"SEC. 17. That it is hereby enacted that the seventh article of the said treaty of April 29, 1868, securing to said Indians the benefits of education, subject to such modifications as Congress shall deem most effective to secure to said Indians equivalent benefits of such education, shall continue in force for 20 years from and after the time this act shall take effect." * * *

(This section also provides a fund of $3,000,000 as a permanent fund due the Sioux Indians parties to the agreement, to bear interest at 5 per cent, one-half of the interest to be expended for "industrial and other suitable education among the Indians").

Section 28 of the act approved March 2, 1889, above quoted, was declared by proclamation of the President of the United States, February 10, 1890, "to be in full force and effect." (26 Stat., 1554, preamble.)

Hence, it will be seen that the obligation of the Government to provide educational advantages for these Indians under the treaty of April 29, 1868, together with the agreements of February 28, 1877, and March 2, 1889, above mentioned, expired on February 10, 1910, the latter date being the termination of the provision in section 17 of the act of March 2, 1889, during which schools were agreed to be continued. It can not, therefore, with good reason, be claimed that since February 10, 1910, there is any treaty or agreement on the part of the Government to provide the funds for schools, which were expended as shown by the foregoing letter from the assistant commissioner, under supposed authority of article 5, act of February 28, 1877, $200,000, and under section 17 of the act of March 2, 1889, $200,000. From this it appears that the total fund available for support of sectarian schools under consideration in the assistant commissioner's letter is the $31,315.49, derived from "Interest on Sioux fund" of $3,000,000, belonging to the Indians, as per the agreement of 1889.

From the showing made it is conclusive that since February 10, 1910, all appropriations for education of the Sioux Indians under consideration, excepting the item of $31,315.49, have been taken from the public funds of the United States and are not available under the act of June 10, 1896 (supra), for support of sectarian schools.

Therefore we submit the only money available under the law for diversion for sectarian schools for the current fiscal year is a total of $31,315.49, of which $5,594.40 is the total of the per capita shares due the 1,008 petitioners supporting sectarian schools, in contrast with the sum of $24,300 contracted to be expended for such schools during the current fiscal year.

Justice and equity demand that only the pro rata shares of funds available may be contracted for, if at all, by petitioning members of any tribe in a given instance, and this rule was promulgated by President Roosevelt, in a similar instance governing the question, in a letter dated February 9, 1905, in which he said:

"Care must be taken, of course, to see that any petition by the Indian is genuine, and that the money appropriated for any given school represents only the pro rata proportion to which the Indians making the petition are entitled."

The Sioux Indians have frequently protested against the diversion of any of their funds for sectarian purposes, and various organizations interested in the welfare of the Indians have urged that so long as the funds due the Indians are held in the tribal form the sectarian use of such funds should not be permitted, since such use creates ill feeling and discord among the Indians in addition to being in violation of the well-settled principle of complete separation of church and state.

We file herewith (Exhibit A) petitions from Dana Long Wolf and several hundred additional members of the Pine Ridge and Crow Creek Bands of Sioux Indians protesting against the further use of any portion of their tribal or treaty funds for sectarian schools.

The petition of the Crow Creek Band is in form as follows:

"CROW CREEK INDIAN RESERVATION, S. DAK.,
"August 19, 1913.

"CHAIRMAN COMMITTEE ON INDIAN AFFAIRS,
"United States Senate, Washington, D. C.:

"The undersigned members of the Sioux Nation or Tribe of Indians belonging to the Crow Creek Reservation, S. Dak., respectfully protest against the use of any money belonging to our tribe of Indians for the support of sectarian schools, and request that the Congress of the United States enact laws to prohibit such use of our tribal moneys. We further request that all our tribal funds shall be divided and the pro rata share due to each member of our tribe shall be credited to him, and paid to such member or expended for his benefit upon his written request, in the discretion of the Government."

The Choctaw Indians of Oklahoma, by resolutions of the general council of the tribe, have protested against the diversion of their tribal funds for support of schools.

These and other Indians, of course, would have no objection whatever to any individual member of their tribes contributing to any extent from his pro rata share of funds derived from a division of the tribal moneys.

The funds appropriated for the Quapaws from year to year, from which $972 are withdrawn for sectarian schools for the fiscal year 1915, are no doubt public funds of the Government and fall within the inhibition of the act approved June 10, 1896 (supra).

The primary consideration in the education of the Indian youth by Government schools, according to the policy of our Government expressed by Congress, whereby the Indians of different tribes in different parts of the country have the benefit of a uniform system of education under the direction and inspection of agents of the Government.

Everything should be done to strengthen and extend this system of education. Nothing should be done to weaken or curtail it. No exceptional provision should be made for Indian education in private schools unless the Government school at a particular point is admittedly inferior or inadequate, and in such a case the defect in the Government system should be corrected as speedily as possible.

Under the declarations of policy made by Congress and amplified by the Supreme Court, there should be a gradual curtailment of the practice of using the tribal funds of Indians for support of private schools. As wards of the Government they are entitled to the benefit of the governmental system of education, even though their parents or other relatives or representatives may prefer private-school instruction for them. Equity to all concerned requires a uniform, broad, just policy not marred by exception to the rule.

In the instant case, as in any similar case, the deduction of the pro rata shares of the petitioning Indians reduces to that extent the income from the tribal funds available for all the members of the tribe. Each Indian is entitled to his own share, neither more nor less. It is inevitable that either the petitioning Indians or the other members of the tribe will suffer by receiving less than their pro rata share of the income of the tribal funds. Apparently it would be the Indians other than those petitioning for the diversion of a portion of the income who would thereby be deprived of part of their share of the income of the funds.

Hon. Francis E. Leupp, formerly Commissioner of Indian Affairs, under whose administration an arrangement was made for permitting the Indians to divert a portion of the income of tribal funds to private schools, furnished an interesting illustration of the effect of such diversion in a letter to the Churchman, dated April 13, 1906, published April 21, 1906, in which he said:

"Suppose that we have a reservation containing 5,000 Indians, to whom there is to be paid in any fiscal year a tribal income of $50,000. This would entitle each individual Indian to $10 as his pro rata share. Suppose that 500 of these Indians petition to have their shares drawn upon for the support of, say, 40 children at $100 apiece at a certain religious mission school. That costs $4,000 which, deducted from the $5,000 due to the 500 petitioners, leaves a balance of $1,000, or $2 apiece, to be paid to the petitioners at the final payment period of the year.

"The 4,500 Indians who do not petition for the diversion of their money to a mission school are assumed, under the President's plan, to be in favor of Government schools, as the Government treaties with these Indians constitute a written demand of the tribe for the maintenance of such schools on the reservation. Now, suppose the Government schools to cost $25,000 for the year's maintenance. Deduct this sum from the $45,000 due to the 4,500 nonpetitioners, and we have a balance of $20,000 to be distributed among the 4,500 at the rate of $4.44 apiece.

"Of course, the difference between the $4.44 and the $2 ultimate dividends is largely in favor of the nonpetitioners as contrasted with the petitioners. From this fact a casual observer might jump to the conclusion that the shares of the 4,500 nonpetitioners are not at all affected by the diversion of the $4,000 to the mission school. I insist that this diversion does affect their share; for, if there had been no diversion of $4,000 there would have been $25,000 to distribute among the whole 5,000 Indians, and each Indian would have received $5. Although the shares of the nonpetitioners suffer to the extent of only 54 cents, they do suffer by this sum. The insignificance of the amount involved does not change the basic fact."

It is clear from the letter of the assistant commissioner of January 28, 1915, heretofore cited, that the amount available per capita in the case now under consideration, would be only $5.55 or for 1,008 petitioners an aggregate amount of $5,594.40, if it were not for the two appropriations of $200,000, which were mixed up with the interest on Sioux fund, Pine Ridge education, so as to raise the value of each share from $5.55 to $33.55, and the total from $5,594.40 to $33,798.24. If only the first amount should be used, it is manifest that the contract which calls for $24,300 could not be met. It is material that the per capita share should be determined by the actual fund available. It is evident that if the $200,000 appropriated under the head education Sioux Nation and that clause undertaking to extend the treaty which expired February 10, 1910, was out of the calculation the amount required for the contract school could not be given. It is especially evident that the appropriations are not interchangeable, so that one for subsistence and civilization can be used for education, or vice versa, and that such use by interpretation nullifies the effort of Congress to preserve the distinction between them.

It must be patent to all that the objections growing out of the continued use of tribal funds for support of private schools would be silenced and altogether eliminated from public discussion by the division of tribal funds into individual holdings, a plan which has been recommended by practically all the philanthropic Indian organizations. If the tribal funds were absolutely segregated to individuals of the particular tribe, there would be no objection to the use which they might make of their share. Such disposition of the tribal funds has been recommended by the annual conference of the Friends of the Indians at Mohonk Lake, N. Y. In 1905 (indorsing the recommendations of President Roosevelt in his first annual message) and in 1909, 1910, 1911, 1912, and 1913 the board of Indian commissioners urged the pro rata division of tribal funds in its annual reports of 1907, page 16; 1908, page 21; 1909, page 19; 1910–11, page 6. The forty-first annual report of the board (1909) seems especially applicable in support of our view of the case. The report is in part as follows:

"The United States Government holds, in trust funds, about $62,000,000, belonging to tribes of Indians in their tribal capacity, and about $13,000,000 which belongs to individual Indians. Everyone who is familiar with legislation and administration for Indians knows that attempts are frequently made to chisel out from these tribal funds large sums of money. Such attempts often seem to be made in the selfish interest of lawyers and claim agents, who concern themselves with the matter because they hope to get a large percentage of the money in commissions and fees if they succeed in securing the legislation desired. Even where large sums from the tribal funds are used for good purposes (as for the schooling of children), we believe that the education of Indians for citizenship would proceed more wisely if these funds were broken up into individual holdings, and Indians who wished their share of the tribal money used for the education of their children were, as individuals, to authorize the use, each of his own money, for that purpose, instead of giving by a majority vote in a 'council' a gross sum from the fund which the Government holds in trust for the entire tribe. The sense of individual responsibility, the experience which comes from husbanding and managing one's own money, Indians can not acquire while their tribal funds are managed for them in bulk.

"We believe that civilization has upon the whole gained by the breaking up of the great tribal reservations into individual holdings of land, where the Indian has been properly protected in his rights and is made secure in the possession of a homestead. We believe that the breaking up of tribal funds into individual shares, to be allotted to each Indian by name, upon the books of the Indian Bureau, is the next important economic step which should be taken in the management of Indian affairs. For the last eight years we have steadily advocated legislation to bring this about. Objection to this plan has sometimes been made on the plea that the separation of tribal funds into individual accounts (an account to be kept under the name of every man, woman, and child entitled to share in the fund) would be a very expensive matter in its demand for clerical assistance and additional bookkeeping. This objection has never seemed to us a weighty one."

The Society of American Indians in 1913 urged that tribal funds be apportioned to each individual's particular account. The allotment of tribal funds is urged by the General Council of the Chippewa Tribes of Minnesota. It is stated for them in a recent report that the legislative committee of the Chippewa General Council proposes to urge upon Congress the desirability and need for:

"The segregation of tribal funds so that an equal division shall be made of these per capita, and placed to the credit of the individual members of the tribe in the Treasury of the United States."

The Indian Rights Association for many years has urged the breaking up of the communal interest in funds of the various Indian tribes, and that the pro rata shares should be credited to individual members of the tribes by the Government and expended upon the beneficiary's request in the wise discretion of the Secretary of the Interior.

Most, if not all, the associations interested in the uplift of the Indians have urged the breaking up of the tribal funds, believing that no great advance in the life of the Indian can be hoped for until he is clothed with individual responsibility.

We, therefore, submit and recommend:

First. That the Senate will not adopt the clause stricken out of the pending Indian appropriation act (H. R. 20150) proposing to extend for another year the agreement approved March 2, 1889, directing and governing the expenditure of the $200,000 for "support and maintenance of day and industrial schools among the Sioux Indians." The item stricken out by the House of Representatives reads as follows:

"* * * to be expended under the agreement with said Indians in section 17 of the act of March 2, 1889, which agreement is hereby extended to and including June 30, 1916."

As has herein been shown, there is no obligation of the Government to continue this appropriation under the agreement sought to be extended; the proposed extension is unilateral, is without consideration, and is clearly a gratuity from the public funds of the United States. The expenditure of this class of funds for sectarian education since February 10, 1910, is clearly prohibited by law and public policy.

Second. That further use of funds due to the Indian tribes held by the Government in tribal or communal form should be prohibited.

Third. That provision of law shall be secured authorizing the division and allotment of the tribal funds held in trust for Indians by the Government, with the provision that the individual shares may be paid to the beneficiaries or expended for their benefit, in the discretion of the Secretary of the Interior.

Very respectfully,

S. M. BROSIUS,
Agent Indian Rights Association.

ROBERT AMERICAN HORSE
(And 66 others).

"The CHAIRMAN. If you admit and agree that funds that are owned by the Indians may be spent to maintain such schools as the Indians wish, does not that remove all objections?

"Mr. BROSIUS. I think it does not remove it, because we claim that the Government is spending money for those schools that do not belong to the Indians.

"The CHAIRMAN. That is the question, is it?"

I present the following protests from 470 adult members of the Rosebud Band of Sioux Indians, objecting to the expenditure of their funds for support of sectarian schools and requesting that their tribal moneys be segregated into individual shares and paid to them or expended for their benefit upon their written request, in the discretion of the Secretary of the Interior.

ROSEBUD INDIAN RESERVATION, S. DAK., *August, 1913.*

Honorable CHAIRMAN COMMITTEE ON INDIAN AFFAIRS:

The undersigned members of the Sioux Nation or Tribe of Indians belonging to the Rosebud Reservation, S. Dak., respectfully protest against the use of any money belonging to our tribe of Indians for the support of sectarian schools and request that the Congress of the United States enact laws to prohibit such use of our tribal moneys. We further request that all our tribal funds shall be divided and the pro rata share due to each member of our tribe shall be credited to him and paid to such member or expended for his benefit upon his written request, in the discretion of the Government.

SHOOTING CAT
(And 469 others).

SECTARIAN INDIAN SCHOOLS.

INDIAN RIGHTS ASSOCIATION,
Philadelphia, January 19, 1915.

DEAR SIR: We request your serious consideration of proposed legislation affecting the management of school funds. The Committee on Indian Affairs of the House of Representatives reported the pending Indian appropriation act to the House containing the following item:

"For support and maintenance of day and industrial schools among the Sioux Indians, including the erection and repairs of school buildings, $200,000, to be expended under the agreement with said Indians in section 17 of the act of March 2, 1889, which agreement is hereby extended to and including June 30, 1916."

That portion of the item quoted directing that the expenditure should be made under agreement to the act of March 2, 1889, was finally stricken out by the House on January 9, 1915 (CONGRESSIONAL RECORD, Jan. 9, p. 1349). The words referred to as having been stricken out have heretofore been incorporated in the Indian appropriation acts each year since 1909, in an effort to extend for a year at a time the clause in the agreement with the Sioux Indians of March 2, 1889, the provisions of which expired on February 10, 1910. This pretended extension or renewal of the agreement was without any action by the Indians; no obligation of the Government was present; the attempted renewal was unilateral and without consideration. The Interior Department, however, considered that the words eliminated from the pending act by the House which were contained in the previous acts gave that department a semblance of authority to continue the practice of permitting Indians to divert, by petition, their pro rata shares of funds available for education from the support of the regular Government schools to the aid of private or sectarian schools of their choice.

In determining the pro rata shares which might be due petitioning Indians, it is understood that the annual appropriation of $200,000 in the item referred to has been included with the tribal money available for schools, by which process the pro rata shares have been immensely augmented. The diversion of Sioux funds by this process in arriving at the pro rata share has been followed, we are informed, since 1909, and we are further advised that almost the entire amount of the pro rata shares of petitioning Indians of the Pine Ridge Band of Sioux has been charged to the fund belonging to the Sioux which was created by the act of March 2, 1889 (25 Stat., 888).

The pro rata share of the school fund due the Pine Ridge Band of Sioux is derived from the interest on the permanent fund created by the act of March 2, 1889 (sec. 17), and amounts approximately to $3.25, while the allowance diverted for education of each child in private schools is understood to be $108.

In a letter to the Secretary of the Interior, dated February 9, 1905, President Roosevelt, in a similar instance in which individual members of a Sioux band had been permitted to divert many times their share of Indian funds for sectarian schools, promulgated the rule that "care must be taken, of course, to see that any petition by the Indians is genuine and that the money appropriated for any given school represents only the pro rata proportion to which the Indians making the petition are entitled."

In the past a large majority of the Sioux Indians in South Dakota who have petitioned have objected to the use of any portion of their funds for sectarian education, and philanthropic and other organizations have filed various protests against such use of Indian moneys.

The funds appropriated for the Quapaws and diverted for sectarian education are believed to be gratuities from the public funds of the United States and fall within the inhibition of law.

The securing of contracts by religious orders stirs up animosities among Indians and should no longer be permitted.

Prior to February 10, 1910, when the obligation of the agreement of March 2, 1889, expired, the appropriation of $200,000 annually was styled a "treaty" fund, and one which the United States Supreme Court held, in the case of Quick Bear *v.* Leupp, in 1908 (210 U. S., 79), to be money belonging to the Indians under the agreement as heretofore stated, which expired on February 10, 1910. It is therefore evident that since 1910 the $200,000 annually granted by Congress is a gratuity from public money of the United States.

After a careful consideration of the question of continuing the practice of appropriating public money for the support of sectarian schools for the education of Indian children, Congress, by the act approved June 10, 1896 (29 Stat., 345) adopted the following as the future policy of the Government in relation thereto:

"* * * And it is hereby declared to be the settled policy of the Government to hereafter make no appropriation whatever for education in any sectarian school."

In the case of Quick Bear *v.* Leupp (supra) the United States Supreme Court, after referring to the limitations upon the use of public money by the act of Congress in 1896, above cited, held that "* * * the effect of this legislation was to make subsequent appropriations for education mean that sectarian schools were excluded in sharing in them, unless otherwise provided."

The primary consideration is the education of the Indian youth by Government schools, according to the policy of the Government expressed by Congress, whereby the Indians of different tribes have the benefit of a uniform system of education under the direction and inspection of the Government. Everything should be done to extend this system of education. Nothing should be done to weaken or curtail it. The Government is fully able and has, in fact, provided facilities for education of Indian children; if, perchance, some particular location has not proper or sufficient facilities for schooling, the need can and should be promptly corrected.

We urge that you will prohibit the further expenditure of funds available for Indian education for support of private or sectarian schools wherever located, and offer the form of an item of amendment of the pending Indian appropriation act, as follows:

"That hereafter no tribal Indian funds shall be expended for the support of any sectarian or private school without the previous consent of Congress."

Respectfully, yours,

CARL E. GRAMMER,
President Indian Rights Association.

Mr. Speaker, these protests of the Sioux Indians heretofore referred to in my remarks—and also in the above letter to me from Mr. Brosius—show conclusively that our red brethren are on the highway that leads to a complete separation of church and state, a principle fought for and maintained so nobly and at great sacrifice by our ancestors when they founded this Government. I would as an American citizen feel myself disgraced if I did not also do all in my power for these helpless but protesting Indians to aid them in removing the shackles of sectarian schools from their midst. Any church should be and will be condemned by the American people that seeks to run their church schools at the expense of the United States Treasury, and in violation of law.

These protests are as follows:

ROSEBUD INDIAN RESERVATION, S. DAK., *August —, 1913.*

Honorable CHAIRMAN COMMITTEE ON INDIAN AFFAIRS:

The undersigned members of the Sioux Nation or Tribe of Indians belonging to the Rosebud Reservation, S. —

The bill as finally agreed upon by the conferees is as follows:

Be it enacted, etc., That the following sums be, and they are hereby, appropriated, out of any money in the Treasury not otherwise appropriated, for the purpose of paying the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and in full compensation for all offices the salaries for which are provided for herein for the service of the fiscal year ending June 30, 1916, namely:

For the survey, resurvey, classification, and allotment of lands in severalty under the provisions of the act of February 8, 1887 (24 Stat. L., p. 388), entitled "An act to provide for the allotment of lands in severalty to Indians," and under any other act or acts providing for the survey or allotment of Indian lands, $125,000, to be repaid proportionately out of any Indian moneys held in trust or otherwise by the United States and available by law for such reimbursable purposes and to remain available until expended: *Provided,* That no part of said sum shall be used for the survey, resurvey, classification, or allotment of any land in severalty on the public domain to any Indian, whether of the Navajo or other tribes, within the State of New Mexico and the State of Arizona, who was not residing upon the public domain prior to June 30, 1914.

For the construction, repair, and maintenance of ditches, reservoirs, and dams, purchase and use of irrigation tools and appliances, water rights, ditches, lands necessary for canals, pipe lines, and reservoirs for Indian reservations and allotments, and for drainage and protection of irrigable lands from damage by floods, or loss of water rights, including expenses of necessary surveys and investigations to determine the feasibility and estimated cost of new projects and power and reservoir sites on Indian reservations in accordance with the provisions of section 13 of the act of June 25, 1910, $250,000, reimbursable as provided in the act of August 1, 1914, and to remain available until expended: *Provided,* That no part of this appropriation shall be expended on any irrigation system or reclamation project for which specific appropriation is made in this act or for which public funds are or may be available under any other act of Congress; for pay of one chief inspector of irrigation, who shall be a skilled irrigation engineer, $4,000; one assistant inspector of irrigation, who shall be a skilled irrigation engineer, $2,500; for traveling and incidental expenses of two inspectors of irrigation, including sleeping-car fare and a per diem of $3 in lieu of subsistence when actually employed on duty in the field and away from designated headquarters, $3,200; in all, $259,700: *Provided also,* That not to exceed seven superintendents of irrigation, six of whom shall be skilled irrigation engineers and one competent to pass upon water rights, and one field-cost accountant, may be employed.

For the suppression of the traffic in intoxicating liquors among Indians, $135,000, of which sum $10,000 shall be immediately available, and section 8 of the act of March 1, 1895, is hereby reenacted as to that part of Oklahoma known as Indian Territory immediately prior to statehood, and section 2140 of the United States Revised Statutes are made applicable to that part of Oklahoma.

To relieve distress among Indians and to provide for their care and for the prevention and treatment of tuberculosis, trachoma, smallpox, and other contagious and infectious diseases, including the purchase of vaccine and expense of vaccination, maintenance of hospitals and sanatoriums, for incidental and all other expenses for their proper conduct and management, including pay of employees, repairs, improvements, and for necessary expenses of transporting Indian patients to and from such hospitals and sanatoriums, and for the correction of sanitary defects in Indian homes, $350,000: *Provided,* That not to exceed $90,000 of the amount herein appropriated may be expended in the erection and equipment of new hospitals for the use of Indians; and no hospital shall be constructed at a cost to exceed $15,000, including equipment: *Provided further,* That hereafter the Secretary of the Interior shall submit to Congress annually a detailed report as to all moneys expended in the erection and maintenance of hospitals and sanatoriums as provided for herein.

For support of Indian day and industrial schools not otherwise provided for and for other educational and industrial purposes in connection therewith, including not to exceed $40,000 for the support and education of deaf and dumb and blind Indian children, $1,500,000: *Provided,* That no part of this appropriation, or any other appropriation provided for herein, except appropriations made pursuant to treaties, shall be used to educate children of less than one-fourth Indian blood whose parents are citizens of the United States and of the State wherein they live and where there are adequate free school facilities provided and the facilities of the Indian schools are needed for pupils of more than one-fourth Indian blood: *Provided further,* That no part of this appropriation shall be used for the support of Indian day and industrial schools where specific appropriation is made: *Provided further,* That not more than $50,000 of the amount herein appropriated may be expended for the tuition of Indian children enrolled in the public schools: *And provided further,* That $75,000 of the amount herein appropriated shall be expended for tuition of children of Indian blood enrolled in the public schools of New Mexico.

For construction, lease, purchase, repair, and improvement of school and agency buildings, including sewer, water, and lighting systems in connection therewith, $420,000: *Provided,* That the Secretary of the Interior is authorized to allow employees in the Indian Service, who are furnished quarters, necessary heat and light for such quarters without charge, such heat and light to be paid for out of the fund chargeable with the cost of heating and lighting other buildings at the same place: *Provided further,* That the amount so expended for agency purposes shall not be included in the maximum amounts for compensation of employees prescribed by section 1, act of August 24, 1912.

For collection and transportation of pupils to and from Indian and public schools, and for placing school pupils, with the consent of their parents, under the care and control of white families qualified to give them moral, industrial, and educational training, $72,000: *Provided,* That not exceeding $5,000 of this sum may be used for obtaining remunerative employment for Indian youths and, when necessary, for payment of transportation and other expenses to their places of employment. The provisions of this section shall also apply to native pupils of school age under 21 years of age brought from Alaska.

All moneys appropriated herein for school purposes among the Indians may be expended, without restriction as to per capita expenditure, for the annual support and education of any one pupil in any school.

For the purposes of preserving living and growing timber on Indian reservations and allotments, and to educate Indians in the proper care of forests; for the employment of suitable persons as matrons to teach Indian women and girls housekeeping and other household duties, for necessary traveling expenses of such matrons; and for furnishing necessary equipments and supplies and renting quarters for them when necessary; for the conducting of experiments on Indian school or agency farms designed to test the possibilities of soil and climate in the cultivation of trees, grains, vegetables, cotton, and fruits, and for the employment of practical farmers and stockmen, in addition to the agency and school farmers now employed; for necessary traveling expenses of such farmers and stockmen and for furnishing necessary equipment and supplies for them; and for superintending and directing farming

and stock raising among Indians, $425,000: *Provided*, That the foregoing shall not, as to timber, apply to the Menominee Indian Reservation in Wisconsin: *Provided further*, That not to exceed $25,000 of the amount herein appropriated may be used to conduct experiments on Indian school or agency farms to test the possibilities of soil and climate in the cultivation of trees, cotton, grains, vegetables, and fruits: *Provided also*, That the amounts paid to matrons, foresters, farmers, and stockmen herein provided for shall not be included within the limitation on salaries and compensation of employees contained in the act of August 24, 1912.

For the purchase of goods and supplies for the Indian Service, including inspection, pay of necessary employees, and all other expenses connected therewith, including advertising, storage, and transportation of Indian goods and supplies, $300,000: *Provided*, That no part of the sum hereby appropriated shall be used for the maintenance of to exceed three warehouses in the Indian Service.

For telegraph and telephone toll messages on business pertaining to the Indian Service sent and received by the Bureau of Indian Affairs at Washington, $10,000.

For witness fees and other legal expenses incurred in suits instituted in behalf of or against Indians involving the question of title to lands allotted to them, or the right of possession of personal property held by them, and in hearings set by the United States local land officers to determine the rights of Indians to public lands, $2,000: *Provided*, That no part of this appropriation shall be used in the payment of attorneys' fees.

For expenses of the Board of Indian Commissioners, $10,000.

For pay of Indian police, including chiefs of police at not to exceed $50 per month each and privates at not to exceed $30 per month each, to be employed in maintaining order, for purchase of equipments and supplies and for rations for policemen at nonration agencies, $200,000.

For pay of judges of Indian courts where tribal relations now exist, $8,000.

For pay of special agents at $2,000 per annum; for traveling and incidental expenses of such special agents, including sleeping-car fare, and a per diem of not to exceed $3 in lieu of subsistence in the discretion of the Secretary of the Interior when actually employed on duty in the field or ordered to the seat of government; for transportation and incidental expenses of officers and clerks of the Office of Indian Affairs when traveling on official duty; for pay of employees not otherwise provided for; and for other necessary expenses of the Indian Service for which no other appropriation is available, $115,000.

For pay of six Indian Service inspectors, exclusive of one chief inspector, at salaries not to exceed $2,500 per annum and actual traveling expenses, and $3 per diem in lieu of subsistence when actually employed on duty in the field, $30,000.

For the purpose of determining the heirs of deceased Indian allottees having any right, title, or interest in any trust or restricted property, under regulations prescribed by the Secretary of the Interior, $100,000: *Provided*, That the Secretary of the Interior is hereby authorized to use not to exceed $25,000 for the employment of additional clerks in the Indian Office in connection with the work of determining the heirs of deceased Indians, and considering their wills, out of the $100,000 appropriated herein: *Provided further*, That the provisions of this paragraph shall not apply to the Osage Indians, nor to the Five Civilized Tribes of Indians in Oklahoma: *And provided further*, That hereafter upon a determination of the heirs to any trust or restricted Indian property or after approval by the Secretary of any will covering such trust or restricted property, there shall be paid by such heirs, or by the beneficiaries under such will, or from the estate of the decedent, or from the proceeds of sale of the allotment, or from any trust funds belonging to the estate of the decedent, the sum of $15, which amount shall be accounted for and paid into the Treasury of the United States and a report shall be made annually to Congress by the Secretary of the Interior, on or before the first Monday in December, of all moneys collected and deposited, as herein provided: *Provided further*, That if the Secretary of the Interior shall find that any inherited trust allotment or allotments are capable of partition to the advantage of the heirs, he may cause such lands to be partitioned among them, patents in fee to be issued to the competent heirs for their shares and trust patents to be issued to the incompetent heirs for the lands respectively or jointly set apart to them, the trust period to terminate in accordance with the terms of the original patent.

For the purpose of encouraging industry and self-support among the Indians and to aid them in the culture of fruits, grains, and other crops, $300,000, or so much thereof as may be necessary, to be immediately available, which sum may be used for the purchase of seed, animals, machinery, tools, implements, and other equipment necessary, in the discretion of the Secretary of the Interior, to enable Indians to become self-supporting: *Provided*, That said sum shall be expended under conditions to be prescribed by the Secretary of the Interior for its repayment to the United States on or before June 30, 1925: *Provided further*, That not to exceed $75,000 of the amount herein appropriated shall be expended on any one reservation or for the benefit of any one tribe of Indians.

There is hereby authorized to be continued during the Sixty-fourth Congress the Joint Commission to Investigate Indian Affairs, with powers and duties as provided in the Indian appropriation act of June 30, 1913 (38 Stat. L., p. 81), and the unexpended amount therein appropriated for the expense of said commission is hereby reappropriated and made available for the purposes therein authorized. Said commission shall make their findings, conclusions, and recommendations to the Sixty-fourth Congress: *Provided*, That when any vacancy shall occur upon said joint commission by reason of the expiration of the term of office of any Member of the House of Representatives upon said joint commission, or of any Senator upon said joint commission, or from any other cause, Hon. CHAMP CLARK, Member of Congress-elect from the State of Missouri, if the vacancy occurs with reference to a member of the House of Representatives, and by the President of the Senate if the vacancy occurs with reference to a Senator.

That not to exceed $200,000 of the appropriations made herein for the Bureau of Indian Affairs shall be available for the maintenance, repair, and operation of motor-propelled and horse-drawn passenger-carrying vehicles for the use of superintendents, farmers, physicians, field matrons, allotting, irrigation, and other employees in the Indian field service: *Provided*, That not to exceed $13,000 shall be used in the purchase of not to exceed 40 horse-drawn passenger-carrying vehicles, and not to exceed $15,000 for the purchase of motor-propelled passenger-carrying vehicles, and that such vehicles shall be used only for official service.

To reimburse A. G. Pollock, former disbursing agent of the Santee Competency Commission, for moneys expended for printing and stationery used by the Santee Competency Commission, $49.25.

For payment to the heirs of Farmer John, an Indian, for land purchased by the Government for a boathouse site on Pelican Lake, Minn., $20.

For the payment to Charles Kappler for the work of compiling the third volume of Indian laws and treaties, the sum of $2,000.

ARIZONA AND NEW MEXICO.

SEC. 2. For support and civilization of Indians in Arizona and New Mexico, including pay of employees, $330,000.

For support and education of 200 Indian pupils at the Indian school at Fort Mojave, Ariz., and for pay of superintendent, $35,100; for general repairs and improvements, $3,800; in all, $38,900.

For support and education of 700 Indian pupils at the Indian school at Phoenix, Ariz., and for pay of superintendent, $119,500; for general repairs and improvements, $7,500; in all, $127,000.

For support and education of 100 pupils at the Indian school at Truxton Canyon, Ariz., and for pay of superintendent, $18,200; for general repairs and improvements, $3,000; in all, $21,200.

To enable the Secretary of the Interior to carry into effect the provisions of the sixth article of the treaty of June 8, 1868, between the United States and the Navajo Nation or Tribe of Indians, proclaimed August 12, 1868, whereby the United States agrees to provide school facilities for the children of the Navajo Tribe of Indians, $100,000: *Provided*, That the said Secretary may expend said funds, in his discretion, in establishing or enlarging day or industrial schools.

For continuing the work of constructing the irrigation system for the irrigation of the lands of the Pima Indians in the vicinity of Sacaton, in the Gila River Indian Reservation, within the limit of cost fixed by the act of March 3, 1905, $10,000; and for maintenance and operation of the pumping plants and canal systems, $10,000; in all, $20,000, reimbursable as provided in section 2 of the act of August 24, 1912 (37 Stat. L., p. 522), and to remain available until expended.

For the construction and repair of necessary channels and laterals for the utilization of water in connection with the pumping plant for irrigation purposes on the Colorado River Indian Reservation, Ariz., as provided in the act of April 4, 1910 (36 Stat. L., p. 273), for the purpose of securing an appropriation of water for the irrigation of approximately 150,000 acres of land and for maintaining and operating the pumping plant, $15,000, reimbursable as provided in said act, and to remain available until expended.

For improvement and sinking of wells, installation of pumping machinery, construction of tanks for domestic and stock water, and for the necessary structures for the development and distribution of a supply of water for Papago Indian villages in southern Arizona, $15,000.

For enlarging the irrigation system for the irrigation of Indian lands, for protective works to prevent damage to irrigable lands by floods, and for development of domestic water supply on the Papago Indian Reservation in Arizona, in accordance with the plans and specifications submitted by the chief engineer in the Indian Service and approved by the Commissioner of Indian Affairs and the Secretary of the Interior, $20,000, to remain available until expended.

For the examination and final location surveys of a dam site on the Colorado River, and the investigation and survey of an irrigation system to supply the land of the Colorado River Reservation from said dam, and for the design, preparation of maps, plans, and detailed specifications for said works, and estimate of cost thereof, for the utilization of the reserved rights to water from the Colorado River in the State of Arizona for the irrigation of approximately 150,000 acres of land on said reservation, $10,000, or so much thereof as may be necessary.

For continuing the development of a water supply for the Navajo Indians on the Navajo Reservation, $10,000, to remain available until expended, reimbursable out of any funds of said Indians now or hereafter available.

For beginning the construction of a dam and necessary controlling works for diverting water from the Gila River for the irrigation of Indian land and allotments on the Gila River Indian Reservation, Ariz., as recommended by the Board of Engineers of the United States Army in paragraph 217 of its report to the Secretary of War of February 14, 1914 (H. Doc. No. 791), $50,000, to remain available until expended, reimbursable as Congress may hereafter provide, the total cost not to exceed $160,000.

For beginning the construction of a dam and necessary controlling works for diverting water from the Gila River at a site above Florence, Ariz., for the irrigation of Indian land and allotments on the Gila River Indian Reservation and private lands in Pinal County, Ariz., as estimated by the Board of Engineer Officers of the United States Army in paragraph 138 of its report to the Secretary of War of February 14, 1914 (H. Doc. No. 791), $75,000, to remain available until expended, reimbursable as Congress may hereafter provide, the total cost not to exceed $175,000: *Provided*, That before beginning construction the Secretary of the Interior shall prescribe such rules and regulations and take such other action as in his opinion may be proper and necessary for the purpose of securing for the Indians of the Gila River Reservation the benefits from such work to which they are legally and equitably entitled, and to enable the United States to control the diversion and distribution of water by said works and canals receiving water diverted thereby; and he may require of the owners of other lands to be benefited thereby agreements for the payment of the charges which he is hereby authorized to fix for diversion of water by said dam.

CALIFORNIA.

SEC. 3. For support and civilization of Indians in California, including pay of employees, $45,000.

For the purchase of lands for the homeless Indians in California, including improvements thereon, for the use and occupancy of said Indians, $20,000, said funds to be expended under such regulations and conditions as the Secretary of the Interior may prescribe.

For support and education of 650 Indian pupils at the Sherman Institute, Riverside, Cal., including pay of superintendent, $108,125; for general repairs and improvements, $8,000; in all, $116,125.

For support and education of 125 Indian pupils at the Fort Bidwell Indian School, Cal., including pay of superintendent, $20,500; for general repairs and improvements, $2,000; in all, $22,500.

For support and education of 100 Indian pupils at the Greenville Indian School, Cal., including pay of superintendent, $18,400; for general repairs and improvements, $2,000; in all, $20,400.

For reclamation and maintenance charge on Yuma allotments, $40,000, to be reimbursed from the sale of surplus lands or from other funds that may be available, in accordance with the provisions of the act of March 3, 1911.

FLORIDA.

SEC. 4. For support and civilization of Seminole Indians in Florida, including the purchase of such lands as the Secretary of the Interior may deem proper, $10,000, of which $3,000 shall be immediately available.

IDAHO.

SEC. 5. For support and civilization of Indians on the Fort Hall Reservation in Idaho, including pay of employees, $30,000.

For improvement and maintenance and operation of the Fort Hall irrigation system, $25,000, reimbursable to the United States out of any funds of the Indians occupying the Fort Hall Reservation now or hereafter available.

For fulfilling treaty stipulations with the Bannocks in Idaho: For pay of physician, teacher, carpenter, miller, engineer, farmer, and blacksmith (art 10, treaty of July 3, 1868), $5,000.

For the Coeur d'Alenes, in Idaho: For pay of blacksmith, carpenter, and physician and purchase of medicines (art. 11, agreement ratified Mar. 3, 1891), $3,000.

KANSAS.

SEC. 6. For support and education of 750 Indian pupils at the Indian school, Haskell Institute, Lawrence, Kans., and for pay of superintendent, $127,750; for general repairs and improvements, $10,000; in all, $137,750.

For support and education of 80 Indian pupils at the Indian school, Kickapoo Reservation, Kans., including pay of superintendent, $14,860; for general repairs and improvements, $2,000; in all, $16,860.

MICHIGAN.

SEC. 7. For support and education of 350 Indian pupils at the Indian school, Mount Pleasant, Mich., and for pay of superintendent, $60,450; for general repairs and improvements, $5,000; for dairy barns, $5,000; in all, $70,450.

MINNESOTA.

SEC. 8. For support and education of 225 Indian pupils at the Indian school, Pipestone, Minn., including pay of superintendent, $39,175; for general repairs and improvements, $6,500; for septic tank, $5,500; in all, $51,175.

For support of a school or schools for the Chippewas of the Mississippi in Minnesota (art. 3, treaty of Mar. 19, 1867), $4,000.

The Secretary of the Interior is hereby authorized to withdraw from the Treasury of the United States, at his discretion, the sum of $185,000, or so much thereof as may be necessary, of the principal sum on deposit to the credit of the Chippewa Indians in the State of Minnesota, arising under section 7 of the act of January 14, 1889, entitled "An act for the relief and civilization of the Chippewa Indians in the State of Minnesota," and to use the same for the purpose of promoting civilization and self-support among the said Indians in manner and for purposes provided for in said act.

The Secretary of the Interior is hereby authorized to advance to the executive committee of the White Earth Band of Chippewa Indians in Minnesota the sum of $1,000, or so much thereof as may be necessary, to be expended in the annual celebration of said band to be held June 14, 1915, out of the funds belonging to said band.

That the unexpended balance of the appropriation for "Enrollment of Chippewa allottees, White Earth Reservation, Minn.," contained in the act approved June 30, 1913 (38 Stat. L., p. 89), making appropriations for current and contingent expenses of the Indian Service for the fiscal year 1914, is hereby reappropriated and made immediately available.

That the seventh paragraph of section 9 of the act approved June 30, 1913 (38 Stat. L., p. 88), be, and the same is hereby, amended to read as follows:

"That the roll herein provided for shall be made in triplicate and shall show the allotment number or numbers, together with the description of the property allotted, and the name, age, sex, and whether the allottee is of full Indian blood or a mixed blood. The roll shall also state whether the person named is living or dead, and if dead, the approximate date of death shall be stated, when it can be ascertained, together with the age of such person at death as near as practicable. No allotment nor the allottee thereof shall be enrolled where there is a suit now pending, or hereafter commence prior to the completion of such roll, to cancel any conveyance of such allotment until such suit has been finally determined."

That the sum of $4,000, or so much thereof as may be necessary, of the tribal funds of the Chippewa Indians of the State of Minnesota, is hereby appropriated to pay the expenses of the general council of said tribe to be held at Bemidji, Minn., beginning July 13, 1915, pursuant to the constitution of the general council of said Chippewa Indians of Minnesota, organized in May, 1913, and to pay the actual and necessary expenses of the members of the executive committee of said council when attending to the business of the tribe, and to pay the expenses to Washington, in January and February, 1915, of the delegation of Chippewa Indians of the State of Minnesota, appointed by the president of said general council pursuant to the resolution of said general council of date August 14, 1914, to present the affairs of said Chippewa Indians of the State of Minnesota to the officials of the United States, said $4,000 to be immediately available, and the expenses of said delegation to be paid by the Secretary of the Interior upon itemized accounts approved by the Commissioner of Indian Affairs and the expenses of said general council to be paid by the Secretary of the Interior upon itemized accounts approved by the president of the executive committee of said council and certified to by its secretary. The Secretary of the Interior may authorize an inspector or special agent to attend future sessions of said general council and conventions to which delegates therefor are elected.

That the Secretary of the Interior, under such rules and regulations as he may prescribe, is hereby authorized to use for or advance to any individual Chippewa Indian in the State of Minnesota entitled to participate in the permanent fund of the Chippewa Indians of Minnesota who is blind, crippled, decrepit, or helpless from old age, disease, or accident, and such other Indians as the Secretary of the Interior may deem proper, in the aggregate not to exceed one-fourth of the amount which would now be coming to said Indian under a pro rata distribution of said permanent fund: *Provided*, That any money received hereunder by any member of said tribe or used for his or her benefit shall be deducted from the share of said member in the permanent fund of the said Chippewa Indians in Minnesota to which he or she would be entitled. Hereafter on ceded lands in the State of Minnesota embraced within the provisions of the law entitled "An act for the relief and civilization of the Chippewa Indians in the State of Minnesota," approved January 14, 1889, the minerals in and mineral rights pertaining to any of the lands the cession of which was provided for in said act and for which the United States has not conveyed title shall be and remain in and are reserved for the use and benefit of the Chippewa Indians in the State of Minnesota.

That the following-described lands within the Red Lake Indian Reservation, Minn., be, and the same hereby are, reserved from sale and allotment, and shall be known as the Red Lake Indian Forest: Townships 150 and 151 north, ranges 32, 33, 34, 35, and 36 west, and townships 152 and 153 north, ranges 32, 33, and 34 west of the fifth principal meridian, except the lands in townships 151 north, range 36 west, which lie north of the north line of sections 26 to 30, inclusive, and except all lands within sections 4, 5, 6, 7, 8, 9, and 18, in township 153 north, range 34 west. The provisions of this section shall not apply to any lands which have heretofore been reserved for school, agency, church, or town-site purposes, or granted to private parties or corporations, within the area described: *Provided*, That when any of said lands are no longer needed for the purpose for which they were reserved, the Secretary of the Interior may declare such lands to be a part of the Red Lake Indian Forest.

That the forest shall be administered, by the Secretary of the Interior, in accordance with the principles of scientific forestry, with a view to the production of successive timber crops thereon. The said Sercetary is hereby authorized to sell dead, down, and matured pine timber and other marketable products, under such rules and regulations as he may prescribe, and to establish such sawmills and accessories as may be necessary to manufacture the dead, down, and matured timber into various products, and he may purchase such equipment and employ such persons as shall be necessary to carry out the purposes of this act. Before any expenditures are made or contracts entered into hereunder, the Secretary of the Interior shall submit an estimate, and annually thereafter, of such proposed expenditures, to be approved by Congress. The Indians, without charge, shall be allowed for fuel, under rules and regulations prescribed by the Secretary of the Interior, dead timber, standing or fallen, which is not of a merchantable grade or suited for timber.

That it shall be the duty of the Secretary of the Interior to maintain at all times a forest cover on all parts of the forest which are not better adapted to agricultural uses than to the production of forest crops, and he may establish nurseries or purchase seedlings or transplants when needed for reforestation purposes.

That the Secretary of the Interior is hereby authorized to issue a permit to any head of a family or adult unmarried member of the Red Lake Band of Indians entitling him or her to the exclusive use for a term of 10 years of any tract of land, not exceeding 20 acres in area, fronting on either Upper Red Lake or Lower Red Lake, having a shore line of not more than 50 rods. Similar permits may be issued by the said Secretary for legal subdivisions which do not border upon either of the said lakes with the same restrictions as to area. In the granting of these permits preference shall be given to Red Lake Indians who have occupied such land for a period of not less than three years prior to the passage of this act, and each permit shall be renewed so long as the person or any member of his or her immediate family shall continue to reside thereon, unless in the opinion of the said Secretary the best interests of the Red Lake Band of Indians demand that such permit be not renewed; and when a renewal is refused the said Secretary shall cause an appraisal to be made of any permanent improvements placed upon such land by the permittee, or his immediate family, and shall pay to him, from the proceeds of the Red Lake Indian Forest, the amount of such appraisement. If any Indian permittee or his immediate family shall fail to reside upon the shore line or interior tract covered by his permit for a period of at least three months in any year, the permit shall be subject to cancellation by the Secretary of the Interior, and when a permit is thus canceled the said Secretary may pay the permittee the value of his permanent improvements from the proceeds of the Indian forest, if in his judgment the improvements are of any value to the Red Lake Indians. If lands covered by a lapsed or a canceled permit are assigned to another applicant, such new permittee shall be required to pay into the Red Lake Indian Forest fund the value which the improvements thereon have at the time of the issuance of such permit.

That every permit or lease issued under authority of this act to Indians or to other persons or corporations shall reserve to the Secretary of the Interior the right to cross the land covered thereby with logging roads or railroads, to use the shore line, or to erect thereon and use such structures as shall be necessary to the proper and economical management of the Indian forest created by this act.

For the payment of high-school teachers of the White Earth Indian School, Minnesota, for instruction of children of the Chippewa Indians in the State of Minnesota, $4,000, or so much thereof as may be necessary, to be used under rules to be prescribed by the Secretary of the Interior: *Provided*, That not to exceed $1,000 of this sum may be used to continue the education of boys appointed under the provisions of the act of Congress entitled "An act making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes, for the fiscal year ending June 30, 1914," approved June 30, 1913.

MONTANA.

SEC. 9. For support and civilization of the Indians at Fort Belknap Agency, Mont., including pay of employees, $20,000.

For support and civilization of Indians at Flathead Agency, Mont., including pay of employees, $20,000, to be immediately available: *Provided*, That not to exceed $4,500 of the above amount may be expended for salaries.

For support and civilization of Indians at Fort Peck Agency, Mont., including pay of employees, $30,000.

For support and civilization of Indians at Blackfeet Agency, Mont., including pay of employees, $20,000, to be immediately available: *Provided*, That not to exceed $8,000 of the above amount may be expended for salaries.

For maintenance and operation, including repairs of the Milk River irrigation system on the Fort Belknap Reservation, in Montana, $20,000, reimbursable in accordance with the provisions of the act of April 4, 1910.

For fulfilling treaties with Crows, Montana: For pay of physician, $1,200; and for pay of carpenter, miller, engineer, farmer, and blacksmith (art. 10, treaty of May 7, 1868), $3,600; for pay of second blacksmith (art. 8, same treaty), $1,200; in all, $6,000: *Provided*, That during the fiscal year ending June 30, 1916, no tribal grazing lease or permit on the Crow Reservation shall be approved by the Secretary of the Interior without first procuring the consent of a majority of the members of a council regularly called by said Indians: *Provided further*, That the Secretary of the Interior be, and he is hereby, authorized and directed, upon the application of any Indian allottee or allottees on said Crow Reservation, to build a fence in full compliance with the

laws of Montana, sufficient to hold or turn all stock, inclosing the allotment or allotments of Indian allottee or allottees, the same to be reimbursed out of any distributive tribal funds to which said Indian may be entitled; and such Indian allottee shall be permitted to lease his allotted lands other than his homestead when so fenced for a term not exceeding five years beyond the date of the execution of the lease to any person or persons desiring to lease the same without interference on the part of any Government official: *And be it further provided*, That any lessee of allotted Indian lands on said Indian reservation shall be required to maintain said fence in good repair on the allotted lands so leased; and the Secretary of the Interior shall have the power, in case of inadequate compensation provided in said lease or of unfair terms or conditions contained therein or of any unfair treatment of the lessor by the lessee as a tenant, to cancel or revise said lease such lease shall be made upon forms furnished by the Interior Department. Natural guardians having the care and custody of minors or incompetent persons may make application, execute the lease above provided for, collect the rents, and do and perform all acts on behalf of such minors or incompetent persons which are herein provided to be done or performed by said Indian allottee, and there is hereby appropriated sufficient money, out of any tribal funds which are now or may hereafter be available, to carry out the provisions herein, said tribal funds to be reimbursed under such rules and regulations as the Secretary of the Interior may prescribe.

For subsistence and civilization of the Northern Cheyennes and Arapahoes (agreement with the Sioux Indians, approved Feb. 28, 1877), including Northern Cheyennes removed from Pine Ridge Agency to Tongue River, Mont., and for pay of physician, 2 teachers, 2 carpenters, 1 miller, 2 farmers, a blacksmith, and engineer (art. 7, treaty of May 10, 1868), $85,000.

For the employment of "line riders" along the southern and eastern boundaries of the Northern Cheyenne Indian Reservation in the State of Montana, $1,500.

For the support and civilization of Rocky Boy's Band of Chippewas, and other indigent and homeless Indians in the State of Montana, including pay of employees, $10,000, to be immediately available.

That the Secretary of the Interior be, and he is hereby, authorized to withdraw from the Treasury of the United States not to exceed the sum of $100,000, or so much thereof as may be necessary, of the principal sum on deposit to the credit of the Indians on the Blackfeet Reservation in Montana, for the purpose of purchasing and caring for cattle for the use of said Indians, seeds, and necessary farming equipment, to enable them to become self-supporting, under such rules, regulations, and conditions as said Secretary of the Interior may prescribe.

That any moneys which may be due from the Indians of the Fort Belknap Reservation, State of Montana, and unpaid on June 1, 1915, for property purchased under the provisions of the sections of the Indian appropriation acts approved April 30, 1908 (35 Stat. L., pp. 70–83), appropriating the sum of $25,000 for the purchase of implements and other equipment for said Indians, under such conditions as the Secretary of the Interior might prescribe for the repayment by the Indians to the United States of the sum so expended, and March 3, 1909 (35 Stat. L., pp. 781–795), authorizing the use of the repayments made by the Indians until June 1, 1915, shall be collected as soon thereafter as is practicable.

That the Secretary of the Interior be, and he is hereby, authorized and directed to announce, at such time as in his opinion seems proper, the charge for construction of irrigation systems on the Blackfeet, Flathead, and Fort Peck Indian Reservations in Montana, which shall be made against each acre of land irrigable by the systems on each of said reservations. Such charges shall be assessed against the land irrigable by the systems on each said reservation in the proportion of the total construction cost which each acre of such land bears to the whole area of irrigable land thereunder.

On the 1st day of December after the announcement by the Secretary of the Interior of the construction charge, the allottee, entryman, purchaser, or owner of such irrigable land which might have been furnished water for irrigation during the whole of the preceding irrigation season, from ditches actually constructed, shall pay to the superintendent of the reservation where the land is located, for deposit to the credit of the United States as a reimbursement of the appropriations made or to be made for construction of said irrigation systems, 5 per cent of the construction charge fixed for his land, as an initial installment, and shall pay the balance of the charge in 15 annual installments, the first 5 of which shall each be 5 per cent of the construction charge and the remainder shall each be 7 per cent of the construction charge. The first of the annual installments shall become due and payable on December 1 of the fifth calendar year after the initial installment: *Provided*, That any allottee, entryman, purchaser, or owner may, if he so elects, pay the whole or any part of the construction charges within any shorter period: *Provided further*, That the Secretary of the Interior may, in his discretion, grant such extension of the time for payments herein required from Indian allottees or their heirs as he may determine proper and necessary, so long as such land remains in Indian title.

That the tribal funds heretofore covered into the Treasury of the United States in partial reimbursement of appropriations made for constructing irrigation systems on said reservations shall be placed to the credit of the tribe and be available for such expenditure for the benefit of the tribe as may be made under existing law.

The Secretary of the Treasury is hereby authorized and directed to credit on the books of the Treasury to the Indians of the Blackfeet Reservation, $4,544.40; to the Indians of the Flathead Reservation, $440,217.78; and to the Indians of the Fort Peck Reservation, $80,425.75, the same being the amounts heretofore covered into the Treasury on account of moneys expended upon irrigation projects upon said reservations.

The cost of constructing irrigation systems to irrigate the allotted lands of the Indians on these reservations shall be reimbursed to the United States as hereinbefore provided, and no further reimbursements from the tribal funds shall be made on account of said irrigation works, except that all charges against Indian allottees or their heirs herein authorized, unless otherwise paid, may be paid from the individual shares in the tribal funds, when the same is available for distribution, in the discretion of the Secretary of the Interior.

For continuing construction of the irrigation systems on the Blackfeet Indian Reservation in Montana, $50,000, which shall be immediately available and remain available until expended: *Provided*, That the entryman upon the surplus unallotted lands to be irrigated by such systems shall, in addition to compliance with the homestead laws, before receiving patent for the lands covered by his entry, pay the charges apportioned against such tract as herein authorized, and a failure to make any two payments when due shall render the entry subject to cancellation, with the forfeiture to the United States of all rights acquired under the provisions of this act, as well as of any moneys paid on account thereof. The purchaser of any Indian allotment to be irrigated by such systems, purchased upon approval of the Secretary of the Interior, before the charges against said allotment herein authorized shall have been paid, shall pay all charges remaining unpaid at the time of such purchase, and in all patents or deeds for such purchased allotments, and also in all patents in fee to allottees or their heirs issued before payment of all such charges herein authorized to be made against their allotments, there shall be expressed that there is reserved upon the lands therein described a lien for such charges, and such lien may be enforced, or, upon payment of the delinquent charges, may be released by the Secretary of the Interior (acts Mar. 1, 1907, vol. 34, p. 1035; Apr. 4, 1910, vol. 36, p. 277; Mar. 3, 1911, vol. 36, p. 1066; Aug. 24, 1912, vol. 37, p. 526; June 30, 1913, vol. 38, p. 90; Aug. 1, 1914, vol. 38, p. 593).

For continuing the construction of the irrigation systems on the Flathead Indian Reservation in Montana, $400,000, to remain available until expended, and the unexpended balance amounting to $186,996.81 appropriated in the Indian appropriation act approved June 30, 1913, for continuing the construction of said irrigation systems on said reservations, be and the same is hereby reappropriated and made immediately available to be expended for continuing the construction of said irrigation systems: *Provided*, That the payments for the proportionate cost of the construction of said systems required of settlers on the surplus unallotted land by section 9, chapter 1495, Statutes of the United States of America, entitled "An act for the survey and allotment of lands now embraced within the limits of the Flathead Indian Reservation in the State of Montana, and the sale and disposal of all surplus lands after allotment," as amended by section 15 of the act of May 29, 1908 (35 Stat. L., p. 448), shall be made as herein provided: *Provided further*, That nothing contained in the act of May 29, 1908 (35 Stat. L., p. 444), shall be construed to exempt the purchaser of any Indian allotment purchased prior to the expiration of the trust period thereon from any charge for construction of the irrigation system incurred up to the time of such purchase, except such charges as shall have accrued and become due in accordance with the public notices herein provided for, or to relieve the owners of all land allotted to Indians in severalty from payment of the charges herein required to be made against said land on account of construction of the irrigation systems; and in carrying out the provisions of said section the exemption therein authorized from charges incurred against allotments purchased prior to the expiration of the trust period thereon shall be the amount of the charges or installments thereof due under public notice herein provided for up to the time of such purchase.

For continuing construction of the irrigation systems on the Fort Peck Indian Reservation in Montana, $50,000, which shall be immediately available and remain available until expended: *Provided*, That the proportionate cost of the construction of said systems required of settlers and entrymen on the surplus unallotted irrigable land by section 2 of the act of May 30, 1908 (35 Stat. L., p. 558), shall be paid as herein provided: *Provided further*, That nothing contained in said act of May 30, 1908, shall be construed to exempt the purchaser of any Indian allotment purchased prior to the expiration of the trust period thereon from any charge for construction of the irrigation system incurred up to the time of such purchase, except such charges as shall have accrued and become due in accordance with the public notices herein provided for, and the purchaser of any Indian allotment to be irrigated by said systems purchased upon approval of the Secretary of the Interior before the charges against said allotment herein authorized shall have been paid shall pay all charges remaining unpaid at the time of such purchase, and in all patents or deeds for such purchased allotments, and also in all patents in fee to allottees or their heirs issued before payment shall have been made of all such charges herein authorized to be made against their allotments, there shall be expressed that there is reserved upon the lands therein described a lien for such charges, and such lien may be enforced, or upon payment of the delinquent charges may be released by the Secretary of the Interior.

That in addition to the construction charges every allottee, entryman, purchaser, or owner shall pay to the superintendent of the reservation a maintenance and operation charge based upon the total cost of maintenance and operation of the systems on the several reservations, and the Secretary of the Interior is hereby authorized to fix such maintenance and operation charge upon such basis as shall be equitable to the owners of the irrigable land. Such charges when collected shall be available for expenditure in the maintenance and operation of the systems on the reservation where collected: *Provided*, That delivery of water to any tract of land may be refused on account of nonpayment of any charges herein authorized, and the same may, in the discretion of the Secretary of the Interior, be collected by a suit for money owed: *Provided further*, That the rights of the United States, heretofore acquired, to water for Indian lands referred to in this amendment, namely, the Blackfeet, Fort Peck, and Flathead Reservation land, shall be continued in full force and effect until the Indian title to such land is extinguished.

That the Secretary of the Interior be, and he is hereby, authorized to prescribe such rules and regulations and issue such notices as may be necessary to carry into effect the provisions of this act, and he is hereby authorized and directed to determine the area of land on each reservation which may be irrigated from constructed ditches and to determine what allowance, if any, shall be made for ditches constructed by individuals for the diversion and distribution of a partial or total water supply for allotted or surplus unallotted land: *Provided*, That if water be available prior to the announcement of the charge herein authorized, the Secretary of the Interior may furnish water to land under the systems on the said reservations, making a reasonable charge therefor, and such charges when collected may be used for construction or maintenance of the systems through which such water shall have been furnished.

The work to be done with the amounts herein appropriated for the completion of these projects may be done by the Reclamation Service, on plans and estimates furnished by that service and approved by the Commissioner of Indian Affairs.

NEBRASKA.

SEC. 10. For support and education of 375 Indian pupils at the Indian school at Genoa, Nebr., including pay of superintendent, $64,500; for general repairs and improvements, $5,000; in all, $69,500.

NEVADA.

SEC. 11. For support and civilization of Indians in Nevada, including pay of employees, $18,500.

For support and education of 250 Indian pupils at the Indian school at Carson City, Nev., including pay of superintendent, $41,700; for general repairs and improvements, $5,950; in all, $47,650.

For the support and civilization of the Washoe Tribe of Indians in Nevada, including the purchase of land and water rights for said tribe, the title to which is to be held in the United States for the benefit of said Indians, $12,500.

NEW MEXICO.

SEC. 12. For support and education of 400 Indian pupils at the Indian school at Albuquerque, N. Mex., and for pay of superintendent, $68,600; for general repairs and improvements, $8,000; for the purchase of additional acreage adjoining the school farm, $12,000; in all, $88,600.

For support and education of 350 Indian pupils at the Indian school at Santa Fe, N. Mex., and for pay of superintendent, $59,550; for general repairs and improvements, $8,000; for water supply, $1,600; in all, $69,150.

For the pay of one special attorney for the Pueblo Indians of New Mexico, to be designated by the Secretary of the Interior, and for necessary traveling expenses of said attorney, $2,000, or so much thereof as the Secretary of the Interior may deem necessary.

NEW YORK.

SEC. 13. For fulfilling treaties with Senecas of New York: For permanent annuity in lieu of interest on stock (act of February 19, 1831), $6,000.

For fulfilling treaties with Six Nations of New York: For permanent annuity, in clothing and other useful articles (article 6, treaty of November 11, 1794), $4,500.

NORTH CAROLINA.

SEC. 14. For support and education of 180 Indian pupils at the Indian school at Cherokee, N. C., including pay of superintendent, $30,000; for general repairs and improvements, $4,000; in all, $34,000.

NORTH DAKOTA.

SEC. 15. For support and civilization of the Sioux, of Devils Lake, N. Dak., including pay of employees, $5,000.

For support and civilization of Indians at Fort Berthold Agency, in North Dakota, including pay of employees, $15,000.

For support and civilization of the Turtle Mountain Band of Chippewas, North Dakota, including pay of employees, $11,000.

For support and education of 100 Indian pupils at the Indian school, Bismarck, N. Dak., including pay of superintendent, $18,200; for general repairs and improvements, $2,000; in all, $20,200.

For support and education of 400 Indian pupils at Fort Totten Indian School, Fort Totten, N. Dak., and for pay of superintendent, $68,500; sinking wells and making improvements of the water system, $5,000; for general repairs and improvements, $5,000; in all, $78,500.

For support and education of 200 Indian pupils at the Indian school, Wahpeton, N. Dak., and pay of superintendent, $35,800; for general repairs and improvements, $3,200; in all, $39,000.

For the erection of a headstone to mark the grave of Scarlet Crow, a Sioux Indian chief of the Wahpeton Tribe, who was buried March 13, 1867, in the Congressional Cemetery, Washington, D. C., in a grave marked "76–R. A. 22," $100.

OKLAHOMA.

SEC. 16. For support and civilization of the Wichitas and affiliated bands who have been collected on the reservations set apart for their use and occupation in Oklahoma, including pay of employees, $5,000.

The Secretary of the Interior is hereby authorized to withdraw from the Treasury of the United States, at his discretion, the sum of $25,000, or so much thereof as may be necessary, of the funds on deposit to the credit of the Kiowa, Comanche, and Apache Tribes of Indians in Oklahoma, for the support of the agency and pay of employees maintained for their benefit.

That the Secretary of the Interior be, and he is hereby, authorized to withdraw from the Treasury of the United States, at his discretion, the sum of $250,000, or so much thereof as may be necessary, of the funds on deposit to the credit of the Kiowa, Comanche, and Apache Tribes of Indians in Oklahoma, and pay out the same for the benefit of the members of said tribes for their maintenance and support, and improvement of their homesteads, in such manner and under such regulations as he may prescribe: *Provided*, That the Secretary of the Interior shall report to Congress on the first Monday in December, 1916, a detailed statement as to all moneys expended as provided for herein.

For support and civilization of the Cheyennes and Arapahoes who have been collected on the reservations set apart for their use and occupation in Oklahoma, including pay of employees, $35,000.

For support and civilization of the Kansas Indians, Oklahoma, including pay of employees, $1,500.

For support and civilization of the Ponca Indians in Oklahoma and Nebraska, including pay of employees, $8,000.

For support and civilization of the Kickapoo Indians in Oklahoma, including pay of employees, $2,000.

For support and education of 500 Indian pupils at the Indian school at Chilocco, Okla., including pay of superintendent, $86,250; for general repairs and improvements, $6,000; in all, $92,250.

For fulfilling treaties with Pawnees, Oklahoma: For perpetual annuity, to be paid in cash to the Pawnees (art. 3, agreement of Nov. 23, 1892), $30,000; for support of two manual-labor schools (art. 3, treaty of Sept. 24, 1857), $10,000; for pay of one farmer, two blacksmiths, one miller, one engineer and apprentices, and two teachers (art. 4, same treaty), $5,400; for purchase of iron and steel and other necessaries for the shops (art. 4, same treaty), $500; for pay of physician and purchase of medicines, $1,200; in all, $47,100.

For support of Quapaws, Oklahoma: For education (art. 3, treaty of May 13, 1833), $1,000; for blacksmith and assistants, and tools, iron, and steel for blacksmith shop (same article and treaty), $500; in all, $1,500.

So much as may be required of the funds authorized by section 17 of the act of June 30, 1913 (38 Stat. L., pp. 77 to 92), for maintenance of a hospital for the Kiowa, Comanche, Apache, and Wichita Tribes, Oklahoma, may be used for the purchase of equipment and in making necessary repairs and improvements to said hospital, in the discretion of the Secretary of the Interior.

That the Secretary of the Interior is hereby authorized and directed to vacate the north half of section 3, township 4 south, range 14 west, in Oklahoma, reserved for a town site in accordance with the provisions of an act of Congress approved March 20, 1906, entitled "An act for the establishment of town sites and for the sale of town lots within the common lands of the Kiowa, Comanche, and Apache Indians in Oklahoma."

And the Secretary of the Interior is hereby further authorized to allot said lands of said town site in equal amounts to San-a-was and Pessa, enrolled Comanche Indian women who have not heretofore received allotments.

That the Atchison, Topeka & Santa Fe Railway Co. be, and is hereby, authorized to reconstruct its line of railroad through the Chilocco Indian Reservation in the State of Oklahoma, to eliminate, where necessary, existing heavy grades and curves, and for such purpose to acquire the necessary right of way, not exceeding 200 feet in width, subject to the approval of the Secretary of the Interior and to the payment for the land so taken and occupied by such new right of way of such an amount as may be determined by the Secretary of the Interior to be fair and adequate compensation therefor, including all damage which may be caused by the reconstruction of said line of railroad to adjoining lands, crops, and other improvements, said amount to be paid to the Secretary of the Interior for the use and benefit of the Chilocco Indian School.

That payments of interest, royalties, or other trust funds becoming due from time to time to any incompetent individual member of the Osage Tribe of Indians under any law may be withheld, in the discretion of the Secretary of the Interior, and the funds may be used for the benefit of such Indian, or his heirs, under such rules and regulations as the Secretary of the Interior may prescribe: *Provided*, That no part of said funds shall be paid out on account of any usurious obligation or contract.

FIVE CIVILIZED TRIBES.

SEC. 17. For expenses of administration of the affairs of the Five Civilized Tribes, Oklahoma, and the compensation of employees, $150,000.

For salaries and expenses of such attorneys and other employees as the Secretary of the Interior may, in his discretion, deem necessary in connection with probate matters affecting individual allottees in the Five Civilized Tribes, $85,000.

For the support, continuance, and maintenance of the Cherokee Orphan Training School, near Tahlequah, Okla., for the orphan Indian children of the Five Civilized Tribes belonging to the restricted class, to be conducted as an industrial school under the direction of the Secretary of the Interior, $35,000; for repairs and improvements, $5,000; in all, $40,000.

The sum of $275,000, to be expended in the discretion of the Secretary of the Interior under rules and regulations to be prescribed by him, in aid of the common schools in the Cherokee, Creek, Choctaw, Chickasaw, Seminole, and Osage Nations and the Quapaw Agency in Oklahoma, during the fiscal year ending June 30, 1916: *Provided*, That this appropriation shall not be subject to the limitation in section 1 of this act limiting the expenditure of money to educate children of less than one-fourth Indian blood.

That the Secretary of the Interior be, and he is hereby, authorized to use not exceeding $40,000 of the proceeds of sales of unallotted lands and other tribal property belonging to any of the Five Civilized Tribes for payment of salaries of employees and other expenses of advertising and sale in connection with the further sales of such tribal lands and property, including the advertising and sale of the land within the segregated coal and asphalt area of the Choctaw and Chickasaw Nations, or of the surface thereof as provided for in the act of Congress approved February 19, 1912 (37 U. S. Stat. L., p. 67), and of the improvements thereon, all of which is hereby expressly authorized and for other work necessary to a final settlement of the affairs of the Five Civilized Tribes: *Provided*, That not to exceed $10,000 of such amount may be used in connection with the collection of rents of unallotted lands and tribal buildings: *Provided further*, That during the fiscal year ending June 30, 1916, no moneys shall be expended from tribal funds belonging to the Five Civilized Tribes without specific appropriation by Congress, except as follows: Equalization of allotments, per capita and other payments authorized by law to individual members of the respective tribes, tribal and other Indian schools for the current fiscal year under existing law, salaries and contingent expenses of governors, chiefs, assistant chiefs, secretaries, interpreters, and mining trustees of the tribes for the current fiscal year at salaries not exceeding those for the last fiscal year, and attorneys for said tribes employed under contract approved by the President, under existing law, for the current fiscal year: *Provided further*, That the Secretary of the Interior is hereby authorized to continue and maintain schools during the ensuing fiscal year among the Choctaw, Chickasaw, Creek, and Seminole Tribes, payable from the tribal funds of these nations, pursuant to the act of April 26, 1906 (34 Stat. L., pp. 137 and 140).

For fulfilling treaties with Choctaws, Oklahoma: For permanent annuity (art. 2, treaty of Nov. 16, 1805, and art. 13, treaty of June 22, 1855), $3,000; for permanent annuity for support of lighthorsemen (art. 13, treaty of Oct. 18, 1820, and art. 13, treaty of June 22, 1855), $600; for permanent annuity for support of blacksmith (art. 6, treaty of Oct. 18, 1820, and art. 9, treaty of Jan. 20, 1825, and art 13, treaty of June 22, 1855), $600; for permanent annuity for education (art. 2, treaty of Jan. 20, 1825, and art. 13, treaty of June 22, 1855), $6,000; for permanent annuity for iron and steel (art. 9, treaty of Jan. 20, 1825, and art. 13, treaty of June 22, 1855), $320; in all, $10,520.

The act of Congress approved June 28, 1906 (34 Stat. L., p. 539), and the act of Congress approved April 18, 1912 (37 Stat. L., p. 88), authorizing expenditures from Osage tribal funds of not exceeding $50,000 for schools and $40,000 for agency and emergency purposes, or an aggregate of $90,000, is hereby amended to provide that not exceeding such aggregate amount may be used for such purposes when authorized by the Secretary of the Interior, in such manner as he deems for the best interests of the Osages, not exceeding, however, in the aggregate the amount so authorized.

That the Secretary of the Interior be, and he is hereby, authorized to pay to the enrolled members of the Choctaw and Chickasaw Tribes of Indians of Oklahoma entitled under existing law to share in the funds of said tribes, or to their lawful heirs, out of any moneys belonging to said tribes in the United States Treasury or deposited in any bank or held by any official under the jurisdiction of the Secretary of the Interior, not to exceed $200 per capita, in the case of the Choctaws, and $100 per capita in the case of the Chickasaws, said payment to be made under such rules and regulations as the Secretary of the Interior may prescribe: *Provided*, That in cases where such enrolled members, or their heirs, are Indians who by reason of their degree of Indian blood belong to the restricted class, the Secretary of the Interior may, in his discretion, withhold such payments and use the same for the benefit of such restricted Indians: *Provided further*, That the money paid to the enrolled members as provided herein shall be exempt from any lien for attorneys' fees or other debt contracted prior to the passage of this act. In case any Choctaw names are added to the rolls

prior to the final distribution such Choctaws and Chickasaws shall have a special payment of $200 per capita in addition to a ratable share of other property.

For salaries and expenses of six oil and gas inspectors, authorized in the Indian appropriation act approved August 1, 1914, to be under the direction of the Secretary of the Interior, to supervise oil and gas mining operations on allotted lands leased by members of the Five Civilized Tribes from which restrictions have not been removed, and to conduct investigations with a view to the prevention of waste, $25,000.

No future allotment shall be made in the Creek Nation except as may be hereafter authorized by Congress.

That the Secretary of the Interior is hereby authorized to acquire on behalf of the Choctaw Nation, Oklahoma, by purchase or otherwise, such lands or easements as shall be necessary for the purpose of a roadway leading from Wheelock Academy, Choctaw Nation, Oklahoma, to the public highway, and to expend therefore not to exceed $150 from Choctaw tribal funds.

That the Secretary of the Interior is hereby authorized to pay, out of any money in the Treasury of the United States belonging to the Creek Nation, to M. L. Mott the sum of $472.22 for services rendered the Creek Nation from January 15 to February 18, 1914, inclusive, and $210.20 as reimbursement for actual expenses incurred in connection therewith.

That section 1 of an act approved March 3, 1909, entitled "An act for the removal of restrictions on alienation of lands of allottees of the Quapaw Agency, Okla., and the sale of all tribal lands, school, agency, or other lands on any of the reservations within the jurisdiction of such agency, and for other purposes," be amended to read as follows:

"That the Secretary of the Interior may, in his discretion, and he is hereby, authorized to remove the restrictions as to sale, encumbrance, or taxation from all of the allotted lands of any adult allottee of any of the tribes of Indians, including the Modocs, belonging to the Quapaw Indian Agency, in the State of Oklahoma, whenever he shall be satisfied that any Indian allottee is competent to manage his or her affairs, but said lands from which the restrictions have been removed shall not be liable for the satisfaction of any debt contracted prior to the removal of said restrictions by the Secretary."

OREGON.

SEC. 18. For support and civilization of Indians of the Klamath Agency, Oreg., including pay of employees, $6,000.

For support and civilization of the confederated tribes and bands under Warm Springs Agency, Oreg., including pay of employees, $4,000.

For support and civilization of the Indians of the Umatilla Agency, Oreg., including pay of employees, $3,000.

For support and education of 600 Indian pupils, including native pupils brought from Alaska, at the Indian school, Salem, Oreg., including pay of superintendent, $102,000; for general repairs and improvements, $12,500; for remodeling sewer system, $3,000; in all, $117,500.

For support and civilization of Indians at Grande Ronde and Siletz Agencies, Oreg., including pay of employees, $4,000: *Provided*, That section 3 of an act entitled "An act to authorize the sale of certain lands belonging to the Indians of the Siletz Indian Reservation, in the State of Oregon," approved May 13, 1910, be, and the same is hereby, amended by striking out all of said section and inserting in lieu thereof the following:

SEC. 3. That when such lands are surveyed and platted, they shall be appraised and sold, except land reserved for water-power sites as provided in section 2 of this act, under the provisions of the Revised Statutes covering the sale of town sites located on the public domain. That the proceeds derived from the sale of any lands hereunder, after reimbursing the United States for the expense incurred in carrying out the provisions of this act, shall be paid, share and share alike, to the enrolled members of the tribe.

For maintenance and operation of the Modoc Point irrigation system within the Klamath Indian Reservation, in the State of Oregon, $4,740, reimbursable in accordance with the provisions of the act of March 3, 1911.

PENNSYLVANIA.

SEC. 19. For support and education of Indian pupils at the Indian school at Carlisle, Pa., including pay of superintendent, $132,000; for general repairs and improvements, $20,000; in all, $152,000.

SOUTH DAKOTA.

SEC. 20. For support and education of 365 Indian pupils at the Indian school at Flandreau, S. Dak., and for pay of superintendent, $61,500; for general repairs and improvements, $5,000; in all, $66,500: *Provided*, That the unexpended balance of the $10,000 appropriated by the Indian appropriation act approved August 1, 1914, for the repair of buildings and to replace equipment destroyed or damaged by the tornado of June 10, 1914, at the Flandreau Indian School, S. Dak., is hereby made immediately available for expenses incurred for the purpose stated after the tornado and before August 1, 1914, and for a water tank and the purchase of dairy cattle to be used in connection with said school.

For support and education of 250 Indian pupils at the Indian school at Pierre, S. Dak., including pay of superintendent, $43,750; for general repairs and improvements, $5,000; for steel water tank, $2,000; for addition to shop building, $1,000; in all, $51,750.

For support and education of 250 Indian pupils at the Indian school, Rapid City, S. Dak., including pay of superintendent, $48,500; for general repairs and improvements, $5,000; in all, $53,500.

For support of Sioux of different tribes, including Santee Sioux of Nebraska, North Dakota, and South Dakota: For pay of 5 teachers, 1 physician, 1 carpenter, 1 miller, 1 engineer, 2 farmers, and 1 blacksmith (art. 13, treaty of Apr. 29, 1868), $10,400; for pay of second blacksmith, and furnishing iron, steel, and other material (art. 8 of same treaty), $1,600; for pay of additional employees at the several agencies for the Sioux in Nebraska, North Dakota, and South Dakota, $95,000; for subsistence of the Sioux, other than the Rosebud, Cheyenne River, and Standing Rock Tribes, and for purposes of their civilization (act of Feb. 28, 1877), $200,000; in all, $307,000.

For support and maintenance of day and industrial schools among the Sioux Indians, including the erection and repairs of school buildings, $260,000.

For subsistence and civilization of the Yankton Sioux, South Dakota, including pay of employees, $14,000.

For the equipment and maintenance of the asylum for insane Indians at Canton, S. Dak., for incidental and all other expenses necessary for its proper conduct and management, including pay of employees, repairs, improvements, and for necessary expense of transporting insane Indians to and from said asylum, $45,000.

For a proportionate share of the amount required to construct a wagon road or highway through the Standing Rock Indian Reservation in Corson County, S. Dak., from a point on the Missouri River north of Pontis, S. Dak., thence in a northwesterly direction to the town of Tatanka, the sum of $5,000, in accordance with the report of the Secretary of the Interior of December 7, 1914, made in pursuance of the provisions of section 20 of the act entitled "An act making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes, for the fiscal year ending June 30, 1915," approved August 1, 1914: *Provided*, That such sum shall be expended under the direction of the Secretary of the Interior in such manner and at such times as he may deem proper, in the employment of Indian labor for the construction of said road or highway, and that the same shall be reimbursable from the Standing Rock Reservation 3 per cent fund under the act of February 14, 1913 (37 Stat. L., p. 675).

UTAH.

SEC. 21. For support and civilization of Confederated Bands of Utes: For pay of 2 carpenters, 2 millers, 2 farmers, and 2 blacksmiths (art. 15, treaty of Mar. 2, 1868), $6,720; for pay of 2 teachers (same article and treaty), $1,800; for purchase of iron and steel and the necessary tools for blacksmith shop (art. 9, same treaty), $220; for annual amount for the purchase of beef, mutton, wheat, flour, beans, and potatoes, or other necessary articles of food and clothing and farming equipment (art. 12, same treaty), $30,000; for pay of employees at the several Ute agencies, $15,000; in all, $53,740.

For the support and civilization of detached Indians in Utah, including pay of employees, $10,000.

The Secretary of the Interior is hereby authorized to withdraw from the Treasury of the United States, within his discretion, the sum of $150,000 of the principal funds to the credit of the Confederated Bands of Ute Indians and to expend the sum of $50,000 of said amount for the benefit of the Navajo Springs Band of said Indians in Colorado, not to exceed $25,000 of which amount may be used in providing school and hospital facilities among said Indians, and the sum of $100,000 of said amount for the Uintah, White River, and Uncompahgre Bands of Ute Indians in Utah, and the sum of $50,000 of said amount for the Southern Ute Indians in Colorado, which sums shall be charged to said bands, and the Secretary of the Interior is also authorized to withdraw from the Treasury the accrued interest to and including June 30, 1915, on the funds of the said Confederated Bands of Ute Indians appropriated under the act of March 4, 1913 (37 Stat. L., p. 934), and to expend or distribute the same for the purpose of promoting civilization and self-support among the said Indians, under such regulations as the Secretary of the Interior may prescribe: *Provided*, That the said Secretary of the Interior shall report to Congress on the first Monday in December, 1916, a detailed statement as to all moneys expended as provided for herein.

To carry into effect the provision of article 9 of the treaty of March 2, 1868 (15 Stat. L., p. 619), with the Confederated Bands of Ute Indians, for furnishing seeds and agricultural implements, the sum of $10,000, or so much thereof as may be necessary.

For continuing the construction of lateral distributing systems to irrigate the allotted lands of the Uncompahgre, Uintah, and White River Utes, in Utah, and to maintain existing irrigation systems, authorized under the act of June 21, 1906, reimbursable as therein provided, $10,000, to remain available until expended.

For a proportionate share of the amount required to construct an interstate wagon road or highway through the Kaibab Indian Reservation, Utah, the sum of $9,000: *Provided*, That such sum shall be expended under the direction of the Secretary of the Interior in such manner and at such times as he may deem proper in the employment of Indian labor for the construction of said road or highway.

WASHINGTON.

SEC. 22. For expenses incident to carrying out provisions of laws of United States applicable to the D'Wamish and allied tribes in Washington, including pay of employees, $7,000.

For support and civilization of the Makahs, including pay of employees, $2,000.

For expenses incident to carrying out the provisions of law of the United States applicable to the Qui-nai-elts and Quil-leh-utes, including pay of employees necessary to such work, $1,000.

For support and civilization of Indians at Colville, Taholah, Puyallup, and Spokane Agencies, including pay of employees, and for purchase of agricultural implements, and support and civilization of Joseph's Band of Nez Perce Indians in Washington, $15,000.

For expenses incident to carrying out the provisions of the laws of the United States applicable to the Indians at Yakima Agency, including pay of employees necessary to such work, $3,000.

For support of Spokanes in Washington (article 6 of agreement with said Indians, dated March 18, 1887, ratified by act of July 13, 1892), $1,000.

For operation and maintenance of the irrigation system on lands allotted to Yakima Indians in Washington, $15,000, reimbursable in accordance with the provisions of the act of March 1, 1907.

For support and education of 350 Indian pupils at the Cushman Indian School, Tacoma, Wash., including repairs and improvements, and for pay of superintendent, $50,000, said appropriation being made to supplement the Puyallup school funds used for said school.

For the second installment of $635,000 to pay for water supply for irrigation of 40 acres of each Indian allotment on the Yakima Indian Reservation irrigation system, in the State of Washington, provided by the act of August 1, 1914 (Public, No. 160), $100,000, to be covered into the reclamation fund (act of August 1, 1914, vol. 38, p. 605, sec. 1).

For construction of a dam across the Yakima River for the diversion and utilization of water provided for 40 acres of each Indian allotment on the Yakima Reservation, Wash., and such other water supply as may be available or acquired for the irrigation of a total of 120,000 acres of allotted Indian land on said reservation, and for beginning the enlargement and extension of the distribution and drainage system on said reservation, $100,000, to be immediately available and to remain available until expended: *Provided*, That the cost of the entire diversion works and distribution and drainage system shall be reimbursable by the owners of the lands irrigable thereunder in not to exceed 20 annual payments, and the Secretary of the Interior may fix operation and maintenance charges which shall be paid as he may direct.

That the Secretary of the Interior be, and he is hereby, authorized to make an allotment of not more than eight acres of land within the diminished Colville Indian Reservation, in the State of Washington, to Se-cum-ka-nullax in lieu of a portion of the Moses agreement allotment numbered 36 embraced within the homestead entry of Charles M. Hickerson.

That the Secretary of the Interior be, and he is hereby, authorized and directed to accept the homestead proof submitted by Charles M. Hickerson for that part of his homestead embraced within allotment numbered 36 to Se-cum-ka-nullax of Chief Moses's band of Indians if the same is shown to be in compliance with the homestead laws, and the title of said Indian to that part of said allotment embraced within said entry is hereby extinguished.

WISCONSIN.

SEC. 23. For the support and education of 210 Indian pupils at the Indian school at Hayward, Wis., including pay of superintendent, $36,670; for general repairs and improvements, $5,000; in all, $41,670.

For support and education of 250 Indian pupils at the Indian school, Tomah, Wis., including pay of superintendent, $43,450; for general repairs and improvements, $7,500; in all, $50,950.

For support and civilization of the Chippewas of Lake Superior, Wis., including pay of employees, $7,000.

For expenses incident to carrying out provisions of laws of the United States applicable to the Pottawatomie Indians who reside in the State of Wisconsin, including pay of employees, $7,000.

For the support and civilization of that portion of the Wisconsin Band of Pottawatomie Indians residing in the States of Wisconsin and Michigan, and to aid said Indians in establishing homes on the lands purchased for them under the provisions of the act of Congress approved June 30, 1913, $100,000, or so much thereof as may be necessary, said sum to be reimbursed to the United States out of the appropriation when made of the principal due as the proportionate share of said Indians in annuities and moneys of the Pottawatomie Tribe in which they have not shared, as set forth in House Document No. 830, Sixtieth Congress, first session, and the Secretary of the Interior is hereby authorized to expend the said sum of $100,000 in the purchase of houses, building material, seed, animals, machinery, tools, implements, and other equipment necessary to enable said Indians to become self-supporting.

Section 3 of the act of March 28, 1908 (35 Stat. L., p. 51), is hereby amended to read:

"That the lumber, lath, shingles, crating, ties, piles, poles, posts, bolts, logs, bark, pulp wood, and other marketable materials obtained from the forests on the Menominee Reservation shall be sold under such rules and regulations as the Secretary of the Interior may prescribe. The net proceeds of the sale of all forest products shall be deposited in the Treasury of the United States to the credit of the Menominee Tribe of Indians. Such proceeds shall bear interest at the rate of 4 per cent per annum, and the interest shall be used for the benefit of such Indians in such manner as the Secretary of the Interior shall prescribe."

For the repair and construction of sidewalks in the village of Odanah within the Bad River Reservation, $1,000, said sum to be reimbursed to the United States from any moneys which are now or which may hereafter be placed to the credit of the Bad River Band of Wisconsin Chippewa Indians.

That there is hereby appropriated the sum of $90,000 for the payment of the members of the Stockbridge and Munsee Tribes of Indians who were enrolled under the act of Congress of March 3, 1893, equal amounts to the amounts paid to the other members of said tribe prior to the enrollment under said act, and such payments be made upon the order of the Secretary of the Interior upon claims being filed with him, showing to his satisfaction that such claimants, or the ancestors of such claimants, were enrolled under the act of March 3, 1893, entitled "An act for the relief of the Stockbridge and Munsee Tribes of Indians of the State of Wisconsin."

That without bias or prejudice to the rights or interest of any party to the litigation hereinafter mentioned, the Secretary of the Interior be, and he hereby is, authorized to sell the timber on the so-called "school lands" and "swamp lands" within the boundaries of the Bad River and Lac du Flambeau Indian Reservations in Wisconsin, and to which the State of Wisconsin has asserted a claim; to keep a separate account of the proceeds of such sale with each legal subdivision of such land, and to deposit the said proceeds at interest in a national bank, bonded for the safe-keeping of individual Indian moneys, to be paid over, together with the interest thereon, to the party who shall finally be adjudged to be the owner of such land: *Provided*, That the consent of the State or parties claiming title therefrom be obtained before any such sale shall be made.

WYOMING.

SEC. 24. For support and civilization of Shoshone Indians in Wyoming, including pay of employees, $15,000.

For support and education of 175 Indian pupils at the Indian school, Shoshone Reservation, Wyo., including pay of superintendent, $31,025; for general repairs and improvements, $5,000; in all, $36,025.

For support of Shoshones in Wyoming: For pay of physician, teacher, carpenter, miller, engineer, farmer, and blacksmith (art. 10, treaty of July 3, 1868), $5,000; for pay of second blacksmith, and such iron and steel and other materials as may be required, as per article 8, same treaty, $1,000; in all, $6,000.

For continuing the work of constructing an irrigation system within the diminished Shoshone or Wind River Reservation, in Wyoming, including the maintenance and operation of completed canals, $25,000, reimbursable in accordance with the provisions of the act of March 3, 1905, and to remain available until expended.

For continuing the work of constructing roads and bridges within the diminished Shoshone or Wind River Reservation, in Wyoming, $15,000, said sum to be reimbursed from any funds which are now or may hereafter be placed in the Treasury to the credit of said Indians.

For repairs at the old abandoned military post of Fort Washakie, on the Wind River Reservation, Wyo., $881.66 from the amount heretofore collected as rentals of buildings at said post.

For extension, enlargement, and construction of the Le Clair and Riverton ditches for the irrigation of Indian allotments and land in private ownership on the north side of the Big Wind River, Wind River Reservation, Wyo., reimbursable as provided by section 1 of the act of August 1, 1914, $45,000, to be immediately available and to remain available until expended.

SEC. 25. Section 26 of the Indian appropriation act of June 30, 1913 (38 Stat. L., p. 103), is hereby repealed.

Rural Credits.

EXTENSION OF REMARKS

OF

HON. EDWARD W. SAUNDERS,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. SAUNDERS. Mr. Speaker, I am profoundly convinced that the greatest blunder of the Sixty-third Congress has been its failure to deal effectively with the great subject of rural credit—and give the farmers both farm mortgage, as well as personal credit legislation. In part this failure is due to the fact that we have occupied too much time in the discussion of measures of doubtful value. One further explanation of this failure may be traced to the method of investigation pursued by the numerous investigating bodies created by this Congress.

Under the head of the proper method of investigating this intricate subject I desire to direct attention to four resolutions which have recently been introduced. One is Senate joint resolution 232 introduced in the Senate by the junior Senator from Texas [Mr. SHEPPARD], and House joint resolutions 416, 417 and 430 introduced in this House, respectively, by the gentlemen from Mississippi [Mr. CANDLER], from Kansas [Mr. DOOLITTLE], and from North Dakota [Mr. HELGESEN]. Each provides for the creation of a commission to conduct hearings during vacation on such personal rural credit bills as may be presented by experts selected by the farmers themselves. Each of these experts will be given the right to present the merits of the bill preferred by him, and point out the defects of the bills which he opposes.

Assuredly we can not take the position that all wisdom on this subject, rests with the Members of this House. Nor do I believe that the Members of any rural credit investigating body in Congress can feel the same interest in this subject, as do the farmers themselves, otherwise some form of personal rural credit bill would have been presented long ago.

The time will never come when clerks will take the same interest in any business, as do the proprietors. Nor do I hesitate to say that my constituents could select an expert to represent them before such a commission who would be much preferred by them to any selection that I could make. Hence I am not only willing, but anxious, to meet their wishes in this respect by creating a tribunal before which they may appear with their own experts, and establish the justice of their own claims in this respect.

The four resolutions referred to have only recently been introduced, but the judicial investigation of this subject for which they provide is not new. During the previous session of this Congress several hundred of my constituents have forwarded to me petitions which have been presented to Congress praying for such an investigation. In this connection I present a copy of the petition of the farm press, which was signed by the editors of many of the most prominent agricultural journals of the country:

DEAR SIR: We, the undersigned representatives of the rural press, would respectfully call your attention to the necessity for rural personal credit legislation. We are earnestly of the opinion that farm mortgages alone will not meet the needs of rural finance, no matter how good the land-mortgage system may be. Of the two, personal credit is needed the more.

No personal credit bill is even pending, so far as we know, to say nothing of being pressed for passage. None of the commissions or committees has drafted a bill on this subject, and the only one to which our attention has been directed is the one drafted by Mr. R. C. Milliken, which has been printed for the use of the Senate Banking and Currency Committee.

We feel that the country needs more light on this subject, and we believe that if a committee of your body, or perhaps a joint committee of both bodies, were appointed to conduct hearings on the bill drawn by Mr. Milliken and a monetary expert who is thoroughly familiar with its provisions, and the objects to be obtained through it were employed to aid the committee in proving it up, it would be conducive of good results, especially so if all the interests affected by it were also permitted to appear before the committee by experts and oppose it. This would be in the nature of a trial by court, where the parties at interest are presented by counsel of their own selection; and experience has never shown a better method of establishing the truth.

We would respectfully ask, therefore, that you use your good offices for the appointment of such committee and employment of Mr. Milliken to aid it in establishing the merits of that bill. We might suggest that it might be well for the chairman of the committee to notify the presidents of the American Bankers' Association, the State Banking Commissioners' Association, the State Insurance Commissioners' Association, and the Association of Life Insurance Presidents of their privilege to appear before the committee, either in person or by such monetary expert, actuary, or other representative as they may select, who would be accorded the same rights and privileges as accorded by the committee to the monetary expert for the proponent.

Respectfully, yours,

——— ———.

The petitions of my constituents commenting on the petition of the editors of the agricultural journals will also be appropriate for insertion at this point, and are in the following form:

To the Congress of the United States:

We, the undersigned farmer citizens of the United States, pray that the requests contained in the farm press petition asking for a special committee to investigate the personal rural credit bill drafted by Mr. R. C. Milliken be appointed and employment of its author to appear and prove up its merits. The system of personal rural credit is not an untried experiment, for nearly every country in Europe has enjoyed the benefits of the same for years. So the only thing for us to do is to adapt the principles underlying the success of those systems to meet the conditions in this country.

There has been four rural credit investigating bodies established by Congress during the past two years, and, as not one of them has reported a bill for personal farm credit, are we not justified in concluding that the fault may lie in the investigating machinery? We believe the function of a congressional committee to investigate a purely scientific question, like credit, is judicial rather than legislative; and, being judicial, its machinery should comport with that of other judicial bodies which provide that the interested parties may appear by expert representatives and establish the justice of their contentions.

Therefore we earnestly pray that Congress at the present session grant the requests of that farm press petition, so that the investigation may be held during vacation and a report made at the next session, and thus enable the country to have this legislation from the Sixty-third Congress.

The requests contained in these petitions are so fair and so just that I do not see how this body can afford to ignore them. They offer an appropriate solution for this vexed problem. I am in hearty accord with the principle therein announced, that the function of a congressional committee to investigate a purely scientific question like this is judicial, and not legislative, and being judicial in character its machinery should conform to that of other judicial bodies by providing that the interested parties may appear by expert representatives of their own selection before a tribunal of impartial Government officials, and establish the justice of their own contentions.

This method of investigation not only appeals to my judgment as being fair and sound, but I believe in it from a moral standpoint. I have bankers as well as farmers among my constituents, as have many other gentlemen on this floor. These bankers are now engaged in the sale of credit for a profit, they have considerable capital invested in that business; and the farmers claim that in most European countries, productive credit is sold by farmers on the cooperative basis,—not for a profit, but as an aid to agriculture,—and where this credit is so sold, interest rates are lower than among the farmers of this country, and agriculture is on a more profitable basis than with us. Hence if we create a tribunal before which these two selfish interests may appear, and present their respective contentions, we will not be charged with representing any special interest. I maintain therefore that every Member of this body should support these resolutions from a moral standpoint alone.

Section 2 of the Sheppard and Candler-Doolittle-Helgesen resolutions reads as follows:

SEC. 2. That such subcommittee or investigating body, which is hereinafter referred to as the commission, shall hold its hearings and investigations in such manner that will permit persons who, in the commission's opinion, have sufficient authoritative backing to present bills for a personal rural-credit system in the United States to the commission and appear before them by experts of their own selection to establish the merits of their respective bills and to disprove any provisions contained in bills not presented by themselves. The commission shall notify at least one leading representative of every interest affected by such bills, including the president of the American Bankers' Association, of his privilege to appear before the commission by an expert of his own selection and to advocate or oppose any bill presented, who shall enjoy the same rights and privileges before the commission as the experts of the proponents.

Under that section one group of farmers may appear before that commission by an expert with a personal rural-credit bill embodying the German system; another group with a bill embodying the Belgian system; another the French system, and still another group may appear with a bill embodying a blend of all those systems. Each expert would be specially interested in establishing the merits of his particular proposition, and pointing out the defects of the other bills, while the members of the commission would sit as a court to confine the experts to the issues, and not permit them to ramble. Each expert would see to it that the evidence introduced by the other experts was authentic, and relevant to the issues, and would seek to test the credibility of the witnesses introduced by the opposition. In addition to the farmers' experts, there would be the experts of the bankers and investing classes in the event they sought to avail themselves of the privilege extended by the resolutions. Should the experts of the latter class fail to come before the commission, this would in no wise reduce its power or hinder a full disposition of the subject matter.

In order to fully appreciate the force and effect of this method of investigating a scientific subject, it is well to consider the present prevailing practice in making such investigations. As a rule the chairman selects the witnesses to testify, and becomes their principal interrogator. He is allowed an appropriation so as to enable him to secure the aid and services of an expert, but no opposing view may be presented by an expert, with the right to cross-examine the witnesses introduced by the committee. This system does not admit of the fullest and most dispassionate investigation of a subject matter. Hence the request for such an investigating body as is provided for in the Sheppard resolution.

One of the first acts of this Congress two years ago was to create a United States commission to study rural credits abroad. A Member of this House [Mr. Moss] and two Members of the Senate [Senators FLETCHER and GORE] were on that commission. They reported a land-mortgage bill, and said that they believed that personal rural credit could "best be enacted by the various State legislatures." Their land-mortgage bill was referred to subcommittees composed of members of the Banking and Currency Committees of the two bodies. After a long investigation they respectively reported bills. These two bills are as wide apart as the poles, and the members of the commission, and the two subcommittees are at such loggerheads that it has been impossible for us to secure any legislation on land mortgages from this Congress. I believe the best solution of the land-mortgage subject would be to extend the scope of the Sheppard and Candler-Doolittle-Helgesen resolutions so as to embrace land-mortgage bills and require the authors of the above bills to appear before the proposed commission, and submit their bills to the test provided under these resolutions. Another thing which may be said in favor of these resolutions is the small appropriation asked for, only $9,000.

When my constituents began to send me petitions praying Congress to create a special committee to hold hearings on this subject of rural credits, I saw at once from the number and character of the writers that they were much interested along this line. The farmers are not asking anything unreasonable in this matter. They are not asking anything that will be to the prejudice of business, or of the common weal. They are asking for an opportunity for the full development of a system of vital interest to them, and therefore of vital interest to the whole country. They propose to play their hands upon the table, and submit the personal rural credit plan to the most searching investigation and the most remorseless inquiry. If the plan is unworkable, and indefensible it will break down when subjected to such an inquiry and investigation. But by all means afford the opportunity at least for inquiry into the merits of this plan by the establishment of the commission proposed in the resolution of the Senator from Texas.

Fortifications Bill.

EXTENSION OF REMARKS
OF
HON. WILLIAM KETTNER,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. KETTNER. Mr. Speaker, shortly after my election to the Congress of the United States my attention was called to numerous Government projects along the Pacific coast that seemed to require special attention.

Among these was the question of the coast defense at San Diego. Through the courtesy of the commanding officer at Fort Rosecrans I was permitted to go through the fortifications.

Fort Rosecrans is a part of Point Loma, a promontory extending some miles into the ocean and forming the entrance to San Diego Bay. The fortifications already there are located on the southeastern slope, and the four 10-inch disappearing guns which form the principal item of the defense are arranged so that they command the entrance to the channel and all approaches from the south; but on the west and north a gunboat could stand off the coast and shell the city of San Diego. At the same time troops could be landed anywhere along the coast from the Point to Pacific Beach, a distance of perhaps 9 miles.

I took this matter up with the department, and Gen. Weaver in his report two years ago mentioned the fact that San Diego should be better protected. However, there was no provision made in the department budget for that year. Subsequently I again went over this matter in the department, calling attention to the growing importance of San Diego and its important position from an Army and Navy standpoint. A further investiga-

tion was made, with the result that the present fortifications bill carries $335,000 to provide for mortar batteries at San Diego.

As far back as 1896 preliminary steps were taken to fortify this point. Surveys were ordered, but no work of importance was undertaken. Some 10 years later the Endicott Board included San Diego in a list of some 25 forts for which extensive fortifications were recommended. Now San Diego is a city of some 100,000, is the first port of call in the United States north of the Panama Canal, and would naturally be a point of attack, as it would be an excellent base of supplies, and the harbor is extensive—sufficiently large to accommodate any battleship fleet that might be operating on the Pacific coast.

The people of San Diego have tried for years to cooperate in every way possible in order to bring about the extension of fortifications, and it is a pleasure to be able to assure them that the department and the Congress have recognized the justice of their representations and requests.

In reading the report of the hearings before the subcommittee I was impressed with the fact that even now the department is not unanimous as to the importance of these much-needed improvements. However, the exposition in San Diego will surely attract a great number of our Senators and Representatives, and we hope to be able to impress upon them our strategic importance and our defenseless condition, and I am sure a few years will see the necessary work accomplished to fully protect this city and harbor.

The Ship Purchase Bill.

SPEECH

OF

HON. WILLIAM ALDEN SMITH,

OF MICHIGAN.

IN THE SENATE OF THE UNITED STATES,

Saturday, January 30, and Monday, February 1 (legislative day of Tuesday, January 26), 1915.

The Senate had under consideration the bill (S. 6856) to authorize the United States, acting through a shipping board, to subscribe to the capital stock of a corporation to be organized under the laws of the United States or of a State thereof or of the District of Columbia to purchase, construct, equip, maintain, and operate merchant vessels in the foreign trade of the United States, and for other purposes.

Mr. SMITH of Michigan. Mr. President, we have listened for the last hour to an address prepared by my honored friend, the senior Senator from California. When I first knew him here he was a man of heroic mold, magnificent physique, clear-headed, big hearted, an earnest, honest, manly man. His form has been somewhat tempered by time, but this address this afternoon gives evidence that his brain has not been in any degree affected by the storms of physical adversity which he has encountered.

Mr. President, I want to say here, in the evening of his long and useful career which is about to close, that there has been no more faithful, painstaking, patriotic public servant in the councils of this Nation than Hon. GEORGE C. PERKINS, of California, who will soon retire to private life with his well-won laurels thick upon him. It is not age alone that has left its indelible imprint upon him, but his feeble step and bent form may be attributed to his consistent earnestness and fidelity in the performance of his public duty. During 22 years of public service here the senior Senator from California has not missed 22 days. Whenever Congress was in session Senator PERKINS's presence could be confidently counted upon by his colleagues.

I know that I express the feeling of admiration of all Senators on both sides of the Chamber who are present this afternoon upon this final—no; I hope not final, but this last utterance of this sagacious, manly, and noble man, and that in the retirement which he has voluntarily chosen he may take with him to his home in California the good wishes and the deep affection of every Senator in this body, whether upon the other side of the Chamber or upon this.

Do not feel, dear Senator, that your days of usefulness have passed.

Chaucer, at Woodstock with the nightingales, at 70 wrote the Canterbury Tales. Goethe, at Weimar, toiling to the last, completed Faust when 80 years were passed.

These are indeed exceptions, but they go to show how far the gulf stream of our youth may flow into the arctic river of our lives.

Where nothing else than life itself survives—

> But as the evening twilight fades away
> The sky is filled with stars invisible by day.

So, my honored friend, in the very evening of your life, in the plenitude of your mental strength, I hope that your sky may be filled with brilliant stars, radiant with your happy and cheerful spirit, and that the twilight of your life may long linger as the sweetest and the most delightful period in your long years of public and private usefulness.

Mr. President, I have been moved to say this because I have sat beside this kindly man ever since I have been a Member of this body. During the long vigils of the night, when earnest work crowds thick upon us, I do not recall an hour when he has not been at his post of duty.

I know something about the people of California. My father and my brother and my sister sleep the long sleep in its soil, and my noble mother and loved sister still breathe its clear, pure air.

I know how the people in your State feel toward you, sir, and I candidly believe that had it not been your own desire, even in your weakened physical state, they would have attested their affection again by a renewal of your commission and sent you back to a seat which, even to the minutest detail, you have never dishonored.

Mr. President, I have just been reading the veto message of the President of the United States on the immigration bill. There are two or three sentences in it which seem to me especially appropriate in the consideration of the bill now before the Senate. On page 4 of that message the President says:

> If the people of this country have made up their minds to limit the number of immigrants by arbitrary tests and so reverse the policy of all the generations of Americans that have gone before them, it is their right to do so. I am their servant and have no license to stand in their way. But I do not believe that they have. I respectfully submit that no one can quote their mandate to that effect. Has any political party ever avowed a policy of restriction in this fundamental matter, gone to the country on it, and been commissioned to control its legislation? Does this bill rest upon the conscious and universal assent and desire of the American people? I doubt it. It is because I doubt it that I make bold to dissent from it. I am willing to abide by the verdict, but not until it has been rendered. Let the platforms of parties speak out upon this policy and the people pronounce their wish. The matter is too fundamental to be settled otherwise.

If a Senator rises in his place on this side of the Chamber and gives expression to exactly that view concerning a bill now pending before the Senate, he is accused of filibustering. If a Senator has the audacity to say that no political party has ever declared itself upon the question of the proposed ship-purchase bill, some one on the other side of the Chamber will say that they represent the latest expression of public opinion of the country. Well, Mr. President, let us see about that. President Wilson, for whom I had great admiration as a private citizen, says in his book, The New Freedom:

> No group of men less than the majority has a right to tell me how I have got to live in America. I submit to the majority because I have been trained to do it. The singular thing about the people of the United States is their almost infinite patience, their willingness to stand quietly by and see things done which they have voted against and do not want done, and yet never lay the hand of disorder upon any arrangement of government.

He says that he believes in majority government. I do not question his veracity; but does he believe in majority government, with all due respect to his utterances while an author and before he became a public official. I will tell you why he does not believe in majority rule. In 1912, 6,293,019 votes were cast for President Wilson and a "tariff for revenue only." The same year 7,604,463 votes were cast for "protection to American industry and labor." If he believes in majority rule, with what audacity did he convene Congress for the purpose of setting aside a law for which the people of this country had in the last election by a preponderance of the votes declared?

Now, to be a little more specific—

> The minority is telling us what we shall do—

Said Mr. Wilson, the author. We are standing patiently by and seeing things done that the majority voted down and do not want. In 1912, 14 States, by a majority vote, chose Wilson and Marshall and a tariff for revenue only. Please remember the figures, because it has an important bearing upon some figures which I shall quote in a moment. In the election in 1912, 14 States, only by a majority vote, chose Wilson and Marshall for President and Vice President of the United States and pronounced in favor of a "tariff for revenue only." In the same year 34 States cast a majority vote against Wilson and Marshall and declared full protection for American industry and labor.

Does the President believe in majority rule? Why did he not respect it? In 1912, 14 States only declared for revenue reform and the Democratic ticket by a majority vote, while 34

States branded the fallacy of free trade with the branding iron or repudiation, and proclaimed themselves in favor of protection to American industry and labor.

Lest there be some confusion about these figures, which I hope may be remembered, I desire to enumerate the States. The States standing for protection to American industry and labor by a majority vote in 1912 were California, Colorado, Connecticut, Delaware, Idaho, Illinois, Indiana, Iowa, Kansas, Maine, Michigan, Minnesota, Missouri, Montana, Nevada, Nebraska, New Hampshire, New Jersey, New Mexico, New York, North Dakota, Ohio, Vermont, Oregon, Pennsylvania, Rhode Island, South Dakota, Utah, Vermont, Washington, West Virginia, Wisconsin, and Wyoming—34 States without the least particle of sympathy with the revenue-tariff policy of the Democratic Party.

Now, let us see what States favored free trade and gave a majority vote for Wilson and Marshall. According to the census of 1910, the States in which a majority vote was cast for protection had a population of 64,993,653. One vote was cast for every 5½ persons. The population of the States declaring for free trade or tariff for revenue only and for President Wilson by a majority vote was 20,542,348, and one vote was cast for every 12½ persons.

Was the President sincere when he made his statement as a private citizen and an author that nothing less than a majority of the people could control him? If so, why did he convene Congress in extraordinary session to take advantage of the mere accident of this election as President of the Republic?

Mr. President, it is historical—and he, being a historian, will probably enjoy the comparison—that when he convened Congress in extraordinary session to revise the tariff in accordance with the will of a minority of the States of the Union and a minority of the popular vote of the country, he did violence to the settled industrial policy of this Government. When he signed the law, which he drove through Congress at the point of the bayonet, he signed it, he says, upon the advice of the Attorney General of the United States at 9 o'clock and 25 minutes in the evening, in order that the business of the country might not be disturbed thereby. Think of passing a law the effect of which was to be so detrimental to the country that the President was obliged to withhold his signature to the bill until all places of business had closed from New York to San Francisco!

I wish he could have known the history of previous tariff bills. I had the pleasure of having a small part in the House of Representatives of assisting in the burial of the last Wilson free-trade law nearly 18 years ago, and that law was as disappointing and unsuccessful as the present tariff. When President McKinley signed the Dingley tariff bill, he did not wait until all the business houses in the country were closed from ocean to ocean in order not to disturb commerce and industry; he signed it in the morning so that languishing industry and unemployed labor might take new hope for the day, and how it responded to his magnetic touch history amply reveals, while the great McKinley was reelected as a just tribute to his patriotism and wisdom. But the present President of the United States, who does not come within a million and a half votes of representing a majority of the American people and who only carried a minority of the States, waited until the darkness of night hovered over every industry of the country, until the lamps were out and labor off its guard, when, under the advice of his Attorney General, he took his pen and made valid this demoralizing law.

I do not think we have had a President—I know we have not since I have been in public life, and I have been here 20 years—I do not think we have ever had a President who was so hopeful with so little cause as our present honored Chief Executive. From the day he signed that bill he has hourly proclaimed himself the advance agent of prosperity, and yet, notwithstanding his delusion, prosperity is not here, and it will not return until protection is restored as a settled national policy.

When President Wilson came into office our factories were humming with the rattle of busy looms; our forges glowed with furnace fires; the ports of our commerce stirred with the pulses of enlarged trade; and improvements in city, town, and hamlet were adding to the beauty and utility of the land. To-day, after a year and a half of theoretical experimentation by our Democratic friends, the factories are idle, men are unemployed, the Treasury is fast becoming bankrupt, capital is discouraged, Castle Garden, formerly the throne room of our alien citizenship, has been turned from an immigrant station into a soup house; there are no immigrants coming for they can not get any work to do, and there are millions of our own citizens in idleness.

I could, if I were so disposed, read a story of want and misery and woe from every part of our country. I have just returned from California, which prospered so greatly under protection and whose people were happy and contented; now they are discouraged and demoralized in nearly every department of industrial enterprise, while Congress spends the larger proportion of its time in building strait-jackets for business men and fastening new burdens upon them.

Mr. WALSH. Mr. President——

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Montana?

Mr. SMITH of Michigan. I yield for a question, of course.

Mr. WALSH. Is the Senator able to state any evidence of such a condition in my State?

Mr. SMITH of Michigan. I think, if the Senator will honor me by his presence for a while, I will give him some figures that may interest him. I dislike to anticipate his desire too promptly.

Mr. WALSH. I will be glad to have the Senator answer the question in his own time.

Mr. SMITH of Michigan. Let me see what I have here. Here is a review, written on the 16th day of January, 1915, by George C. Potter, a prominent business man of Jamestown, N. Y., of R. G. Dun & Co.'s reports:

JANUARY 16, 1915.

DUN'S REVIEW,
R. G. DUN & CO.,
New York City.

GENTLEMEN: Our firm has been a subscriber to R. G. Dun & Co. for over a quarter of a century and to the Review since its first issue. We are always much interested in the annual number.

In the issue just received, dated January 9, you show that the expansion in business during 1913 and 1914 has been one of record-breaking mortality, with more failures in both years than ever occurred before in our history. You also say:

"This in a measure was traceable to the effects of the European war, which accentuated the depression in trade and exerted a particularly unfavorable influence on conditions in the South."

You refer, of course, to the cotton States and the collapse of cotton prices; but upon analyzing the figures, it appears that the increase of failures in all these States combined—North Carolina, South Carolina, Georgia, Alabama, Tennessee, Mississippi, Oklahoma, Louisiana, and Texas—is only about 500, while in the three Middle Atlantic States—New York, New Jersey, and Pennsylvania—the increase was about 700.

Of the Southern States, Florida shows the largest increase—404 failures in 1914, against 183 in 1913—but Florida can hardly be classed as a cotton State; and if the balance of the country was prosperous the luxuries grown in Florida, such as fruits and early vegetables, would find ready sale at good prices. Oranges and grapefruit have not been bringing enough on the New York market to pay for the boxes and transportation, and this, no doubt, accounts for much of Florida's business mortality.

That is the home of our honored friend from Florida [Mr. FLETCHER], who is the sponsor for this bill.

Does anybody deny that on the other side of the Chamber? Come on, you champions of free trade and low tariff, you happy-hearted, cheerful Democrats, who in a measure are responsible for the present condition of the country. Let some of you rise and deny these figures. Gloom, nothing but gloom, pervades the Chamber—gloom on that side that they should have committed such a folly, and gloom upon this side that we have got to "watchfully wait" for two years longer.

My friend from Florida did not hear these figures. I am going to give him one or two, just for his own information. I will press on, however, at this point, as I do not want to delay the consummation of this fifth folly of the administration, and this is pressed in the face of a deficit of one hundred millions per year.

Oh, how beautiful your theory of free trade and foreign trade, which you have brilliantly painted from political platforms for generations, yet which for a half century you have had but two opportunities to exemplify, and both have signally failed! Ever since you passed that law, and changed our trade balance, and discharged men from their employments, and caused panics and failures, you have been trying to find some diagnosis sufficiently scientific to distract the country's attention from the real cause.

My, what a record!

In some way that name seems to be attached to our most supreme follies.

Nobody here can deny these figures.

Mr. FLETCHER. Mr. President, may I interrupt the Senator for a question?

Mr. SMITH of Michigan. To be sure.

Mr. FLETCHER. He seems to be inviting some sort of response on this side; but I can not see what the tariff has to do with this shipping bill.

Mr. SMITH of Michigan. It has everything to do with it. Money raised from customs is to be used to buy ships. You just sweep from one folly to another without continuity of thought.

Mr. FLETCHER. If the Senator will allow me to finish my question, I will proceed.

Mr. SMITH of Michigan. Oh, certainly. I respect my honored friend from Florida very highly.

Mr. FLETCHER. As I have understood, the Senator's view all along has been that what the American manufacturer wanted was the home market, and that what he complained about was the introduction into this country of goods to compete with his; and that if those goods were not permitted to come in as liberally as it is claimed they would come in under a Democratic tariff bill, labor would be better off, and our industries would prosper. How is it, now, that when the effect of this world-wide war is practically to build a wall around the United States, there happens to be so much gloom, when the very highest type of protection is afforded by conditions over which we have no control?

Mr. SMITH of Michigan. If anybody on that side of the Chamber had asked that question but the Senator from Florida, I do not think I would stop to answer it; but the Senator from Florida is a business man, and he has business sense. When I tell him that the failures in his own State have been greater, the mortality of business life has been greater, than in any of the preceding years—and I have demonstrated it here by figures which can not be denied—and the Senator rises to say that a temporary restraint in importations, due to a condition of affairs in which we have not had the slightest influence, should be a sufficient stimulus for the American business man to engage in new enterprise, it is the height of folly.

I will say to the Senator from Florida that I have had the pleasure of visiting the little Kingdom of Holland, which is below the sea; but those sturdy Dutchmen pushed back the sea and planted a garden where old Neptune was formerly monarch, and they built the dikes around that Kingdom to keep out the sea. There has not been a year since the dikes were first built that the Government of Holland has not made an appropriation to build them higher, and yet for more than a quarter of a century water has not imperiled the Kingdom. You ask the Queen of the Netherlands why she is so solicitous about the dikes, and she will tell you that her people realize the constant danger they are in from inundation, and while the dikes stand the menace is minimized. It is a crime to bore through the dikes of Holland. They keep them up because they want to give permanent assurance to their labor and their capital that their business and their employment and their home life will not be disturbed by the rising tide. I suppose if the honorable Senator from Florida were the head of the Netherlands Kingdom and no tide happened to sweep over its banks, he would stop the appropriations and refuse to keep the dikes intact. We can not tell how long this war may last. We had no part in starting it, but months before it started the business men of this country were upon the rocks. You have used the war as a subterfuge to blind the people against the real causes of our business depression, and now you talk about the war being a protective wall!

Will the Senator from Florida put a dollar in the sugar business of this country to-day? The war protects it, and your party has struck it down. Sugar is bringing a good price. Will the Senator from Florida invest in stock in any sugar company? I know where he can get it at less than 50 cents on the dollar, because there is no permanence in the protection which the war affords and your party has exposed the industry to absolute free trade.

I said a few moments ago, and I am going to repeat it for his benefit, that R. G. Dun & Co. report that of the Southern States Florida shows the largest increase in failures last year—404 failures in 1914 against 183 failures in 1913:

> Florida can hardly be classed as a cotton State; yet, if the balance of the country was prosperous, the luxuries grown in Florida, such as fruits and early vegetables, would find ready sale at good prices. Oranges and grapefruit have not been bringing enough in the New York market to pay for the boxes and transportation. This no doubt accounts for Florida's awful business mortality.

Does the Senator from Florida deny that such a condition of affairs is entirely unsatisfactory to the people of Florida? I have heard the honored Senator plead in this Chamber for protection for his industries, Democrat though he is. He is a very good protectionist for the industries of Florida, but he is a better party man than he is a protectionist, and to present a solid party front in favor of this demoralizing low-tariff policy he abandoned the industries of his own State, and the record of R. G. Dun & Co. shows the result more strikingly than I could do—a rate of mortality in the business of Florida that is positively appalling.

Mr. FLETCHER. Mr. President, may I interrupt the Senator for just a moment?

Mr. SMITH of Michigan. Certainly; I yield to the Senator from Florida.

Mr. FLETCHER. It is true perhaps—I have not had occasion to inquire into the matter—that the increase in the failures in Florida has been considerable in the past year. That does not necessarily mean that the failures have been very numerous. It may mean that in previous years they were very rare. The increase may be great, and still not show a very depressing condition. It is true, on the other hand, that Florida has suffered severely on account of the war. It is true that Florida produces one-third of the long-staple or sea-island cotton of the country. She also produces quite a considerable amount of the short-staple cotton; and cotton, as we know, has suffered on account of its depending largely on the foreign markets for realizing a profit. It is true that one of her chief industries, also, is naval stores, producing something like $20,000,000 per annum, and the naval-stores market is——

Mr. SMITH of Michigan. Mr. President, in yielding for a question I do not yield the floor. The President will, of course, protect my right to proceed, after the Senator from Florida finishes his question.

The PRESIDING OFFICER. Nothing has occurred to deprive the Senator from Michigan of the right to the floor, and nothing will occur as long as he yields for a question.

Mr. SMITH of Michigan. I yield for a question only; although it is rather elaborate, I want to answer it.

Mr. FLETCHER. I understood the Senator to put the matter in such a shape that an answer was really called for, and I am attempting to answer by way of an inquiry, and, of course, without depriving him of any of his rights to the floor.

I was proceeding to respond to the Senator's suggestion in regard to the depressed conditions in my own State. I had gone so far as naval stores, which also depend upon a foreign market and which in Florida amount to something like $20,000,000 per annum ordinarily. The largest naval stores producing State in the country is Florida.

Another great industry in Florida is the phosphate industry. It produces some 78 per cent of all the phosphate produced in this country and over half of all produced in the world. The rates of freight from the ports of Florida to Rotterdam, a neutral port, have gone from $2.80 per ton this time last year to $10.80 per ton, practically prohibitive, so they can not move the phosphate at all at present.

These three great industries are crippled under these circumstances, temporarily only, because Florida has passed through some disasters in the past and she has never yet been discouraged. She lost in one awful night, like the going out of an electric light, over a hundred million dollars in orange groves; but she recovered from all that, and she will recover from this condition. However, I mention these facts by way of responding to the Senator's suggestion as to the conditions in a business way in that State, and I think the Senator will admit that those circumstances form some just explanation of the conditions.

Mr. SMITH of Michigan. Mr. President, I appreciate the rejoinder of the Senator from Florida; he has come to the defense of his State as I expected him to do. I do not want the people of Florida to be discouraged. How long they will continue to support Democratic policies I do not know. The rate of mortality business runs pretty high in Florida, much higher than in the cotton States, who are also discouraged. In fact, I think I can see signs of encouragement. Utopian dreams of two years ago will soon wear off, and political changes now foreshadowed will bring about more favorable business conditions.

I was quoting, however, from this R. G. Dun report before the European war began. It staggered me when I saw that Florida was in that situation, although I know that other States that raise luxuries are suffering the same way. California, most unprosperous and unhappy condition. I actually know of my own accord that the laboring men of California are driven to desperation owing to lack of employment; that serious plans have been contemplated for great public work that labor may be relieved of its embarrassment.

Mr. President, if we will be honest with ourselves we will all admit that these conditions are not overdrawn. This is not an imaginary painting. It is the plain, blunt truth. You can not save people with daily proclamations of prosperity, whether they come from the White House or from any other source. You have got to give them employment, and that has been denied them under this new tariff law.

The Democratic Party are responsible for a good many vagaries and impracticable plans; but they were most unfortunate in imagining that they had received a commission from the majority of the American people to overturn our fiscal affairs and then proceed to put a majority of the American people out of employment.

When President Wilson took the oath of office in the portico of this Capitol every fourth person in the Republic had a bank

account to his credit. More than 25,000,000 people had money in the banks. Does anybody deny that? I am afraid you did not quite catch it on the other side. I say, when President Wilson took the oath of office in the east portico of this Capitol every fourth man in the Republic had a bank account—money to his credit. You scattered labor to the four winds of heaven. You have driven them from their habitations and their employments into strange parts of the country seeking work. How proud you must be over your achievements.

Proclamations from the White House do not buy meat, potatoes, butter, and eggs. The country can not feed itself very long on figures of speech, no matter how refined it may be.

And I repeat that your party imagined it held a roving commission from the electorate to destroy at will the safeguards of American industry, and you are now trying to enact this bill by force of numbers, not reason, although you have no mandate from a majority of the people of the United States to thus change the course of the ship of state.

Oh, how I wish the President would take some of his own advice. Listen to what he says in his last veto message:

> Let the platforms of parties speak out upon this policy and the people pronounce their wish. The matter is too fundamental to be settled otherwise.

Let the platforms of parties speak out upon the question of our abandonment of a policy of government which for more than a century has lain upon the very heart of the Republic. Let party platforms speak out. Then it will be time enough to determine whether we are all socialists and in favor of Government ownership of merchant ships.

But 6,000,000 people declared for free trade at the last presidential election; 1 for every 12½ persons voted in the South. Sixty-four million people declared for protection and against free trade, while on the popular vote for President in 1912 the Democrats lacked a million and a half votes of having a majority mandate from the American people for free trade. Wreck, ruin, disaster, disappointment, and failures have testified to the unwisdom of their policy from the very hour the bill was signed by President Wilson up to this minute. If you think the American people do not understand that it was your folly and not the European war that created this havoc in the country, you are mistaken.

Mr. BRISTOW. Mr. President——

The PRESIDING OFFICER (Mr. WALSH in the chair). Does the Senator from Michigan yield to the Senator from Kansas?

Mr. SMITH of Michigan. I yield for a question.

Mr. BRISTOW. Referring to the late veto message wherein the President assumes that the immigration bill has not been passed upon by the American people, and therefore he did not permit it to become a law, does not the Senator from Michigan think it would be a good thing to have this pending measure submitted to the American people for them to pass on?

Mr. SMITH of Michigan. Yes, Mr. President; that is a fair question. The architects of our Government were very wise men, sagacious and farsighted; they planned our Government in such a manner that its destinies would be controlled by party organizations; but there were some things they lodged so securely in its foundation that even parties could not profane them.

Most of the follies that have been suggested in government for a hundred years have been broken at the doorway of party organizations. The Democratic Party was convinced in a moment of moral lapsus that free silver was a good thing. They regretted it later, and willingly let our party extricate them from danger; and I do not care how persistent or able that old element of the Democratic Party may be in the future, they will never again commit that party to such a folly. Republican courage and the temperate wisdom of the voter saved the Government from repudiation in 1896, but the unwise leadership of Mr. Bryan still hangs like a loadstone about the neck of Democracy, and new ills are borne through his tutelage every minute. This is one of his fancy figures; and if defeated now, will be promptly interred beside his free-silver baby.

So, in answering the honored Senator from Kansas, I am not quite sure that even this is ripe enough to submit; caucuses have been hopelessly divided on it; it is an entering wedge. If the folly were temporary and would stop with the purchase of a few vessels for ocean commerce, we upon this side of the Chamber might not feel so bad about it; but it is the forerunner of errors so numerous and far-reaching that we ought to pause and seriously consider it before even taking it to the voters of the Nation on a referendum. But if my honored friend from Kansas, whose sense and sagacity all his colleagues appreciate, would propose a referendum of this bill, we could at least have the consolation of knowing that the American people have been taken into the confidence of the administration before pledging itself to a doctrine so radical and ill considered.

Mr. BRISTOW. Will the Senator yield further for an interrogatory?

Mr. SMITH of Michigan. Certainly.

Mr. BRISTOW. I appreciate the difficulties in a direct referendum, but does not the Senator think that it is always advisable to test public opinion to a greater or less degree in regard to given legislation by giving the American people an opportunity to study and reflect upon things that are new and unusual and of vast moment? If this bill could go over for two or three months, in the course of time vacancies occur in congressional districts, and would not the Senator be willing to test the merits of this legislation in almost any congressional district in the United States where public opinion prevails?

Mr. SMITH of Michigan. Oh, unhesitatingly; yes.

What they are trying to do, if I may say it to my honored friend, is not to accomplish things of permanent value to our country—they are flitting around, trying to distract public attention from the vital weakness of their political principles. They try first one thing and then another—remedies, remedies, unexhausted remedies—they are not good diagnosticians. First, the people were to get a living at a lower cost by this new tariff law. Lo and behold, they have not got money enough under it to get a living at any cost! Then the President and his followers thought that there was not money enough in the country, though there was more currency in the country than there had ever been before in the history of our Government. Over three billions of money was circulating freely and interchangeably throughout the country at par; yet he thought that the necessity existed for more money, and every effort has been made to expand the currency and stimulate enterprises by flushing the channels of commerce with easy money. Our opponents overlook the fact that it is not currency, but confidence, that is lacking. It has always been so when Democracy is in power. Menacing meddlers destroy business initiative and arrest development. From the day they took the reigns of Government in their hands doubt and hesitation hung like a pall over our industries, while fruitless investigations have terrorized business men.

How well I remember eight years ago standing in my place near where the Senator from Kansas [Mr. BRISTOW] is now sitting. I heard the Aldrich-Vreeland bill advocated, and I saw it generally antagonized from the other side of the Chamber. I do not recall anybody over there who favored it. They denounced it as a measure giving favors to the bankers. I gave some attention to that bill when it was before the Senate. It contained a provision under which emergency currency could be issued on railroad bonds of a certain class. I struck the first blow at that provision, not because I did not think the railroad bonds would be good security, but I knew that, if one class of those securities were made available for emergency funds out of the Treasury and another not, such discrimination would affect vitally the value of American railroad securities. Every Senator on the other side of the Chamber, I think, opposed the Aldrich-Vreeland bill; but we passed it and provided for the printing of $500,000,000 in notes. We set the Engraving and Printing Bureau at work printing them. They finished the printing of $500,000,000 in notes, sealed them up, tied them strongly together in sealed packages, laid them away in the vaults of the Treasury, and, during the six succeeding years of Republican administration we never so much as broke a seal on a single package of that money. There were no hasty conferences at the White House to know what to do with the deficit then. The seal was not broken on a single package of that $500,000,000 of emergency currency until Woodrow Wilson took his knife and slit them all, passing out $348,000,000 of them to help weather the Democratic gale.

Mr. WEEKS. And provided for $500,000,000 more.

Mr. SMITH of Michigan. Yes; as the Senator from Massachusetts says, and provided for an issue of $500,000,000 more. No wonder Senators upon the other side flee from the Chamber in great haste in the face of these facts. [Laughter.]

Mr. BRISTOW. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Kansas?

Mr. SMITH of Michigan. Certainly.

Mr. BRISTOW. Let me inquire of the Senator if this $348,000,000 was not issued under the Aldrich-Vreeland Act months and months after the present currency law had been passed and was available for use? The administration, apparently being afraid to use it, availed itself of the old Republican law in order to tide the country over a panic.

Mr. SMITH of Michigan. Oh, yes. The Senator from Kansas is absolutely right about it. They were afraid of their own

creation; they did not have any confidence in it. I do not now recall whether the President signed that bill at night or at noonday, but most of the bills that have been enacted by our Democratic friends could be fittingly signed in the nighttime.

What did you take that $348,000,000 out of the Treasury for? Stand up and answer. The other side of the Chamber is crowded with Democratic Senators; they are standing motionless in the face of this charge. The Senator from Florida [Mr. FLETCHER] is hastily looking over his data. [Laughter.] Can I not get an answer to my question in this Chamber, electric with Democratic wisdom? [Laughter.] Such silence is not characteristic of Democracy. Last night they were full of dash and spirit. Why did President Wilson cut the seals and the tape which bound the $500,000,000 which he found locked in the Treasury when he went to the White House? We had more money then in circulation than ever before—over $3,000,000,000 of currency. There was no contraction of the circulating medium. Why, they put that money out to artificially stimulate industry that was shipwrecked and calling for help, and even that was not enough, for in some Southern States, notwithstanding the inhibition against it, they issued State money to relieve their embarrassment. Referendum, indeed! There will be a referendum which the Constitution requires every four years, and the fitness or the unfitness of the Democrats to run this Government will have to be met in the forum of the Nation.

Oh, how the unemployed cry out! I was in London when the unemployed of London made a demonstration one night from Trafalgar Square to London Bridge. The good Queen went out and collected alms for the people; and while they appreciated the motive that prompted her, they said, "We do not want alms; we want work." To-day municipalities have ordered public work throughout our country for the unemployed. Mayor Mitchel, of New York, has given almost all of his time since he was elected to that high office in trying to find employment for the unemployed. Castle Garden has become a soup house. My God, Senators upon the other side of the Chamber, think of it, right under the statue of Columbia Enlightening the World, Castle Garden now a public soup house! The first thing the traveler sees after crossing the billows of the mighty deep is the reflected light of Columbia Enlightening the World. Suppose in letters of living light there could be flashed upon the incoming visitors the truth about our industrial conditions, emigrants would avoid us as they would a pestilence.

"The Republican Party has not had a new idea for 30 years." says President Wilson. I hope not, if they are the new ideas which the author of that sentence, in a moment of desperate partisan wit, undertook to perpetrate. It is a well-known fact among students of contemporaneous history that the limitless and inexhaustible new ideas of the present administration have utterly clogged its mental digestion. "Not had a new idea for 30 years!" Well, as with a party, so with a man, so with a country. If it has a good reputation, it can run a while on that; and our country has had a good reputation among the nations and at home. It has had a good reputation for paying its debts; it has had a good reputation for wisdom in foreign affairs and in the solution of domestic problems.

Let us see whether we have had any ideas for 30 years. We were in power, were we not, from 1900 to 1910? I will take the census as our basis; I do not care to appeal to any other figures; the census is the only thing that our friends upon the other side do not dispute. We are not at all agreed upon the Constitution, and they put their own interpretation upon Holy Writ; but the census they can not deny; that is incontrovertible. They may not like it in all respects, but they do not deny it, for the Census Bureau is the one branch of our Government in which they as well as we have had a part. Down to the humblest enumerator, Democrats have had their share of the appointments. They named all the enumerators in the South, where their party is dominant. "Not a new idea for 30 years," says the President over at Indianapolis. How disappointing such a reckless utterance. If he could be coaxed to make another speech of that kind, the verdict in 1916 against him would be practically unanimous. But I must not be diverted. Let us examine the fruits of Republicanism.

During the years 1900 to 1910 the population of our country increased from 76,000,000 to 90,000,000; the national wealth increased from $88,000,000,000 to $137,000,000,000; yet the President says all we could do was to "sit on the lid." What a dignified expression—"sit on the lid"! Yet our national wealth increased from 1900 to 1910 from $88,000,000,000 to $137,000,000,000. The Republican Party was in power, and our friends on the other side were so hopelessly in the minority that they could not even make a loud noise. Talk it over, Senators; weigh these problems; but do not deny the census. The savings deposits increased from 1900 to 1910 from $2,389,000,000 to $4,070,000,000—almost double—and yet the President of the United States has the audacity to say that we can do nothing but sit on the lid! [Laughter.]

Why, labor had more money to its credit when President Wilson took the oath of office on the east portico of this Capitol than would be required to pay for more than a third of the combined national debts of the 50 leading countries of the earth; and yet the President has the audacity to say that we have not had a new idea for 30 years. Our old ideas must have been very good and well suited to the country with such results as these to our credit.

The postal receipts increased from $102,000,000 in 1900 to $224,000,000 in 1910. Somebody must have been doing something besides "sitting on the lid" to have written so many letters to employ this great agency of the country to get in touch with their fellow men throughout the land.

Mr. BRISTOW. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Kansas?

Mr. SMITH of Michigan. Certainly.

Mr. BRISTOW. May I ask the Senator to again state the facts as to the postal increase?

Mr. SMITH of Michigan. According to the census, the postal receipts increased from $102,000,000 in 1900 to $224,000,000 in 1910.

Mr. BRISTOW. Let me inquire if that increase was not a gradual annual increase?

Mr. SMITH of Michigan. Yes; it was gradual.

Mr. BRISTOW. There being a decided increase every year?

Mr. SMITH of Michigan. Yes, Mr. President.

Mr. BRISTOW. Is the Senator from Michigan aware that at present the postal receipts are diminishing about 5 per cent?

Mr. SMITH of Michigan. Well, I know that people have ceased to send letters home. Business men are curtailing their mailing accounts. Postal receipts are the very best index to business conditions throughout the country.

Mr. BRISTOW. Is the Senator not aware that for the first time for almost a generation we find our postal receipts diminishing instead of increasing?

Mr. SMITH of Michigan. Until now I do not think our postal receipts have diminished since the last Wilson tariff bill, about twenty-odd years ago, but not during the intervening years. This table shows a gradual increase each year under McKinley, Roosevelt, and Taft.

If we can only "sit on the lid," how can the President account for the fact that the expenditures for public schools increased from $200,000,000 in 1900 to $401,000,000 in 1910? What astounding figures those are! Yet they cover a decade of Republican rule, when the Democracy had no heart and no faith in their own strength. The country spent the money lavishly, and there were no hasty meetings at the White House between the Secretary of the Treasury and the President to determine how they should meet a deficit. Sit on the lid! I do not know how he said it, but I think my friend the Senator from Indiana was with him.

Mr. SHIVELY. No; I was not.

Mr. SMITH of Michigan. If I misquote him, I rely upon the Senator to correct me.

Mr. SHIVELY. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Indiana?

Mr. SMITH of Michigan. I yield for a question.

Mr. SHIVELY. Since the Senator has seen fit to refer to the Senator from Indiana, who is in his seat, and has called his name, I will say that I was not present on that occasion.

Mr. SMITH of Michigan. I think the Senator's colleague was. I beg the Senator's pardon.

Mr. SHIVELY. I regret very much that I was not there, but I could not be present.

Mr. SMITH of Michigan. Well, I am glad the Senator was not there, because I know his keen sense of fairness and justice, as shown in all his political life, and I know he would not have uttered a sentence so undeserved as the one the President applied on that occasion.

Mr. SHIVELY. The Senator must not think that I regard his remarks as at all complimentary.

Mr. SMITH of Michigan. Oh, Mr. President, I did not intend them so. The Senator can take them any way he pleases. I have great respect for the Senator, however, and I do not want to kindle any thought in his heart that the friendship which I have for him should be wiped out by a passing remark. I am glad, however, he was not there at that speech, which was disappointing to the country and to his own party and not creditable to the presidential office. I could not believe my

eyes when I read in the CONGRESSIONAL RECORD that "Woodrow," laughed when talking about "watchful waiting."

Mr. CUMMINS. "Chuckled."

Mr. SMITH of Michigan. Yes; "chuckled" when talking about "watchful waiting." I could not believe he could talk about the "watchful waiting" Mexican policy, and "chuckle" when 17 of our boys had been shot down to their death on Mexican soil. He actually "chuckled"! Did he not go over to New York to bury them with national honors? My God! Why did he chuckle at Indianapolis? Such levity in the presidential office is new to the Republic. I knew a President, whose birthday was celebrated yesterday, who went among the sick and the dying; but I did not hear him chuckle. We wear carnations on our breasts in his honor and recall his virtues with honest pride. Chuckle, indeed!

"We have done nothing but sit on the lid," says the President. The number of depositors in the savings banks increased from 3,107,000 in 1900 to 9,142,000 in 1910. Is that any indication of prosperity? Every fourth man in the Republic had a bank account. There was more money to the credit of labor than had been mined on our soil from the time Columbus discovered America until the present hour. Yet we are told our party has not had a new idea for 30 years. Providence deliver us from some of the new ideas of the present administration.

The capital invested in manufactures increased from $8,078,000,000 in 1900 to $18,237,000,000 in 1910 under protection to American industry and labor and the beneficent administration of the Republican Party. Does anybody deny that? These are the figures from the census, not a Republican census but a bipartisan census. Ten billions; a billion a year! Yet, forsooth, we are to be told from high places that all we have done is to "sit on the lid."

I think the country chuckled a little at the President's expense when that speech was made. It was a purely partisan harangue from the first word to the last.

Let us go a little further.

The capital invested in manufactures increased from $8,078,000,000 in 1900 to $18,237,000,000 in 1910. The wages and salaries paid in manufactures increased from $2,390,000,000 in 1900 to $4,353,000,000 in 1910. There is where labor was happy. There is where the home was glad. There is where the spindles sang their noonday song. We were then in power in all branches of the Government. Prosperity was on every hand.

The products of manufactures increased from $11,411,000,000 in 1900 to $20,092,000,000 in 1910.

What a marvelous increase! Your State, I will say to the Senator from Texas [Mr. SHEPPARD], shared in that delightful period of American prosperity. Your population multiplied, your fertile fields showed the results of prosperity, your happy people went about their employment with renewed hope and energy. Your cities grew as they had never grown before. Your vast territory, I say to the Senator from Texas, blossomed and bloomed during this period of Republican rule. Yet the President of the United States says that during the last 30 years we have done nothing but "sit on the lid"!

I am sorry my argument has such a magic effect upon the Senators on the other side. I wanted to say more about the imperial State of Texas. I wanted to go more minutely into its prosperity. But the Senator from Texas stayed only long enough to listen to the first period of my remarks. Now he is gone. Well, I console myself with the thought that his neighbor from Louisiana [Mr. THORNTON] has come into the Chamber. God knows he could give testimony as to the blighting effects of Democracy upon the industries of his State. He could give eloquent testimony against the experiments of the President. If there is any question about it, I have the testimony of his successor before me. Oh, what a story it is! The Democratic administration sacrificed Louisiana to the foreign wolves and the bears. Her proud and prosperous industry was stricken as with a blight at nighttime, stricken at the very height of its prosperity and development, stricken notwithstanding Louisiana aided in strengthening his grasp. He struck her down. Louisiana, in sackcloth and ashes, is a striking testimonial to the blighting effect of free trade. I say that in the hearing of the Senator from Louisiana [Mr. RANSDELL], and if I have overstated it I pause to be corrected; and yet this period is the era of the new freedom.

"Sit on the lid," said the President in his Indianapolis speech. "Sit on the lid," indeed! Listen. The materials consumed in manufactures increase from $6,577,000,000 in 1900 to $11,675,000,000 in 1910, under protection. The number of employees increased from 5,079,000 in 1900 to 7,399,000 in 1910.

The primary horsepower used increased from 10,000,000 horsepower in 1900 to 19,000,000 horsepower in 1910. And yet the President of the United States says that all we could do was to "sit on the lid"!

Oh, how hastily my friends from Louisiana have fled the Chamber! They know where the weak spot in their political armor lies. They know that the Democratic Party struck a savage blow at Louisiana. I do not want to become involved in any controversy with the Senators from Louisiana, both of whom I respect very highly; but why they should have left the Chamber in such haste when I was merely complimenting the State and chastising its foe I do not understand.

Mr. President, here is an item which I thought would interest my friend from Oklahoma:

The value of the farm lands increased from $13,000,000,000 in 1900 to $28,000,000,000 in 1910. Somebody must have been doing something besides sitting on the lid. Somebody must have been cultivating these lands to have raised them from $13,000,000,000 to $28,000,000,000. What political party was then in power?

The value of the farm buildings in 1900 was $3,556,000,000. Ten years thereafter the farm buildings had increased in value to $6,294,000,000—more than double. Somebody was doing something besides sitting on the lid. They were building houses, cultivating their soil, and increasing its value by leaps and bounds, and the Republican Party was still in power.

Look at the demoralized condition of this country to-day—tax ridden, debt burdened—and the responsibility for it is not difficult to locate. The country will make note of it and will not be diverted by hectic proclamations about the effect of a European war upon our business life, for months before the European war business men were in the very slough of despondency. It got so that a business man did not dare to come here in answer to a presidential summons lest he should be held up and have his pockets picked by an emergency tax.

Mr. BRISTOW. Mr. President——

The PRESIDING OFFICER (Mr. MARTINE of New Jersey in the chair). Does the Senator from Michigan yield to the Senator from Kansas?

Mr. SMITH of Michigan. For a question.

Mr. BRISTOW. The Senator, I understand, is a member of the Committee on Foreign Relations. I was told to-day by a gentleman who has just returned from Europe that there is growing in every European country a feeling of unfriendliness toward the United States; that the German people are hostile to us; that the English people are becoming more so every day; and that there is a sentiment of hostility growing up in France. He attributed it to the present unwise policy of the present administration in dealing with great problems that come before the State Department.

I wanted to ask the Senator to give us his views. Does he recognize the statement of this gentleman, who is a very reliable gentleman, as true, and if so, what is the cause of this unfriendly development in all those great European nations and among their people?

Mr. SMITH of Michigan. The Senator does me too much honor. However, I know he has asked this question because he desires an answer, and because he thinks that my long service upon the Committee on Foreign Relations of the Senate and in the House of Representatives as well may, perhaps, make me more or less familiar with the European attitude toward our Government. I do not think, however, that it takes a member of the Committee on Foreign Relations to see the consequences of our diplomatic folly. I may be wrong about it, but for a long time I have felt that whenever our Government announced a policy there was no sincerity in it, our representatives abroad promptly apologizing for our show of vigor. We recall what was said by our ambassador to Great Britain in London a few months before the repeal of the Panama tolls law. There has been a truckling spirit throughout our entire foreign intercourse for several years.

While we have offended to the quick almost every country in this hemisphere—however, I must not be diverted at this point; I will answer the Senator after I have concluded my remarks regarding industrial independence.

The last figures I gave were on the increase in the value of farm buildings, during the decade from 1900 to 1910, which was remarkable. The value of farm implements and machinery increased from $749,000,000 to $1,261,000,000 in those 10 years. Who made that farm machinery? American labor was employed. Who built all these houses and barns and improved these farms? American labor. Who tills these fields? American labor. Is there any wonder that the people were prosperous then? You can easily account for it. It could not be otherwise, because we were patronizing our own people; we were doing business at home.

The farm value of oats produced in 1900 was $208,000,000; in 1910 it was $384,000,000. Somebody raised those oats. Somebody was doing something besides "sitting on the lid."

The farm value of cotton produced in 1900 was $438,000,000. In 1910 it was $820,000,000; quite a jump in 10 years; and all under Republican administration.

This farm value of cotton seed increased from $77,000,000 during those 10 years to $142,000,000.

The value of horses in 1900 was $603,000,000; in 1910, $2,276,000,000. Notwithstanding the automobile was performing a part of the labor, yet horses were used in the multiplied employment for which they were suited during those 10 years of Republican prosperity.

The value of milch cows in 1900 was $514,000,000; in 1910, $780,000,000.

The value of sheep in 1900 was $122,000,000; in 1910, $233,000,000.

The value of hogs in 1900 was $185,000,000; in 1910, $436,000,000.

The total value of farm animals in 1900 was $2,228,000,000; in 1910 it was $5,138,000,000.

The total value on the farm of farm productions in 1900 was $5,017,000,000; in 1910 it was $8,926,000,000.

I could continue to enumerate the multiplied blessings under the beneficent rule of the Republican Party until I exhausted my strength, but I hasten on. Our policy has strengthened the Government at every point. The President's policy has plunged our country into debt. We issued some bonds to help pay for the Panama Canal, but we paid so much of the expense out of our current income that $30,000,000 in bonds was left by us in the Treasury; and the honored Senator from Florida and his associates upon the other side of the Chamber now propose to reach into the Treasury by this bill and take those bonds out and spend the avails on an experiment; an experiment pure and simple, a doubtful experiment.

Oh, Mr. President, why not be candid and honest with one another? We ought not to be obliged to go to the census to find an indorsement for our acts. In the last presidential election over 7,135,000 people proclaimed themselves for protection to American industry and less than 6,200,000 proclaimed themselves in favor of a revision of the tariff.

Mr. BRISTOW. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Kansas?

Mr. SMITH of Michigan. For a question.

Mr. BRISTOW. I have been very much interested in the Senator's discussion of the financial situation of the Government. He refers to the tariff. Was it not alleged by the promoters of the tariff bill that there would be a decline of about $70,000,000 from that bill in the revenues, and that that would be made up by an income tax? Now, has not the decline of $70,000,000 practically come about as was predicted, but while the estimated revenues from the tariff were what we expected and counted upon, we find ourselves now in a condition of having to levy $100,000,000 of unusual and special taxes upon the people to make up the additional deficit over and above what was estimated; and now it appears from the papers that notwithstanding this additional $100,000,000 of taxation that has been levied upon the people of the United States, after that is collected and put in the Treasury there is still, so the papers state, about $80,000,000 additional deficit which is not yet accounted for. I wanted the Senator, if he can explain to the Senate, how it is that the revenue estimated by the promoters of the tariff being approximately what they said it should be, we find ourselves in the condition of having to levy $100,000,000 additional taxes and still make up the deficit of about $80,000,000?

Mr. SMITH of Michigan. The question of the Senator from Kansas does him great credit. It is true that Mr. HULL, the author of the income-tax law, stated to the House that $42,000,000 would be raised under it. But $28,000,000 was raised under it. It is true that of the $58,000,000 in duty collected under the old law on sugar $43,000,000 will now be absorbed by the Sugar Trust. Under the old rate which went out on the 1st of March by virtue of the Underwood Act the Treasury of the United States has suffered, while the Sugar Trust has absorbed in the 10 months since the reduction was made nearly $15,000,000 which the Treasury needs and should have had. At this rate, by the end of 12 months, as the result of its 25 per cent reduction, fully $18,000,000 will have been absorbed by the trust and lost to the Treasury.

The income-tax law has not been a success. It was never intended to be applied except in great governmental stress. The power to pass it was lodged in the Constitution in order that if an emergency arose the Congress could enact a law by which private incomes could be drawn upon to assist the Government. It was never contemplated that this power should be lodged in the Constitution for the sole purpose of helping the Democratic Party to set its house in order.

Mr. BRISTOW. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield further to the Senator from Kansas?

Mr. SMITH of Michigan. I yield for a question.

Mr. BRISTOW. My inquiry is, Have not the revenues collected from the tariff law been about what was estimated there would be collected?

Mr. SMITH of Michigan. Oh, yes; and importations have come in abundance, destroying, in a measure, the labor market here.

Mr. BRISTOW. Will not the decrease in the amount of money collected from tariff duties be at the end of the year about what the chairman of the Committee on Ways and Means of the House of Representatives indicated that it would be?

Mr. SMITH of Michigan. Substantially.

Mr. BRISTOW. That being the case, the Senator has just pointed out that there has been a loss of about $14,000,000 in the estimated amount of income tax that would be collected.

Mr. SMITH of Michigan. In the 10 months.

Mr. BRISTOW. Making $15,000,000 or $16,000,000 during the year. My inquiry is, What is the cause of this deficit of $80,000,000? Deducting the $16,000,000, we will say, that has been found, it leaves $66,000,000 of a deficit yet to be accounted for.

Mr. SMITH of Michigan. I think it is due to several causes. I think one of them is the profligacy with which appropriations have been made. Even Mr. FITZGERALD, the chairman of the House Committee on Appropriations, was obliged to warn his own party that they were dangerously near the rapids, that they must stop or they would go over the falls. Again and again Mr. FITZGERALD, the Democratic leader from New York, spoke out against it. Mr. SISSON, another Democrat, a Member from Mississippi, warned his colleagues in the House of Representatives over and over again that they were near the danger point; and yet they have gone on until on yesterday the President hastily calls the House chiefs in council to check the deficit.

The revenue from imports has approximated the estimate made by the chairman of the House Committee on Ways and Means, whom I regard very highly. I served on the Committee on Ways and Means with him. I think a great deal of him; he is a very honorable and upright man. His figures on the probable revenue from customs were not very far astray.

But during the first seven months of the Underwood-Simmons bill our free list showed an increase in importations of $140,000,000. If those articles had been caught up at the customhouse and assessed as they should have been assessed, we would not have a deficit in the revenues.

Mr. McLEAN. We have spent $100,000,000 more.

Mr. SMITH of Michigan. Yes, Mr. President; the Senator from Connecticut is right. We have spent $100,000,000 more, but our free importations increased in less than nine months $140,000,000 under the new law.

Mr. BRISTOW. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield further to the Senator from Kansas?

Mr. SMITH of Michigan. I do.

Mr. BRISTOW. The Senator from Michigan has just stated that we have spent $100,000,000 more than we did the previous year. I want to inquire of the Senator if the American people have gotten any service of any value for this additional hundred million dollars of burden which has been placed upon their backs?

Mr. SMITH of Michigan. No; and if you add the $40,000,000 to it for this experimental test of socialism, which radiates from every line and syllable of the bill now before us, you will have $40,000,000 more from which the people will derive no benefit at all. I do not consider that the people have derived great benefit from many of these laws. They have multiplied the number of employees tremendously; they have also sent them scurrying throughout the country—special agents of the Department of Commerce and of the Treasury Department, turning over every toadstool they come across to see if it is not a mushroom. [Laughter.] They have detectives and special agents running up and down this country at Government expense who never should have been commissioned.

When the first blighting effects of this tariff law began to be manifest—and they were manifest early—the Secretary of Commerce said that if anybody should curtail wages or discharge anybody, he would use a searchlight to ascertain the cause. I think he is still investigating, but we have had no reports. One day last spring before the offices of one of the automobile com-

panies in Detroit more than 6,000 people stood begging for work. Why did not the Secretary of Commerce investigate that? It was a most fruitful field for introspection.

Mr. BRISTOW. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield further?

Mr. SMITH of Michigan. I do; I yield for a question.

The PRESIDING OFFICER. The Senator from Michigan yields for a question.

Mr. BRISTOW. Let me inquire of the Senator if there has not only been added $100,000,000 of additional burden by public taxation and public expenditure, but has there not also been added a vast burden in increased expense to the banking business of the country?

Mr. SMITH of Michigan. Oh, Mr. President——

Mr. BRISTOW. Is not the great expense of maintaining that cumbersome, impracticable, unnecessary, and unsuccessful bank law, which has been foisted upon the country, a burden upon the borrowers of the country? Has it not added increased interest which they have to pay for the money they borrow?

Mr. SMITH of Michigan. I am not sure about it; but I think the first year of the existence of the new reserve banking act will show that it has failed to earn its overhead and fixed charges by several million dollars. I do not know; I should have to look it up and see; but one of my honored friends had considerable to do with this business. I do not like to be impatient about the results that the country is to get from that law, but coming across the country from ocean to ocean a little while ago I did not find that any great number of people were availing themselves of the law.

I stepped into a bank in Boston but a few weeks ago and was shown the available loanable balance in the hands of that bank and of the reserve bank; and the bank that was running on its own merits outside of the reserve system had eight times the loanable funds that the reserve bank had, and was loaning its money at a less rate of interest.

Mr. BRISTOW. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Kansas?

Mr. SMITH of Michigan. Certainly; I yield for a question.

Mr. BRISTOW. I want to make an inquiry, but I wish first to make a preliminary statement. I will say that I think the Senator is right when he says that the great banking system which has been recently organized will not by any means pay its expense during this year. Will not the expense of maintaining the system have to be met by taxing the banks? The Federal reserve bank will levy assessments on the member banks. When those banks pay for this cumbersome system, which they do not use and which is absolutely of no benefit to them, they have not got to take the money out of their earnings, but do not the earnings of the banks come from interest paid by borrowers who get money from those banks?

Mr. SMITH of Michigan. Undoubtedly.

Mr. BRISTOW. Is not this system resting with great weight and burden upon the borrowing public of the United States?

Mr. SMITH of Michigan. Undoubtedly. The banks of the country are not happy over it and the borrower, who is obliged to make an affidavit that he had never looked cross at his wife before he can get a loan from one of these reserve banks, is not getting very much benefit out of the system. I know that in the State of Michigan, with which I am somewhat familiar, the people have not availed themselves of this banking system to any great extent; in fact, most of our people regard it as a partisan institution from top to bottom. They think it was framed along partisan lines; they think that the committee, consisting of two partisan members of the Cabinet, went out and located the reserve banks in sections that were calculated to do their party the most good.

I have looked in vain at the Federal Reserve Board to find a Republican on it. The Democrats could not possibly have passed the law in the Senate if there had been any idea that the board was to be a partisan board, and yet it is rankly partisan. I think it is a bad thing to permit any political officer of this Government to have such power over the private banking of the country, representing, as it does, the savings of labor. I was told by a very prominent banker in a New England State that the Secretary of the Treasury read the riot act to him because he would not subscribe to the cotton loan. He talked to him for 30 minutes, trying to coax him to take some of the cotton loan, and when he could not coax him he threatened him, then the president of that bank said, "We will take none of the loan."

I do not want to be hasty in my judgment of that law. I heard the other side condemn our relief measures without warrant and I lived to see the scoffers praise; I think, however, it was conceived in spite. I do not believe the banks of this country would have gone into the system if they had not been threatened with a repeal of their charters. If those who have talked so boldly about the referendum had had a referendum among the bankers of the country to see whether or not they wanted to join the Federal reserve system, I think they would have gotten an overwhelming verdict against it. Many of those that are now in it would like to get out of it, but I understand that there has been a ruling that, once in, there is no escape. They can not repeal the charters of State banks, however, and it remains to be seen whether they will enter the system.

Oh, the trouble with this administration from the day that they took the oath of office to this minute has been that they are not good diagnosticians; they can not locate the disease; remedies, new remedies, is their hobby, while the patient is bewildered by their audacity. [Laughter.] They have issued more money because they thought that would inspire confidence. Oh, yes; how well I remember the battle here between the then Senator from Rhode Island, Mr. Aldrich, and the Senator from Oklahoma [Mr. OWEN], then new in this Chamber, but vigorous, keen, and alert, over the Aldrich-Vreeland bill.

We ordered $500,000,000 of that money printed in the similitude of the national currency, folded it up, sealed it, put it away in the Treasury, and locked the vault; and for eight years the doors of that vault were not opened nor a seal broken on a single package of emergency currency, until the present administration ran the country upon the rocks and then sought to revive it by spreading this $500,000,000 over the land, and raised the limit from $500,000,000 to $1,000,000,000 in order that they might stimulate lagging, faltering industry. No Republican ever cut those seals; not a dollar went out under our administration. There is a case where we possibly "sat on the lid," but it was to our credit. We had ample money in circulation, more than ever before in the history of the Republic. Improvements in city, town, and hamlet were adding to the beauty and utility of the land, spindles sang from daybreak to sunset, and there was work for everyone to do until Democracy came.

Oh, what a record of failure and bankruptcy and idleness every month of your administration has seen! The European war, indeed! How fortunate you were to have a European war to which you might attribute the ills of our body politic when we are at peace with all mankind! The Russo-Japanese War did not affect us; our prosperity continued right along—even increased through forced purchases—and even our war with Spain did not arrest our prosperity under McKinley and the Dingley laws. War, indeed! If you think the country is ever going to believe that that is the cause of our domestic trouble, you mistake the intelligence of your countrymen. You were not commissioned by a majority of the American people. Thirty-four States repudiated your tariff doctrine. You are in by accident, and you hope to stay in by the accident of war. If our people can live upon figures of speech, upon well-rounded sentences, upon epigrammatic utterances, they may try you further; but I do not believe it. The last election did not look like it. I have not been able to get a Senator upon the other side of the Chamber to deny these figures; not one. Even the Senator from Florida, in whose State there were 404 failures last year, more than in any other year in the history of his State, acknowledged that his State was in a deplorable condition. He acknowledged it. It is in the record. I have the figures.

Mr. BRYAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Florida?

Mr. SMITH of Michigan. Yes; certainly. I yield for a question.

Mr. BRYAN. Yes; for a question.

Mr. SMITH of Michigan. I referred, however, to the senior Senator from Florida [Mr. FLETCHER].

Mr. BRYAN. We are both from the same State. Does the Senator from Michigan deny the fact that our shipments of phosphates—and Florida exports 80 per cent of the phosphates produced in this country—that our shipments of lumber, that our shipments of naval stores—of which the State of Florida produces 56 per cent of the production of the country, worth $40,000,000—have been influenced by the European war?

Mr. SMITH of Michigan. I wish the junior Senator from Florida had been in the Chamber when the senior Senator from Florida pleaded guilty to this indictment of R. G. Dun & Co. Your State began to feel the blighting effect of this tariff policy months before the European war began.

Mr. BRYAN. Years before.

Mr. SMITH of Michigan. Months.

Mr. BRYAN. Years.

Mr. SMITH of Michigan. No; I have the record. I will read the record to the Senator.

Mr. BRYAN. Was the Senator, when he was describing all this Republican prosperity, referring to the years 1907 and 1908?

Mr. SMITH of Michigan. Nineteen hundred and seven and nineteen hundred and eight? Yes; I have covered those years.

Mr. BRYAN. Those were very prosperous Republican years.

Mr. SMITH of Michigan. Yes; I have covered that period, and I am sorry the Senator was not here——

Mr. BRYAN. I am sorry, too.

Mr. SMITH of Michigan. Because I have taken the figures from the census, which is nonpartisan.

Mr. BRYAN. It would have been interesting to hear the Senator from Michigan explain how it was that we had such great prosperity in 1907 and 1908.

Mr. SMITH of Michigan. Yes; I explained it.

Mr. BRYAN. If that is so, I should like to know why it was that the Republican Party, which produced all this prosperity, while the Democratic Party was carrying some 22 States, only carried 2.

Mr. SMITH of Michigan. That was a mere accident. I have just said, a moment ago, that you got in by accident. You did not have a majority vote, and you will never get a majority again.

Mr. BRYAN. We got in by unanimous consent.

Mr. SMITH of Michigan. No; you are going out by unanimous consent. [Laughter.]

Mr. BRYAN. If we do, we will only do as the Republicans did two years ago.

Mr. SMITH of Michigan. No; I can not admit that. We tried to elect two Republicans at one time to the same office. The Senator from Florida is drawing on his imagination somewhat.

Mr. BRYAN. No; there is no imagination about that. That is a fact.

Mr. SMITH of Michigan. I am going to repeat one or two things here for the benefit of the Senator from Florida, because I like him and I do not want him to go far in darkness and doubt.

Mr. BRYAN. I shall be glad to hear the Senator from Michigan.

Mr. SMITH of Michigan. I know the Senator will.

Mr. BRYAN. I am especially interested in anything the Senator from Michigan says, because it is possible he will have much to do with the return of prosperity if unfortunately the Republican Party should ever again be intrusted with power in this country.

Mr. SMITH of Michigan. That is a very high compliment, but I am not eligible for higher honors. Men have to be defeated before they are eligible for a higher place, and I have never been defeated yet. I am well satisfied with my present honors. Now, do not go too far away, because I want to get these figures into your mind.

Mr. BRYAN. I shall be within range of the Senator. The Senator takes a wide range when he gets started.

Mr. SMITH of Michigan. Almost all the Senators on that side get out of range promptly.

I want to call the attention of the Senator first to the statement of the R. G. Dun Co. regarding Florida, and then I am going to turn to something else. I read a letter from Mr. Potter to Dun's Review and R. G. Dun & Co., under date of January 16, in which he said:

> Our firm has been a subscriber to R. G. Dun & Co. for over a quarter of a century and to the Review since its first issue. We are always much interested in the annual number. In the issue just received, dated January 9, you show that the expansion in business during 1913–14 has been one of record-breaking mortality, with more failures in both years than ever occurred before in our history.

Mr. BRYAN rose.

Mr. SMITH of Michigan. Now, wait until I get through. Just restrain your impatience.

Mr. BRYAN. I simply wish to ask whom that is from.

Mr. SMITH of Michigan. It is from one of the leading business men of the country to R. G. Dun & Co., quoting from Dun's Review:

> You also say this, in a measure, was traceable to the effect of the European war, which accentuated the depression in trade and exerted a particularly unfavorable influence on the conditions in the South. You refer, of course, to the cotton States, to the collapse of cotton prices; but upon analyzing the figures it appears that the increase of failures in all these Southern States combined—North Carolina, South Carolina, Georgia, Alabama, Tennessee, Mississippi, Oklahoma, Louisiana, and Texas—is only about 500, while in the three Middle Atlantic States—New York, New Jersey, and Pennsylvania—the increase was 700. Of the Southern States, Florida shows the largest increase in failures—404 failures in 1914, against 183 failures in 1913—but Florida can hardly be classed as a cotton State; and if the balance of the country was prosperous the luxuries grown in Florida, such as fruits and early vegetables, would find a ready sale at good prices. Oranges and grapefruit have not been bringing enough on the New York market to pay for the boxes and transportation, and this no doubt accounts for much of Florida's business mortality.

Now, I did not say that all business in Florida had gone Democratic. I simply say that they have had a larger percentage of failures since Woodrow Wilson became President than ever before.

Mr. BRYAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan further yield to the Senator from Florida?

Mr. SMITH of Michigan. I do.

Mr. BRYAN. I do not deny that, Mr. President.

Mr. SMITH of Michigan. I knew the Senator would not. He is an honest man and a faithful public servant, and I respect him very highly.

Mr. BRYAN. It is undoubtedly true that it has been the hardest year in Florida since 1907. It may even exceed that year. What I was objecting to, however, was the Senator's attributing that to the tariff or to the Democratic policy in regard to the tariff. Florida has never received any benefit from the tariff. None of our products were on the protected list, save and alone oranges; and Florida oranges are so superior to any other oranges that they could go into the markets of the world and take the markets of the world.

Mr. SMITH of Michigan. Yes; but nobody wants them now, because no one is at work on more than half time. Millions of people are out of employment, and they can not buy oranges, and they are not buying them in Florida, and they are not buying them in California, and they are rotting on the ground.

Mr. BRYAN. That is largely true, I will say to the Senator.

Mr. SMITH of Michigan. Yes; that is true.

Mr. BRYAN. Oranges are selling at a very low price; but the sale of oranges does not take place in large quantities until nearly the close of the year. The great trouble with us has been in the lumber business, in the phosphate business, in the naval-stores business, and in addition to those things, we have cotton, and then the fact that there has not been the market for the citrus fruits.

Mr. SMITH of Michigan. Yes; I think the Senator is correct about that.

Mr. BRYAN. But certainly, so far as we are concerned, the tariff has not had anything to do with it, because those money crops have all been exported.

Mr. SMITH of Michigan. I will tell you why the tariff has had something to do with it. Every man who works in a cotton mill, every man who works in a shoe factory, every man who works in a furniture industry is the patron of every other man. The man who makes desks does not make chairs, nor baskets, nor shoes, nor clothes, and he does not raise oranges, or lemons, or grapefruit. He just makes desks; and if he can not get a market for his desks he can not buy the grapefruit, nor the clothes, nor the shoes. That is the truth about it.

A man who makes glass—and there are many thousand of them—only makes glass. He buys everything else that he needs. He hires the carpenter to build his home, the bricklayer to lay his brick, the carpet man to weave his carpet, the desk man to build his desk, the shoe man to make his shoes, and in the prosperity which he, as a glassmaker, enjoys, he assists in the prosperity of every other man's vocation. When you strike down the glass industry you strike at the customers of Florida and Mississippi and Michigan.

I stepped into a bank in Detroit not long ago, and I said to the cashier: "How is business?" He said: "First rate; but something occurred here to-day that you will be interested in knowing about." I said: "What was it?" He said: "One of our customers came in here to-day and bought a draft on London for $50,000 to pay for glass which he had formerly bought at Toledo, Ohio." Do not tell me that that $50,000, which was paid for glass in Europe, employs anyone to make shoes or nails or carpets over here. When you make it easy to buy the products of the European labor you make it harder for our people to sell their diversified productions among themselves. That is the truth about it. You have lost your customers in protected industrial centers, I say to the Senator from Florida—he who is now sitting next to the Senator from Louisiana. I should like to know whether the people of Louisiana are at present buying any of the products of Florida under free trade in sugar? Of course not. I will tell you what they are doing. The people who work in sugar factories are buying very little, for they are doomed to destruction, and you know it. Your party chiefs admit it. When we pleaded with them for that infant domestic industry that made us partially independent of the world in the matter of a sugar supply, and would have soon rendered us completely independent of the world. Senators

on that side of the Chamber said to us, "There are more sugar users than there are sugar producers, therefore we must pass this free-trade bill in the interest of the greatest good to the greatest number." That is what they said; and the people who are working in sugar factories to-day are working on borrowed time, and they have all got tickets of leave, and they are going out of that business. They are not eating the fruits of Florida, nor buying the furniture of Michigan, nor wearing the shoes of Massachusetts. They are economizing, and yet we are paying as much for sugar to-day as we did before the Democratic Party struck this foul blow at the sugar industry of Louisiana and California and Colorado and Utah and Michigan and New York. The difference is that the American Sugar Refining Co. are carefully tucking away the duties that we formerly collected at our customhouses and putting them in their pockets.

Not long before the Underwood-Simmons tariff bill went into effect a letter was shown to me by a glass manufacturer in my State. It was from Germany, and it said:

DEAR SIR: Of course you can not live under the new Democratic tariff regulations in your glass business. You will not pretend to—

I know they could not live. I knew that in the glass factory at Saginaw, Mich., where there is a million dollars invested, they were making glass for 16 cents a square foot and selling it for 15 cents a square foot when the Democratic Party reduced the duty and exposed that industry to ruin. I know that. I know that they were selling glass made in America for 1 cent a square foot less than it cost them to make it. But, returning to the letter, it said:

DEAR SIR: You can not possibly live under the new tariff law; but I like you, and I want to be of help to you, and if you will take the agency for our glass we will agree to hold the price just where it was before the new tariff went into effect and both prosper.

What do you think about that? Fifty thousand dollars spent in one order for foreign glass which, if bought at home, would afford just $50,000 more to the laborers of Toledo. This is only one small illustration of many thousands that could be given. Of all the people in this world the laboring man should have stood solidly for protection to American industry. It was for his benefit. If the manufacturer is dissatisfied with the price of his wares, he can store them for another month or year; the merchant who is not getting a satisfactory price for his staples may keep them upon his shelves; but the laborer can not store his wares. His wares are the muscles of his strong right arm. He can not store time; not used upon the instant it is lost forever.

It is because labor is thus helpless that it is the first to feel the effect of the reduction of values and the last to get the benefit of an inflation. Low tariffs have flooded this market with imported goods. On our borders customhouses have been partially closed and American labor unnecessarily exposed to unfair competition. Yet labor is expected to stand by and uphold the hands of a party which has deprived it of its ability to earn a living. That is the unblushing truth. There is not a Senator on the other side of the Chamber who can deny it.

Mr. CHILTON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from West Virginia?

Mr. SMITH of Michigan. I yield, of course, to my friend from West Virginia.

Mr. CHILTON. Of course I can not deny what the Senator says by a question. I just want to state to the Senator——

Mr. SMITH of Michigan. Anything else would take me from my feet. I do not want to subject myself to the new discipline imposed upon Senators by the other side of the Chamber.

Mr. CHILTON. I do not want to take the Senator from his feet. I just want to say the Senator has made a statement that is not in accordance with the facts as to the result of the election in West Virginia. The newspaper reports absolutely contradict his position as to the condition of the glass industry and every other industry in the Ohio Valley and the Kanawha Valley. What he says is contradicted by Dun's report of last week as to practically every industry in my State. There is not one word the Senator said about my part of the country that is corroborated by the facts, nor is his statement true as to the glass industry, to which he has addressed himself. But I can not answer the Senator without taking him off his feet.

Mr. SMITH of Michigan. The Senator can not answer me at all; the facts must confound him and all other apologists for the present Democratic tariff law.

Mr. CHILTON. I will at the proper time answer it from the record and give some of the facts.

Mr. SMITH of Michigan. A few months ago the Senator from West Virginia and the present Presiding Officer of the Senate [Mr. MARTINE of New Jersey] were called to that State to investigate the deplorable conditions in one of the great industries of the State. Do not tell me that your State is prosperous. There is no State in the Union that is prosperous to-day. Even the old immigrant station at Castle Garden is a public soup house, and it can not be denied.

Mr. CHILTON. Mr. President——

The PRESIDING OFFICER. Will the Senator from Michigan yield?

Mr. SMITH of Michigan. I can not yield for a speech without losing my right to the floor, but I will yield for a question.

The PRESIDING OFFICER. The Senator from Michigan will yield.

Mr. CHILTON. The Senator has made a statement which shows how reckless he is.

Mr. SMITH of Michigan. Recklessness is common under Democracy when you are hastily summoning your Cabinet to the White House to consider how to meet a constantly growing deficit.

Mr. CHILTON. That only shows how reckless the statement is when the Senator is indulging in eloquence rather than in trying to find facts.

Mr. SMITH of Michigan. The Senator could not have heard what I said.

Mr. CHILTON. No; possibly not. I can say that without being reckless, either. The Senator was talking about an investigation that was made two months ago. No such thing occurred.

Mr. SMITH of Michigan. I said a few months ago. There is a difference between "few" and "two."

Mr. CHILTON. Well, to say a few months ago is reckless.

Mr. SMITH of Michigan. There are just the same number of letters in "few" as in "two," but they do not mean the same.

Mr. CHILTON. It was not a few months ago; it was a long time ago, and it was about conditions which occurred under a Republican administration.

Mr. SMITH of Michigan. Oh, let us see about that.

Mr. CHILTON. The answer is that the coal business under the Underwood tariff revived and the prices rose in that part of the country for many months.

Mr. SMITH of Michigan. Yes; coal is high enough always.

Mr. CHILTON. If the Senator does not want me to answer him, he should not invite me to do so. In my own time I will answer him, for I have the data here.

Mr. SMITH of Michigan. I love to have the Senator answer me. I always enjoy conversation with the Senator. But he is the one Senator on the Senate floor who has the temerity in the face of a nation-wide industrial depression to claim for his State prosperity.

Mr. CHILTON. Mr. President——

The PRESIDING OFFICER. Will the Senator yield further to the Senator from West Virginia?

Mr. SMITH of Michigan. Certainly, for a question.

Mr. CHILTON. I will take but a minute.

Mr. SMITH of Michigan. I will yield for a question. Do not take me off my feet, for I am at a disadvantage. We are temporarily in the minority here.

Mr. CHILTON. The Senator will be in the minority for a long time. There is no doubt about that.

Mr. SMITH of Michigan. I will tell you how long.

Mr. CHILTON. That would be a hard thing to do.

Mr. SMITH of Michigan. Just long enough to get the Democratic Party out of power, which will be at the next election.

Mr. CHILTON. But you have gone out of power, and you are not coming in.

Mr. SMITH of Michigan. We are on the way back now. We crossed the first bridge last November, gaining over a hundred Republican Members in the House of Representatives.

Mr. CHILTON. Now, will the Senator allow me to ask him this question: Does the Senator know that in my State there is the biggest ax factory in the world?

Mr. SMITH of Michigan. Yes; axes are in demand everywhere. Everybody is using his own wood now.

Mr. CHILTON. And it is run and owned by a high protective tariff Republican who never voted the Democratic ticket. I want to say that he told me within the last 30 days that the idea of the tariff affecting his ax business was ridiculous; that he had been making axes in the city of Charleston and selling them in Sweden, after paying the ocean price and the freight to seaboard in competition with Swedish labor, which is conceded to be much less than the labor in this country. The reason he does it is that he comes to West Virginia, where there is cheap fuel. You can not manufacture some things in your State and pay three and four dollars a ton for coal and compete with us, when we have natural gas at five and six cents a thousand, and coal to ship to you at a dollar and a dollar and a quarter a ton. The trouble is that you do not know about the

prosperity of West Virginia. There is not a single thing in West Virginia that is shut down to-day except a few glass works that make whisky bottles and whisky glasses. That is about the only thing that is shut down.

Mr. SMITH of Michigan. I am glad the ax industry has survived.

Mr. CHILTON. Will the Senator now listen to the facts? I want to state to him that there are to-day glass factories in West Virginia declaring a dividend of 100 per cent upon their capital. Every one of them is running, and they are making window glass, too. I know that to be a fact. Some of the owners are friends of mine; some of them are former clients and people whom I know. There is not a single window-glass factory in the State of West Virginia that is closed down to-day. They are all making money.

Mr. SMITH of Michigan. Glass manufacturers are discouraged.

Mr. CHILTON. But the Senator said a minute ago——

Mr. SMITH of Michigan. Ax makers may be happy, but I do not believe it.

The PRESIDING OFFICER. One at a time.

Mr. SMITH of Michigan. I was talking about the glass industry generally and called attention to my State.

Mr. CHILTON. Up in Michigan, of course, you can not make much money, but if you come down to West Virginia you can.

Mr. SMITH of Michigan. We can not make much money in Democratic times; no one does.

Mr. CHILTON. You can not make much money, because you can not compete with much more favorable conditions in the State of West Virginia, which you tried to slander a minute ago.

Mr. SMITH of Michigan. I would not slander West Virginia; her people are wonderfully patient and long-suffering.

Mr. CHILTON. I did not catch that remark.

Mr. SMITH of Michigan. I would not slander West Virginia. She is coming back to protection. I know something about the State.

Mr. CHILTON. Mighty little.

Mr. SMITH of Michigan. I have been through the State, and I say without hesitancy that her industries are not prosperous.

Mr. CHILTON. Yes; the whisky business is in very bad shape down there.

Mr. SMITH of Michigan. The Senator from West Virginia is more familiar with that than I am. If the Senator will go over to New York and look at the desperate effort being made by Mayor Mitchel to get work for the unemployed where they can earn their daily bread, he will be greatly surprised. The same situation exists in all American cities. I have here a Chicago paper saying that Chicago must look after her thousands of unemployed. There is not a great city in this country where public work is not being urged in order to provide work for the unemployed. Senators know that. Nearly 6,000 stood in front of an automobile factory in my State begging for work on a single day. Do not tell me that this country is prosperous or the people satisfied.

Mr. CHILTON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield further?

Mr. SMITH of Michigan. No; I can not yield further.

The PRESIDING OFFICER. The Senator from Michigan declines to yield.

Mr. SMITH of Michigan. I decline for the simple reason that I have been on my feet for nearly four and a half hours, and if I yield as a matter of courtesy the Senator does not seem to appreciate it. If I yield for a speech, then I lose the floor; and I do not want to take any chances on either.

Mr. CHILTON. I would not take the floor from the Senator.

Mr. SMITH of Michigan. Now, Mr. President, I want to ask what has become of the revenues of this Government. We never had a shortage of revenue until the Democratic Party came in. Are the revenues short? Be frank with us. The Senator from West Virginia does not deny that the revenues are short.

Mr. CHILTON. Of course, I can not when you will not let me.

Mr. SMITH of Michigan. We are $100,000,000 below our necessities, and neither the Senator from West Virginia nor any other Senator on the other side can deny it. We are $100,000,000 short in our revenues, with $146,000,000 worth of European products coming in here free of duty in less than a year under low tariff. That is the reason why the people are out of employment. That is the reason why our revenues are low. That is the reason why the President hastily called his Cabinet together yesterday to stay the ruin of American credit. You know that. You know that you may pick out here and there a coal mine that is doing business. But both the Senators from Florida admitted that the record I read about the failures in Florida last year is unhappily true. The same applies in every other State in the Union, except, possibly, West Virginia. If the Senator from West Virginia would speak a little louder the idle cars that are now resting upon the sidetracks of the great railways of the country would be full to overflowing with men who would be willing to live in West Virginia if they were sure they could find something to do when they reached there.

The country has been struck by a Democratic cyclone. Prosperity has been arrested; devastation is upon every hand. The emergency currency was not used until Woodrow Wilson became President of the United States and our industries were demoralized by free trade.

Mr. SWANSON. Will the Senator permit me?

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Virginia?

Mr. SMITH of Michigan. I can only yield for a question, but I do that with great pleasure.

Mr. SWANSON. The Senator knows full well those notes were never available and never would have been available if the law appertaining to their issue had not been changed. The currency law was changed and the interest reduced. When the original law was passed the rate of interest was made so high that it was never expected that the American people would get any relief under that currency law, and no relief could come until the Democratic administration changed the law and made the notes available to the people.

Mr. SMITH of Michigan. Let us analyze that for a moment. The rate of interest imposed by the Aldrich-Vreeland bill was 4 per cent for the first month, 5 per cent for the second month, 6 per cent for the third month, and 7 per cent for the fourth month. The Senator says the $500,000,000 of emergency currency notes were not available, because the interest rate was so high. The Republicans passed the emergency currency law and fixed the rate below clearing-house certificate rates for emergency purposes only. When the Senator's party came into power they were so anxious to get those notes out of the Treasury that they promptly changed the law so that they could get $1,000,000,000 to meet a demoralized industrial condition throughout the country.

Mr. SWANSON. Does the Senator give credit to his party for passing a law after the panic of 1907, pretending to give relief but the interest was so high that no relief could be granted until the law was changed?

Mr. SMITH of Michigan. Oh, Mr. President, we placed the interest high to insure the automatic return of this money to the Treasury as quickly as possible after the exigency had passed. The Senator must admit that was wise. The only way we got rid of your old State bank issues throughout the South was by imposing a tax which forced that State money out of circulation.

Mr. SWANSON. If the Senator will permit me——

Mr. SMITH of Michigan. Certainly, for a question.

Mr. SWANSON. The present law provides that there shall be an increase in the rate of interest the longer the notes stay out, which will ultimately return them, but the Senator put the food so high——

Mr. SMITH of Michigan. Food?

Mr. SWANSON. It was in the shape of food and it was put so high nobody could reach it.

Mr. SMITH of Michigan. Mr. President, money is not food.

Mr. SWANSON. They could not reach it until a Democratic administration changed the law.

Mr. SMITH of Michigan. Money is not food. If money was food one-half the people of this country would be dying of starvation to-day, because it is in hiding and has been since your party has had control of the Government for the last two years. Oh, no. Money is not food. Money is the fruit of labor.

The Senator knows that we have more money in the country to-day than we have ever had since the American Republic was born. We have more than three and a half billion dollars of good money among the people. There is no scarcity of money; it is as plentiful as it was under Taft. There is a scarcity of work and there is a lack of confidence among the people who have money. They have no faith in your party or its management.

Mr. SWANSON. Now, if the Senator will permit me——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Virginia?

Mr. SMITH of Michigan. I desire to know the circumstances under which I yield to the Senator from Virginia. I would do almost anything for the Senator from Virginia, and I especially desire to treat him courteously.

Mr. SWANSON. As the Senator's time is limited, I will not interrupt him further.

Mr. SMITH of Michigan. I do not say that. If I am yielding just for a question and not yielding the floor, I will gladly yield to the Senator from Virginia.

Mr. WALSH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Montana?

Mr. SMITH of Michigan. This interruption comes from an unexpected quarter.

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Montana?

Mr. SMITH of Michigan. Certainly; but it comes from a source which gives me some worry. I will yield to the distinguished Senator from Montana.

Mr. WALSH. I would not take the Senator from Michigan off the floor, because I propose to ask him a question simply for information.

Mr. SMITH of Michigan. I yield to the Senator from Montana.

Mr. WALSH. I desire to inquire of the Senator if he will give us the date when this $300,000,000 of emergency currency went out?

Mr. SMITH of Michigan. Let me see; they were authorized eight years ago. I know the seals were not broken——

Mr. WALSH. Yes; that is what I mean—when the seals were broken.

Mr. SMITH of Michigan. The seals were not broken until after Mr. Wilson became President.

Mr. WALSH. Oh, yes; we all know that.

Mr. SMITH of Michigan. Well, that is admitted. The exact date, I think, preceded the European war.

Mr. WALSH. Is the Senator from Michigan quite certain about that?

Mr. SMITH of Michigan. Yes; I think I am right. If the Senator has the amended act before him, when did the law go into effect?

Mr. WALSH. That was in January, 1914.

Mr. SMITH of Michigan. That was seven months before the European war commenced.

Mr. WALSH. Yes.

Mr. SMITH of Michigan. While you were getting your national reserve bank act into working order; while the President was trying to pick out competent Democrats to run the board—"deserving Democrats" to run the board—you used the emergency currency act to strengthen business confidence.

Mr. WALSH. It seems that the Senator can not give us the exact date. Will he not frankly admit that not a dollar went out until after the 31st day of July, 1914, when the European war broke out?

Mr. SMITH of Michigan. No; I will not admit that unless the Senator states it as a fact.

Mr. WALSH. Then I will supply the information to the Senator.

Mr. SMITH of Michigan. Very well.

Mr. WALSH. Will not the Senator from Michigan frankly admit that the currency did not go out until we amended the Vreeland-Aldrich Act after the European war broke out?

Mr. SMITH of Michigan. Well, I know you amended that act to make it easier to get this money out of the Treasury.

Mr. WALSH. Exactly; after the European war broke out and to meet contingencies arising in consequence of it.

Mr. SMITH of Michigan. In other words, you thought there was a scarcity of money.

Mr. WEEKS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Massachusetts?

Mr. SMITH of Michigan. I yield with great pleasure for a question.

The PRESIDING OFFICER. The Senator from Michigan yields to the Senator from Massachusetts for a question.

Mr. WEEKS. I want to ask the Senator from Michigan if he does not recall that the reason for passing the Aldrich-Vreeland bill, which was filibustered against and voted against by every Democrat in the Chamber, was to provide in case of emergency for sufficient currency to take care of the needs of the country?

Does the Senator not recall also the rate of interest which was imposed on clearing-house certificates in case of an emergency arising was not less than 6 per cent and in many cases 7.3 per cent? Therefore the rate of interest in the Aldrich-Vreeland Act was placed at 4 per cent for the first month, 5 per cent for the second month, 6 per cent for the third month, and 7 per cent for the fourth month, the reason being that the experience of this country had been that clearing-house certificates were invariably retired at the end of the fourth month or about that time; so that the banks could not take out this emergency currency and loan it at the higher rates carried by clearing-house certificates if the rate were made an increasing one, and thereby making a large profit out of it. It was simply intended temporarily to take care of an emergency. There never has been an emergency under the Republican Party, therefore there has been no necessity of taking out any of this circulation. It was only when the Democratic Party was in control that an emergency did arise—not entirely the fault of the Democratic Party, to be sure—that it became necessary to take up some of that circulation.

Mr. SMITH of Michigan. It was largely the fault of the Democratic Party.

Mr. WEEKS. The change in the law reducing the rate to 3 per cent had nothing whatever to do with the taking out of this $348,000,000, to which the Senator from Michigan has referred.

Mr. SMITH of Michigan. Mr. President, what I said, and I reiterate it, was this: That we put that emergency act upon the statute books against the opposition of the Democratic Party, and owing to misjudgment upon their part they relied upon our legislation to prevent a panic last year.

Mr. SWANSON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Virginia?

Mr. SMITH of Michigan. Does the Senator from Virginia deny that?

Mr. SWANSON. I was not in the Senate when the Vreeland-Aldrich bill was passed; I was governor of the State of Virginia; but if I had been here and a condition had existed which made it impossible for people to get money, I would have voted against such a fraud to deceive people—a thing that had to be changed before they could possibly get any relief.

Mr. SMITH of Michigan. You used this money. The rate was only 4 per cent on short-time paper.

Mr. SWANSON. It is money; is it stolen?

Mr. SMITH of Michigan. Oh, no, Mr. President.

Mr. SWANSON. I am not a partisan so narrow as is the Senator from Michigan, to say that I would not vote to amend a Republican law or a Democratic law or any other law if it would be beneficial to the people to do so. When a law pretends to bring relief, and brings no relief because the rate of interest is so high that nobody can use it, it is simply a pretense; and you admit the money was all locked up and sealed. We prophesied that it would be locked up; we prophesied that it would be sealed; we prophesied that there would be no relief in it; we prophesied that nobody would get a cent of it until it was changed. If I had been here, I would have voted against a law that pretended to carry relief, but brought none.

Mr. SMITH of Michigan. We did not need that money at all under a Republican administration. Trade and industry rose to its highest point under our laws; American credit was never higher than it was before Woodrow Wilson became President. Emergency currency was not needed. Bankruptcy was a stranger, and labor was in constant demand in all parts of the country.

Mr. WEEKS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Massachusetts?

Mr. SMITH of Michigan. I yield if the Chair will protect me in my right to the floor.

The PRESIDING OFFICER. The Chair will certainly see that the Senator is not taken off the floor.

Mr. WEEKS. Mr. President, I should like to ask the Senator from Michigan if he will not in his own time ask the Senator from Virginia if he thinks it is a fraud to impose a rate of interest on emergency currency of 4 per cent for one month and 5 per cent for the next month, when the current rate charged by the banks is 6 and 7 per cent? Is that a fraud upon anybody when it merely reduces the profit made by the banks?

Mr. SMITH of Michigan. I do not want to embarrass the Senator from Virginia by asking him that question.

Mr. SWANSON. I will be very glad to answer it.

Mr. SMITH of Michigan. I do not want to embarrass the Senator from Virginia by asking that question when we all know that the rate of discount under his pet plan of a Federal reserve system was 6 per cent——

Mr. WALSH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Montana?

Mr. SMITH of Michigan. And the Secretary of the Treasury and the reserve board made it 6 per cent, while under the emergency currency law the rate was 4 per cent on short-time paper. Why is the interest so high on reserve-bank money that nobody can borrow it?

Mr. WALSH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Montana?

Mr. SMITH of Michigan. Of course I yield to him; we only desire the truth about this matter.

Mr. WALSH. I simply want to put the Senator in possession of exact information upon the subject to which I adverted a while ago. I advise him that the Aldrich-Vreeland Act was amended first by an act approved the 4th day of August, 1914, and that was again amended by an act approved August 15, 1914; and not a dollar of emergency currency went out until the passage of that act.

Mr. SMITH of Michigan. I recollect those two dates very well; the Senator is right. I remember, however, that in quite a number of cities of the country they were then using clearing-house certificates.

Mr. WALSH. I venture to assert that the cutting of the seals, to which the Senator has referred, was some time subsequent to the passage of these two acts.

Mr. SMITH of Michigan. I think the Senator is right. We never had occasion to use that money under Republican administrations.

Mr. WALSH. Will the Senator also add that there was not a European war?

Mr. SMITH of Michigan. Oh, the European war is a godsend to the Democratic Party. [Laughter.] The world may suffer untold damage, but the Democratic Party ought to get down on its bended knees and thank the Lord that something came between the awfully demoralized industrial condition of our country and their certain retirement last fall. I inquired a little while ago from the Senator from Florida how many factories would be built, how much money would be invested in any industry because of the protection afforded by the European war. No one would go into business on the strength of the demands created by the European war. Take the poor people in the sugar district of Louisiana. Are they happy because they have, as the result of the European war, temporary protection in their sugar industry, which has been marked for final and effectual slaughter in 1916? No; everybody knows they are not. Stock in sugar factories of Michigan is a drug on the market; the industry is destroyed.

Mr. WALSH. Mr. President, will the Senator permit me another interruption?

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Montana?

Mr. SMITH of Michigan. Certainly.

Mr. WALSH. The Senator can not go to Montana and buy sugar stock in that State at 200 per cent of its face value.

Mr. SMITH of Michigan. Well, the people of Montana still have the spirit of the frontiersmen in their nature. They are going to go down with the ship. They would not take a boat if they had an opportunity to escape from the sea. [Laughter.] Montana is especially fortunate in the character of her citizens. They do not make very much fuss over their troubles and do not gloat much over their successes.

Mr. CHILTON. Mr. President, will the Senator allow me to ask him a question?

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from West Virginia?

Mr. SMITH of Michigan. Is my friend from West Virginia going to annihilate me?

Mr. CHILTON. Do not the facts presented by the Senator from West Virginia, which the Senator from Michigan does deny, and the facts presented by the Senator from Montana [Mr. WALSH], which he can not deny, demonstrate to the Senator that all that is the matter with him is that he does not come from the right State?

Mr. SMITH of Michigan. No, Mr. President. It simply demonstrates that you are whistling to keep up your courage.

Mr. CHILTON. I am telling the Senator the facts to show that he is wrong.

Mr. SMITH of Michigan. The crockery industry of West Virginia is not prosperous. The Senator knows that, as does everybody else.

Mr. CHILTON. No; I do not.

Mr. SMITH of Michigan. I know it.

Mr. CHILTON. I do not think the Senator knows it, either.

Mr. SMITH of Michigan. I do know it; and everyone knows it who is at all familiar with the industrial conditions on the Ohio River.

Mr. SWANSON. Will the Senator permit me to interrupt him?

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Virginia?

Mr. SMITH of Michigan. The "Senator from Michigan" will permit the Senator from Virginia to interrupt him for a question.

Mr. SWANSON. I understand the Senator's contention is that the lack of prosperity in the industries of this country today is due to too many foreign goods coming in, and that the Senator's idea of great prosperity is a small importation of foreign goods. If that is true, we are having less foreign goods coming into this country now than we have had for years, and the customs duties have been greatly reduced. If the Senator's contention is correct, that prosperity is measured by the importation of foreign goods, we ought to have great prosperity now; greater, in fact, than we have ever had.

Mr. ROOT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from New York?

Mr. SMITH of Michigan. I certainly will yield to the Senator, although I do not desire to lose the floor.

Mr. ROOT. Let me ask the Senator from Michigan if his view is not rather that the arresting of enterprise in the United States now is due to the widespread apprehension of the hostility to American enterprise that dominates the party of the Senator from Virginia and of his colleagues?

Mr. SMITH of Michigan. There is no doubt about that.

Mr. ROOT. Is it not due——

Mr. SWANSON. Is the Senator addressing his remarks to me?

Mr. ROOT. I am putting a question to a most competent person to answer it, the Senator from Michigan.

Mr. SWANSON. I thought the remark was addressed to me.

Mr. ROOT. No; I am putting the question to the Senator from Michigan.

Mr. SWANSON. But I insist that the witness is not impartial.

Mr. BRANDEGEE. But competent.

Mr. ROOT. Witnesses are not expected to be impartial. They are expected to be what the Senator from Michigan always is—truthful. I am putting the question because I know that as a truthful, experienced, and well-informed American citizen, there can be but one answer to the question as to whether the arresting of enterprise, the failure of Americans to put their money into new enterprises, the failure of Americans to enlarge their enterprises, is not due to the fact that they are afraid of what the Democratic Party will do to them and to their undertakings, and whether they do not feel that, after all, the long period of war upon the tariff, war upon the trusts, war upon business enterprises, in its various phases, there is left a residuum of hostility to American enterprise in the Democratic Party, which makes it unsafe for Americans to put their money into new enterprises or the enlargement of old enterprises?

Mr. SWANSON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Virginia?

Mr. SMITH of Michigan. In just a moment. I want to commend the logic of my honored friend from New York to the Senator from Virginia. You can not bring about prosperity by proclamations. If you could, we would have had prosperity long ago. The first proclamation failed; the second was issued. The moment he got the reserve-bank law into effect, President Wilson dictated the following:

NEW ERA OF PROSPERITY DAWNS.

First of a series of laws by which the Democratic Party will serve the country—

Proclaims the Nation's titular head.

If it was true then, why did it have to be repeated yesterday?

Prosperity will come—

Says the President. It must have been a year late. Why did it not come under the first proclamation? Proclamation after proclamation and still prosperity does not come. The Senator from Virginia is right. The customs receipts have fallen off, but importations have increased under the free list.

I heard the Secretary of the Treasury ask a great audience in San Diego, Cal., the other day, what was the matter with the country, and they were struck dumb. No one could answer. Finally, when he said, in the vernacular of the street, "Not a damn thing," everybody wondered whether it was true.

Mr. CHILTON. Mr. President, do I understand the Senator to say that he was present?

Mr. SMITH of Michigan. Yes; I was there.

Mr. CHILTON. And he was struck dumb? [Laughter.]

Mr. SMITH of Michigan. Not permanently, Mr. President; but I am glad to score one for West Virginia.

Mr. OWEN rose.

Mr. SMITH of Michigan. Why does the Senator from Oklahoma threaten me? [Laughter.]

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Oklahoma?

Mr. SMITH of Michigan. Certainly, for a question.

Mr. OWEN. I wish to be permitted to make an inquiry, as it seems to be in order to make inquiries of the Senator. I do not wish to take him from the floor.

Mr. SMITH of Michigan. Plainly, the Senators on the other side are carrying on a most interesting filibuster here. They do not permit me to finish my sentence. Indeed, I have been disposed to conclude my remarks for some time, but for the last few hours I have been engaged in yielding to questions of one kind and another from the other side of the Chamber. I am not going to single out the Senator from Oklahoma for discourtesy. I yield for a question, of course.

Mr. OWEN. The inquiry of the Senator from New York suggested one to me. I wish to ask the Senator if he does not know it to be a fact that the Pujo investigation of the House of Representatives developed the fact, from competent testimony, that half a dozen of the great banking houses, with 125 individual members connected with those houses holding 326 directorates, controlled by the interlocking directorship system every one of the great railways of the country; controlled the great insurance companies, with hundreds of millions of assets; controlled the great express companies; controlled the telephone and telegraph business; controlled the great industrials, such as the American Tobacco Co., Amalgamated Copper, and so forth; controlled the great banks and trust companies of New York Boston, Chicago, Philadelphia, and so forth; and altogether were shown to control twenty-two thousand millions of stocks and bonds, and that they followed the policy, when the Democratic Party came in, of deliberately cutting off the purchasing of supplies by the railways, cutting down the activities of these industrial companies, and themselves were responsible for bringing about in this country the hard times which they falsely charged to the Democratic Party?

Mr. SMITH of Michigan. Well, Mr. President, that is a very severe indictment, although it has nothing to do with the deficit in American revenues.

Mr. OWEN. The Senator does not answer the question.

Mr. SMITH of Michigan. What has your question to do with a deficit of a hundred million dollars in the revenues?

Mr. OWEN. Will the Senator answer the question?

The PRESIDING OFFICER. One at a time.

Mr. SMITH of Michigan. These men whom the Senator has indicted may be responsible for many crimes. I do not know. I doubt it, however; but the Democratic administration which plunged the country into bankruptcy is responsible to the people.

Mr. OWEN. The Senator does not answer the question. Will the Senator answer the question, if he can?

Mr. SMITH of Michigan. I say to the Senator that what he has said is a serious indictment against business men.

Mr. OWEN. It is.

Mr. SMITH of Michigan. I do not think it is strictly true, but I have no doubt the Senator from Oklahoma believes it to be true.

Mr. OWEN. It is; and they are the allies of the Republican Party.

Mr. BRISTOW. Mr. President——

Mr. SMITH of Michigan. Several of the men who now sit on the Federal Reserve Bank Board, by the favor of the President, were on those interlocking directorates, and yet the President called them to positions of great responsibility. It seems to me there is a great deal of false pretense and sham about Democratic ethics. President Wilson nominated the International Harvester monopolist, Thomas H. Jones, to have charge of our new Federal banking system. Be consistent, gentlemen! If these interlocking directors are criminals, why do you take them to your bosom? Why do you call them into your party councils? Why do you advise with them and give them greater power than they had in their private employments?

Oh, Mr. President, the Senator from Oklahoma knows that is the merest folly. You can deceive no one by such arguments.

I hold in my hand the Chicago Tribune, which says that there are 150,000 men out of employment in the city of Chicago. My God! If they could have heard the Senator from West Virginia [Mr. CHILTON] a few moments ago, they would have taken the train forthwith for his Commonwealth, where work is so plentiful. Chicago city officials have decided to classify all jobless men by putting a blue tag on those living in Chicago, because those who come from Iowa and from Indiana and from Michigan and Wisconsin and from Oklahoma and Ohio to Chicago are to have a different colored tag. They will wait until the Chicago jobless have been provided for.

Now, Senators, you know this condition exists. You know that right under the glaring light of the Goddess of Liberty in New York Harbor Castle Garden is a public soup house to-day.

Mr. BRISTOW. Mr. President——

The PRESIDING OFFICER. Will the Senator from Michigan yield to the Senator from Kansas?

Mr. SMITH of Michigan. I certainly will, for a question.

Mr. BRISTOW. I wanted to inquire of the Senator from Michigan if the President of the United States did not take one of the chief conspirators to whom the Senator from Michigan has referred, who himself was on various boards of directors, who himself—he and his firm—engineered these combinations, who himself controlled these railroads, who himself practiced all the iniquities of high finance, and put him on the Federal Reserve Board to run the affairs of the banks of this country under the law, and plunder the country to his heart's content?

Mr. SMITH of Michigan. That is a straightforward question, and it has the double advantage of being both a question and an indictment. Everybody knows how Senators squirmed in their places upon the other side of the Chamber when those nominations fell upon them for confirmation. Why, when the President called to Washington his friend, Thomas H. Jones, of the International Harvester Trust, who only contributed about $25,000 to the Democratic campaign two years ago—and I guess he raised $25,000 more, according to the evidence, making $50,000 altogether for one campaign—and tendered him a place at the Federal reserve bank table he found two or three heroic Democrats who had the courage to deny him that place. The President thereupon wrote a letter to my honored friend from Oklahoma, I think—and if I am in error I will stand corrected—saying that Mr. Jones, while technically connected with the International Harvester Trust, a corporation that had been ejected from a number of States by acts of legislatures, he was in it only a little bit; that he had only one or two shares; that he did not go in to make any profit, but to reform the trust. But when Mr. Jones, a man of sturdy, bluff, western independence and honor, saw that statement from the President of the United States to the Senator from Oklahoma he repudiated it, saying, "I did not go in for any such purpose. I did not go in to reform it. I approve what they did."

Senators, what hypocrisy! What hypocrisy to denounce interlocking directors, to denounce combinations of wealth, to denounce the unsympathetic millionaire, then give them the best positions in the service of the Government, greatly increasing their potentiality!

Paul Warburg is another interlocking director against whom the Senator from Oklahoma has so pitilessly arrayed himself.

Mr. Delano, I understand, was the president of one of the great railroads owned by the Gould system, who own the Western Union Telegraph Co. and are allied with the telephone monopoly; and yet they called Mr. Delano to the Federal Reserve Board and gave him larger powers over the money of the people—undoubtedly a good man—but the sniveling hypocrisy evidenced by the defenders of the administration appals me. It is rank hypocrisy. If the Senator from Oklahoma can palliate or excuse it, I should like him to do so now. I will gladly yield.

Mr. OWEN rose.

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Oklahoma?

Mr. SMITH of Michigan. I do.

Mr. OWEN. I say to the Senator from Michigan that he has not answered my first question.

Mr. SMITH of Michigan. Oh, what a brilliant and resourceful reply. It does no credit to the Senator from Oklahoma, who voluntarily injected himself into the controversy. I have not replied to his question! No other reply is necessary. The President of the United States decided the case against the Senator from Oklahoma when he put Paul Warburg and Mr. Delano on the Federal Reserve Board.

I know it was a bitter pill for you to swallow. I know how long you tried to avoid it. I know that you imperiled the country's prosperity by delaying the organization of the board, while the Chief of State was trying to reconcile the differences in his own party over those appointments. All the Senators here know it. I can not disclose any of the secrets of the executive session, but I do know that rebellion among Democrats was upon every hand. But the same high-handed, autocratic, relentless, and uncompromising authority which forced you to repeal the protective tariff law against the wishes of your countrymen; which has dawdled and delayed the solution of Mexican affairs; the same authority which bowed the knee to England

and gave her joint supervision in the Panama Canal, for which the American people alone had paid; the same authority that sent Secretary Bryan to California, post haste, on a de luxe train, at extra expense, in order that he might confer with Senator Caminetti at Sacramento concerning a settlement of the Japanese controversy—Senator Caminetti, the only person in California who showed any interest in Mr. Bryan's visit, and who received a most adequate reward from the administration—the same authority that is trying to force this Government from its path of duty, breaking down the traditions of Washington and Jefferson and Madison and Lincoln and Grant and McKinley, breaking down the consistent policy of this Government for more than a hundred years, is leading us into socialism and danger. And if this fallacy ever ripens it will be a disappointment to the country, as was the tariff law that he framed, as were the appointments that he has made, as was the Panama surrender, as is the Mexican policy, which has resulted in anarchy and bloodshed, which could have been easily avoided. And yet the President says "the Republican Party has not had a new idea in 30 years."

If these are new ideas, I thank God that the Republican Party has had the wisdom to avoid such unnecessary pitfalls in its matchless career of half a century.

I said the President did not represent a majority of his countrymen. The majority of the American people never told him to do these things. Woodrow Wilson said, with great solemnity, in one of his books, "No number less than a majority has a right to tell me how I have got to live in America." Yet he received 6,293,419 votes when he ran for President of the United States in 1912 and there were 7,604,463 votes cast against him. Majority rule, indeed.

He says he believes in majority rule. In 1912 Wilson and Marshall carried a majority vote in 14 States only. A majority of votes in 1912 in 34 States proclaimed themselves in favor of the American policy of protection. Yet he asserts that nothing less than a majority can control him. Thirty-four States of this Union voted against his low-tariff and free-trade policy, and yet he believes in majority rule. Fourteen States were in favor of free trade, and yet we are to suffer for two years more until another general election remedies the wrong unconsciously and unintentionally inflicted by the electorate of our country in 1912. Thirty-four States passed a majority vote for protection. These States are the most diversified, intelligent, enterprising, populous in the Union, and I do not mean to be invidious by that statement. I only mean to say that 1 in 4 persons in those 34 States voted in 1912 and 1 in 12½ persons voted in the 14 States that gave the President a majority.

What are the States which gave a pronounced majority in favor of protection to American industrial labor in 1912?

Mr. THOMPSON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Kansas?

Mr. SMITH of Michigan. I yield for a question to my honored friend. I do not want to be taken off the floor, however.

The PRESIDING OFFICER. The Chair understands that.

Mr. SMITH of Michigan. I have been interrupted so much that I am a little weary.

Mr. THOMPSON. Will the Senator tell us how many States and what States there were that the candidate of his party for the Presidency carried in 1912?

Mr. SMITH of Michigan. I do not remember, but I do remember the popular vote for protection.

Mr. THOMPSON. There were two States.

Mr. SMITH of Michigan. Indeed, I am gratified to have this information. It was purely accidental, however, that we got any votes. I will tell you the States that gave a majority for protection.

Mr. REED rose.

Mr. SMITH of Michigan. I hope my adroit and able friend from Missouri is not menacing me.

Mr. REED. I want to make an announcement, if I may.

The PRESIDING OFFICER. Will the Senator from Michigan yield to the Senator from Missouri?

Mr. SMITH of Michigan. I am a little suspicious of the look in the Senator's eye. [Laughter.]

Mr. REED. I can not keep it out of my eye when I am looking over to the Senator continuing his filibuster, but I did want to ask the courtesy of the Senator to make an announcement.

The PRESIDING OFFICER. Will the Senator from Michigan yield?

Mr. SMITH of Michigan. I yield, if I am not yielding the floor.

Mr. REED. Oh, no.

The PRESIDING OFFICER. The Chair understands that.

Mr. REED. If the Senator's speech is as humorous as this introduction it will be worth listening to, but I wish to say that on Monday, probably in the evening, if I can then obtain the floor, I desire to submit some remarks in support of the veto by the President of the immigration bill.

Mr. SMITH of Michigan. Mr. President, that is marvelously interesting, because it will be almost the first time in his career here when the Senator from Missouri has been in close accord with the President on any public question. I shall hear that speech.

But resuming, among the States in the Union which gave a pronounced and overwhelming majority in favor of protection to American industry and labor in 1912 were California. Does anybody deny that? Colorado; I see the Senator from Colorado here. Connecticut, Delaware. How is it, I ask the Senator from Delaware? Am I right?

Mr. DU PONT. Yes.

Mr. SMITH of Michigan. Idaho, Illinois, Indiana, Iowa. There is no doubt about that. Kansas. Now, how is my friend over there, the Senator from Kansas? Kansas gave a majority for protection to American industry and labor.

Mr. THOMPSON. Will the Senator answer as to what two States his candidate for the Presidency carried in 1912?

Mr. SMITH of Michigan. Why should the Senator embarrass me? He knows we ran two candidates. Why not answer this question?

Mr. THOMPSON. And how many electoral votes did that candidate receive in the Electoral College?

Mr. SMITH of Michigan. I can not recall. Did the State of Kansas cast a majority of its vote for protection to American industry and labor in 1912 and again this year, I ask my honorable friend? Here is the senior Senator from Kansas [Mr. BRISTOW]. I ask him. Perhaps the junior Senator does not recall that event.

Mr. THOMPSON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Kansas?

Mr. SMITH of Michigan. I yield for a question.

Mr. THOMPSON. On account of the fight between the two candidates, ex-President Roosevelt and President Taft, the tariff question was lost sight of in Kansas.

Mr. SMITH of Michigan. Oh, Mr. President, that will not do; Kansas people rarely act thoughtlessly. I think the Senator from Kansas is a plurality Senator.

Mr. CHILTON. Mr. President——

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from West Virginia?

Mr. CHILTON. I merely wish to call the attention of the Senator to a fact, if that is material. Senator PENROSE himself will be in the same position when he comes into this body on the 4th of March next under his new election.

Mr. SMITH of Michigan. The Senator from West Virginia is progressing. He is now willing to represent Senator PENROSE here as well as himself. I am quite content to await Senator PENROSE's arrival with 250,000 plurality to his credit. I guess no one questions his title, or, indeed, the title of the junior Senator from Kansas.

Mr. President, Maine cast its vote for protection to American labor in 1912. Does anyone deny that?

Maryland cast her vote for protection to American industry. I am not unmindful of the rapt attention of the Senators upon the other side of the Chamber to this recital. I am glad so many of them have returned to their seats and honor me by their presence.

Massachusetts cast its vote for protection. I ask the junior Senator from Massachusetts if that is not true? Of course I am right.

Mr. TOWNSEND. I will ask the Senator whether Michigan did not record its vote by approximately 110,000 majority for protection?

Mr. SMITH of Michigan. Yes; and yet we have not had any influence in restraining the rapacious appetite of our friends on the other side of the Chamber, notwithstanding my honored colleague and myself bear a commission from that great State to this body. Only yesterday the greatest Progressive club in the State of Michigan, and I think the father of all the other Progressive clubs in Michigan, met at Bay City and decided unanimously to abandon their separate organization and return in a body to the Republican Party.

Minnesota cast its vote in favor of protection to American industry and labor and against the vicious propaganda of free trade, which the President of the United States learned to love in his youth, 40 years ago.

Missouri cast its vote in favor of protection, and but a minority in favor of the doctrine of Wilson and Marshall.

Montana. At last I have reached the frontier post of Republicanism, and I think I am right when I say that both the Progressive Party and the Republican Party in Montana favored protection to American labor and that their vote was considerably greater than the vote of the Democratic Party for free trade, Wilson and Marshall.

Mr. WALSH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Montana?

Mr. SMITH of Michigan. I do.

Mr. WALSH. I suppose that is a challenge to the Senator from Montana. I desire to say to the Senator from Michigan that the State of Montana did cast its vote in 1912, as it always does, in favor of the protection of American industry and American labor from the oppression of the trusts and the protective tariff, the mother of trusts, and they reaffirmed that in the last election when they gave a majority of over 5,000 votes over both the combined Republican and Progressive votes.

Mr. SMITH of Michigan. I think the people gave their vote for protection, of course; they usually do; and I am glad that I have not misstated the condition in Montana. There was a moment or two when I began to wonder whether I was wrong or somebody else was wrong on the other side; but I am gradually regaining my confidence and feel quite sure the statement I made about Montana is not only true, but will bear repetition.

Nebraska. Nebraska, the home of the three-time candidate of the Democracy, the uncrowned king; Nebraska, where free silver was born and nurtured for a few short weeks, and in whose virgin soil it gently reposes forever [laughter]; Nebraska, from which sprang the doctrine of "a guaranty of bank deposits," which lasted but a few short months in a campaign until the nettles grew upon it and it was quietly interred in its native soil alongside the free-silver baby; Nebraska, the home of Democratic plant life and other spurious nostrums.

Nebraska, the residential home of the Secretary of State, now divided, however, with North Carolina. One State will not hold him and now he lives in two. He always did believe in the double standard [laughter], and if he keeps on he will reestablish the old ratio of 16 to 1. [Laughter.]

I admire the Secretary of State, however, but I can not forgive him for the part he played in carrying Prof. Wilson out of the House of Representatives on his shoulders after the West Virginia doctrinaire had struck the blow at our domestic prosperity in 1892. He was one of four men who carried Prof. Wilson out of the House of Representatives on his shoulders after they passed the Wilson free-trade law, which brought on the panic of 1893.

I do not know what part of the physical anatomy of Prof. Wilson Mr. Bryan carried out [laughter]; I never made particular inquiry as to that; but I do not think he was very particular; any part was satisfying; under the circumstances every one was delirious with expectation. [Laughter.] How well I recall the results of that folly.

Nevada cast a majority of its vote for protection of American industry and labor; and this year it would have elected a Republican Senator in place of the senior Senator from Nevada [Mr. NEWLANDS] if there had been just 17 votes more. It cast its vote in 1912 in favor of protection to American industry and labor; yet the Senator from Nevada joined his colleagues on the other side in their raid upon prosperity, having more solicitude for party solidarity than the wishes of the electorate of Nevada as expressed in the presidential election of 1912.

New Hampshire cast its vote for protection. They had good reason to cast their vote for protection; their factories prosper under it. This year they reelected their distinguished Senator to come back to this Chamber, where he reflects so much honor upon his Commonwealth; they elected a Republican for governor of that State; and, for the first time in 14 years, they have elected a Republican mayor of the city of Manchester, with all its multiplied industries. The citadel of Democracy has fallen in New Hampshire; Manchester is no longer a Democratic city.

New Jersey. Can it be possible that is the home of the President, who says that nothing less than a majority should control him; the man who says there should be no inside but all outside in government? Shades of the Democratic caucus; all outside and no inside. You could not break into a Democratic caucus with a jimmy. [Laughter.] Yet in his New Freedom he says that the Government should be all outside and no inside.

I hesitate very much to comment on New Jersey, the home of the President, and facing as I do the present Presiding Officer of the Senate [Mr. MARTINE of New Jersey in the chair], and yet I think he will bear with me while I state the truth.

The PRESIDING OFFICER. The Chair trusts the Senator from Michigan will pardon him for observing that the Senator from Michigan need have no fear or hesitancy for the reason he has stated. The Commonwealth of New Jersey is quite able to take care of itself.

Mr. SMITH of Michigan. I never had any fear of the Senator from New Jersey; it is a pleasure to come within the range of his influence.

But New Jersey cast a majority of its vote in favor of protection in 1912, notwithstanding the President lives in New Jersey. You would hardly believe it, from the returns of the election last fall, when his candidate for Congress was defeated, but it is true. The majority of the voters of New Jersey cast their votes in favor of protection to American industry and labor in 1912, and yet the President leads his party against this overwhelming expression of public opinion.

New Mexico, the latest star in our constellation of States, which I had some part in bringing into the Union, of which I am very proud, and which is ably represented here by my friends, cast a majority of its votes in favor of protection in 1912 and again last fall. I ask the Senator from New Mexico if I am not right about that?

Mr. CATRON. The Senator from Michigan is right.

Mr. SMITH of Michigan. The truth is mighty. I have called witnesses ever since my statement was questioned on the other side of the Chamber. [Laughter.]

Mr. WALSH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Montana?

Mr. SMITH of Michigan. I do, for a question.

Mr. WALSH. I trust the Senator from Michigan did not include me in his last remark?

Mr. SMITH of Michigan. Oh, Mr. President, certainly not. If I was courting trouble with anyone on that side of the Chamber, I should avoid the Senator from Montana with all the adroitness that I could command. No; I did not include the Senator.

Arizona got away from us; Arizona does not seem to have quite come up to our expectations in 1912; but we will pass that by. The people of that State will have an opportunity to correct their folly next year. Most of the mines out there are shut down now, and I think they will not want another object lesson.

New York cast a majority of its votes in 1912 for protection to American industry and labor; and yet the President of the United States says that a majority should control here. The Senator from New York [Mr. ROOT], who does me the honor of listening, nods his assent to my suggestion, for which I am especially grateful. Last fall how nobly New York again did its work. With what consternation did she rout the Democracy, electing a governor of magnificent proportions, a Senator of great promise, both of them protectionists; and even when the State fell, and went into the hands of the opposition in some offices, the people by a majority vote declared in favor of protection to American industry and labor; and yet the President, whose book is literally running over with his respect for majority control, employed every means in his control to get the tariff law repealed, and to put in its place something which the people had declared they did not want.

South Dakota, North Dakota, Ohio—yes, Ohio—pronounced itself in favor of protection to American industry and labor. Why should it not?

Mr. POMERENE. Mr. President——

Mr. SMITH of Michigan. It was the home of Garfield; and also of McKinley, whose name is still sacred not only in the Commonwealth in which he lived and is buried, but throughout the country and, indeed, throughout the civilized world. On yesterday the people by thousands decorated their bosoms with red carnations, emblematic of their affection for the loved McKinley.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Ohio?

Mr. SMITH of Michigan. I yield to the Senator from Ohio for a question.

Mr. POMERENE. Mr. President, as the Senator from Michigan has referred to Ohio and to her vote in 1912, may I have the permission of the Senator to ask him a question?

Mr. SMITH of Michigan. Certainly.

Mr. POMERENE. I noticed the other day that when our distinguished friend, whom we all delight to see honored, was present, some of his very good friends nominated him for the Presidency.

Mr. SMITH of Michigan. I am sorry the Senator mentioned that; that was confidential.

Mr. POMERENE. I want to ask whether the speech of the Senator this evening is in the nature of a speech of acceptance of the nomination?

Mr. SMITH of Michigan. No; it is intended as a valedictory. I am not a candidate.

Mr. POMERENE. I thought I could, with propriety, ask that question, in view of the fact that my own distinguished colleague [Mr. BURTON] and the distinguished Senator from Idaho [Mr. BORAH] are not present in the Chamber, and therefore the Senator would not necessarily be embarrassed by an answer to the question.

Mr. SMITH of Michigan. Well, remembering the number of candidates Ohio has, I am not surprised that the Senator from Ohio is looking abroad.

Mr. POMERENE. Yes; we have a multitude of them; and I would be very glad to have any one of them or the distinguished Senator from Michigan receive the nomination——

Mr. SMITH of Michigan. The Senator is very kind.

Mr. POMERENE. Because we realize——

Mr. SMITH of Michigan. That is as far as the Senator desires to go.

Mr. POMERENE. Because we realize that none of them could be elected. [Laughter.]

Mr. SMITH of Michigan. We will try that out later in another forum.

Mr. POMERENE. In view of the manner in which the Senator has spoken of the doctrine of protection, I notice that he did not make any reference to the State of Michigan, which at the last election, I believe, elected a Democratic governor.

Mr. SMITH of Michigan. Oh, I will refer to that.

Mr. POMERENE. How did that effect the tariff question in that State?

Mr. SMITH of Michigan. It is all right; it was done deliberately; it was not accidental. The people of our State did it from choice. He has made a good governor, and is a very honorable man.

Mr. POMERENE. I am very glad to hear a tribute to at least one Democrat.

Mr. SMITH of Michigan. Oh, I have always praised Democrats where I could, but I do not have many opportunities to do so. [Laughter.]

Mr. POMERENE. I have observed that for some time the Senator from Michigan sees through a glass darkly. In view of what the Senator has said with reference to protection in the State of Ohio, what kind of protection does the Senator have in mind as being indorsed there—protection of the Taft brand or protection of the Roosevelt brand?

Mr. SMITH of Michigan. Both.

Mr. POMERENE. And in view of the Senator's possible nomination for the Presidency, does he expect to follow the Roosevelt branch of the party or the Taft branch of the party?

Mr. SMITH of Michigan. Both.

Mr. POMERENE. The Senator, it seems to me, ought to take a lesson from those who try to ride two horses going in opposite directions at the same time.

Mr. SMITH of Michigan. The Senator from Ohio is confused. He has not read the platforms of the two parties. I have them here; they are perfectly harmonious on the question of protection. I will tell you what kind of protection we are going to have. If I have anything to say about it, or if I am to be satisfied with it—which, perhaps, is of very little consequence—we will have the Ohio brand; we will have the same kind of protection that we had under McKinley. I was here when McKinley was President and helped to enact the tariff law which he signed, and I like that brand of protection myself.

Mr. POMERENE. The Democrats of Ohio will be very glad to meet you on that issue.

Mr. SMITH of Michigan. What there is left of them; they got pretty badly licked at the last election. [Laughter.]

Mr. POMERENE. Not so very badly licked. In a State which ordinarily is a hundred thousand Republican, the Republican governor was only elected by about 28,000.

Mr. SMITH of Michigan. How much did the Republican candidate for Senator get?

Mr. POMERENE. There were different issues involved in that case; it was not a straightout contest between Republicans and Democrats.

Mr. SMITH of Michigan. My friend from Ohio is an innocent-looking man [laughter] and his beautiful brown eyes have an enchanting effect upon me; but he is trying to conceal something from view. [Laughter.]

Mr. POMERENE. I was not aware of the fact that I so closely resembled the Senator from Michigan.

Mr. SMITH of Michigan. The Senator resembles me in many respects, especially in his modesty; but the Senator is trying to conceal something. He knows that if he had stated the majority his colleague to be received at the last election in the State of Ohio it would have measured up with the highest ever cast by the Republican Party in past years. He knows that, and yet he did not say it—and I am going to say for him—Mr. Harding, his colleague to be, received substantially a hundred thousand majority for Senator. Furthermore, as I recollect, both branches of the legislature are Republican. Congressman Frank Willis, a young man of splendid proportions, was pitted against Gov. Cox, and won a most notable victory for our party. Yes; the Ohio brand of protection is good enough for me. It was good enough for Garfield. It was good enough for Rutherford B. Hayes. It was good enough for William McKinley. That kind of protection is good enough for me. President McKinley did not wait until 9.30 o'clock in the evening to sign the Dingley bill; he did not withhold his signature until all places of business from New York to San Francisco had closed, lest he might disturb the business equilibrium of the country. President Wilson withheld his signature to the Underwood law until 9 o'clock and 5 minutes, on the advice of his Attorney General, lest the new law disturb the business of the country. He sprung it on them in the night; and, oh, the morning after. [Laughter.] But William McKinley, of blessed memory, signed the Dingley law in the morning, that his countrymen might take new hope for the day. The wonderful effects of that law kept him in the Presidency until the assassin cut him off; and the day he was buried there was little said about his wanting to be a king and wear a crown; there was little said about Emperor McKinley, who was taking over-sea possessions that he might wear a crown upon his brow. The day he was buried every train of cars in this Republic stopped at the hour of his burial, on bridge or mountain or valley or hill, and paused for full five minutes in compliment to his memory. The multiplied enterprises of our country paused and labor rested for full five minutes at the moment of his burial; and, praise God, there was no idleness until his example and his teachings were forgotten.

Mr. BRISTOW. Abandoned, not forgotten.

Mr. SMITH of Michigan. No; as our honored friend from Kansas says, not forgotten—abandoned. What a tribute to a real party leader with real political principles! He was a far-sighted, sagacious President of the Republic. What a tribute! Not a vocation unrepresented in this tribute; men of strange tongues; workers in mines, forges, and factories; men of foreign birth; men unfamiliar with our institutions; men in every part of the world paid their tribute of affection to this mighty Ohioan; and it is his principles which attract me to the Ohio brand of protection.

But his political course was not unruffled. After the McKinley law passed Congress, in 1890, he was retired from the House of Representatives under a mistaken judgment of the electorate; but it did not take the American people long to rectify that error. How the Democracy plumed itself on the retirement from Congress of McKinley! To what lengths they went in running a shoe-string district through the State of Ohio in order to accomplish that purpose! Yet, when he died, the industries that had sprung into being by the magic of his genius paid reverent tribute to his memory.

He was a well-poised man. He did not want the War with Spain. He did nothing from pique; he was always animated by a lofty purpose and the purest patriotism. He tried his best to check the growing sentiment in favor of war for Cuban freedom. He knew what war was. He was a soldier when he was 16 years of age. He was one of the 800,000 soldiers who, at 16 years of age, fought the battles of this Republic. I heard him often protest against it; he knew its full consequences must be borne by this Republic.

Mr. WALSH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Montana?

Mr. SMITH of Michigan. I certainly do.

Mr. WALSH. As the Senator from Michigan said to the Senator from Ohio that he would run upon both the Progressive and the Republican platforms, so far as the tariff is concerned, I want to read to him from the Progressive platform as follows——

Mr. SMITH of Michigan. Of course, it is wholly unnecessary to thus nip my boom in the bud, because I will not run at all. I have no thought that I shall ever be deemed worthy of such confidence.

Mr. WALSH (reading)—

> We demand tariff revision because the present tariff is unjust to the people of the United States. Likewise, we condemn the Payne-Aldrich bill as unjust to the people.

Waiving the question of the candidacy of the Senator, I would like to inquire of him whether he proposes to go on the stump and indorse those sentiments?

Mr. SMITH of Michigan. Oh, Mr. President, that was in anger. Yes; I am going to indorse the principle of protection of American industry and labor, and I am going to attack the Democratic position as un-American and undesirable. Your frequent platform declarations that we have no constitutional right to impose protective duties makes the issue square and insures a finish fight from which no Republican will shrink. But let me finish what I began some moments ago. Oregon gave a majority vote in favor of protection in 1912. Is there any doubt about that? When the President of the United States says that he is in favor of majority rule, he is ignoring the majority for protection in Oregon.

Pennsylvania, Rhode Island, South Dakota, Utah, Vermont, Washington, and West Virginia cast a majority of its votes in favor of protection to American industry and labor.

Thirty-four States pronounced themselves by a majority vote against the President's policy, including the President's own State, and yet he ignored that "mandate from the people."

Mr. CHILTON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield further to the Senator from West Virginia?

Mr. SMITH of Michigan. Yes.

Mr. CHILTON. I want to say to the Senator, in addition to what the Senator from Montana has said, that in a brief speech which I made in the Senate shortly after the election of 1912 I read four declarations of the Progressive platform which denounced in terms the Republican Party. It denounced that party because, as the platform said, it had lost its usefulness. It denounced the Payne-Aldrich bill. It denounced the management of the Republican Party. It denounced the leadership of the Republican Party. The party that did that got 85,000 votes in the State of West Virginia, and the old standpat Republican Party, to which the Senator still attaches himself and tries to make it appear is still in accord with the Progressive Party and its declarations, in 1912 got fifty-odd thousand votes, and the Democratic Party got 117,000 votes.

Mr. SMITH of Michigan. Put them together, where they are to-day, and I say that there was a majority for protection.

Mr. CHILTON. If the Senator wants to persist in saying that those two things I have named—to wit, the Progressive platform and the Republican platform—mean the same thing, why, I can not help it, and he can add the two together.

Mr. SMITH of Michigan. I know they do not mean the same thing to the Senator from West Virginia, because he is concerned in keeping up the quarrel between these two wings of the Republican Party; but they do mean the same thing to me, and in my State they have already come together with practical unanimity, and if they come together in the Senator's State with the same unanimity the same desirable result will be accomplished in the Nation.

Mr. CHILTON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan further yield to the Senator from West Virginia?

Mr. SMITH of Michigan. I do.

Mr. CHILTON. I want to say to the Senator that in the election of 1914 West Virginia was one of the few States that increased its Democratic delegation in the Congress of the United States.

Mr. SMITH of Michigan. Well, that is not to your credit nor to the credit of West Virginia.

Mr. STONE. You elected a Democratic governor in Michigan.

Mr. SMITH of Michigan. Oh, well, that does not make any difference.

Mr. STONE. Of course not.

Mr. SMITH of Michigan. We carried the State by 75,000 majority for everyone else on the ticket and gained two Representatives in Congress.

Mr. CHILTON. Is the Senator talking about West Virginia?

Mr. SMITH of Michigan. Oh, no; everything that is said here does not necessarily concern West Virginia. I am talking about another State. Answering the question of my honored friend from Missouri, Congressman WOODRUFF, of Michigan, elected as a Progressive, told me yesterday that his party had met formally at Bay City two or three days ago and dissolved the Progressive Party and had come over in a body to the Republican Party. I hope our friend from West Virginia can get some comfort out of that situation. I know I do.

Mr. WALSH. Possibly the Senator from West Virginia will retort that that is no particular credit to the people of Michigan.

Mr. SMITH of Michigan. Oh, well, he did not say that. It required the acumen of the Senator from Montana to concoct such a retort [laughter], and it was not original with him. I do not mean that, however, as a criticism of my friend. You have gotten into the habit of quarreling among yourselves.

Now, I have enumerated the States that pronounced in favor of protection two years ago. It is a striking summary. They declared in favor of the American policy—not the British policy, the American policy; not the policy that has demoralized and driven to desperation the workmen of England and the workmen of America.

Said the President:

I, for my part, believe that there ought to be no place where anything can be done that everybody does not know about.

Oh, what sadness must have crept over his heart when he ascertained that our Democratic friends had locked themselves in the Committee on Finance and pulled down the curtains and shut the blinds, and were as impervious to counsel as though they had been in a tomb in the catacombs!

That is good doctrine when one is not moved by passion or cheered on by ambition. In his book on the New Freedom, at page 223, the President says that the Government should be "all outside and no inside." How can he approve the methods by which most of the legislation of his party in Congress has been accomplished this year? You would naturally suppose he would be saddened by the spectacle of his party locking themselves behind closed doors to perfect legislation which he, as President of the United States, must approve.

I, for one, have the conviction that Government ought to be all outside and no inside.

Said President Wilson before he came to the White House:

I, for my part, believe that there ought to be no place—

That includes the Senate, it includes the House of Representatives—

that there ought to be no place where anything can be done that everybody does not know about.

At page 129 the President said in his New Freedom:

There is not any legitimate privacy about Government. Government must, if it be pure and correct in its processes, it must be absolutely public in everything that affects it. I can not imagine a public man with a conscience having a secret that he would keep from the people about their own affairs.

Yet the Senators in this body have witnessed more secrecy in the last two years in the perfection of legislation and in their party plans than has ever been seen here before. The President ought either to disapprove it or he ought to take in that highly ethical sign.

He calls the House chiefs in council to check the deficit. Why not proclaim it to the world? Why not have it all outside and no inside? Why not let the people know what this deficit is? Why call the party chieftains in council behind closed doors?

I do not think he intended to do harm. I do him the credit to say that, because in his first message he said he would not do the country any harm. He wrote a great deal on building up trade, and especially our foreign trade. It is marvelous how these Democrats like foreign trade. They would rather see one shipload go abroad with a few products for sale than to see 100,000 trainloads go up and down the highways of our country. If all our population were to rely for employment on the amount of goods we sell abroad, idleness would prevail throughout our land; we could not keep the people in New York City thus employed, let alone the balance of the country.

I understand the domestic commerce of this country amounts to upward of $45,000,000,000 annually. The figures are simply appalling. That is the commerce which we should encourage. Our domestic commerce—that may be seen on the highways, in wagons, in cars, going at all hours of the day to the American market place.

I never knew a good loyal Democrat in my life who did not take a great deal more satisfaction in a shipload of products sent abroad than in a thousand loads sold upon our streets. That is the fundamental mistake the Democratic Party labors under. I would not buy a dollar's worth of goods in Europe that could be made at home by our own people.

Look at Canada. There are 7,000,000 people across our northern border. Her citizens may come here at daybreak under this Democratic law, drive into one of our chief cities, occupy our market place, sell the production of their fields and their factories and their looms, take our money, and return at nightfall, without being burdened at all with the expense of maintaining the American Government. They not only have the blessed privilege of enjoying the American market place without cost, but they enjoy their own markets exclusively at the same time.

If I had my way about it, I would not buy European goods that could be made at home. Then we would not have complaints of 150,000 jobless men in Chicago and 500,000 in New York. We would not have complaints of idleness from every city in the Union. The people would have work to do, and then Dun's Review would not record the failures of 1914 as the

greatest in number and volume that ever occurred in the history of our Government.

I do not wonder the President feels called upon to make weekly proclamations of coming prosperity; and yet it does not come, and never will under Democratic management.

Ours is an ideal Government, and we should have more solicitude for our own people than we have for the people of other lands. Our charity ought to begin at home. We should be appreciative of the people who fight our battles. There is not a citizen of Canada who could be drafted to fight under our banner. Why should we give them our market place in competition with those who win our victories on land and sea. They do not pay any of our taxes. Our so-called war tax, which is a deficiency tax pure and simple, does not touch our neighbors on the north. Our own people sustain our Government, and aliens should not be accorded equal privileges with our own.

What a matchless array of figures I cited to you from the census of the United States. No one man can disprove them. Millions upon millions in that one decade of Republicanism were added to the national wealth. We must constantly increase our independence of the world and not place too much reliance on foreign favor. The time may come, and it may result from this European war, when Great Britain will encircle all her dominions with a protective-tariff wall that will exclude us from the best foreign market place in all the world. She may put a tariff wall around her possessions, buying from Canada the products of her mines and forests and her cereals, using for her own benefit her matchless productions in Australia and New Zealand. She may out of Egypt furnish herself with cotton and with wheat. There may grow out of this war a confederated England, just as a confederated Germany grew out of the Franco-Prussian War. When that time comes and the spirit which is now prevalent throughout the Empire is given practical effect, America will have lost her best customer in all the world.

We sell to England about $600,000,000 worth of the products of our fields and our factories every year. When she ceases to buy from us, to whom will we sell? Tell me, my Democratic friends. You have been so generous to our rivals; when we are driven out of the British market by British protection, tell me to what country will we sell the $600,000,000 worth of American products, the fruits of our genius? Oh, how silent sit the Senators upon the other side. [Laughter.] You can not find a customer in all the world to take the place of Britain if you lose her. I want to tell you that there is a sentiment throughout the British Empire growing stronger every year in favor of following the American example and the French example and the German example by giving protection to her own people and preventing the poaching of her neighbors. And if, as a result of this war, her colonies should be more closely united in a general commercial policy as a result of the fighting going on to-night upon a hundred battle fields, and a confederation should result, we will have lost the best customer we have in the entire world.

Then the wisdom of the fathers who advocated American industrial independence and diversification of productions, so that the chair maker may buy shoes of the shoemaker, clothes from the tailor, carpets from the carpet weaver, glass from the glassmaker, each patronizing the toil of other men, thus contributing to a prosperous whole. How great the wisdom of the fathers when they proclaimed that we could not buy in a cheap market and retain a dear market in which to sell. Our market is the best in all the world; as the world progresses, and it is progressing onward, I would not be at all surprised if out of this war the most autocratic government in Europe should become the greatest republic. The cheers of the people of Russia are as sweet music to the Czar. He has never before heard them since he ascended the throne of Russia. For the first time in his experience, at the head of the Russian State, he walks among his people unarmed and unafraid. If when this war is over the people ask for a democracy it would not surprise me at all to see it granted. Common suffering creates a wonderful bond of sympathy between men.

I wish I could detail to this Senate the personal conversation I had a few years ago with the Emperor of Germany, in which he expressed some interesting views on the American and the German tariffs, but I forbear. I believe that all Europe is destined to be protective in its fiscal policy. Sentiment in the House of Commons to-day can not be overlooked, and when they become more strongly confederated we will lose our best customer abroad.

We protectionists believed that we were producing too much wheat and cereals. So we got the Department of Agriculture to make some experiments with our soil and determine whether or not we could raise sugar from the beet. I remember with what misgivings the Secretary of Agriculture conducted his experiments in different States. We felt that we ought to produce sugar here. We were paying hundreds of millions for our sugar abroad. We felt that if we could take the burden off of wheat and the cereals and plant in the same fields a product which we badly needed we could thus retain the money which would otherwise be expended abroad.

Do you know that the island of Cuba has a productive sugar capacity of more than 5,000,000 tons a year? They can supply nearly double the American demand. But there is no reason in the world why we should permit them to do it, thus exhausting our gold supply.

Oh, no; we must diversify our productions, and by so doing retain our gold supply. Every dollar's worth of goods we buy abroad we must pay for in yellow gold, and it is an axiom of good government that you can not buy your products abroad and hold your gold supply at home.

Under the Republican administrations gold has been running into our Treasury like a maddening river from every part of the world. That is the reason why our credit is unexcelled. Is it any wonder that every fourth citizen of the Republic had a bank account to his credit when President Wilson stood on the front steps of this Capitol and took the oath of office as President of the United States? Is it any wonder that from a policy so wise we have been able to gather in money enough to pay all the expenses of our Government and greatly reduce the national debt?

From Lincoln to Taft no hasty Cabinet council has ever been held to take care of an increasing national deficit in the revenues of this country.

We partially built the Panama Canal out of our current income. We left $30,000,000 of Panama Canal bonds in the Treasury. The Democrats propose to take them out and put the money into this ship-purchase plan—a purely socialistic doctrine. If the President had gone to the country on that issue, he would have felt very much as he is feeling now regarding the immigration question. If he had ever had that put in his party platform, I think he would have been a private citizen to-day. It will be a bad law; it commits this Government to a folly—Heaven only knows what fruit it may bear.

Up in the blue mountains of California, in a little room without a roof over it, the silent student of the stars is studying the course of the planets. He is ascertaining their distance from the earth and fixing charts by which ships on the sea will be navigated for years to come. The maps that he is making there in the blue mountains of California will guide our vessels for a quarter of a century. How silently he works, this student of the stars, smoothing out the way of the mariner by night or by day! What we are doing, however, here to-day makes confusion worse confounded. We are not fixing safe charts for the ship of state; we are making no plans by which shoals may be avoided. We are by this bill rushing headlong onto the rocks of socialism.

What the next move will be only the "Doctor" knows. He is not a good diagnostician. He may say, "We have not gone quite far enough; we must take over the railroads and operate them; we must take the mines." Already there is a widespread propaganda in favor of the Government taking over the mines.

How the Government will prosper when it has blunted the initiative of the individual and discouraged him in his struggles of life! Oh, but the President says we must cultivate our neighbors to the south. You can not get any trade from South America or Central America under any circumstances until you treat South America and Central America justly. You can not put your soldiers into any country of Central or South America to subjugate the people and foist upon them a government which they do not want and get any trade or any good will out of such country. We have not a friend to the south of us.

Mexico—think of it. I guess I will not talk about Mexico.

Mr. BRISTOW. Why not?

Mr. TOWNSEND. Go ahead.

Mr. SMITH of Michigan. I have neither the time nor the disposition to do it. I have been brought close enough to that controversy to know something about it. I know where the Mexican revolution was born. I know the character of the men behind it. Down here in the Hibbs Building sits a lawyer who got the first $50,000 in gold that was ever paid out of the Mexican treasury for throwing dust in the eyes of President Diaz and his administration.

I know it, because under oath he told me so. That has been the headquarters of this revolutionary propaganda. Yet this

man is permitted to freely pass from his office in Washington to Carranza or to Villa, and he seems to be marvelously successful in his business of revolutions in Central and South America.

He prophesied the downfall of Zelaya in Nicaragua. He had a hand in the revolution of Guatemala. He spent most of his time one summer between Guatemala City and the City of Mexico. Many people thought he was trying to form a combination to get control of the Mexican Central Railroad from the Mexican Government, then throw it into combination with the railroad of Guatemala, and then tie it up with the Keith system in Central America. A conference in a New York hotel held up the battle of Juarez for two days, while an attempt was made to adjust the railroad and the oil differences of five men, who held in the hollow of their hand the destiny of 17,000,000 Mexican people.

I charge here that all the lives that have been lost, all the blood that has been shed, all the treasure that has been sacrificed, all the feelings that have been wounded, all the hearts that have been broken, all the widows that have been made, all the children that have been made orphans has been caused by the rapacious appetite of a few men to control the railroad and the oil interest of Mexico, and our Government, consciously or unconsciously, has loaned itself to those men.

There is a man here now in this Capitol named Llorente—I do not know whether he is in the galleries or not; if he is, he will hear my opinion of him—who spent his time on the Mexican border in an American hotel in El Paso, where he had millions of dollars to his credit, hiring men to blow up bridges and destroy railroad tracks. I talked to a man in the prison at El Paso, who told that this man told him the arrangement that had been made with him by Llorente in the consular office rendered him immune from prosecution. Llorente used the officers of this Government, of the Department of Justice, to further his diabolical purposes. After the death of Madero, Llorente was taken to Mexico City and incarcerated in a Mexican prison because he failed to account for hundreds of thousands of dollars which had been placed at his disposal and which he used with such a lavish hand in American cities in defiance of our laws of neutrality to further the ends of a few very ambitious, very adroit, and very selfish men in Mexico.

It is said that the President at Indianapolis the other day actually "chuckled," as the CONGRESSIONAL RECORD puts it, when somebody referred to his watchful waiting policy in Mexico. Chuckled! Oh, Mr. President, chuckled at what? At the discomfiture of 17,000,000 people? At a devastated Republic? At the loss of American prestige with our immediate neighbor on the south? Chuckled! Surely it could not have been because 17 marines lost their lives under our flag at Vera Cruz.

Mr. BRISTOW. Why did he go to Vera Cruz?

Mr. SMITH of Michigan. We went to Vera Cruz because he was angry at Gen. Huerta. He ordered Huerta to get off the throne, which Huerta did not do; so, then, the President blocked his loans in Europe and hung a sign on him that he was an undesirable citizen, and the whole world was asked to outlaw him. Some of us did not want the Huerta government destroyed unless there was some other government acceptable to the people of Mexico to put in its place.

Mr. BRISTOW. After Huerta, then what?

Mr. SMITH of Michigan. Oh, how often I have heard the question asked, "After Huerta, what?" Then one day a few of our marines landed and went up the street, not knowing that martial law had been proclaimed, and were apprehended by a subordinate and told that they must consider themselves prisoners. The marines walked along with the officer until one of his superior officers came along, and they told him that they were bluejackets from an American vessel and had no thought of violating the law, and he let them go, returned them to their ship, and made an apology for their apprehension; and yet, before a joint session of the two Houses of Congress, we were asked to give authority to the President to require Gen. Huerta to salute the American flag with 21 guns, when he did not have powder enough to fire 2 guns, let alone 21 guns. [Laughter.] And the 21 guns have not been fired yet, although 21 lives and more were lost because of our ill-advised act.

The whole thing is a pitiful travesty.

Oh, such devastation, such ruin, such disaster, and all for nothing! And we gave arms and ammunition to those bandits. I have often wondered whether the 17 soldiers who sleep under our flag were really sent to their final rest by the powder and the guns that were placed in their hands through the kindness of the American Executive.

If that is a chapter in the history of this Government which our friends on the other side like, all right. In the eyes of the civilized world we have proven ourselves utterly and entirely incompetent to deal with a delicate situation at our very doors involving a doctrine of the American Government recognized for more than 75 years.

Mr. KENYON. Mr. President——

The PRESIDING OFFICER (Mr. SWANSON in the chair). Does the Senator from Michigan yield to the Senator from Iowa?

Mr. SMITH of Michigan. I yield for a question.

Mr. KENYON. The Senator's remarks on this subject are very interesting. I should like to ask him what he thinks about the shipping of cartridges and rifles and ammunition across the water to be used in helping to kill people over there for the sake of profit to manufacturers in this country?

Mr. SMITH of Michigan. It has long been the doctrine of nations that it was legitimate. I do not know that it is highly moral, but it is legitimate to deal with belligerents. We have done it. We did it during the Cuban insurrection, during her trouble with Spain. I remember to have called one night at the palace of the governor general in Habana with Gen. Fitzhugh Lee when that controversy came up with the governor general of Cuba. I have never known it to be otherwise than legal, at least to engage in such an enterprise.

Mr. KENYON. Is it not just as reprehensible to do that as it is to permit shipments into Mexico?

Mr. SMITH of Michigan. The situation in Mexico represents our modern idea of neutrality. The President has made it easy to send arms across the border into Mexico. I know that hundreds of millions of cartridges have been shipped into Mexico during the last two years; Capt. Hopkins, who has an office in the Hibbs building, had a hand in those shipments. Flint & Co., of New York, had a hand in those shipments. Llorente, whom I spoke of a moment ago, shipped munitions of war into Mexico as nails, and under various misleading names. The neutrality law was changed by Executive order. I did not favor the neutrality law passed three years ago at the instance of President Taft. I felt we were going to get into trouble by that law, and said so in conference with our committee at the White House; but it was passed, and the President was vested with a broad discretion, and has made common cause with bandits. He hurled his anathemas to set aside Huerta and followed the fortunes of Carranza and Villa, sending emissaries to both camps, and making it easy for them to get guns. If a state of war existed in Mexico, why were they not accorded belligerent rights? I recognize the humane spirit which has prompted the question of the Senator from Iowa. I wish they might not come here for arms. But, above all things, we should not place guns in the hands of aliens to be used against our own countrymen on the slightest provocation.

We went to Mexico with our fleet to prevent the landing of munitions of war for Gen. Huerta. We sent our entire battleship fleet down there with very slight provocation and then backed off while a shipload of ammunition for Huerta was landed down near the terminus of the Tehuantepec Railroad, below Tampico, and our hasty flight of battleships from Newport News to Vera Cruz cost the lives of 17 of our boys. One of my dearest friends was in command of the dreadnaught *Utah*, and with 3,000 men marched through the streets of Vera Cruz in the face of desultory firing from the tops of dwellings. He took his ship and crew safely back to New York Harbor, only to be forcefully retired by the plucking board while in the very prime of his useful life.

But I am diverted. [Laughter.] I thought I was going to have time to analyze fully the speech of the President at Indianapolis.

Mr. CATRON. We are here.

Mr. KENYON. The Senator has plenty of time.

Mr. SMITH of Michigan. I am glad to see these encouraging signs. [Laughter.]

The PRESIDING OFFICER. The Senate will be in order.

Mr. SMITH of Michigan. This is indeed a tumultuous assemblage. [Laughter.]

I intended to go through that speech line for line. I wanted to call your attention to the fact—and it is a fact, and I say it very respectfully, because no one has a higher respect for the presidential office than myself—that from the hour President Wilson entered the White House he has never discussed in detail any question with Congress or with the country.

Now, think that over. He did not discuss the tariff question; he simply laid down his ultimatum. He never discussed the intricacies of the banking system. He has not discussed in detail the immigration bill. He did not discuss the Mexican problem

when he called us together with so much solemnity. He just told us that Huerta could not be tolerated and wanted our authority to get rid of him. He wrote the resolution in his own way and delivered it to his friends on the committee. The House of Representatives passed it under orders, but when it came to the Senate committee they promptly drove a 16-inch shell through it and eliminated all personal reference to Gen. Huerta, against whom the President directed his spleen.

He has never discussed the Mexican question at all. He has never discussed any public question in detail since he became President, until his speech at Indianapolis the other day, and if he ever repeats that performance his political doom is sealed. [Laughter.]

I do not know of a Democrat in the country who approves it. Of course, I am not in the confidence of them all. How could they approve it?

Mr. CUMMINS. There are comparatively few of them left.

Mr. SMITH of Michigan. I join with the distinguished Senator from Iowa in the hope that they will all see the error of their ways. The President says that the independents are the only real people in the country; that they can dictate who shall and who shall not win; and while patting them on their backs for their independence he says that teamwork is essential in political affairs and anyone who will not play at his proper place on the team ought to get out of the game. Well, I can not harmonize; if the independent deserves this approval, the fellow that does the teamwork is an outlaw. These two horses are going in opposite directions.

Mr. President, our Democratic friends have established employment bureaus now in all the post offices. [Laughter.] We never thought of such a thing under a Republican administration, when there were more jobs than there were men to fill them; but, lo and behold, every post office is now a public employment agency! Think of it—idleness everywhere and postmasters out trying to find work for the unemployed! Why, President McKinley never thought of doing that. No Republican President ever thought of turning post offices into employment bureaus; but if the postal receipts fall off as rapidly for the balance of the President's term as they have been falling off up to this time, and general business continues to dwindle, they will not have any postal business to do and postmasters can devote their entire time to the employment agency. [Laughter.]

What a Utopian dream! I suppose they want the unemployed to apply by mail for a job, and thus increase the postal receipts.

Mr. KENYON. Where would he go?

Mr. SMITH of Michigan. God only knows.

Mr. CUMMINS. To West Virginia.

Mr. SMITH of Michigan. I must say to my honored friend from Iowa that I have lost faith in West Virginia since the Senator from West Virginia said:

> The Republican Party has not had a new idea in 30 years!

[Laughter on the floor and in the galleries.]

The VICE PRESIDENT. The Chair regrets to call the attention of the galleries again to the fact that it is a rule of the Senate that there shall be no confusion in the galleries. The Chair will be compelled to enforce the rules and clear the galleries if disturbance arises again.

Mr. SMITH of Michigan. Mr. President, I hope the Republican Party will be spared the ideas that are so common in the official life of our country to-day. Not a new thought in 30 years!

I have given figures to show that during 50 years of continuous Republican rule there was prosperity everywhere.

The abandonment of our tariff law was brought about by the agitation of importers and doctrinaires. The professional importers kept up the agitation, since which time these pelican patriots are the only people who prosper. They have done most of the business of the country and have pocketed most of the profit.

The public has had no benefit from the change. Everyone pays as much for everything as he did before. The high cost of living has not been lowered. The only difference is it is more difficult to find employment under the new law. I saw in a paper the other day that there were 500,000 idle people in New York. A paper before me shows that there are 250,000 idle men in Chicago. I saw 6,000 idle men before an automobile factory in my own State one day last year. If the present administration is responsible for this condition, God pity it.

Mr. President, I have spoken much longer than I had expected to do, and while I appreciate the continued interest in my remarks, I think I will suspend for the day.

Monday, February 1, 1915.

Mr. SMITH of Michigan. Mr. President, at the time the Senate took its recess on Saturday evening I was discussing the question of national revenues and the ability of the Government to meet its necessary expenses. All Senators, I think, without regard to party, agree that the revenues of the Government are not in satisfactory condition. The expenditures of the Government are vastly in excess of our income and unnecessary appropriations may plunge the country into a huge national debt.

Mr. STONE. Mr. President, will the Senator permit me to interrupt him?

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Missouri?

Mr. SMITH of Michigan. Certainly, for a question, so long as I am permitted to retain the floor.

Mr. STONE. I wish merely to make an announcement. I want to say to the Senator, and particularly to my friends on the other side, that, if I can find a chance to-morrow, wedging in between two of the speakers on the other side, I wish to submit some observations on this bill. I wish especially to invite my Republican colleagues to honor me with their presence.

Mr. SMITH of Michigan. Mr. President, that is a very welcome announcement. Anything that the distinguished Senator from Missouri may say upon this bill will be regarded with very great interest, because we all know that he speaks independently, that he uses his own judgment, and that he reaches his own conclusions without reference to the desires or ambitions of others connected with the Government.

I was speaking, Mr. President, of the excess of expenditures over income, and this question goes vitally to the wisdom of embarking upon an experiment, to say the least, which the Government has never in any emergency in its history felt called upon to undertake in the past. Am I wrong in saying that the expenditures are vastly in excess of the revenues? Certainly no Senator upon the other side of this Chamber will deny that statement. The hasty council of Cabinet ministers called at the White House yesterday indicates a very acute condition in the affairs of our Treasury, and an order seems to have gone out—I do not know how authentic it is, but the public press has carried it—that all appropriations are to be scaled down and that we are to have no river and harbor bill; that the harbor work now partially done is to be neglected. I certainly deplore that situation. I feel that our river and harbor work should be done. It is all right for those who believe that, in the interest of economy, more rigid management is required. I have no criticism to make upon those who opposed the last ball. Their work seems to have borne fruit, as both the Senate and House Committees of Commerce have taken from the proposed river and harbor bill millions of dollars that were carried in the last bill.

Mr. KENYON. Has the Senator's State suffered?

Mr. SMITH of Michigan. Yes; my State has suffered; but my State always suffers when the Democracy is in power. But I was speaking of the necessity for economy, and I do not like to quote the junior Senator from Iowa or other Republican Senators upon that question when we can have first-hand information from our opponents.

During my service in Congress I have learned to admire many Democrats, and to love some of them. I have in my heart only the kindliest feelings toward them all, politically misguided though they may be; but my admiration has been especially strong for the Representative from New York, Mr. FITZGERALD, who upon many occasions has demonstrated his independence of his party. What does he say about the necessity for economy? Quoting from Mr. FITZGERALD in the House of Representatives at the last session, I find the following:

> It may seem somewhat strange—
>
> Said that distinguished New York Democrat—
>
> but I hope it is not out of place, to remind Members on this side of the House that the Democratic platform pledged us in favor of economy and to the abolishment of useless offices; but it did not declare, Mr. Chairman, that the party favored economy at the expense of Republicans and the abolition of useless offices in territory represented in this House by Republicans while favoring a different doctrine wherever a Democratic Representative would be affected. In a few months I shall be called upon in the discharge of my official duties to review the record that this Democratic House shall have made in its authorization of the expenditure of the public moneys. Whenever I think of the horrible mess that I shall be called upon to present to the country on behalf of the Democratic Party I am tempted to quit my place.

This is a Democrat talking, a distinguished Democrat from New York, the acknowledged leader of the House Committee on Appropriations at the present time; and yet this man solemnly says to his colleagues in the House of Representatives:

> Whenever I think of the horrible mess that I shall be called upon to present to the country on behalf of the Democratic Party I am tempted to quit my place.

Mr. OWEN. Mr. President——

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Oklahoma?

Mr. SMITH of Michigan. For a question, certainly.

Mr. OWEN. Will the Senator permit me to ask him what the quotation is that is being read? I did not understand what it was from.

Mr. SMITH of Michigan. It is from Representative JOHN J. FITZGERALD'S admonition to his Democratic colleagues in the House of Representatives, and of course it is excellent authority. No one could speak with greater authority upon the question of the "horrible mess" than Representative FITZGERALD, of New York.

Mr. WALSH. Mr. President——

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Montana?

Mr. SMITH of Michigan. For a question, certainly.

Mr. WALSH. Since the Senator is referring to the city of New York, I did not catch the number of unemployed men the Senator told us the other day were in the city of New York. Can he recall?

Mr. SMITH of Michigan. I am not surprised at that. Nobody has been able to catch them accurately, and I do not know that I could state the number accurately, but I think it is around four or five hundred thousand.

Mr. WALSH. Yes; my recollection is that the Senator stated it was 500,000.

Mr. SMITH of Michigan. I think so.

Mr. WALSH. The statement seemed so startling that I looked up the total vote in the city of New York in the recent election, and I find that it was 481,444 votes for governor in the city of New York.

Mr. SMITH of Michigan. That does not indicate very much on this point.

Mr. WALSH. So the Senator thinks there are more than 100,000 more men out of employment in the city of New York than there were votes cast?

Mr. SMITH of Michigan. Oh, Mr. President, I did not say that out of the voters of New York there were four or five hundred thousand unemployed men. I am talking about the unemployed in the city of New York. I am talking about unnaturalized citizens and young men under voting age—people who live in New York. Those are the figures. If these figures are offensive, I withdraw them.

Mr. WALSH. No.

Mr. SMITH of Michigan. I do not take any pleasure in a recital of that kind, but I think the reports of the committees appointed by the mayor verify my statement.

Mr. WALSH. I appreciate that the Senator is giving us the total number of unemployed, without reference to whether they were voters or not. I simply put these figures in for the sake of comparison. I understand now the Senator's contention is that there are 100,000 more men unemployed in the city of New York than the total number of voters.

Mr. SMITH of Michigan. I am speaking accurately, if the reports of employment committees and labor unions can be believed. No census has been taken. Take Chicago: Of the citizens of Chicago—now, mark you, citizens of Chicago—the Chicago Tribune says there are 150,000 unemployed. The Senator knows there is always, during periods of distress, a large drift of unemployed people to the cities. That is always true, and it was so true in Chicago that they were obliged to tag those who lived in the city and were entitled to its natural protection. I am inclined to think, from what I have seen in the newspapers and from the statement of prominent officials in Chicago, that it is not at all an extravagant statement to say that there are 250,000 people out of employment in Chicago to-day.

Mr. WALSH. I understood the figures given were 150,000.

Mr. SMITH of Michigan. One hundred and fifty thousand Chicago people. That does not include the people who live in the surrounding country and who have come into the city; but idle men came in so rapidly that they were obliged to tag those who belong there with a blue tag in order that they might be cared for first.

I do not want to make an extravagant statement about that. I have seen the figures. It is not at all out of proportion. If Chicago has from 200,000 to 250,000 unemployed, it is not at all extravagant to say that New York has 500,000 unemployed; Mayor Mitchel says there are 200,000 more men out of employment in New York this winter than last. A few days ago, when I was in California, I heard the statement that there were 50,000 unemployed people in Los Angeles. I do know that the most common thing in southern California to-day is the tramp. Doorbells are rung and people apply for food throughout southern California every day, and neither of these States are exceptional.

Mr. President, I have in my hand now—I did not intend to read it—a statement by Supt. Sears, of the Bureau of State Employment of Massachusetts. I am inclined to think that Supt. Sears was appointed to his place by Gov. Walsh. I am not sure. Perhaps the Massachusetts Senators can set me right upon that point. Anyway, Supt. Sears, of the Bureau of State Employment of Massachusetts, says in his last report—and this is not music to my ears; it is very regrettable. It is a drama.

Mr. SAULSBURY. A tragedy.

Mr. SMITH of Michigan. Yes; "tragedy" is a better word. Supt. Sears refrains from attributing this condition of affairs to either the European war or the low tariff.

I am simply interpreting the cold facts and figures—

Said Mr. Sears—

that the work of this bureau records when I say that the labor situation, as reflected by our contact with it, is discouraging.

I should like to know if the junior Senator from New Hampshire knows this official?

Mr. HOLLIS. No; I have never heard of him. I thought Mr. Gettyman was the Democratic appointee; but I am not sure.

Mr. SMITH of Michigan. Mr. Sears may be the commissioner of labor. But he says:

I am simply interpreting the cold facts and figures that the work of this bureau records when I say that the labor situation, as reflected by our contact with it, is discouraging. Yesterday, as a typical day, we had what we term an attendance of 3,000 persons looking for work. To these 3,000 we had a grand total of 82 jobs to offer.

That is deplorable, is it not?

It is a tragedy, as the Senator from Delaware [Mr. SAULSBURY] says—82 jobs to 3,000 men in one day.

Did the Senator from Montana [Mr. WALSH] catch those figures? I should like to have him understand them. I am reading from the report of the superintendent of the bureau of employment in Massachusetts, Mr. Sears. I do not know his politics; his statement is official.

The average daily demand by employers for help of all classes for the month of August was 52. For the same month last year we were receiving calls for help from employers at the rate of 82 a day.

These are not pleasant things, but they are official, and we should have the courage to look them in the face.

Mr. WALSH. Mr. President, I am greatly interested in the figures the Senator gives, and I am equally interested in the conclusions he draws from them. I take it that his conclusions are that this is all due to the change in the tariff?

Mr. SMITH of Michigan. Yes.

Mr. WALSH. The war in Europe is not a factor to be considered at all?

Mr. SMITH of Michigan. No; it was not when these figures were made. These are not war figures.

Mr. MARTINE of New Jersey. Mr. President, will the Senator yield to me for just a moment?

Mr. SMITH of Michigan. Certainly; I yield to my honored friend for a question.

Mr. MARTINE of New Jersey. I want to state that I have too much faith in the candor of the Senator from Michigan to believes that he seriously believes the statement he made that this is entirely owing to the tariff situation.

Mr. SMITH of Michigan. If the Senator will pardon me, I said that the figures I have read from the Massachusetts commissioner were figures which antedated the European war.

Mr. MARTINE of New Jersey. I want to ask whether the Senator can not recall, in his memory as a representative Republican, the conditions when idle men clogged the streets of Boston, Philadelphia, Pittsburgh, and New York? I can recall very, very well many times when labor was stalking the streets asking for bread or employment under the Republican régime. I can recall that the first time I ever heard of a soup house or a bread line standing at Fleischman's, on the corner of Broadway and Tenth Street, until midnight, was under the régime and domination of a Republican President and a Republican Congress.

The Senator can not palm off this nonsense on an intelligent public, that this is entirely the result of the Democratic administration. On Saturday night last he went on to tell of the magnificent results that had been accomplished during the régime of the Republican Party, criticizing the President.

Mr. SMITH of Michigan. Of course it was a period of great prosperity.

Mr. MARTINE of New Jersey. Now, he might just as well have gone on and——

The VICE PRESIDENT. The Chair understands the Senator from Michigan is not intending to yield the floor.

Mr. MARTINE of New Jersey. I do not want him to yield the floor.

Mr. SMITH of Michigan. I am perfectly willing to yield to the Senator, but I do not want to yield the floor.

Mr. MARTINE of New Jersey. I know it is rather——

The VICE PRESIDENT. The Chair has ruled a dozen times that a Senator on the floor can only be interrupted for the purpose of a question, and if he yields to anything further than that he does yield the floor.

Mr. MARTINE of New Jersey. I do not want to do that.

The VICE PRESIDENT. The Senator has been notified of that fact three times.

Mr. MARTINE of New Jersey. Then I will stop.

The VICE PRESIDENT. Undoubtedly the Senator from Michigan is refusing to be interrupted except for a question.

Mr. MARTINE of New Jersey. He did not refuse, as I understood him.

The VICE PRESIDENT. That is what the Chair understood.

Mr. MARTINE of New Jersey. I failed to hear him. I ask the Senator's pardon.

Mr. SMITH of Michigan. If the Senator will give me his attention, I desire to say that under every rule that I have known in this body since I have been familiar with its procedure I could have yielded to the Senator from New Jersey and allowed him to say what I think he could say so well, but under this new rule which the other side of the Chamber has attempted to establish a Senator yields to an interruption at the peril of losing the floor, and I am thus deprived of the pleasure of listening to my honored friend. I did not like to do it, and I apologize to the Senator from New Jersey for it.

Mr. MARTINE of New Jersey. Oh, no apology. I accept the ruling of the Chair, but I do hope to round up the Senator on some of these interrogatories he is making at some time.

Mr. SMITH of Michigan. I have been rounded up so many times by my amiable friend that I am disappointed when he overlooks me.

I was talking about the report of the labor commissioner of Massachusetts, much to the discomfiture of some Senators on the other side of the Chamber. When 3,000 persons in one day present themselves to one bureau and ask for labor and can obtain only 52 positions, that is serious. That is official; the country has gone Democratic.

When I said there were between four and five hundred thousand persons out of employment in New York I was met by the skillful challenge of my friend from Montana [Mr. WALSH], for a charge like that gets right to the marrow. There is something the matter with this country. There is something the matter with it, and that something was not the matter with it when this Democratic administration was ushered into power. There is no doubt about that. Our revenues were ample; our expenditures were generous. We were building the Panama Canal practically out of current revenues of the Government which we did not need. There were more jobs than there were persons to fill them. The credit of the Nation was at its highest point. The bonds of the Government were floated at 2 per cent. Something has happened to the country. I know what it is, I think. It is the same thing that happened to it 20 years ago—a Democratic blight. That is what has happened to the country.

Mr. WEEKS. Mr. President——

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Massachusetts?

Mr. SMITH of Michigan. Yes; I yield for a question.

Mr. WEEKS. I should like to ask the Senator from Michigan if he has considered, in discussing the question of the unemployed, the number of people who are on short time. For example, I note in a Boston paper that the Waltham Watch Co., which employs 3,000 people ordinarily at full time and frequently at overtime, has been employing them five days a week, and last week it reduced the time to four days a week. None of those people are out of employment, but they are working two-thirds of the ordinary time. Has the Senator taken into consideration the hundreds of thousands of people in the United States who are employed but are employed on shorter time than under normal conditions?

Mr. SMITH of Michigan. I thank the Senator from Massachusetts, who is always enlightening and accurate. What I was talking about was the unemployed. When you get to the next question of partial employment I assert without the slightest fear of contradiction that over 4,000,000 people are thus employed and unemployed. There is not a city in this country where people are not working on half time. My honest friend from Oregon [Mr. LANE], who always has the courage to acknowledge facts, says under his breath that that must be so.

Mr. LANE. Not entirely.

Mr. SMITH of Michigan. I know in one of the great stores in Chicago, Marshall Field, they have cut down their force very perceptibly because of lack of trade. I know in my own city skilled workmen who have formerly gone to labor in the early morning and enjoyed it through the entire day are working on half time. Throughout the country this condition exists and proclamations and rostrums do not seem to cure it. But proclamations made by the President a year ago have failed. The reserve bank act is here, but prosperity is still a stranger.

Mr. SHERMAN. Mr. President, will the Senator yield for a question?

Mr. SMITH of Michigan. I yield for a question to my friend from Illinois.

Mr. SHERMAN. If it has arrived, I have also arrived from a trip in the western country. I found in one State where more than 90,000 soft-coal miners are registered, 40,000 of them are idle this winter. I want to know how much longer it would take for it to arrive in that State.

Mr. SMITH of Michigan. I can not tell. I think I could prescribe a remedy for that condition. I think the first thing I would do would be to repeal the nonsensical low tariff law that was passed under presidential whip and spur by Congress immediately after the Democratic Party came into power.

As I said Saturday night, the President waited until 9 o'clock and 5 minutes in the evening to sign that law. He waited until every place of business from ocean to ocean had been closed to forestall the ill consequences certain to flow from it. McKinley signed the Dingley law in the morning, giving hope and cheer and comfort to the unemployed. Why should the President wait until evening, when darkness hung thick upon us, when men pillage and rob and murder, why wait until then to sign a bill which he said would "not injure any legitimate industry"? Is it possible that most of the industries of the country were illigitimate? It hit them all.

Mr. SHERMAN rose.

Mr. SMITH of Michigan. I yield for a question.

Mr. SHERMAN. Keeping in line with the requirement, I ask the Senator whether he considers sugar from cane or beets a legitimate industry?

Mr. SMITH of Michigan. Yes; I belong to a political party that has fostered the sugar industry. I was one of the men who helped President McKinley develop that industry. Some of the States paid a bounty on sugar because we were sending vast sums of gold out of the country to pay for that necessary article of use. In Michigan we put a bounty on to encourage the farmers to produce sugar. The former Mr. Wilson, the former Prof. Wilson, the former doctrinaire, the former economist, the former educator, the former teacher of youth, the former college president—Dr. Wilson, of West Virginia, said in the House of Representatives, in the presence of my honored friend from Mississippi [Mr. WILLIAMS], that of all the articles of production in our country sugar is the most deserving of a tariff. Why? Because it will produce the most revenue. Next, because it is such a necessary article of consumption that we can not afford to depend upon foreigners for it. Prof. Wilson, whose name was attached to the last futile attempt of Democracy to establish free trade in America, wanted to put a duty on sugar, while President Wilson treats it as an illegitimate industry, although he acknowledges he has never had any business experience.

Mr. SHERMAN. He is not prejudiced against it?

Mr. SMITH of Michigan. No; I do not believe he has any prejudice against business. He simply does not understand it.

Mr. PAGE. Mr. President——

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Vermont?

Mr. SMITH of Michigan. For a question.

Mr. PAGE. The Senator, I believe, comes from a State which makes some maple sugar.

Mr. SMITH of Michigan. Not quite as much as is made in Vermont.

Mr. GALLINGER. Or New Hampshire.

Mr. SMITH of Michigan. Yes; or New Hampshire.

Mr. PAGE. Is it not a fact that for the amount of product the hard labor entering into the making of a pound of sugar is perhaps greater than any other commodity? Is not that the Senator's experience?

Mr. SMITH of Michigan. I never made any sugar, but I have eaten my share of it, especially that sent to me by the Senator from Vermont; although I have not eaten any this year, but I am looking for some. [Laughter.]

Mr. MARTINE of New Jersey. The tariff was the cause of the failure.

Mr. SMITH of Michigan. You mean the sap stopped with the advent of Democracy.

Mr. MARTINE of New Jersey. No; but——

Mr. PAGE. But is it not true that this administration has cut down the little bounty that we have heretofore received, the little protection that has prevented the incoming of the sugar from the country north—from Quebec?

Mr. SMITH of Michigan. Yes; we have favored Canada all we could under this administration.

Mr. PAGE. Is it not true that every State that makes sugar even though they make small quantities feel that in cutting down the little protective duty that a great wrong has been done to that industry?

Mr. SMITH of Michigan. I think I may truthfully say that that is so. The other side are flattering themselves that the sugar industry this year is doing a very good business. It is doing a good business but it is on borrowed time. They have been sentenced for execution in 1916, and they have been simply living on fruits and flowers and delicacies that are usually sent in by sympathetic friends to the culprit the night before his sentence is to be effective; that is all.

The American sugar industry is living on borrowed time. There is scarcely a sugar factory in Michigan whose stock you can not buy for 50 cents on the dollar. There was a time just before this war began and after the free trade of the Democracy became a certainty—there was time when we could buy it for 18 cents on the dollar. Who is going to gain by ruining the domestic industry? Who is going to gain by it I ask Senators upon the other side? All the foreign sugar that we get comes through the American Sugar Refining Co., which handles the raw sugar from Cuba. I would not want to assert that they did, but I know when I was a member of the Ways and Means Committee of the House of Representatives we had a Mr. Atkins, of Boston, before us, and Mr. Atkins said under oath that he and Sir William Van Horn and other gentlemen had acquired vast tracts of sugar land in Cuba. Much of the propaganda that has been circulated throughout the country in favor of free sugar comes from that source. I dare say that the peon who works in the sugar-cane fields of Cuba has never got any increase out of this rebate to the foreign sugar monopoly. The people of this country have had no benefit out of it. Sugar is high to-day because of decrease in foreign supply. The high priest of sugardom, the Senator from Kentucky [Mr. JAMES], admitted that as there were more people using sugar than there are people producing it, the greatest good to the greatest number called for this sacrifice.

Now we will go down through our tariff laws just a moment and see where we come out on that theory, the greatest good to the greatest number. There are more people using glass in this country than there are people making it. Therefore the greatest good to the greatest number would indicate that it was wise to buy our glass where we could buy it the cheapest and close our domestic factories. There are more people using furniture in this country than there are furniture factories making it. Therefore the theory of the greatest good to the greatest number calls for a sacrifice that we shall allow people to buy their furniture wherever they will in the world—no matter how cheap the labor that makes it—and close our domestic factories if the theory of my honored friend from Kentucky is to be put into effect. There are more people wearing clothes than there are people making clothes, therefore, to be consistent, we should allow the people in this country to buy clothes wherever they can buy them the cheapest and the American manufacturers must be put out of business.

Mr. BRISTOW. That would be true also as to feldspar and many other products.

Mr. SMITH of Michigan. Yes. Now, let me ask, when we have entirely reformed our American principles so completely that these theories are given effect, what will the American citizen do for his daily wage? Where will he work? If the bars are to be taken down, if importations are to be made easy, and if there is to be no customs supervision at our doorway, who, in the name of all that is good, will furnish employment to the American citizen?

I reassert the plain, straight, philosophic truth, that you can not buy what you need in a cheap market and retain a dear market in which to sell your products. If you buy in a cheap market, you will have no dear market in which to sell; and our civilization does not justify such a sacrifice.

I do not want to take up the question of European wages; everybody knows that they do not pay as much over there as we pay here. I heard my honored friend, the senior Senator from Missouri [Mr. STONE], work himself into a high state of excitement against the former Senator from Rhode Island [Mr. Aldrich] because he had not brought in a report that had been published of certain boards of trade and chambers of commerce throughout the world on the question of wages. Well, I was somewhat touched by the solicitude of my honorable friend from Missouri. I remember it distinctly. His anxiety made quite an impression on me, and I felt uncomfortable in the thought that we had suppressed something perhaps that ought to have been given to the public. So I went over to the Senator from Rhode Island, and I said to him, "Where are those reports?" He said: "They are being translated at the State Department." "It seems to me," I said, "it is taking a long time to get those translations. Have you got any of them?" He said: "Yes; we have got some of them." I said: "Bring them in; I should like to see them." So he brought in a few sheets from those reports. I recall that one of them was a report from the Board of Trade of Nuremberg. I read it. The Nuremberg Board of Trade reported to this Government that the wages paid in Nuremberg were only about one-half what they were in this country in the same lines of employment. I recall reports made from other communities. I was in Germany shortly after that, and visited some of these cities, and I know from my own knowledge that the wages over there are not over half what they are here, and that the manner of living is far below the standard of the American workman.

I did not intend to get into this question, except to again repeat a maxim which is sound, that we can not buy our necessities in a cheap market and maintain a dear market in which to sell. That is the fallacy of this whole free-trade proposition from the other side of the Chamber.

Cheapness has been the aim of the Democratic Party from the hour of its birth. They always want something cheap. They wanted free silver—16 to 1. Everything they want is cheap. It is free trade and free silver, and Heaven only knows what other free things will constitute their political faith as the years go by.

But I am getting away from the question asked by the Senator from Vermont [Mr. PAGE]. I said that the sugar industry of the country was under sentence of death. Of course they smile from their imprisoned walls when they see the flowers; they welcome the consommé and the light refreshments; they are consoling themselves somewhat upon the intervening period between their sentence and their execution; they are still hopeful that, in a country that is intelligent and just, something may occur to turn aside the solemn judgment that has been entered for 1916. If the administration had had courage enough, it might have avoided the agony of the intervening years. Beet culture will be cut off before 1916. There are a few instances in the country—I know of one in southern California—where the sugar company owns its beet land, but I know of another factory within a half mile of that one entirely dependent upon the farmers who had formerly supplied them with beets, but who have refused to cultivate beets under present conditions.

It is outrageous and uncalled for. Most of the employees of those sugar factories are now idle. Yet this wonderful protective war wall, to which the senior Senator from Florida [Mr. FLETCHER] alluded the other evening, still exists, and yet, according to the honorable Senator, war is the very acme of protection.

Mr. BRISTOW. Mr. President——

Mr. SMITH of Michigan. I yield for a question.

Mr. BRISTOW. Let me inquire of the Senator from Michigan if he does not think that it will be impossible for the Democratic Party to permit this free-sugar clause to stand in the tariff law? Will it not have to be repealed? In view of the declining revenues, which have already been supplemented by an income tax and by a special tax, which, to cover up its real purpose, has been designated "a war tax"—and yet, according to representations from the State Department, there is a deficit now approaching of something like $80,000,000 for the year in the face of these special taxes—does the Senator from Michigan not believe that it will be impossible for the present administration to permit the free-sugar clause to stand, which, if it stands, will reduce our revenues thirty or forty million dollars more, without imposing some other extraordinary methods of taxation in order to make up the deficit which is rapidly growing?

Mr. SMITH of Michigan. I do not think it will be possible to allow this gift to be made to the American Sugar Refining Co.; for that is substantially what it amounts to; nobody else is getting any benefit from it. Thousands of men are to be retired from the sugar industry. The people are getting no benefit from free trade in sugar, while the duty, which formerly went to the Treasury, is now absorbed by the Sugar Trust.

The tremendous deficit is growing from day to day. It must be cared for in one of two ways, either by increasing the revenue or by curtailing expenses. Yet they propose to take $10,000,000 out of the current revenues, notwithstanding the warning of Mr.

FITZGERALD, a powerful Democratic chieftain. It is almost impossible to imagine that a Democrat could say what Mr. FITZGERALD has said. This is his statement:

Whenever I think of the horrible mess that I shall be called upon to present to the country on behalf of the Democratic Party I am tempted to quit my place.

Think of the chairman of the House Committee on Appropriations saying a thing like that to his colleagues in the House of Representatives!

Mr. BRISTOW. Mr. President——

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Kansas?

Mr. SMITH of Michigan. I yield for a question.

Mr. BRISTOW. Let me inquire what response was made to the chairman of the Committee on Appropriations by the House of Representatives when he made the appeal?

Mr. SMITH of Michigan. Thus far there have been no economies effected. The very bill that we are now considering calls for an expenditure of $40,000,000 on an experiment. The river and harbor bill, which is now being perfected in the Committee on Commerce, will call for an expenditure of about $35,000,000, and they are creating offices of all kinds that are needless and unnecessary.

Mr. BRISTOW. Mr. President——

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Kansas?

Mr. SMITH of Michigan. I yield for a question.

Mr. BRISTOW. Again, does not this very bill create additional offices?

Mr. SMITH of Michigan. Oh, yes, and no one can tell how many; there is no limit to the number.

Mr. BRISTOW. And were not the expenditures which the chairman of the Committee on Appropriations was denouncing passed by the House in the face of his protest?

Mr. SMITH of Michigan. Oh, yes; and I think he is very greatly discouraged over the present outlook. I am not strictly in his confidence, but I have admired Mr. FITZGERALD for many years. I know how independent he was when the Republican Party were in control of the House, and I know how thoroughly honest and independent he is now. This is a terrible indictment of his party. The Representative from Mississippi, Mr. SISSON, also held his party up to scorn for their profligacy in expenditures.

This is pretty strong language on the part of Mr. FITZGERALD:

I am looking now—

Says he—

I am looking now at Democrats who seem to take amusement in soliciting votes on the floor of this House to overturn the Committee on Appropriations in its efforts to carry out the pledges of the Democratic platform. They seem to take it to be a huge joke not to obey their platform [laughter and applause on the Republican side] and to make ridiculous the efforts of the Members of our party who do try to live up to the promises they made to the people. I know that some Members on this side are voting continually for appropriations because they fear the wrath of the public if they do not vote out of the Public Treasury assistance for everything anyone suggests. I have in my hand a letter which is somewhat characteristic of the correspondence which I receive daily.

If I place my political fortunes above my sworn duty under the law, I would not attempt to carry out the promises of the Democratic platform, but I should place myself at the head of this band of Treasury looters upon every occasion.

* * * * * * *

We charged the Republicans for 12 years of my service in the House under Republican administrations with being grossly extravagant and reckless in the expenditure of the public money.

If I were to say on my responsibility as a Senator that the present administration of this country should be characterized as "Treasury looters," I would be taken off the floor for disrespect to the coordinate branches of the Government, and, indeed, I would not say it. I might reprimand, criticize, and condemn them, but to call them "Treasury looters" can only be done by one on the inside.

This New York Representative has turned State's evidence against his party, and you can not dismiss it with a wave of your hand. Representative FITZGERALD has turned State's evidence against his party and brands them as "Treasury looters." It has not been customary to put statues of Members of the House of Representatives in the corridors of this Capitol; but if there is a Democrat who deserves a statue in this Capitol it is JOHN J. FITZGERALD, of New York, who has had the courage to turn State's evidence against his party and expose the crime of profligacy for which it is responsible. We borrowed no money under our administration. We had money enough to improve our harbors and our rivers and to build public buildings. Why, there is not to be a public-buildings bill this year. The work that is now being done is to be arrested, and a building with a foundation all in and the plans all made and a contract let is not to be erected, and where an appropriation of $50,000 or $100.000 was made for a public building, the Secretary of the Treasury will put up such a building as he thinks necessary for that community, regardless of the limitations imposed by the law, and cover the balance of the money back into the Treasury to cover up the deficits.

Mr. BRISTOW. Mr. President——

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Kansas?

Mr. SMITH of Michigan. I yield for a question.

Mr. BRISTOW. May I inquire if it is proposed to take that money, then, which Congress has appropriated for public buildings and public improvements here among our own people and use it to buy these old ships that are interned now, and set them afloat to lose a lot more money?

Mr. SMITH of Michigan. Certainly.

Mr. BRISTOW. If I understand the Senator correctly, in the case of the buildings that have been provided for, and an appropriation, we will say, of fifty or one hundred thousand dollars made for the building, the money is not to be spent for the erection of that building?

Mr. SMITH of Michigan. No.

Mr. BRISTOW. Then what are they going to do with the money that is not spent—take a part of it for these ships?

Mr. SMITH of Michigan. Cover it back into the Treasury to help make up the deficit, and then take it out of the Treasury with the other hand and pay for these ships; even trust funds—the Panama Canal bonds are to be taken. But let us see whether that course on the part of Treasury officials is justified. We will take the case of a community like Des Moines, a fine, splendid community in the State of my honored friend from Iowa.

Mr. CUMMINS. That is exactly what happened there.

Mr. SMITH of Michigan. Is it? Well, I did not know it. I have put my finger on a place where it actually occurred. I was not aware of it, but I was taking Des Moines merely because it affords such a fine example. I will finish what I have to say, and then I am going to ask the Senator just what they did at Des Moines.

We will say that the people of Des Moines have waited until they have a city of substantially 100,000 people. They have waited for years for a public building commensurate with the dignity and importance of that community. They have declined small appropriations for little buildings on the ground that the community was growing and would soon need more elaborate improvements. The Senators and Representatives from Iowa have pushed aside offers of small appropriations until finally the city has risen to such importance that the Government of the United States concludes to build a creditable structure for the convenience of the public. It is the only immediate connection that Des Moines has with the Federal Government. It is the only tangible, local evidence of the existence of the Federal Government in Des Moines. It is the only thing that identifies that enterprising city with the Federal Government at Washington. We plan a monument that will typify the majesty of our Government and vote an appropriation of $100,000. The present Secretary of the Treasury will get bids. If that appropriation would put up a granite building which would stand for ages, the Secretary of the Treasury, acting autocratically and without authority of law, will plan a building merely to accommodate the present necessities of Des Moines, and if he can build it for $60,000 he covers the other $40,000 back into the Treasury to buy ships with.

I venture the assertion that Des Moines would prefer no building to an inadequate one; that is high-handed and autocratic, but do not think it is prompted by economy; the money will be spent in other directions. They are going to build a railroad in Alaska to cost $35,000,000, where there are two railroads now that are not patronized. They are going to spend $40,000,000 for ocean decorations, and yet they can not give a suitable public building to that splendid community. And yet that is Democratic economy!

Mr. GORE and Mr. JONES addressed the Chair.

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Oklahoma?

Mr. SMITH of Michigan. If my friend from Washington will pardon me, I will yield to the Senator from Oklahoma for a question.

Mr. GORE. I should like to inquire of the Senator how much the Federal Government has expended to construct locks and dams in the St. Marys Canal between Lake Superior and the lower lakes?

Mr. SMITH of Michigan. Probably $100,000,000, thereby opening the Great Lakes to the commerce of the world.

Mr. POINDEXTER. Mr. President, if the Senator from Michigan will allow me, I should like to remark——

Mr. SMITH of Michigan. I can yield only for a question, under the ruling of the Chair.

Mr. POINDEXTER. I will put it in the form of a question. I should like to inquire whether the Senator is not aware that the saving in freight rates on the traffic of the Great Lakes in a single year when business was prosperous, over what would have had to be paid in rail rates, was equal to the entire expenditure of the Government in the improvement of those waterways?

Mr. SMITH of Michigan. Oh, many times over, as everyone knows.

Mr. POINDEXTER. I know that that is a fact.

Mr. SMITH of Michigan. Everyone recognizes that; the Senator from Washington speaks with absolute authority.

Proclamations from the White House do not furnish food to the unemployed.

I belong to a political party that paid the expenses of the Government, ordinary and extraordinary. I belong to a political party which paid the expenses of the War with Spain, and when the war was over we had more money to our credit in the Treasury than when it began. How well I remember when President McKinley called Congress in extraordinary session, and our old friend Dingley, of Maine, of pleasant memory, walked in and took his place in the House of Representatives, and said: "We will provide now for the expenses of the war." We went right on with the public business of the country, neglecting nothing, and did not owe a dollar as the result of that war.

In the Senate we ratified the treaty of peace which called for the payment of $20,000,000 to Spain to settle some differences growing out of the war and affecting the transfer of Cuba, Porto Rico, and the Philippine Islands. Did we have the money—$20,000,000? Did we have to curtail public expenses? Did we have to impose new and inquisitorial taxes? No! We paid that money out of the Treasury; even the present Secretary of State advocated it. We still have the Philippines, 7,000 miles away, but there is a Democratic proposition pending to turn them adrift. They criticized President McKinley so much for taking that territory. I do not know but that they now intend to give it away.

Mr. JONES. Mr. President——

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Washington?

Mr. SMITH of Michigan. I will yield for a question.

Mr. JONES. I understood that the Senator was trying to show the extravagant economy of this party. I should like to ask him whether or not he has read the Democratic campaign textbook of 1914.

Mr. SMITH of Michigan. I read a portion.

Mr. JONES. I want to ask the Senator whether he found very many references in that campaign textbook to the record of economy they had made.

Mr. SMITH of Michigan. Oh, no; they pride themselves on their expenditures.

Mr. JONES. Did the Senator note—I have not had the time to read this textbook, but we naturally look to the index to see what has been treated—that the only references to economy in this index are two, namely, economies in the War Department and economy in collecting the income tax? Those are apparently the only references to economy in this book.

Mr. SMITH of Michigan. Yes; that is true. Some Democrats in very high place seem to think that the country approves of their extravagance. I do not think so. Appropriation bills originate in the House of Representatives. The people reduced the Democratic majority in the House of Representatives in the last election from about 140 to about 35 and indicated a hostility to their program; and yet the President, in his speech at Indianapolis, says that he was approved by the country at the last election. I do not think he was. I think I am right when I assert it.

The totals in the Electoral College under the vote in the last election would have been as follows:

Republican	297
Democratic	213
Progressive	13
Doubtful	8

Figuring by States, the congressional elections show Democratic States in the Electoral College would have been as follows:

Alabama	12
Arizona	3
Arankasas	9
Colorado	6
Florida	6
Georgia	14
Indiana	15
Kansas	10
Kentucky	13
Louisiana	10
Maryland	8
Mississippi	10
Missouri	18
Montana	4
North Carolina	12
Oklahoma	10
South Carolina	9
Tennessee	12
Texas	20
Virginia	12

Mr. BRISTOW. Mr. President——

Mr. SMITH of Michigan. I yield for a question.

Mr. BRISTOW. I wish to inquire of the Senator if he is not mistaken as to Kansas, the Kansas Republican State ticket being elected by from thirty to fifty thousand majority and a Republican United States Senator being elected.

Mr. SMITH of Michigan. Yes; I appreciate that; it was a very welcome sound when the news came over the wire; but what about the congressional delegation as it stands in the next Congress?

Mr. BRISTOW. Unfortunately that stands as at present.

Mr. SMITH of Michigan. That is what I am giving. I am giving the Democrats the benefit of the congressional elections, and the incident to which the Senator from Kansas calls my attention only shows that I am very generous with our friends on the other side.

The States that have gone congressionally Republican with their votes in the Electoral College are as follows:

Connecticut	7
Delaware	3
Idaho	4
Illinois	27
Iowa	13
Maine	6
Massachusetts	18
Michigan	15
Minnesota	12
Nevada	3
New Mexico	3
New York	45
North Dakota	5
Ohio	24
Oregon	5
Pennsylvania	38
Rhode Island	5
South Dakota	5
Utah	4
Vermont	6
Washington	7
West Virginia	8
Wisconsin	13
Wyoming	3

This leaves California in the Democratic column, although the Republicans seem to have elected 5 of its 11 Representatives and the Democrats 3. Nebraska split its congressional delegation evenly. The net result, if this had been a presidential year, a Republican President would be due for inauguration March 4. This is a wholesome and expected rebuke to the administration, and would easily have given us in the Electoral College 297 votes against 213 Democratic.

I think we are due to win a great victory in the next campaign, and I am looking forward, with unalloyed pleasure, to that event. Representative FITZGERALD turned State's evidence against his party. He calls them Treasury looters.

Mr. TOWNSEND. Mr. FITZGERALD alone?

Mr. SMITH of Michigan. No; he is not alone. Representative SISSON, from Mississippi, is also aroused.

We are a debt-paying Nation. The Republican Party has an especially commendable record in this regard. Let us see what we have done. The cancellation of $2,500,000,000 of indebtedness in 25 years following the Civil War is the finest chapter in the history of national financiering. The United States, with an indebtedness of only $10 per capita, with a credit so good that bonds can be sold bearing but 2 per cent, and with $112,000,000 of Panama bonds authorized but not issued, our financial credit was the best of any nation of the world when the Democratic Party came into power. They have injured American credit and prestige. They have aroused the indignation of our own countrymen, and excited the mirth of foreigners, by the puerile and child-like manner in which they have conducted our foreign affairs. We have no friends of this Government to the south of us. I do not believe there is a person in Mexico who does not despise us, while Americans who have interests in Mexico, and have plead and begged for some kind of protection at the hands of our Government, feel very unkindly toward those in authority.

We have angered Honduras by attempting to violate her constitution. We have angered Costa Rica beyond measure, those prosperous, self-reliant, happy people.

We entered into a treaty with Nicaragua regarding the Nicaragua Canal, across Lake Managua and San Juan River. Grover Cleveland held the treaty between Costa Rica and Nicaragua to be valid and binding upon both countries. Yet the United States of America, while professing respect for treaty rights, attempts to destroy it to gratify purely private interests against the protests of the Government of Costa Rica.

Mr. BRISTOW. Mr. President——

Mr. SMITH of Michigan. I yield for a question only. I want the Chair to understand if anyone interrupts me I only yield for a question, because under the new rules here I am not permitted to be as courteous to my associates as I would like to be.

The PRESIDING OFFICER (Mr. HUGHES in the chair). The Senator from Michigan yields to the Senator from Kansas.

Mr. BRISTOW. I want to inquire of the Senator what is the significance of this alleged purpose to pay Costa Rica a million and a half dollars that I saw in the papers. Is that a balm to her wounded feelings, to satisfy her, or what is the significance of the added appropriations that we are asked to pay those countries?

Mr. SMITH of Michigan. The principal significance which I attach to it is the utter recklessness of the party in power to present Treasury conditions. The entire attitude assumed by our Government in Central America is wrong and does us no credit. We have been occupying Nicaragua with our soldiers for over two years against the protest of a large majority of the people.

Mr. BRISTOW. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Kansas?

Mr. SMITH of Michigan. I yield for a question.

Mr. BRISTOW. The Senator is very familiar with Mexico and our relations with that country. I should like to inquire of him what has become of the million dollars which we collected of the Mexican people when we took Vera Cruz, when we made war on Mexico and captured that port, appropriated her revenues, aggregating more than a million dollars? What has become of that money? Did we bring it to the United States; and if so, where is it and what is to be done with it?

Mr. SMITH of Michigan. I do not know, of course. I am not in the confidence of the present administration. No one can prophesy with accuracy what it will do from day to day; I shall not enter such a doubtful field; but we went to Vera Cruz for the purpose of helping Carranza and Villa, who were at that time together, probably to overawe President Huerta. When we got in we could not get out with credit to ourselves. Our soldiers were landed at Vera Cruz under a desultory fire, and the lives of many Americans were threatened. The long procession of noncombatants from the interior of Mexico got under our flag, and the protection which was afforded by Gen. Funston made it absolutely necessary that we should not leave. We administered the customhouse at Vera Cruz. If there is anything on earth that is dear to a Mexican recalcitrant it is a customhouse. A customhouse will inspire a revolution in Mexico any time. I know of my own knowledge that President Madero offered a Michigan man 40 per cent for his money if he would let him have $100,000 until they could get possession of the customhouse at Juarez.

The customhouses have been the aim and the hope and the ambition of every revolutionary Mexican in the last three or four years. When Carranza found himself cut off at his northern customhouse he made post haste for a more southerly one at Vera Cruz, and just before he reached it our soldiers took possession.

It was not intended to withhold this money from these Mexican revolutionists. It was intended to give it to them, but when we were about ready to give it to one of them the other objected, and as we have been their copartners in this whole bad business, we must hold what we have for a more favorable time or enter a court of equity, where conscience is king, to determine which one of these highwaymen is to have this money. I think, answering directly the question of the Senator from Kansas, that the money is now in the Treasury, where it will remain until order is restored, if that time ever comes.

Mr. BRISTOW. Mr. President——

Mr. SMITH of Michigan. I yield for a question.

Mr. BRISTOW. Let me inquire if that money should be given to any Mexican revolutionist or bandit or statesman without the consent of Congress?

Mr. SMITH of Michigan. I will say to the Senator from Kansas our ships of war were sent to Vera Cruz without the consent of Congress. Our soldiers were placed upon Mexican soil without the consent of Congress. Our soldiers are now upon the soil of Nicaragua without the consent of Congress, and have actually carried on war without the consent of Congress. I had always supposed that Congress was the sole power to determine whether or not there should be war, but this administration has made war not only upon Mexico but upon Nicaragua without the authority of Congress.

I said in another place, under some provocation, our troops were ordered out of Mexico by Carranza. I have very good authority for making that statement. I know that Carranza, through the American consul, made a demand for the withdrawal of our troops. He wanted the Vera Cruz customhouse. If it were not for customhouses there would be no revolution. But I said that our troops had been ordered out of Mexico by Carranza. I feel quite sure the official records will show that our troops were ordered out of Mexico by Carranza and the order complied with.

Mr. BRISTOW. Mr. President——

Mr. SMITH of Michigan. I do not say he could have moved our troops by his mandate, but he moved some one, and a controversy promptly arose between Gen. Funston and the War Department over the withdrawal of our troops. Funston protested that it would be inhuman and expose thousands of innocent people to danger. While he was quarreling with the War Department over the withdrawal order Villa and Carranza dissolved partnership, and in that situation Gen. Funston remained for awhile longer to protect those people. I yield to the Senator from Kansas for a question.

Mr. BRISTOW. Mr. President, continuing my question, I am anxious to know who has authority to use this million dollars which we have, I think, purloined from the people of Mexico and brought up here. It is their money and not ours. Who can use that money? Could it be used by the Executive to build up one faction as against another?

Mr. SMITH of Michigan. By our Executive?

Mr. BRISTOW. Yes.

Mr. SMITH of Michigan. Yes, it could; if he were so disposed.

Mr. BRISTOW. Does the Senator mean to say that with our Army and Navy we can take a port of a foreign country, capture it, hold it by force of arms, collect the revenue from it, aggregating a vast sum of more than a million dollars, and then the Executive can bring it away——

Mr. SMITH of Michigan. Use it?

Mr. BRISTOW. And they can use the money as a political agency to put up or tear down parties to a controversy in that foreign country?

Mr. SMITH of Michigan. Yes, Mr. President; unfortunate as that may seem it can be done if an administration were reckless enough to do it. I do not think it would be much more reckless than to authorize the shipment of arms and ammunition into Mexico at the time we did it. I know it would not be half as reckless as it is to hold the people of Nicaragua in subjection without authority of Congress. Yes; it could be done.

While Huerta was President of Mexico our Government sent emissaries to his enemies in the field; I know that the President sent William Bayard Hale, Mr. Carrothers, and John Lind to Huerta's enemies; and the strange thing about it all is—and I am going to say this—that there has not been an emissary sent from this Government to the Mexican Capital in the last two years who has not fallen squarely into the arms of the representatives of Henry Clay Pierce and the Waters-Pierce Oil Co.

Mr. CUMMINS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Iowa?

Mr. SMITH of Michigan. I yield for a question.

Mr. CUMMINS. My question is this: The Senator stated a few moments ago that he supposed the money collected at Vera Cruz was in the Treasury. How does he know that it is in the Treasury?

Mr. SMITH of Michigan. I do not really know, but I assume it is.

Mr. CUMMINS. Does not the Senator know that a short while ago I introduced a resolution asking the President to inform the Senate with respect to the amount collected, what he proposed to do with it, and whether he proposed to expend it without the authority of Congress, and that the resolution was opposed on the other side of the Chamber, and finally sought to be sent to the Committee on Foreign Relations, it being now on the calendar.

Mr. SMITH of Michigan. Yes, Mr. President, I know that is so; and I should like to see the resolution of the Senator from Iowa acted upon. It should have received the approval of the Senate. It might have revealed a condition of affairs about which the country knows but little. I do not think, however, that the money is in the Treasury to the credit of our general fund. I think it is only held for safe-keeping.

Mr. CUMMINS. I was about to ask the Senator from Michigan whether he thought that money might be used to buy these ships in view of an empty Treasury?

Mr. SMITH of Michigan. Well, if the Mexican quarrel keeps up long enough, it might be borrowed to buy ships.

Mr. SHERMAN. Mr. President——

Mr. SMITH of Michigan. I yield to the Senator from Illinois for a question.

Mr. SHERMAN. I wish to inquire of the Senator from Michigan whether the Government does not now find itself in a situation where great diplomatic embarrassment would arise if it undertook to dispose of this million dollars which it has in its custody? Would not the payment of this million dollars, even if it were by the authority of Congress, to any of the revolutionary elements now in Mexico, carry with it a recognition by this Government of what we deemed to be the lawful government of that Republic?

Mr. SMITH of Michigan. Yes, Mr. President; and it would carry with it the recognition of no other government on the face of the earth. There is not a government in the civilized world that has recognized any government in Mexico since Gen. Huerta was driven from Mexico City by the activities, the spleen, the pique, and the madness of our own Government, although he had been recognized by every government in the word, except two or three. The foremost Governments, Germany, France, England, Russia, Austria, and Italy, had all recognized Huerta, and recognized him promptly. When the secretary for foreign affairs in England was asked in the House of Commons regarding the recognition by England he said: "It has been the policy of this Government always to recognize de facto governments." We could have done the same thing with perfect propriety. If we had done it, in my judgment, Huerta could have composed the differences that existed there, and the responsibility for all the robbery and all the murder and all the lawlessness from that time to this rests upon the President's shoulders.

While I am on the subject I am going to give as tersely as I can what I believe to be the errors of the Washington administration in Mexico.

I.

The announcement of the new doctrine that governments owing their origin to violence would not be recognized by this Government was an error. It had no more than been announced before the Chief Executive of this Nation knew it was an error. When an incipient revolution in Peru occurred, when their President was incarcerated and their secretary of war was murdered, a revolution which, in its effect, was as far-reaching as was the revolution in Mexico, the President of the United States promptly recognized the revolutionists. "Consistency, thou art a jewel," but thy name is not Democracy. [Laughter.] It was an error for this Government when it announced the new doctrine that governments owing their origin to violence would not be recognized by this Government for the following reasons:

(a) It was announced before the President had access to the records of the Department of State and the history of our foreign relations, which should have served as his guidance.

(b) It was purely an expression of the President's personal views, being contrary to the traditions and precedents of this Government since its existence.

(c) It was uttered without foresight and without that comprehensive view of its effect on our foreign relations which should have obtained. This is made evident by the inconsistent attitude of the administration in refusing to recognize the administration of Huerta and subsequently recognizing the new Government of Peru—where the President had been deposed by violence and was in jail and the minister of war had been assassinated—and by the recognition of the Government of Haiti. These inconsistencies subject the administration to the charge of insincerity.

There is no apparent continuity in the American policy.

II.

In refusing to recognize the provisional government of Gen. Huerta, this Government was within its rights, but it nevertheless contributed to the discredit of a government which was endeavoring to restore peace and order to Mexico, and which had the support of 98 per cent of Mexican public opinion and of the American and all other foreign colonies as well as of all European Governments.

That is quite a startling statement, and yet it is true. The consequences following the withholding of our recognition have been most grave. Our attitude has been interpreted and is now recognized as favoring and supporting rebels in arms against a regularly constituted government. It has fed the flames of rebellion, stimulated the revolutionary movement, and is responsible for the destruction of millions of dollars' worth of property and thousands of human lives. It has financially ruined thousands of Americans, and it has afforded advantages to European commercial, manufacturing, and exploiting interests to the loss and detriment of those of the United States. It has excited the suspicion and hostility of every Latin-American country, has grievously affronted every European chancellery, and has placed this Nation in such imminent peril in its foreign relations with three great Governments that it has found itself obliged to determine its course in a great international question by the pressing necessities of the difficult position which it has created rather than in response to the call of high national and moral obligations.

That is the truth about it.

It has forced a further distorted and amplified interpretation of the already exaggerated Monroe doctrine and launched us upon seas of imperialism from which no man may see the shore. Persistence in such a policy can be justified only by the supreme necessity of saving the pride, prestige, and face of an administration committed to a national blunder. It can therefore be justified only as a policy of "expediency" and not as one of "morals."

III.—THE DISPATCH OF THE LIND MISSION.

The dispatch of Mr. Lind to Mexico as the official representative of the President in dealing with the Huerta administration, without diplomatic character and without the approval or consent of the Senate of the United States, was an act at variance with our precedents and was an assertion of overlordship over the sovereign Mexican Nation through direct though not armed intervention in its affairs. The representations made through Mr. Lind had already been made under instructions from Washington through the sworn and constitutionally made officer of this Government without success, and their repetition through the personal representative of the President, a person without diplomatic character or training, was an act of needless offensiveness to a friendly and sovereign State, foredoomed to failure even before negotiations were entabled.

I myself do not say anything against Mr. Lind in this connection. I think John Lind is an upright man. I served with him in Congress and found him to be a most agreeable, able, and conscientious man; but his mission to Mexico was an absolute failure, so far as our information goes. He has not accomplished one thing for this country; neither did William Bayard Hale accomplish anything. Nobody knows how much these men have been paid for going down there, but we do know that after they reached Mexico they were generously entertained by people who had interests to subserve. The Huerta government was convicted of high crimes and misdemeanors upon ex parte testimony. Huerta was told that he was unfit to be President and was asked to join an expression of his own condemnation. Huerta's government was further asked to give guaranties for a constitutional election, whereas every person versed in Mexican affairs knows that a constitutional election is impossible in Mexico.

There has never been anything said about a constitutional election since Huerta retired. It was not constitutional for a body of Mexican generals to meet at Aguas Calientes. That was not the constitutional dignity that the President of the United States said must be observed in Mexico before he would have anything to do with it. The Aguas Calientes convention was not constitutional. Two or three Presidents have emanated from that voluntary, promiscuous, and rather revolutionary gathering.

Finally, the diplomacy of the Washington administration having been conspicuously unhorsed by the unafraid Mexican President and his astute minister of foreign relations, Mr. Gamboa, it made an irreparable mistake in retaining Mr. Lind in Mexico after his mission had terminated, thus further irritating the Mexican Government, exposing our own Government to further ridicule, and the unfortunate Mr. Lind to the dubious delights—though assured safety—of the seaport of Vera Cruz, the only place where he could live in quiet.

IV.

The attempt to discredit European nations accredited to Mexico and to misrepresent their attitude with reference to recognition.

The European Governments accredited in Mexico have no political interests in that country, but they have large commercial ones and large colonies. France has $900,000,000 invested in banking and manufacturing enterprises. Great Britain has close upon a billion of dollars invested in mines, banks, railways, and plantations. Germany and Spain have each over $500,000,000 invested in the country at large and growing colonies. The representatives of these Governments

have experienced not only nearly two years of the misgovernment, but also the terrors and insincerities of the Madero government, a government in theory totally unsuited to Mexico and in practice worse than the autocracy of Gen. Diaz.

No one doubts that. He was a dreamer, a good man, I guess, but his brother, who was summarily disposed of for intrigue, was always at his heels. It was his brother who drew out of the Mexican treasury $50,000 in gold and handed it to Capt. Hopkins, whose office is in the Hibbs Building in Washington, for throwing sand in the eyes of the administration of President Diaz. Some people say that he drew out $300,000 at the first offering. That he gave Mr. Hopkins $50,000 of it in gold I know to be true; and Hopkins was a sand thrower. He spent most of his time casting reproach upon the Diaz administration. He is the professional revolutionist over Central America. He knew Zelaya was going out of the presidency of Nicaragua weeks before he went out; he helped put him out. I do not know how much he got for it, but if I had the power I would make him tell how much he got for it. If I had the power, I would drive these professional revolutionists out of the District of Columbia.

You talk about driving bad women out of the District of Columbia and destroying the "red-light" district. The police can look after that. But you permit a pest pot of revolution to burn and smell to heaven right under your noses. Then, too, they have access to the Department of State, and have had for years. I have called attention on this floor several times to that fact, but I can not move anyone to action on the majority side.

The New York Herald, with a degree of independence that is most commendable, has published page after page of the iniquities of this revolutionary cabal who have their offices in this city, where most of these revolutions at the south of us are concocted. The New York World, which admires the President of the United States, but which has not very much love for the Secretary of State, although it treats him with respect, has over and over again cautioned the country against this revolutionary pest pot in the District of Columbia, but nothing is done. But I must not be turned aside. They desired to secure the safety of their nationals and an opportunity for them to pursue their peaceful occupations. They therefore recommended the recognition of the Huerta government, and for these reason only their representations were approved and acted upon by their Governments. The refusal of this Government to accord recognition became, therefore, equivalent to a rebuke to the European, Asiatic, and Latin-American nations which had accorded recognition, and it was further distressing to them in that they were deprived of the moral support of this Government in aiding the Huerta administration to restore order, and that while they were deprived of the benefits expected to flow from their action they were offered no compensation therefor in the policy of this administration.

V.

In attempting to destroy the financial credit and standing of Mexico we went out of our way to strike a blow at the people of a friendly Republic. Huerta had made all his arrangements for money in France. He got an advance of ten or twenty millions. He took ten millions of it and paid back a loan to the banks made by Madero, and the other ten millions he used in strengthening his army and maintaining peace. The President of the United States hung a sign on him, saying that he was an undesirable citizen, and the world took note of that sign and refused to loan him any more money, although he stayed in his place 15 months after that sign was hung out and seemed to enjoy the confidence of his countrymen.

This was a second act of intervention in the affairs of Mexico, designedly expected to deprive the federal government of the means necessary to put down rebellion and disorder.

Can anybody say anything against that? Is not that sound doctrine? For the purpose of carrying out the policy of the President this Government and this Nation were made responsible for the destruction of vast material interests, for a protracted and bloody warfare, for the unnecessary sacrifice of thousands of human lives, and for the permanent impairment of cordial good feelings between the two nations. This policy, initiated without any knowledge of the resources of the Mexican Government, has been a ridiculous failure. Mexico's revenues to-day are larger than they were six months ago. They are composed of $5,000,000 a month from the customhouse and $6,000,000 from other special taxes that are not burdensome, thus giving a total revenue of $11,000,000 a month being used entirely for administrative and war purposes.

Huerta was in pretty good shape. He was proportionally in better shape than we are in the net result. He had more money, and would have had good credit if we had not broken it down.

VI.—IN LIFTING THE EMBARGO ON THE IMPORTATION OF ARMS AND AMMUNITION INTO MEXICO.

(a) This was an error because it was dictated by considerations of "expediency" and not of "morals"; placing arms in the hands of civilized people bent on destroying one another is an immoral act and contrary to laws, human and divine.

When the Senator from Iowa [Mr. KENYON] asked me, Saturday night, if I regarded the shipment of arms to Mexico as a proper thing for this Government to do, I said that it was the custom of nations but that it was immoral.

This was an error contrary to laws, divine and human. How much more reprehensible, therefore, is the placing of arms in the hands of savages and vandals, with the power to take human life and destroy the property of law-abiding people. By this act, our Government, acting upon the promptings of mistaken, even though honest, motives, became accessory to the crimes committed by the hands of barbarians.

They are not all barbarians, but many of the men who are fighting under numerous chiefs are known to be not of the highest order of citizenship.

(b) Because the act convicts the administration of insincerity, since the President some six months ago announced his determination never to take this step. He announced that he never would take the step, and then took it.

(c) The failure of some established Mexican Government to become responsible for damages growing out of the disturbed conditions existing in northern Mexico, we, as a Nation, will become liable under international law and under the interpretation of the Monroe doctrine for money compensation for the lives and property of foreigners taken in that territory. These damages will amount to probably seventy-five or one hundred millions of dollars.

And Mr. Bryan, Secretary of State, in the interest of peace and good order, would probably recommend paying such damages, even though he had to give the bonds of the Government to do it. If anybody has any claim against this Government anywhere on the civilized earth, I recommend him to bring it here now, because he never had a better opportunity to collect it. Pay Colombia $25,000,000 salve money, when we ought to charge them $50,000,000 for the benefit conferred on future generations of Colombians by connecting their Atlantic and Pacific ports through a waterway that for all the future generations of men will give them access to their widely separated ports upon both oceans! But they seem to understand that people could get their claims easily up here now, and they are all coming up with their satchels. There have been more men hanging around this Capitol with satchels, ready to take back money that they think they are entitled to, than I have seen before in 20 years of service. They come from everywhere. My advice to them is to get action quickly, because the money will not last long.

VII.—THE ASSUMPTION THAT CONSTITUTIONAL ELECTIONS CAN BE HELD IN MEXICO.

There never has been a constitutional election in Mexico, and there never will be until a radical change is made in the habits and character of the people. The work of making the nation democratic must be begun at the bottom and not at the top. We can not justly saddle an ignorant and savage nation with responsibilities such as are borne with difficulty by highly civilized nations. Eighty per cent of the population is Indian and unable to read or write, and with no more comprehension of the theory and practice of democracy than a Zulu or Hottentot. As well expect the Statue of Liberty in New York Harbor to stand if built upon quicksand as to expect a constitutional election under present conditions in Mexico. It was a dream. The only thing I am sorry about is that it was a presidential dream.

Every government there has been shot in and shot out of power. That is the plain truth about it. I am not saying this because it is pleasant. That is the plain truth about it. Anybody who has been down there knows it. Why, the last time I was in Mexico City the policemen carried lanterns so that other people might not think they were prowlers, and there was not a depot where the train stopped anywhere in Mexico where they did not have soldiers ranged up to overawe the disobedient populace.

Mr. GALLINGER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from New Hampshire?

Mr. SMITH of Michigan. I yield to the Senator for a question.

Mr. GALLINGER. I should like to ask the Senator who was President of the Republic of Mexico at that time?

Mr. SMITH of Michigan. Diaz.

Mr. GALLINGER. Can the Senator tell who is the President of Mexico now?

Mr. SMITH of Michigan. No, Mr. President; I have not read the morning papers thoroughly. [Laughter.] I know who was President yesterday, but I have not read this morning's papers. I do not know who is President; but whoever it is, he is trying his level best to avoid going to the capitol. If he can be seen once in the capitol he is doomed.

Every government there has been shot in and shot out of power, and a revolution is an election. That is a terrible thing to say, is it not? I do not like to say it; my criticism is not directed to the whole 17,000,000 of Mexicans. I think our Government is partially responsible for their being in this demoralized and awful condition; and I am not altogether sure—I am going to be fair about it—that the responsibility rests wholly with the party now in power, although they have done much to encourage the present situation.

Do you remember the battle of Juarez? I said the other day that five men in the Belmont Hotel in New York held up that battle for two days; and there were not enough shots fired in the battle of Juarez to gratify the interest and inquisitive desire of people across the border, who expected a real fight. Some shots came over into El Paso. You can see buildings there where a stray shot came across the river. Even the American consulate got one or two of them in the roof, but it was not a battle. President Diaz had been convinced that the monetary interests that had controlled the Mexican railways and the oil business had turned against him. He had been convinced of it. His minister, Limantour, when he returned from Europe, gave out an interview in New York which put the finishing touches on the reign of Diaz; and he surrendered almost without firing a gun at Orozco and the soldiers under President Madero.

Madero made all kinds of promises to his people and did not keep them. I regret the manner of his death. He did nothing for this country. He did not cause the prosecution of any man for murder of an American citizen. Foreigners had more standing in Mexico than Americans did. One of the most prominent citizens of New Hampshire—I do not know but that my friend the senior Senator from New Hampshire will remember this—came here to ascertain what rights an American had in Mexico and he was told that his name sounded a little like a German name and they hoped he would not disclose his American citizenship.

Mr. GALLINGER. The Senator is correct in that.

Mr. SMITH of Michigan. I am obliged to the Senator from New Hampshire for confirming what I have said. Every government in Mexico has been shot in and shot out of power, and we furnished the ammunition and the guns. It is no credit to us.

How I was thrilled by the couplet of the Senator from Massachusetts [Mr. LODGE]—I wish I could recall it—when he was discoursing so ably and interestingly upon the delicate situation in Magdalena Bay. "Our name was on the guns, John." Now, I know what I am talking about when I say "our guns." The testimony taken by our committee on the Mexican border disclosed this condition of affairs.

Mr. SUTHERLAND. I hope the Senator will read it, if it does not take too long.

Mr. SMITH of Michigan. I will read it on the request of the Senator, although I did not intend to do so; but it is so pertinent to the present issue that I think it really ought to be read.

Mr. BRANDEGEE. Is that all there is of it?

Mr. SMITH of Michigan. This is all there is of it, but there was further and ample proof of selfish activity on the part of prominent Americans.

Mr. CUMMINS. They did not want to be investigated.

Mr. SMITH of Michigan. They did not want to be investigated; but we know that millions and millions of rounds of ammunition have been spirited across the border, sometimes with the consent of our Government officials and sometimes without it. Every government of Mexico has been shot into office, and our only answer was rhetoric, rhetoric, rhetoric.

The truth of this view is sustained by the history of Mexico since the time of the revolution against Spain. Where else throughout the world has there been more turbulence, more violent overturning of government, more hallelujahs of triumph, or more anathemas of death and defeat? The hero and patriot of one hour becomes in the next hour the fugitive from justice, with a price upon his head.

It is but a few days ago that Carranza marched in triumph into the Mexican capital and then skulked out of it under color of darkness. Now he is on his way back again, and his successor is skulking.

Hallelujahs of triumph and anathemas of death and defeat right at our door. Right at our door the president of Mexico only a few short months ago, it seems to me, came over to the Rio Grande and the President of the United States met him on the international bridge, where they exchanged felicitations. It was supposed then that we had some interest in that country and its people, but we have given its bandits arms and ammunition to destroy honest people. The red fire of anarchy now burns from the Rio Grande to Vera Cruz.

Somebody may ask what I would have done about it. I would not have broken down the barriers of self-government in Mexico. But I would have given protection to American citizens and to other foreigners who had a right to rely upon us.

Mr. ROOT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from New York?

Mr. SMITH of Michigan. Certainly; I yield with pleasure to the Senator from New York for a question.

Mr. ROOT. I rose for the purpose of putting a question to the Senator from Michigan that may direct his mind and his very illuminating discourse toward one specific direction in which the pending ship-purchase bill may bring us into contact with serious questions in Mexico. The question is this: Would it be possible, in the judgment of the Senator from Michigan, to preserve an attitude of entire impartiality and abstention from all participation in controversies that are going on in Mexico between the various aspirants for supreme control and at the same time operate a line of Government-owned vessels engaged in commerce between the ports of the United States and the ports of Mexico? Would not this situation naturally arise? While private vessels can make their private arrangements with these chieftains, Carranza and Villa and Zapata and Obregon, and all the others, while private persons can arrange with these aspirants, as we know, for their accommodations and their protection at one port and another, the Government of the United States could not possibly do that without involving itself in controversy by giving its moral support to one of the arrangements. What does the Senator from Michigan think about the situation in which we would be placed with reference to our self-denying ordinance as to the affairs of Mexico if this bill were to pass?

Mr. SMITH of Michigan. Mr. President, that is what caused me to refer to the Mexican situation. It is a fact that we are about to establish a new medium of communication upon the sea, and of course we could do no business safely with Mexico under present conditions.

All that the Senator from New York has said, and most appropriately, is very illuminating as illustrating the difficulties under which we are now laboring to bring forth a mountain, when in reality we will bring forth a mouse. We will get nothing out of Mexico and nothing out of Central America and nothing out of South America by these Government-owned ships. Our entire attitude toward these people must be changed to disarm prejudice.

Mr. ROOT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield further?

Mr. SMITH of Michigan. For a question.

Mr. ROOT. May I ask the Senator from Michigan whether the very striking figure of his is designed to affect the suffrage vote?

Mr. SMITH of Michigan. No; I had no hidden motive.

Mr. ROOT. I call the attention of the Senator to the fact that there are a considerable number of the States of the Union, including that of my friend the Senator from Utah [Mr. SUTHERLAND], who I observe is smiling at this moment, in which the threat of bringing forth a mouse would present a most serious political problem.

Mr. SMITH of Michigan. Oh, Mr. President, I voted for suffrage in Michigan, and I am going to vote for it here if I have an opportunity. But before we undertake to establish closer trade relations with the Republics to the south of us we must get their good will. They are very suspicious of us now.

Mr. LIPPITT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Rhode Island?

Mr. SMITH of Michigan. I yield for a question only.

Mr. LIPPITT. I should like to ask the Senator from Michigan if he thinks it is perhaps taking a long step toward getting their good will when our Chief Executive has acknowledged that they have a right to shoot all the people they want and we are not going to interfere with their holy pastime?

Mr. SMITH of Michigan. Oh, what a striking indictment that presents! What a striking indictment of one whose action has contributed so much to the disrespect for law in Mexico. It seems to me that it is rather dubious doctrine to say to the people of the Western Hemisphere that you can fight whenever you please as long as is necessary to kill one another off.

Recently we have heard Senators on the other side of the Chamber quote with approval the records of distinguished Secretaries of State in the past. They talk about Evarts and Frelinghuysen, and yet when a Senator who has been a great Secretary of State, who is fitted to fill any office in this Government with credit, stands up here with solemnity and candor and admonishes them against the danger they will encounter by this departure from a settled policy of the American Government for over a century they turn a deaf ear. How vain the eloquent appeal of the great Senator from New York. Future generations, however, will do Senator Root the credit to say that he warned his country against the danger of this paternalistic device. The President of the United States says he will not recognize anyone unless he is chosen squarely under the constitution of Mexico. He who rules marches through slaughter to a throne. Power is seized by ambitious hands, but the victor ends his career either in the dungeon, in exile, or by the dagger.

Mr. JONES. Mr. President——

The PRESIDING OFFICER. Will the Senator from Michigan yield to the Senator from Washington?

Mr. SMITH of Michigan. I yield for a question.

Mr. JONES. It may be that the Senator has already touched on the point I have in mind. If he has done so, I will not ask him to repeat it. Can he give us any information as to why it is that we have apparently kept some of the representatives of our Government going around over Mexico with different factions. Have we kept our representatives along with Villa and Carranza and Zapata to see that they were doing their pillage and their ravishing and their murders in a proper sort of a way, or why have we kept our representatives there?

Mr. SMITH of Michigan. We have kept them spying on conditions. Some of them ought never to have been sent there. Some of them were discredited in their own countries before they were chosen for that kind of service. When the President of the United States solemnly told the American people that Villa had entered Torreon not as a victor but as a brother to those people, he based his statement upon the report reputed to have been made to the State Department by Consul Hanna. I know from the lips of a man who was with Villa at Torreon that Hanna was not within 15 miles of Torreon when Villa entered and did not know anything about it. This man, who is worthy of belief, told me that when Villa entered Torreon he was walking with him on the streets of Torreon when a woman cried out, "There goes the federal paymaster," and without waiting to see who he was Villa and his chief of staff drew their guns and shot that man to the earth, and as he lay groaning and dying he held in his hand a yellow piece of paper which this newspaper man told me he bent over and took out of his hand and it was a pass from Villa. He was not the paymaster. He was a lumberman of Torreon. He had in his pocket $15,000 in money, for he had sold his lumber, anticipating the coming of revolutionists, and was preparing to get out of the country. Even the wife and children of the dying man were forbidden to look upon his face or give him burial. Finally toward evening they begged so hard that he might be buried that his body was thrown over a donkey's back and taken toward the cemetery. On the way the body fell off. No one was permitted to move it without authority from Villa. Finally when that authority was given this American told me he followed the body, which was again thrown across the back of a donkey, to the cemetery. When he got out to the cemetery he said there were 10 Americans out there digging graves, and he heard the man in charge of the cemetery say, "After you have finished digging the graves for these Spaniards you dig yours."

Yet the country is informed that Villa's entrance into Torreon was peaceful and kindly and not as a revolutionary chieftain. Some one has been fooled; why will not the President listen to people who know the truth? He kept Nelson O'Shaughnessy cooling his heels in a Washington hotel for 10 days before he would give him an audience. O'Shaughnessy reflected luster upon his country. He ordered him to come here direct and would not even let him stop over at his old home where his father had recently died. He wanted him here, and for 10 days O'Shaughnessy, the acting minister of the American Government in Mexico, who through peril and disaster stood at his post and rendered service for which the American people will always be his debtor, was denied access to the Chief Executive. I do not say that the President would have given out a false statement about Villa's entrance into Torreon if he had known the truth. But he will not listen to people who do know. He does not seem to want information from people who do know. I told Mr. Bryan while he was making a speaking campaign before the election of President Wilson, in his room in the Alexandria Hotel in Los Angeles, that I was taking testimony that would be useful to him if Wilson should be elected and he should be associated with the administration. I never have been asked for one syllable from him. I took this testimony to the State Department and laid it in his own hands, and told him it represented the statements of people under oath as to conditions in Mexico, and that is the last I ever heard about it.

From the time of the revolution against Spain down to the time of the establishment of the government of Gen. Diaz, the rulers of Mexico pass across the stage like the ghost of Banquo, "Come like shadows, so depart." The Empire of Iturbide, the tyrant Santa Ana, and the unhappy and unfortunate Maximilian, along with a multitude of vulgar and bloody tyrants, held sway over the destinies of this unhappy country, despoiling its population and leaving in their wake only the echo of disappointed ambitions and sad tragedies. And yet we are idle; there is plenty of rhetoric, but we are idle.

Philosophers should have learned the lesson taught in the pages of Mexico's bloody history that the practice of democracy, which is a burden at times to the most civilized nations, can not be successfully imposed upon an illiterate nation clothed only with the superficial vestments of modern civilization and harking back to the days of human sacrifice when the popular virtues were celebrated in blood.

There is not a Senator in this Chamber nor a citizen of this Republic who is proud of our course toward Mexico during the last two years—not one. There may be apologists for it, and there are always apologists enough, but no one is proud of that record. I am sorry it has been made. I do not think it has been done intentionally. I think it is simply lack of accurate knowledge and information that is responsible for most of our errors in handling that situation.

In this connection I desire to quote from the message of President Franklin Pierce on May 15, 1856, as follows:

> It is the established policy of the United States to recognize all Governments without question of their source or their organization or of the means by which the governing persons attain their power, provided there be a government de facto accepted by the people of the country, and with reserve only of the time as to the recognition of revolutionary governments arising out of the subdivision of parent States with which we are in relations of amity. We do not go behind the fact of a foreign Government exercising actual power to investigate questions of legitimacy; we do not inquire into the causes which may have led to a change of government. To us it is indifferent whether a successful revolution has been aided by foreign intervention or not; whether insurrection has overthrown existing government, and another has been established in its place according to preexisting forms or in a manner adopted for the occasion by those whom we may find in the actual possession of power. All these matters we leave to the people and public authorities of the particular country to determine, and their determination, whether it be by positive action or by ascertained acquiescence, is to us a sufficient warranty of the legitimacy of the new Government.

In some way, every time we send an emissary to Mexico he becomes a partisan of one or another of these revolutionary juntas. Men can not go out and do justice to a delicate situation like that unless they guard faithfully against undue prejudice against any class of people in the country to which they have been accredited.

Oh, it is a sad chapter. I do not like to discuss it; I have not been in the habit of discussing it, and I would not discuss it now except that we plan to buy ships and send them southward, with the hope that they can get business at Vera Cruz which private enterprise will not be able to get, or southward to the ports of Nicaragua and Costa Rica and Honduras and Salvador, and on southward to the great States of South America. I do not believe we can get any business there until those people have a higher regard for us than they have to-day. Other countries have acquainted themselves with their methods of doing business. Germany has been for year proselyting for commerce with South America. The largest and most imposing building in Lima has been erected by German bankers as an evidence of the strength of the financial institutions of the German Empire. Throughout Chile and the Argentine the same care, solicitude, and detail have been observed on the part of the European countries who have been proselyting for South American trade. They have been taught to do business with those countries understandingly; we can not dislodge them simply by investing $40,000,000 in ships.

If we want to cultivate the good will of the States to the south of us, we must keep our hands off their internal affairs. If we want to cultivate the good will of the States and the people on the south of us, we must stop trying to run their political affairs. We can not go on establishing puppet governments and then maintaining them in power by force of arms, either in Central or South America, and get the good will of the people of those countries. "We must take things as we find them," said a prominent Democratic official. Is it necessary to leave it as you find it?

The appropriateness of my reference to the condition of affairs in Central and South America in connection with this

debate grows out of the fact that we are about to establish steamship lines on Central and South American lanes. One of the great States of Central America has a man in this Capitol who asserts that we can never do business with them until we give them $25,000,000 as a balm to their wounded feelings. He came to see me at my house, and said he wanted to talk with me because I was a member of the Committee on Foreign Relations. He said, "I want to talk with you about this Colombian business, Senator." I said, "All right; go ahead." I listened to him for one hour, during the course of which he said 40 times, "What we want to do is to reestablish good will between our people and our Uncle Samuel." When he got through I said, "You want a frank answer, do you not? I do not want to deceive you." He said, "Yes"; and I said, "Instead of $25,000,000 I would not give you 5 cents, and I will tell you why. We spent $360,000,000 to improve the waterways of Central America. It is no longer necessary for Colombian people to go overland from one Colombian port to another. It is not necessary for them to transfer to and from the railroad at Panama, and for all future generations Colombian citizens have a waterway from their Pacific to their Atlantic ports without cost. We should have assessed Colombia $50,000,000 for benefits conferred. She has ports upon both seas, and may sail her ships from one to the other without hindrance or delay. This is a matchless and a superb country of ours. We can afford to set a good example to the world and be generous, but we must first be just to our own people."

When the President calls his chiefs to the White House to discuss the Treasury deficit, it is a poor time to make a country, to whom we owe nothing, a present of $25,000,000. They will get over this little disappointment, but we will not get over this deficit until we get the Democratic Party out of power.

As I said about an hour ago, if the last congressional elections are any index, we would have gotten the Democrats out this year, notwithstanding what the President says in his speech at Indianapolis about that being a Democratic victory; it was not. He is mistaken; he has been misinformed about that, as he has been about other things. He does not go to the right sources for his information; he has discouraged people from coming to him; he has surrounded himself with mystery and exclusiveness; and, if he goes wrong, he can not blame anybody but himself.

This is a minority administration. It ought to go slowly. The Democrats of this country in the election of 1912 carried only 14 States by a majority vote of the people of those States. Does anybody deny that? The party of protection carried 34 States of the Union by a majority vote; and yet the President of the United States, before he came to that exalted office, sitting in the quiet of his library, undisturbed by ambitions or tempests, political or otherwise, sat down deliberately and wrote this:

> No group of men less than the majority has a right to tell me how I have got to live in America.

And yet, representing a minority, he has told American workmen how they must live!

I do not like to annoy my friends on the other side of the Chamber by referring to such an embarrassing subject, but if we are going to buy ships out of a deficit, we ought to know it.

Now, let us see what the war in Europe had to do with this deficit.

Mr. GALLINGER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from New Hampshire?

Mr. SMITH of Michigan. For a question only.

Mr. GALLINGER. I will ask the Senator if his attention has been called to the fact that there is likely to be a $30,000,000 deficit in the postal revenues this year?

Mr. SMITH of Michigan. That would not surprise me at all. They have turned the post offices in this country into employment agencies for the first time in 130 years. Every post office in this country has been turned into an employment agency. No wonder the postal receipts have fallen off, and the administration is pluming itself upon having done something wonderful. We did not have to do that under the Republican administrations. There was nobody looking for jobs then. There were not 150,000 Chicagoans out of employment then.

The first fiscal year of the Underwood law would have shown a deficit had it not been for the three months and three days of the Republican tariff law, and the fact that the woolen schedule did not go into effect until December 1, giving them five months of the Republican tariff duties, while the sugar schedule did not go into effect until March 1, 1914, giving eight months to enjoy the Republican sugar schedule. President Wilson says that the deficit is not due to the reduction of the tariff, in his message to the Congress, but to a decrease in importations on account of the war. I do not like to dispute the President, but I have got to do so if I tell the truth. The statement that it was due to a decrease of importations on account of the war is not according to the facts. Importations increased from month to month after the passage of the Underwood-Simmons bill. The decrease in revenue is not due to lessened imports, but it is due to reduced tariffs, which were not so adjusted as to produce adequate revenue with which to run the Government. That is the fact about it. The European war did not have anything to do with it. If it had not been for the European war, our despondency and demoralized industrial condition would have been much worse than it is to-day, for here and there is a large manufacturing institution filling war orders.

There was no trouble here when Russia and Japan were at War. There was no trouble in this country during the Franco-Prussian War. We went along swimmingly with our domestic affairs. There were at that time 50,000,000 people trading among themselves in diversified and varied employments, the man who made the chair buying shoes from the man who made the shoes, the shoemaker buying his chairs from the cabinetmaker; and in our own way, among ourselves, each patronizing the other, we were enabled to go through these wars without much difficulty or effect upon our domestic affairs.

In December, 1913, the people employed in the woolen and worsted industry in this country amounted to 172,693. If you buy your worsted goods abroad, what will become of these 172,000 men? For whom will they work? Where will they get their wages? If they do not get their wages you can not sell to them the fruits of California or of Florida, no matter how sweet and delicious and inviting those fruits may be. They will rot upon the ground if somebody is not sufficiently employed to pay the freight on them from the place where they were grown to the market place. Those 172,000 men are directly and vitally affected by the present tariff law. I was in New Hampshire a few weeks ago celebrating the election of my uncompromising protectionist friend the senior Senator from New Hampshire [Mr. GALLINGER], who for over 20 years has given an intelligent and disinterested service to his country, which the people of New Hampshire have shown they fully and deeply appreciate. I was down there in New Hampshire, and, I think, in the great mill at Manchester there is usually 17,000 people employed in one factory; am I not right, Senator?

Mr. GALLINGER. About that.

Mr. SMITH of Michigan. And yet, Mr. President, there was not enough music in the spindles of that factory to attract the attention of the passers-by.

There were 172,693 men employed in the woolen and worsted industry. There were 383,529 men employed in making cotton goods. If we buy our cotton goods abroad, for whom will these 383,000 men work? We manufacture only about 30 per cent of the cotton goods of the world, and yet we open the door and make it easy to bring in the products of other men's toil while our workmen have nothing to do. For whom will these 383,000 men work?

In the cutlery manufacture of this country we had 35,586 men. If my friend from Connecticut were here, I would ask him how many of those men are employed in the cutlery manufacture in Connecticut at the present time. I venture less than half the usual force, and on short time at that.

Why, there were 102,000 men making glass in this country—beautiful glass, fit for anyone's table—and yet we have made it so easy to get glass from Europe and the glassworkers are looking for something else to do. When the men who make glass have no wages and no employment, they can not buy shoes that are made by the shoe man, nor furniture that is turned out by the furniture factories, nor carpets that are made by the carpet weaver. They must have work if they are to become customers. There were 102,000 of them in the glass business in this country in 1913, and now they are scattered all over our broad land seeking other employment. Our glass is as good as the glass made in any part of the world.

When the tariff was lowered on glass there was a glass manufacturing concern at Saginaw, Mich., making French plate glass at 16 cents a square foot and selling it at 15 cents a square foot. They lost a cent on every square foot they made; and this reckless Democratic free-trade Congress took away much of their protection, tore down their house, and drove them to the open hilltops, there to be chilled by the biting blast.

Oh, Mr. President, this is serious business—serious business—driving glassworkers out of their employment. I should like to ask the junior Senator from Connecticut [Mr. MCLEAN] how many men were employed in the cutlery industry in Connecticut before this new tariff law went into effect. Does the Senator know?

Mr. MCLEAN. I could not give the Senator the exact number; but of course it is a very large industry.

Mr. SMITH of Michigan. Thirty-five thousand are employed altogether in the country making cutlery. Are they now running on full time?

Mr. McLEAN. About four days in the week.

Mr. SMITH of Michigan. Ah! Four days they are to be permitted to earn their daily bread by the courtesy of the Democratic Party. My God! That is a crime against humanity—to expose American workmen with families, defenders of our flag, to want and misery, while we allow aliens to send their products across the border at daylight and to take our gold back to their country at eventide without any responsibility to our flag, to our Government, to our institutions, and without paying a cent toward our national expense. Upon what theory of government is this permitted?

The foundry and machine shops had 597,234 men employed when President Wilson took the oath of office on the east portico of this Capitol. Many thousands of them have been driven from their homes, denied employment, while we have been buying foundry and machine work abroad. If it had not been for this European war, which sent foreign machinists and foundrymen to the front with guns upon their shoulders, we would have been buying more foundry and machine products over there than we are buying to-day.

We had 89,886 people making automobiles, including the bodies of automobiles, and many of them are having a difficult time now to get work. Six thousand men appeared in front of one factory, to my knowledge, on one day, asking for work in the city of Detroit.

Here are 1,380,923 men whose occupations have been exposed to ruin by the accidental triumph of Democracy.

I read on Saturday reports from R. G. Dun & Co. of the failures throughout the country. I shall not repeat it. I do not want to repeat it; but I did not give the Senate the benefit of the concluding paragraph. I did refer to the number of failures in Florida and other Southern States where the increase was about 700, but I did not give you the conclusion:

> The real cause of the present widespread depression you do not mention at all, but the customhouse figures tell the whole story and show conclusively that closed factories and factories working on greatly reduced time all over the country are not the result of the war—on the contrary, this has been the means of temporarily opening many of them—but are the direct result of our present free-trade tariff under which a credit balance in our favor during 1913 of over $691,000,000 has been changed in five months of 1914 to a debit balance of over thirty-nine millions, or at the rate of about one hundred millions per year against us.

I wish some alert, well-informed, and courageous Democrats would answer that suggestion. R. G. Dun & Co. do not make reckless statements.

I want to give you some figures from their reports, and I am going to call the especial attention of the Senator from North Carolina [Mr. SIMMONS] to them. The Senator from North Carolina and I are very good friends, though we frequently disagree on economic questions. The bill which has caused most of the devastation in the country bears his name. I am going to read these figures and I hope he will listen to them.

The following figures taken from R. G. Dun & Co.'s record show clearly the disastrous effects of a low tariff or free-trade policy in the business life of the country:

1914.

Number of failures	18,280
Number of business concerns	1,655.496
Per cent of failures	1.10

First year under low tariff, Wilson-Underwood-Simmons bill:

1912–13.

Number of failures	16,037
Number of business concerns	1,616,517
Per cent of failures	.99

That was the disastrous year, when the blight came upon us. The election had taken place, but they did not take office until the following spring.

1912.

Number of failures	15,452
Number of business concerns	1,564,279
Per cent of failures	.98

In 1911, that was before the blight came:

1911.

Number of failures	13,441
Number of business concerns	1,525,024
Per cent of failures	.81

That was under the Payne tariff law, for which no apology is necessary in view of present conditions.

Nineteen hundred and ten was another glorious Republican year. No new theories came creeping into the financial policies of the Government:

1910.

Number of failures	12,652
Number of business concerns	1,515,143
Per cent of failures	.80

1909.

Number of failures	12,924
Number of business concerns	1,486,389
Per cent of failures	.80

You see how these failures mutliplied under free trade and how they are minimized under protection.

In 1908 there were 15,690 failures in the United States; there were 1,470,554 firms in business; the percentage of failures was 1.8 of 1 per cent.

In 1911 we had 13,441 failures; in 1914 we had 18,280.

In 1907 we had 11,725 failures, with 1,418,075 concerns in business, and the percentage of failures was but three-fourths of 1 per cent. And yet our friends on the other side treat us to a moving picture of despair every time 1907 is mentioned.

Let us go on with those periods of protection. In 1906 there were 10,682 failures, 1,392,949 firms doing business, and the percentage of failures was but seventy-one one-hundredths of 1 per cent. I might run through the whole list. When we get back to Cleveland's unfortunate experiences with Prof. Wilson, who managed his affairs in the House of Representatives, we find that there were 12,186 failures, and there were 1,105,830 concerns in business, and the percentage was 1.10 per cent.

In 1897 there were 13,351, with 1,058,521 in business, and the first percentage of failures was 1.26. You know how prostrate business was under the Cleveland administration.

In 1896 there were 15,088 failures; 1,151,579 firms in business. The percentage of failures was 1.31 per cent.

In 1895 there were 13,197 failures; in 1894, 13,885 failures.

You may search this record through from one end to the other; it is the record of Dun & Co., and you will find the greatest number of failures when the Democrats are in power, with free trade and low tariff, and the danger is minimized greatly the moment we get a protective-tariff law. Failures in low-tariff years are 32.6 per cent greater than in the years of protection. These are mercantile figures. You may deny them if you can. One would think we were in the catacombs, everyone is so quiet on the other side of the Chamber.

Even the author of the bill has not the courage to rise and reply to R. G. Dun & Co.'s statement; there were 32 per cent more failures under low tariff than in the years of protection. Yet, with the recklessness born of political necessity, these free-trade buccaneers have dashed against the wall of protection and broken down the very citadel of American prosperity and independence.

Mr. McLEAN. The Senator will remember——

Mr. SMITH of Michigan. I yield for a question.

Mr. McLEAN. In his Indianapolis speech the President stated that the new Trade Commission, which he created, will have power to revise the tariff.

Mr. SMITH of Michigan. The President has no right to say that; Congress can not delegate its power of taxation. The unofficial list of probable appointees on the Federal Trade Commission does not contain the name of a man experienced in tariff matters.

Mr. SHERMAN. Mr. President——

The PRESIDING OFFICER. Will the Senator from Michigan yield to the Senator from Illinois?

Mr. SMITH of Michigan. I yield for a question.

Mr. SHERMAN. I will inquire if the Senator has heard, from what he considers authoritative sources, that Mr. Hurley, of Chicago, has been selected as a member of that board, and in a few days his name will be sent to the Senate for confirmation? I inquire further, to know if he is an associate and bosom companion of Roger C. Sullivan, of Chicago, and is president of the Illinois Manufacturers' Association.

Mr. SMITH of Michigan. Yes; I know of the Illinois Manufacturers' Association.

The Senator from Florida in charge of this bill presented a telegram from the Illinois Manufacturers' Association a few days ago signed by Mr. Hurley, and I made some observations on the matter at that time.

Mr. SHERMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield further?

Mr. SMITH of Michigan. I yield for a question.

Mr. SHERMAN. I will ask the Senator if he knows, and if not I should like to be interrogated at the proper time myself, if I ever get the floor again, that 5 out of the 12 directors of the Illinois Manufacturers' Association are not in favor of this resolution which Mr. Hurley put through the board of directors, and I have certain correspondence here to show it.

Mr. SMITH of Michigan. That is most impressive and encouraging. I did not think it could be. There is, however, a well-organized, systematic propaganda among the appointees and prospective appointees of the President to uphold every vagary which he suggests.

I was of the opinion that Mr. Hurley was drawing upon his imagination somewhat when he said the Illinois Manufacturers' Association approved of this bill. But the last semiofficial announcement from the White House shows that the commission will be composed of Mr. Hurley, a Mr. William Parry, of Seattle, a Progressive, and a Mr. Davies, a Democrat, and two or three others, but no Republican. He can not see a Republican. He could not see one when he made up the Reserve Bank Board, and he can not see one on the Federal Trade Commission. There will not be one appointed. May I read this letter? I was very much surprised when the Senator from Florida [Mr. FLETCHER] offered that telegram. The letter is as follows, addressed to Senator SHERMAN:

PEKIN COOPERAGE CO.,
Pekin, Ill., January 25, 1915.

Hon. L. Y. SHERMAN, *Washington, D. C.*

DEAR MR. SHERMAN: In answer to your letter of January 23 would say I was not at the meeting of the directors of the Illinois Manufacturers' Association when they adopted the report to support the pending shipping bill.

Speaking for myself only, I am much opposed to this bill, and I think the Government goes far out of its way when it engages in shipping or transportation of any kind. In my humble opinion the passage of this bill would be inimical to the manufacturing interests of this country. I, of course, personally appreciate and approve the stand you take in this matter, and I regret I am not able to inform you what immediate causes led to such an action on the part of the board of directors.

With kind regards, I am,
Yours, very truly,
H. G. HERGET.

Does not that shed a flood of light upon the telegram of Mr. Hurley, who put his organization on record without even canvassing his own board? The President vetoed the immigration bill because no party platform had ever declared for the literacy test. The President vetoed the immigration bill because, he said, no one held a mandate from the American people to say what their attitude was concerning that matter, and he wanted a referendum before acting. Where is the popular mandate committing this Government to this folly of Government ownership? What part of the Democratic platform calls for this extravagance? What party demanded it? Why do it now of all times when you are holding secret councils at the White House to try and overcome the deficit of the Federal Treasury?

Still you go madly on, spurred only by caucus decree.

Representative FITZGERALD says, "I am tempted to quit my place."

He is the only Democrat I ever heard of who thought of resigning public office.

Mr. McLEAN. Mr. President——

Mr. SMITH of Michigan. I yield for a question only.

Mr. McLEAN. To return to the Senator's statement with regard to the majority for protection in 1912, the Senator will remember that the President said in his Indianapolis speech that had the last election been in a presidential year the Democratic candidate would have had 80 majority in the Electoral College; and in that vote, I understand, he included the State of Michigan——

Mr. SMITH of Michigan. Oh, Mr. President——

Mr. McLEAN. Because the State of Michigan elected a Democratic governor.

Mr. SMITH of Michigan. But we carried the State by 75,000 majority for everybody else. I proved this morning—and it is not necessary to go over it again—to the satisfaction of everybody that if the last election had been a presidential election, based upon the congressional elections throughout the States, the Republicans would have had in the Electoral College 297 votes, the Democrats would have had 213 votes, the Progressives would have had 13 votes, and there would have been doubtful 8 votes. If the President can take any comfort out of that situation, he is welcome to it.

I do not like to say anything irritating, so I will quote from the Senator from Mississippi [Mr. WILLIAMS]. The Senator from Mississippi rose one day, in a colloquy here on the 8th of April, and said, in reply to the Senator from Iowa:

Mr. CUMMINS. Mr. President, it is utterly impossible for Senators upon this side of the Chamber to hear the controversy that is going on upon the other side, and we are very anxious to hear it. Therefore I ask for order.

Senator JOHN SHARP WILLIAMS said:

The Senator from Iowa was exactly right. The poor, dear, old, foolish Democratic Party is going through the same game that she can be generally trusted to go through with soon after she gets into power. Here we Democrats are quarreling with one another because this or that or the other city was not made a reserve city.

Why, if the Apostles were here and had constituted a board and attempted to designate the reserve cities for this system, there would have been indignation meetings held somewhere and words of scurrility and violence would have been uttered at those meetings.

We Democrats stand here and we quarrel with one another, and mass meetings are held in New Orleans by Democrats, and this thing occurred which would be absolutely inconceivable if it had not happened—they became so indignant, they became so violent in their language, they became so unreasonable and illogical that they passed resolutions calling upon one of the Senators from that State to vote against the bill repealing the exemption of coastwise ships from tolls, because of what? Because the board has not made New Orleans a reserve city.

That is the Democratic Party; that is its history; that is what led old Tom Reed to say in 1894 and 1895—

"You can not last long, because you are not accustomed to governing anybody or anything; you can not govern the country; you can not even govern yourselves; you are incompetent."

The Senator from Iowa was exactly right, fellow Democrats.

That must be music to the ears of Senators upon the other side of the Chamber. It falls with dulcet tone upon our ears, because it is from the inside; it is from one who knows; it is from one of the managers; it is from one of the prophets; it is from one of the sages, a real leader on the other side of the Chamber; and he denounces his own party as incompetent. I would not do that; but I do say that some of the things that that party has done have been most unfortunate for the country, and if they accomplish the passage of this bill it will commit the country to a paternalistic and socialistic doctrine which for 130 years American public men have been inspired to resist.

The President and his party chieftains are alarmed over the present deficit and they are holding us here to make the deficit larger. How inconsistent! They broke down our industrial safeguards with a recklessness and indifference born of sectional and class hatred, and did it at a time when the people of our country were at the very height of their industrial prosperity and greatness; they broke them down when more than 25,000,000 persons in the United States had bank accounts to their credit and when there was more money to the credit of labor in the banks of this country than would be required to pay more than a third of the combined national debt of the 50 leading countries of the earth. Labor had more than $14,000,000,000 to its credit when Woodrow Wilson took the oath of office on the east portico of this Capitol. It represented more than double the whole world's known supply of gold, and is greater in value than the world's total output of gold and silver since Columbus sailed for America. Labor has been drawing on its savings from day to day because it has no employment.

We had better guard with great jealousy our domestic market, fellow Senators; we had better preserve it, for we are going to lose some of our foreign markets. All over Europe there is a feeling that they should protect themselves by economic barriers. England has been a dumping ground for the world, and yet her dependencies have erected barriers against industrial poaching, greatly prospering thereby.

The other day I was going across the Detroit River into Canada, when I saw a huge building and said, "What is that?" The reply came, "That is the Ford Automobile Co. of Canada." I said, "That is not the Ford Co.," and the reply was, "Yes; it is." I said, "Do you mean that they have built a factory in Canada?" "Yes," was the answer. I said, "Well, there is another one within a stone's throw on the American side; why was that factory duplicated?" And the answer came, "Mr. Ford could do no business with Canadians without paying tariff duty unless he manufactured upon Canadian soil; so he came over here and duplicated his factory." What a smart thing that was on the part of Canada!

I do not know of a more favored spot on the face of the civilized globe than is Canada. I wonder that immigrants do not go there in a steady stream. They have fertile fields and unoccupied lands. They have a variety of climate and production; they are just where we were 120 years ago in population, but they are just where we are to-day in everything that goes to make a nation great. When we had 7,000,000 people we did not have a railroad in this country. Canada has 7,000,000 people, and 30,000 miles of railroad girdle her domain from coast to coast.

Mr. PAGE. Mr. President——

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Vermont?

Mr. SMITH of Michigan. I yield to the Senator from Vermont for a question.

Mr. PAGE. Is it true that the Canadians have excelled us in the past year in the amount of railroad construction? I understand that is so; that they have built more railroad lines than we have built in this country.

Mr. SMITH of Michigan. Well, I think they have been doing some very extensive railroad work, and also have been doing a great deal of canal and harbor work. Just how much they have done I do not believe I am able to say offhand, but I know the amount has been very large.

Mr. PAGE. I saw the statement made only a short time ago that for the first time in the history of Canada they had excelled the United States in the amount of new railroad construction; and I think that is a fact.

Mr. SMITH of Michigan. I would not be at all surprised if that were true. But what I am endeavoring to impress upon my colleague is this, that Canada, queen of the colonies of England, special favorite of the mother country, welcome always at the family table, influential in the discussion of the over-sea affairs whenever a council convenes at London—Canada, I say, ought to have millions of people going to it, because they not only have the advantage of open and free and unrestricted access to the American market place, but they enjoy absolute protection in the monopoly of their own market. If our manufacturers want to sell their products in Canada they have got to step up to the captain's office and pay something toward the current expenses of the Government of the Dominion. If they want to sell anything in this country they put it on a wagon and cross the river, enter our markets at daybreak and take back our gold at nightfall. They contribute nothing toward the expenses of our Government. Nearly 40,000 Canadians are now bearing arms upon European soil. Pray God they may come back safely to their country! It seems to me this afternoon, as I think about it, I can hear them on their march, and the drum-beats that summon them to their duty. But if our country were imperiled, if we were menaced, we could not draw upon Canadian soldiers to fight our battles. We would have to rely upon our mechanics, farmers, and laborers to whom I referred a few moments ago; we would have to take these 1,300,000 men employed in industries that were sacrificed by this new tariff law, and they would fight our battles. If our Treasury were empty, as it has every promise of being, we could not draw upon Canadians to restore it, and yet we give them our markets, inviting open competition with our own labor.

Mr. SHERMAN. Mr. President——

Mr. SMITH of Michigan. I yield for a question to the Senator from Illinois.

Mr. SHERMAN. I wish to ask the Senator if he knows of any other industries that have migrated to Canada in part to pursue their industrial activities?

Mr. SMITH of Michigan. Oh, yes; many of them. I am told about them, indeed, almost every day. I know quite a number that have felt it absolutely incumbent upon them to locate on the other side of that tariff wall in order to do business with Canada, while we are tearing down our wall to make access easy for them.

The time is coming—and I am no prophet, but I said it Saturday night, and I say it to-day—when Great Britain will circle her Empire with a protective-tariff wall which will restrict the products of foreign States, and when that time comes we will have lost the best customer we have in all the world. There is a growing sentiment in England in favor of protection. It is already the law of Canada, Australia, and New Zealand. When that time comes Great Britain will circle her Empire with tariff restrictions; when that time comes Ireland, with its vast and undeveloped resources, with its climate like California, with its rivers running madly to the sea, with its fertile soil and its abundant natural richness, with its light-hearted people, who make a success in every part of the world except on their own soil, will be included in a confederation like the German confederation. When that time comes protection will again be the policy of the Emerald Isle, as it once was. There was a time in the history of Ireland when it had a protective-tariff law when the products of Ireland were seen everywhere throughout the world. There was a time when her spindles made merry music and her people were happy and contented. There was a time when Ireland produced great statesmen and poets and scholars. Walk through Westminster Abbey to-day and read upon the gravestones the names of the historic dead who lie buried there, and you will touch your hat to the Sheridans and the Grattans and other great leaders of Irish thought in the days that are past, who rest beside the Kings and Queens of England. When I was in Ireland last I went out with Michael Davitt, the great Irish statesman—peace to his ashes—to the cemetery. He said, "What do you want to go out there for?" I said, "Because I want to touch the casket of Daniel O'Connell." We went out together and got down on our knees and touched the casket of Daniel O'Connell as we pondered over his mighty contest for human liberty.

Ireland once kept out the products of English factories. Their fabrics were unexcelled; their labor employed; but in a moment of weakness they yielded to the persuasion of English statesmen and a union was established which broke down the trade barriers, and from the hour Ireland and England formed this union and the tariff wall between the two countries was destroyed, from that hour Irishmen have spent their time in mines, digging out coal to carry to England, there to light the furnaces and build the fires that keep British industry going.

Some of us feel that the time is coming when England is going to gather her colonial dependencies into a central parliament in London and pass a protective tariff law for that confederation. She will draw upon Irish mines and forests and fields. She will call upon Australia for her wool, and take the products of New Zealand's fertile soil. She will draw upon South Africa and Egypt. The Nile will make its contribution to the industrial welfare of greater Britain, doing exactly what Germany did after the Franco-Prussian War.

I wish I could repeat what the Emperor of Germany said to me in his palace in Berlin about protection to German industry and labor. I never have repeated his conversation. I have thought of it many times, and of the pleasant evening spent in his company with 200 of his generals and all of his family. I never shall forget it. In the trouble and the heartaches and the misery of the present hour I can see him as he moves about amid the danger and responsibility which rest upon him. I saw him then in the very height and vigor of his potentiality and greatness. I wish I could tell of his hopes for his own fatherland and his friendship for America, but I desist. He gathered in every outlying German State and welded them all into a confederation, industrially independent and prosperous. Great Britain is going to do the same thing, and when she does we will lose the best American customer we have in the world; and if we are not wise enough to diversify our employments and develop our own domestic possibilities so that we may live prosperously among our own people, we will have missed the aim and purpose of national existence.

Mr. PAGE. Mr. President——

Mr. SMITH of Michigan. Does the Senator from Vermont desire to ask me a question?

Mr. PAGE. Yes; I do.

Mr. SMITH of Michigan. I yield for that purpose.

Mr. PAGE. I should like to ask the Senator if he is aware that even at this very moment the Canadian Government are considering the advisability of largely increasing the tariff on articles coming from the United States to Canada?

Mr. SMITH of Michigan. I do know it. I know it, and it shows the wisdom of those people. I heard Laurier when he closed his campaign at Windsor in favor of reciprocity between Canada and the United States. It was one of his greatest efforts. It was addressed to about 15,000 Canadians. Everyone in Canada loves Laurier. I can illustrate it by a story that I heard over there shortly after the death of Queen Victoria.

They had draped buildings throughout the Dominion in honor of the late Queen, and back in the country in a little town they had draped a grocery store and a meat market in her honor. About 25 days after the Queen had been buried a Canadian woodsman came into town, looked at this draped store, and said, "Why, what is the matter? What is the matter here?" Some one said, "Why, the Queen is dead." "Oh, my!" he said, "the Queen is dead! Who gets that job?" Instantly the man said, "Why, the Prince of Wales gets it." "Ah," said this Canadian, "he must be bully boy with Laurier."

Many Canadians thought Laurier was the British Government. They could not conceive how the Prince of Wales could become King of England without his assistance. The people of Canada loved him, but would not follow him for reciprocity, because protection had proven itself so valuable to Canada. They had our example in the early history of this Republic. When Washington finished his struggle for American liberty we had less people than Canada has to-day; but she has the telephone, thousands of miles of good roads, and 30,000 miles of railroads. The reason the Canadians did not take reciprocity from the lips of Laurier was because they knew their population. Those who came from England have been saturated with free trade, and they knew if they lowered the bars the Britishers who were free traders would be encouraged to fight protection, therefore they refused to follow Laurier. It was because the Canadians were protectionists that they rejected American reciprocity. How wise they were. All the advantages they were to receive from reciprocity were immediately conferred upon them without charge by this administration.

If there is a green spot in the civilized world it is Canada, with her marvelous possibilities, and the right of her 7,000,000 people to make use of our market places, giving us absolutely nothing in return.

Mr. PAGE. Mr. President——

Mr. SMITH of Michigan. I yield to the Senator from Vermont for a question.

Mr. PAGE. I should like the opinion of the Senator from Michigan as to why, at the immediate present, there is such anxiety in regard to the increase of the Canadian tariff. I ask, because this very morning I received from home a letter stating that our largest customers in Canada had written us—yes, had

wired us—to forward the goods that we had for them immediately, that they might be received in Canada before the tariff went on to the goods.

Mr. SMITH of Michigan. You mean the increased tariff?

Mr. PAGE. Yes; the increased tariff. It is so urgent that we put an extra force upon the order to get it off at once.

Mr. SMITH of Michigan. When you say "we" who do you mean?

Mr. PAGE. My own personal interest.

Mr. SMITH of Michigan. In what line?

Mr. PAGE. Hides.

Mr. SMITH of Michigan. I think they must have our hides. They do not care very much whether they get Democratic or Republican hides, but they must have them. Am I right?

Mr. PAGE. Yes. And they have become now a most active competitor with this country in leather. There is a competition there which did not exist 10 years ago, and it has been increasing until to-day they are able to compete successfully, because they get the advantage in regard to the tariff which we do not possess.

Mr. SMITH of Michigan. Is not that remarkable? They want to make boots and shoes and leather findings and send them here under our low tariff. They are indeed highly favored. They can sit in security behind their protective wall and sell their surplus products in this market of a hundred million people while we are effectually barred by them!

Mr. PAGE. Mr. President——

Mr. SMITH of Michigan. I yield for a question.

Mr. PAGE. The Senator comes from a lumber State?

Mr. SMITH of Michigan. Formerly a great lumber State.

Mr. PAGE. My own State is not a large lumber State. Still, there are quite a number of small towns where the logging business is done. I would like to know how the conditions of the tariff affect the lumber interests of Michigan, because in my own State the sawmill owners put in all their stock in the winter of 1913 and 1914, and they have it stacked up in the yards. They are losing the interest and the insurance; they are losing the decadence or the reduction in value because of the effect of wind, sun, and rain. Those men are unable to give the poor people in their towns the usual employment this winter because they say, "All our money is in our stock of lumber, and we can not go on and stock more this winter." I should like to know if there is any similar condition in the Senator's State?

Mr. SMITH of Michigan. Undoubtedly. Many people thought when the duty was taken off of lumber that we were going to get it cheap from Canada, but Canada promptly put an export duty on lumber which comes into active competition with our people.

Canada is wise, and Great Britain will some day follow her example. Why should England pay out her gold in settlement of balances of trade for products which she can produce within her own dominions and insure her people steady and remunerative employment?

What I am arguing for is this: That we are upon unsafe ground when we fix our eyes upon foreign trade. That part of the President's message I do not like at all where he says we must give more attention to our foreign trade. Foreign trade is nothing compared with our marvelous domestic commerce. If all the commerce that we do abroad were to be scattered over the highways of our country it would attract no attention. It bulks largely in the public eye because it is piled upon the wharves of seaport cities.

Foreign trade is a Democratic delusion and a snare, and our present tariff law is based upon a wrong theory and will not insure industrial independence. Our wonderful domestic commerce amounting to $40,000,000,000 a year keeps our people employed, happy, and prosperous. As we exchange our products with one another, we retain our gold supply.

Great Britain will some day have a tremendous confederation unless this war arrests her onward march. She has boasted for a hundred years that she has territory upon which the sun never sets. But we also have a territory upon which the sun never sets. Our acquisition of the Aleutian Islands from Russian America has given us a territory upon which the sun never sets. As the Aleutian fisherman is pushing his canoe toward the shore at nightfall the woodchopper of Maine is beginning to wake the forest echo with the stirring music of the ax.

Oh, what a blessed Republic this is! How generous and considerate it has been to the alien, the immigrant from other lands! How indulgent it has been to its own citizens lowly born! Thank God I live in a country that sets a premium upon individual initiative and does not circumscribe the growth of man.

Paternalism is insidious. It is to-day gnawing at the very vitals of this Republic. It is as insidious as it is unwise and as harmful as it is unnecessary.

The minority which dissented from this bill in the Committee on Commerce had reliable information that there were ample ships now tied up in American ports ready for service. Why should we now draw $10,000,000 out in cash and give our notes for $30,000,000 more merely to test out an experiment? Somewhere, sometime, this account has got to be squared. I do not know who is going to do it. We can not do it for two years, but somewhere this deficit must be overcome. The fact that you stop the work on public buildings—ah, what a satire—and the fact that you have chloroformed the Committee on Commerce for fear it will bring in a river and harbor bill shows the desperation of your case and the unwisdom of your course.

Mr. CUMMINS. Mr. President——

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Iowa?

Mr. SMITH of Michigan. I yield for a question to my honored friend from Iowa.

Mr. CUMMINS. Is not the Senator from Michigan mistaken as to the amount that may be taken out of the Treasury under this bill? He has spoken of it several times as $10,000,000. Is it not $20,000,000?

Mr. SMITH of Michigan. Well, Senator, they have changed the bill four or five times since it came out of the committee. I do not know what it is this morning. It may now call for $20,000,000 cash. Is it now $20,000,000 I ask the Senator from Iowa?

Mr. CUMMINS. I ask the Senator from Michigan. He can not ask me any question, I understand.

Mr. SMITH of Michigan. No; I can not without losing the floor, and I am not quite through with my remarks.

Mr. CUMMINS. I ask the Senator from Michigan if it is not true that the bill provides originally for an original capital of a corporation to be organized of $10,000,000, of which the Government may take the entire issue. Then is it not true that the bill further provides that the capital of the corporation may be increased and that it authorizes the Government to take $10,000,000, not to exceed $10,000,000, of that increase?

Mr. SMITH of Michigan. Yes; the Senator is correct. But the folly of the whole thing is evidenced by the fact that the administration has not the courage to meet the situation exactly as it is. Administration officials do not expect to sell a dollar of that 49 per cent of the stock to anyone on earth. Why? Because the Secretary of the Treasury admits that it is a losing venture, and people are not knowingly putting their money into a losing venture. Why do they not have the courage to take it all in the first place? The Secretary of the Treasury says the public will not take it. My, what a condemnation that is! Mr. HARDY, a Member of the House, said:

> Mr. HARDY. Is not the consideration you are discussing now one that would prevent private capital from taking any part of this stock?
> Secretary MCADOO. Yes. I do not believe you can get private capital to take stock in any company that is going to be obliged for some time to operate the ships at a loss in order to build up trade.

Well, what do you think of that? He admits the public will not take any of the stock, and yet he holds out in this bill the suggestion that the public will take 49 per cent of it. I wonder how that bill would look if it were making an out-and-out appropriation to buy merchant ships? I wonder how it would look to the public. Said Mr. HARDY:

> Mr. HARDY. So that really you do not much expect private capital to come in?
> Secretary MCADOO. To take part of this stock?
> Mr. HARDY. Yes.
> Secretary MCADOO. No; I do not.

If he does not expect the public to take any of this stock, why put that provision in the bill? Why not be frank about it? The public will not take it, they will not have anything to do with it, and they will condemn it at the first opportunity.

This whole proposition is based upon the wrong theory. It is based on the theory that we need the ships, which is at least questionable. I do not underestimate the value generally of trade relations with the world—not at all. I appreciate that in the great forward movement in the history of mankind trade has played an important part. I know that trade with Asia was the magnet which drew forth the ambition, the enterprise, and the daring of Europe. I know that trade with Asia steered the frail bark of Columbus across the unknown waters of the western sea, prompting him to new fields of enterprise and daring. Trade with Asia discovered a continent, the fairest and most glorious among the dominions of men. I do not underestimate the influence of trade relations with the world; but this will not get us anywhere. This bill will break down and

discourage private enterprise in American shipping. It will retard the wholesome growth of our merchant marine.

I should like to see our merchant marine built up, Senators. For many years we have indulged in the hope that this would come about. I have my own ideas as to how it ought to be done. I favor discriminating tariff duties; I would do it by so framing our tariff laws that there would be an inducement for foreigners to send their products in American bottoms. The Underwood-Simmons bill did something in this direction, but not enough. Our merchant marine should be encouraged and our flag restored to the sea in a practical and appropriate way. Commerce is a great civilizing agency.

Trade with Asia bound the world in the chains of commerce and placed civilization upon the lofty pedestal which it occupies to-day; trade with Asia knocked at the barred portals of China and gained admittance; trade with Asia poured through the veins of old Japan a reviving current that has made her the foremost nation of Asia and the arbiter of the destinies of the Orient; trade with Asia now causes the greatest nations of Europe to stand alert and exigent upon the soil of China.

If we have sense enough to maintain our undisputed supremacy, if we hold the Philippine Islands, a natural outpost in the Pacific and a way station in the pathway to the Orient, some day the 400,000,000 people over there will want the products of American genius and labor. But our important outposts ought to be preserved.

Gen. Grant, when he was President, knew the value of ocean outposts. He tried to get our Government to purchase Santo Domingo. President Grant sent a commission down to Santo Domingo to find out what kind of people were there, and whether or not they would like to become a part of the United States. They found the people of Santo Domingo kind and gentle, patriotic, and law-abiding. They would willingly have come under our flag. President Grant made a treaty for that purpose, and one vote in this Chamber—that of Charles Sumner—kept the United States from acquiring Santo Domingo.

Why are we suzeraine in Porto Rico to-day? Because it is a valuable outpost for our commerce. Why are we active in Hawaii? Because it is an outpost on the highway of American commerce. That is the reason that England has held on so tenaciously to her islands in the West Indies. Oliver Cromwell nailed a sign on a tree in Jamaica over 300 years ago that that was the property of the King of England, and it has been the property of England ever since. Why? Because it was a strategic outpost on the sea, which Great Britain appreciated.

Trade with Asia will be one of the most important factors in the future industrial development of this country in the years to come. There are 400,000,000 people over there, and some one country is going to intimately trade with them. If we have sense enough to treat them fairly, we ought to have a part of that trade. We might not get it for some time to come, but they are smart people over there. Do not let anybody delude himself to the contrary. You southern people need not imagine that you can raise all the cotton that is to be raised in this part of the world. The great Imperial Valley of California is now producing the best cotton that can be found anywhere in the world. I brought a sample of it five years ago to the Capitol and handed it to the president of the South Carolina Cotton Growers' Association, and he told me that that was the finest cotton he had ever seen, better than the Egyptian cotton or the southern cotton. If we have any sense—I do not know whether we have any left or not as a Government—but if we have any sense, we will encourage the development of the Imperial Valley before we buy merchant ships.

We have done something; we have given them some water, as my colleagues all know; and oh, what fruit it has borne! The Imperial Valley resembles the Valley of the Nile in richness, is fully as productive and limitless in its possibilities. The Japanese are acquiring cotton lands freely enough to excite our curiosity. The raw cotton must not cross the Pacific Ocean to Japan and China; it should be manufactured here, thus adding millions of workmen to the prosperous roll of labor on the Pacific coast and opening up limitless possibilities in the Orient.

Before buying ships you might appropriately engage in buying water for the fertile but arid and dry sections of our country. If you have any money to spare just put a few drops of water onto the arid lands of the West and it will return you a crop useful to your countrymen and rich in its commercial possibilities and value; but this Utopian, paternalistic, socialistic plan of buying ships just to see them bound the billows in competition with private enterprise does not appeal to me.

I do not underestimate trade with the outside world, but it is hazardous trade. We have not a single customer in Europe who patronizes us from choice. They buy from us because they are obliged to do so, and as soon as they can get along without us they will do so.

Take the Columbia River Valley in Washington, with its unexampled possibilities. Harness the Columbia River and revolutionize the economic conditions of a State.

"Poor, old, foolish Democratic Party!" as the Senator from Mississippi [Mr. WILLIAMS], who honors me by his presence, says. He knows more about it than I do. "Poor, old, foolish Democratic Party!"

Mr. MARTINE of New Jersey. Mr. President, I should like to ask the Senator a question.

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from New Jersey?

Mr. SMITH of Michigan. Mr. President——

Mr. MARTINE of New Jersey. The Senator speaks of it——

Mr. SMITH of Michigan. Just one moment, Senator.

Mr. MARTINE of New Jersey. I will not take the Senator off the floor.

Mr. SMITH of Michigan. One moment; I would not be discourteous to the Senator for anything, but I want it distinctly understood that under the new rule the Senate is imposing I can only yield for a question.

Mr. MARTINE of New Jersey. My question is this: Why is it that the Senator from Michigan spends so much time and so much force and so much energy on so miserable a weakling as the poor, old Democratic Party?

Mr. SMITH of Michigan. I will tell you why. It was the switch of a cow's tail that set Chicago on fire. [Laughter in the galleries.]

Mr. MARTINE of New Jersey. I did not happen to catch the Senator's remark.

The VICE PRESIDENT. Within the last three days the Chair has been compelled to call the attention of the galleries a number of times to the fact that it is a rule of the Senate that there must be no applause, no disorder, and no approval or disapproval in the galleries. It is made the duty of the Chair to enforce that rule; and if it is not obeyed, it is made the duty of the Chair to clear the galleries. For three days this rule has been violated. This is the last warning the Chair is going to give the galleries.

Mr. MARTINE of New Jersey. Mr. President, I understand the Senator's response to be that the switching of a cow's tail set Chicago on fire.

Mr. SMITH of Michigan. One moment, Mr. President.

Mr. MARTINE of New Jersey. Now, I have to say——

Mr. SMITH of Michigan. Wait a moment.

Mr. MARTINE of New Jersey. That it will take more than a suggestion——

Mr. SMITH of Michigan. Mr. President——

Mr. MARTINE of New Jersey. Have I not the floor by the Senator's consent?

The VICE PRESIDENT. The Senator has not the floor by the Senator's consent at all.

Mr. SMITH of Michigan. I am replying to the Senator. I said it was the switch of a cow's tail that set Chicago on fire. That is historic. The old lady who went out with her lamp to milk the cows died two or three days ago. The cow in switching its tail turned over the lamp; the lamp set fire to the hay; the hay burned the building, set other buildings on fire, and the city of Chicago was destroyed.

I am giving my attention to the Democratic Party lest there be a spark of life left, which may consume a State.

Mr. MARTINE of New Jersey. In response to that——

Mr. SMITH of Michigan. I am not yielding the floor, Mr. President.

Mr. MARTINE of New Jersey. Well, I will not take the Senator off the floor.

Mr. SMITH of Michigan. No; I know the Senator will not, and I do not intend he shall.

The VICE PRESIDENT. The Senator from Michigan declines to yield.

Mr. MARTINE of New Jersey. Mr. President, I am asking the Senator a question.

The VICE PRESIDENT. No; the Senator from New Jersey is not asking the Senator from Michigan a question. He is making a speech, and the Senator from Michigan objects to being interrupted.

Mr. MARTINE of New Jersey. I am not making a speech.

Mr. SMITH of Michigan. I presume my honored friend from New Jersey did not hear me——

Mr. MARTINE of New Jersey. I heard something about the "switch of a cow's tail."

Mr. SMITH of Michigan (continuing). I was recalling the graphic words of my friend from Mississippi, who said, "the poor, dear, old, foolish Democratic Party."

Mr. MARTINE of New Jersey. Yes.

Mr. SMITH of Michigan. And that is what Senator JOHN SHARP WILLIAMS, of Mississippi, said, and that is his estimate of his party. He knows more about it than I do; if I have offended my honored friend from New Jersey, I beg his pardon.

Mr. MARTINE of New Jersey. But the Senator certainly attributed all wisdom to the Senator from Mississippi in that remark——

Mr. SMITH of Michigan. It may not have been a wise remark, but was it truthful?

Mr. MARTINE of New Jersey (continuing). And I ask why it was, if we were so weak, impotent, and miserable, that the Senator from Michigan should expend so much time and energy and magnificent oratory in denunciation of us?

Mr. SMITH of Michigan. I was simply stating a historic fact. I can not yield, Mr. President.

Mr. MARTINE of New Jersey. According to the Senator's estimate of us, we are dead now; but it seems to me we are a pretty live corpse.

Mr. SMITH of Michigan. Oh, Mr. President, we can not neglect such a corpse. It has frequently been galvanized into life and must be watched. [Laughter on the floor and in the galleries.]

The VICE PRESIDENT. The Chair has just admonished the occupants of the galleries that they should keep quiet. They have not done so. The Chair is in doubt as to whether to clear them now or not. If this is repeated, the galleries will be cleared.

Mr. SMITH of Michigan. I think I had better leave this part of my address, because the remark of the Senator from Mississippi is calculated to rouse the risibilities of anyone. It is authentic. I am not doing him any injustice. I would not do that. I have great respect for him. I have served with him for 20 years and like him very much. I have not much confidence in his economic views, but I suppose that is reciprocal. He has not much in mine. That is all right. Michigan has just given me a new commission, and I have no doubt Mississippi will do the same by him. I hope so.

When I was interrupted I was speaking about the effect of this bill upon the general policy of the Government. I am fearful that the seed we are about to sow will produce nothing but thistles, even though it be a new thought and comes from a most respectable source; for one, I am very glad the idea never occurred to our party.

I was talking about trade with Asia. We must get on a good commercial footing with Asia; there is danger that the "open door" may be closed as a result of this war. That is the only part of the world where manufacturing and industrial enterprise is still in its infancy. We have great opportunities there if we are considerate and watchful.

This is the best Government in the world, Mr. President. It rests on the many and not on the few; on persons, not on property; on the development of public opinion, not on authority.

Whoever holds a mandate from a majority of the American people holds a royal commission. Whoever assumes to exercise a power never bestowed by the electorate is presumptious, indeed. The President, in his veto of the immigration bill, said: "What party platform has ever declared for the principles in this legislation? Who holds a mandate from the people" to exclude aliens because they can not read and write? What political party has declared for the measure now before the Senate? I ask, What political party has demanded that we forsake the paths of the fathers and invest the public money in private enterprise? Who holds such a mandate from the people? Not your party, Senators. The language used by the President in the veto of the immigration bill applies so strikingly to the bill under consideration that I marvel he could be for the one and not the other.

What party platform has declared in favor of Government ownership of transportation facilities? I will pause for any Democrat to reply. Why, when Mr. Bryan, the present Secretary of State, returned from a trip around the world a few years ago, and in a thoughtless moment at Madison Square Garden let slip unintentionally his conviction that the Government ownership of railroads was a good thing, the Democratic Party promptly chloroformed him, and the idea was never accepted as a party axiom. He approved the sale of the Government railroad of Nicaragua to private bankers, showing that he has fully recovered from his malady. You chloroformed Mr. Bryan the moment he said he was in favor of Government ownership of railroads, and you did a good job. I commend you for it; but you must have run out of chloroform, because some is needed to stop this bill; it is a departure; it is not necessary; it launches us on the open sea without rudder or compass or chart, and you do it without a mandate from the people.

The Senator from Iowa [Mr. KENYON] and the Senator from Ohio [Mr. BURTON] saved the country about $45,000,000 by making long speeches in this Chamber at the close of the last session, and the country rang with their praise. Now you are going to spend it for something the people do not want, something they have not asked you for. Everybody praises BURTON and KENYON for saving millions of dollars, but did they do it in order that you might squander it in a socialistic venture? No, Mr. President; no.

I know that if the Speaker of the House of Representatives is correctly reported, he uttered a solemn warning to his party in Chicago yesterday which should have some influence upon his colleagues here. Speaker CLARK was the choice of more men in this Chamber for President of the United States than the present occupant of the White House. He says, "Some danger may lurk in this measure; the deficit is giving us concern." Of course it is giving us concern.

Mr. KENYON. What did Representative FITZGERALD say?

Mr. SMITH of Michigan. The Senator from Iowa asks me a question. I hesitate to answer, but I quote again from this distinguished New Yorker:

> It may seem somewhat strange, but I hope it is not out of place, to remind Members on this side of the House that the Democratic platform pledged us in favor of economy and to the abolishment of useless offices; but it did not declare, Mr. Chairman, that the party favored economy at the expense of Republicans—

You would almost think a Republican was saying that—

> and the abolition of useless offices in territory represented in this House by Republicans while favoring a different doctrine wherever a Democratic Representative would be affected.

Now, do you not feel a little chagrined over that? Has he told the truth? Do you challenge its correctness? Was he goaded to this criticism by any personal ambition of his own? No. What prompted him to say that you were discontinuing offices in Republican districts and increasing them in Democratic districts?

The chairman of the House Committee on Appropriations further says:

> I am looking now at Democrats who seem to take amusement in soliciting votes on the floor of this House to overturn the Committee on Appropriations in its efforts to carry out the pledges of the Democratic platform. They seem to take it to be a huge joke not to obey their platform, and to make ridiculous the efforts of the members of our party who do try to live up to the promises they made to the people. I know that some Members on this side are voting continually for appropriations because they fear the wrath of the public if they do not vote out of the Public Treasury assistance for everything anyone suggests.

He further said:

> If I placed my political fortunes above my sworn duty under the law, I would not attempt to carry out the promises of the Democratic platform.

Then he seems almost to regret that for 12 years he charged the Republican administration with being extravagant. Well, we did spend money; we did build public buildings; we did improve harbors; we did dredge rivers, spending millions upon the Mississippi River, which runs through the fertile and beautiful State of the honored Senator from Mississippi [Mr. WILLIAMS]. But, gentlemen, we spent all of this money under proper vouchers. We did not borrow it; we did not impair the Treasury to do it; we did not strain the national credit.

Everything we have done since the Democrats came into power has been experimental and disappointing. Name one measure you have enacted that has borne fruit. Certainly not the disappointing tariff law, which was the first thing you did; certainly not your income-tax law with which the country has been afflicted, or the war tax, which is misnamed and a subterfuge to cover up real conditions. There was just as much money in the country as there was a year before, when everything was prosperous. There were $3,500,000,000 in currency floating around, but it was not employed as it had been when the Republican Party was in power.

You broke the seal and passed out $378,000,000 in emergency currency because you thought the country was suffering from a lack of money, when in reality it was suffering from lack of confidence in the Government. Then you passed a banking and currency law. It is not yet a success. I think it is pretty early to condemn it. I doubt whether it can earn its fixed charges. I know of scores of bankers who would leave the system if they could get out. Some one has said, "All hope abandon those who enter here," and those who have gone into this new banking system will not be able to get out of it if they desire.

Mr. CUMMINS. It was Dante who said it.

Mr. SMITH of Michigan. It was Dante. I thank the Senator.

The new system was intended to be partisan. There is not a Republican on the reserve board.

Every place is filled by a Democrat, just as though Republicans did not have any interest in the financial welfare of the

country. There is not a Republican on that board. It is a partisan board. It was born in hostility to New York and nurtured in the cradle of sectionalism. That is the truth about it.

When the Secretary of the Treasury, at the time he was trying to make forced loans to the cotton States, called up banker after banker to see if they would subscribe, he was rebuked over and over again for his insolence; bankers realized for the first time that a political machine was trying to direct the banking affairs of the country.

You know the Secretary of the Treasury said that certain banks were carrying too much money; that they were hoarding it, and he named a number of banks; he named one at Beloit, Wis. The answer came back that a State bank had been on the verge of failure for two weeks there, and they thought they were doing a proper thing to get ready for the failure when it came. He named a bank at Lake Linden, in northern Michigan, in the copper country. He said it was carrying too much money; but he did not know that that bank furnished the pay roll of the Calumet & Hecla Mining Co.; that to meet that pay roll for a week would break an ordinary bank. They were obliged to carry a large amount of cash. What insolence to criticize men for being prudent!

As soon as the banking people of this country wake up to the fact that an appointee temporarily holding political office is undertaking, from the seat of government, to influence the course of the banking business in this country they will call a halt and take note of the consequences of political management.

Oh, Mr. President, the Democrats have not done anything yet of which they should be proud. Their Mexican policy, the attempt to be "good Lord and good devil" in the present deplorable European crisis in order that some one may be invited to settle the war, may dull the intensity of our Americanism. Would Lincoln, or Grant, or McKinley have done that? Poor Lincoln, when he had the Civil War on his hands, and Maximilian and the French forces were coming into Mexico to set up a government of their own, took time to emphasize his Americanism. When the French Government protested, Lincoln said, "You must go." Those men were wise; they were farsighted; they had had some experience. Lincoln's experience had been among the brambles and the briars and the bushes of adversity. He knew men because he was one of them. The threat of French occupation had no terror for him. Although burdened with the weight of awful responsibility, he still had courage to tell them to get out of Mexico; and they got out. American guns and American powder are sent into Mexico, and we stand by and watch, as though it were a panorama spread out for our entertainment.

Our military occupation of Nicaragua is no credit to this Government. Some day I am going to tell that story. I have here in my portfolio the detailed reports of our soldiers. Some day, when I shall not be trespassing upon the time of the Senate, I am going to tell that story.

Mr. BRISTOW. Mr. President——

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from Kansas?

Mr. SMITH of Michigan. I yield for a question.

Mr. BRISTOW. I have unfortunately been necessarily absent from the Chamber attending a committee meeting during a part of the Senator's remarks, and I should like to know if he has dealt with the Santo Domingan situation?

Mr. SMITH of Michigan. I do not like to enter that field, now the subject of inquiry by a Senator elect. I am sorry he is coming to the Senate, because I think his State ought to have sent a Republican; but if California was determined to send a Democrat, we should be glad Mr. Phelan is here. He is investigating some phases of the Santo Domingan situation. I said a little while ago that if the fervent wish of President Grant had been granted our flag would float over Santo Domingo and the great Bay of Samana, that would hold the fleets of the world; that beautiful bay that encircles a rich and fertile island would have been ours but for the pique of Charles Sumner, who cast his vote against annexation. The people of Santo Domingo wanted to come. Mr. Hitt, of pleasant memory, with whom my honored friend from Ohio, Mr. BURTON, and myself served for many years in the other House, was one of the commissioners who visited the island to ascertain the character of the Santo Domingan people. He said they were a kind, honest, affectionate, well-meaning and well-informed people, and crime was comparatively unknown. Why, at one time in the history of Santo Domingo President Baez was offered a crown by the French Emperor, and declined it, saying: "My countrymen are fit to govern themselves."

Senator Sumner was an able man. He was an optimist and believed in the manifest destiny of his country to rule the Western Hemisphere; but his vote paralyzed the purpose of Grant to make Santo Domingo a part of the American Union.

Personal ill will entered into the contest. The treaty was defeated because he was angry with Grant, and this beautiful island has since been a derelict upon the high seas, while Haiti, on the other side of the mountain, has bathed the surface of her island with the blood of her people. Would it have been wise to have taken Santo Domingo when it was offered? Grant wanted it, because he knew that the time would come in the history of this Government when there would be a canal across the Isthmus or through Nicaragua. He wanted Santo Domingo as an outpost of the Republic. He wanted Samoa for our Navy. Who doubts the wisdom of our island ownership?

Cuba for more than a hundred years has been a pawn upon the chessboard of nations. France and England once came to the United States with a proposition to establish a tripartite agreement for the permanent government of Cuba. Why? Because it was at our doorway, an outpost in the Atlantic destined to mark the gateway from sea to sea. In a moment of generosity we gave it to the Cubans and, while I have no regrets, I think it would have been better for us both if Cuba was part of the United States. We had no qualifying clause in the resolution passed by the House, but when it came over here all the diplomats accredited to this Government called upon President McKinley and represented to him that we were inviting danger from European States, to which the President replied that we accepted full responsibility for our course. This body wrote the qualifying words into law at a midnight session of the Senate, our word was given and the promise has been fully redeemed. Porto Rico lies right at the entrance to this canal. Our flag proudly flies over the island; we could have had Cuba and Santo Domingo as well.

I did not intend to say anything about it; but the Senator from Kansas [Mr. BRISTOW] called my attention to the Dominican situation. I know what he meant; he would like to have me say something about the activities of our present minister there, but I can not do so without revealing some of the secrets of executive session; so I will not say anything about it. But I want to say this much, that I was not at all surprised with the failure of the American minister to satisfy the people of Santo Domingo and the United States.

Mr. President, the bill we are now considering in such hot haste involves so much, is so experimental in its character, so threatening and far-reaching in its effect, so deplorable from every point of view that I have hoped against hope that the danger might be avoided. I wish the Senators might be persuaded not to press it, but I am fearful that all that we say upon this side of the Chamber will not deter them. They seem determined to go blindly on; I think they have made up their minds to put this measure through at any sacrifice. Can we not appeal to them to consider Treasury conditions and the possible danger of international complications? Will you stop your ears to all our pleadings?

The Late Representative Payne, of New York.

MEMORIAL ADDRESS

OF

HON. JOHN J. FITZGERALD,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, February 7, 1915.

The House had under consideration House resolution 725, as follows:

"*Resolved*, That the business of the House be now suspended that an opportunity may be given for tributes to the memory of the Hon. SERENO E. PAYNE, late a Member of the House of Representatives from the State of New York, and to the memory of the Hon. EDWIN A. MERRITT, Jr., late a Member of the House of Representatives from the State of New York.

"*Resolved*, That as a further mark of respect to the memory of the deceased, and in recognition of their eminent abilities as distinguished public servants, the House, at the conclusion of these memorial proceedings, shall stand adjourned.

"*Resolved*, That the Clerk communicate these resolutions to the Senate.

"*Resolved*, That the Clerk be instructed to send a copy of these resolutions to the families of the deceased."

The resolution was agreed to.

Mr. FITZGERALD. Mr. Speaker, the House of Representatives suffered a distinct loss in the death of SERENO E. PAYNE. He was one of its most notable and distinguished Members. His fame rested upon substantial accomplishments. I am unable at this time to review with that detail which it deserves

the career of Mr. PAYNE in the House. The demands of the short session upon me give no opportunity for the preparation of such a tribute as I should be honored to express. I can only hope to have recorded an expression of my sincere esteem and keen appreciation of a very dearly cherished friend.

My service in the House began in the Fifty-sixth Congress. The death of Mr. PAYNE leaves me the sole survivor of the 34 Representatives who were elected from the State of New York in 1898. Even then, 16 years ago, he had attained an enviable prominence in public life. Intimately identified with the preparation of several tariff laws, he was justly regarded as one of the best-informed men in the United States upon the tariff question.

He was a man of profound industry, of wide information, and of unquestioned integrity. His assiduous attention to duty was well illustrated by his constant attendance during the sessions of the House. Only upon exceedingly rare occasions was his striking figure missed from its accustomed place, and then only when ill health or imperative committee work prevented his attendance in the House. His example can be emulated with profit by many Members, and if universally adopted as the rule by Members of the House would tend very greatly to facilitate the business of the House.

Convinced that the principles of Government advocated by the political party with which he was identified were most likely to advance the prosperity and the happiness of the people, he sturdily advocated his political beliefs. In such discussions he was the intense partisan that strong men of intense convictions must necessarily be. Adversity did not discourage him. His views were not altered by shifting majorities or changes of political sentiment. All the time he remained sturdy and unyielding as the oak, vigorously controverting all contentions which were not in harmony with his views.

I am of those who believe that the country is better served by such study partisans. Honest in convictions, with accumulated stores of valuable information, they eventually bring forth from the strife of intellect results that advance most the country's welfare. Seldom do permanent acquisitions of value result from the alert public man who is overeager to adapt his views to every passing popular whim or fancy.

Mr. PAYNE was a modest and a lovable man. During 16 years of association with him I came to know him intimately and to cherish his friendship. His services to the country were distinguished and valuable. He had the respect of all men, the good will of opponents, the deep affection of his friends. His death deprives this House of the wisdom, the experience, the counsel of one of its most distinguished Members. He will linger long in the memory of many men who respected, admired, and loved him.

William M. Calder.

EXTENSION OF REMARKS
OF
HON. LUTHER W. MOTT,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES.

Thursday, March 4, 1915.

Mr. MOTT. Mr. Speaker, I feel that the Sixty-third Congress should not pass into history without a brief reference to the unique and valuable record of one of its Members from the State of New York. I refer to WILLIAM M. CALDER, a Representative from the sixth district, in Brooklyn. Mr. CALDER is retiring to private life after 10 years of service in this body. He is retiring to the regret, I can unhesitatingly say, of every one of his colleagues from the State of New York, without regard to party allegiance. His retirement is not only a loss to this House, but to his home city and State and even to the Nation at large, for Mr. CALDER has been a Representative in the American Congress in the best and finest sense of that word.

He came into the Fifty-ninth Congress as a Republican, and such he has loyally and consistently remained throughout his 10 years of service; but, far more than mere allegiance to one of the great political parties of this country, he has stood for earnest service, true patriotism, and constant endeavor in the cause of good government. His duty to his country always has stood first with him. His allegiance to the Republican Party never conflicted with that, nor did it breed in him any narrow partisanship. He felt that he owed a duty to the people of his district and his State that rose above party lines, and he performed that duty with courage and consistency and wisdom.

I have said that Mr. CALDER's record is unique. By that I make reference to his term of service as a Representative from the city of New York. Mr. CALDER, so far as the records of this House show, is the first Republican Member who ever served 10 years from the greatest city in the Western World. With singularly few exceptions, it has not been the habit of the city of New York to return to Congress, term after term, Members who have yielded faithful and worthy service. Rather, it has been the political custom of that city to make frequent changes in its Representatives, even when there has been no essential change in the balance of party representation. Many of us who realize the importance and influence of long service in this body may regard this as a shortsighted policy on the part of a community whose interests in the National Government are so large; but such has been its custom.

In the case of Mr. CALDER the voters of the city of New York made an exception—and I speak particularly of the Republican voters. They delegated him to represent them for five consecutive terms, a fact which constitutes a record for Republican representation from that city. More than that, for the past four years Mr. CALDER has been the sole Republican Representative from that city. In the present Congress he has been the only Republican Member south of Poughkeepsie. He has, in literal fact, constituted for a period of four years the entire Republican delegation from the city of New York. His service was uninterrupted by reverses of his own party, reverses which even extended to other candidates in his own congressional district, but which never affected him. His support came from voters in all parties in such overwhelming force that even in the darkest hours of the Republican Party he emerged triumphant, a tribute to his personal worth and the sterling nature of his service, such as has rarely been accorded to any Member of this body.

Mr. CALDER has retired from the House of Representatives of his own free will. Last year he elected to present himself as a candidate for the United States Senate, an honorable and praiseworthy ambition and one which was soundly based upon the decade of faithful work he rendered in this branch of the Congress. He thereby put aside any opportunity to return as a Member of the House. He made a notable campaign for the senatorial nomination, and when the choice went to a distinguished opponent, Mr. CALDER retired from active politics with more honor in his own State than would have come to him through a renomination to this body.

I can not feel that the service of WILLIAM M. CALDER in the United States Congress has come to an end, for his work here during a period of 10 years has been far too valuable to be brought to a conclusion when he is still a young man. He has served on two of the great committees of this House, those dealing with interstate and foreign commerce and appropriations. He brought to his work on those committees a sound and experienced business judgment, which made him one of their most useful and valued members. His term of service in Washington has covered a period of constructive American legislation, whether wise or unwise, such as is scarcely paralleled by any other decade in the history of the country. As each year has gone by he has become of steadily increasing value as a legislator, because of his faithfulness to his work, his industry, his study and knowledge of our national affairs, and his never-failing sound and patriotic judgment. It is because of the character of his work in this House that I can not bring myself to believe that he has quitted Congress forever.

There is to me another phase of regret in Mr. CALDER's retirement. The House has lost the wise counsels of a typical American business man, who made himself a success in his chosen occupation and who gave freely to this body the value of his experience and training in the business world. In no sense of disparagement to any Member of this body, I feel that the American business man has never been represented in Congress to an extent commensurate with his importance in the life of this country. A large preponderance of the Members of Congress, including both Houses, are members of the legal profession. It seems to have become a custom widespread among the voters to send lawyers to Washington to make laws. I do not criticize it; I recognize the great necessity of having in Congress the best legal minds that it can attract. But I also believe firmly that Congress needs just as vitally the wisdom, the counsel, and the wide experience of the American business man, particularly in a day when so much of our national legislation concerns business and the industrial prosperity of our country. And when any Congress, or a series of Congresses, can obtain the services of such a typical American business man as WILLIAM M. CALDER I believe the fact is one for congratulation and praise. The people of the United States need business men in Congress, just as they need lawyers and the representatives of other professions and occupations. Mr.

CALDER was one of the men who peculiarly filled such a need, and it is because of that fact, if for no other reason, that the people of New York will view his retirement with sincere regret.

On both sides of this House, and particularly among the members of the delegation from the State of New York, Mr. CALDER'S absence in the Sixty-fourth Congress will be a matter of ungrudging regret. We who have served with him here came to know and admire his unfailing courtesy, his patience, his diligence, his wisdom, and his loyalty to his work. He has been a true representative of the people of his district, his State, and his country. He has been an honor not only to his own party but to the voters of all parties. His public life has been such, in the value of its yield to the people, that I firmly hope and believe it will admit of no permanent retirement from service in the American Congress of my friend WILLIAM M. CALDER.

The Nation and the Constitution.

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BORLAND,
OF MISSOURI,

Thursday, March 4, 1915.

Mr. BORLAND. Mr. Speaker, at the present time we hear so much outcry, particularly from some of our fellow Members of the legal profession, against the rapid, radical, and revolutionary changes being made in our form of government and political life that we are inclined to think that we are really in danger of losing all of the limitations of constitutional government. In truth, this outcry is the strongest evidence of the innate conservatism of the American mind. The legal profession is notoriously conservative and devoted to forms and precedents. The legal profession has during our entire national life been a great leader of American political thought and action. In the early days of our Republic, in the absence of any hereditary or class leadership, this duty, with the privileges which go with it, was promptly assumed by the American bar, and has been held with great tenacity until the present time.

Like most men who have had a legal training I am a devout believer in constitutional limitation. The safeguards of an organic law are essential to the calm, deliberate, and effective exercise of power by democracy. Constitutional limitations are for the protection of the minority and those who for any reason are temporarily unpopular or whose race, religion, occupation, or geographical situation renders them the object of popular distrust or denies them the power of controlling the policies of the country at the moment. Majorities do not feel the need for constitutional rights. They are amply able to protect themselves. While majorities may fret under constitutional limitations and the delays thus interposed to the extreme exercise of their will, yet such limitations can not long stand in the way of a settled and deliberate policy or principle that will result in the greatest good to the greatest number. In the long run these limitations protect the majority against its own hasty, ill-considered, and unjust actions. Every individual will find himself sometime or another in the minority, and even a majority is habitually dominated by a minority. To place unlimited power in the hands of a temporary majority may mean in the last analysis to place it in the hands of an active, bold, and, possibly, reckless minority of leaders who for the moment control public thought.

The Constituent Assembly of France was a remarkable example of the weakness of government of the temporary majority. The majority in that instance did not hesitate to proscribe and persecute the minority and to deprive them of all political rights. The tyranny became so great that no man dared be in the minority. To oppose the majority was to be branded as a public enemy. As the lust of power grew even terror could not hold the majority together. The leader of a faction which was in power for the moment relentlessly used such power to stifle all possibility of opposition. As a result the Constituent Assembly degenerated rapidly from a large representative body to a small faction, turbulent and utterly irresponsible. The members were afraid that they would awaken some morning in the minority and on the way to the guillotine. Hence they hastened to vote for the most reckless proposals of their leaders. No answer was found to this problem but the far-reaching absolutism of one leader.

But the fears of the friends of constitutional government are not justified by the present condition of public opinion in America, and certainly not by the results of the 126 years of constitutional history. We speak of our country as new and of our Government as an experiment. In truth, we are the oldest Government in the world. We have lived 126 years under the present Constitution. In all of that time but 17 amendments have been made to it. The first 10 of these were cotemporaneous with its adoption. They constitute a Bill of Rights, and as they were proposed as a condition of the acceptance of the Constitution by the requisite number of States may be regarded as a part of the original instrument. Of the remaining seven amendments none even remotely affects the fundamental character of our Government. They relate simply to details of governmental machinery:

The eleventh amendment restricted the jurisdiction of the Federal courts.

The twelfth amendment changed the machinery for choosing the President and Vice President.

The thirteenth amendment abolished slavery and involuntary servitude.

The fourteenth amendment provided for a citizenship of the United States as distinguished from the citizenship of an individual State.

The fifteenth amendment extended the right of suffrage.

The sixteenth amendment provided for the collection of an income tax.

The seventeenth amendment provided for the election of the United States Senators by the direct vote of the people instead of through the machinery of the State legislatures.

Not a single fundamental right of any individual has been added or taken away unless we consider that the thirteenth amendment, abolishing slavery, destroyed what was meant to be a permanent and fundamental part of our political system.

While our Constitution and form of government have thus remained almost unchanged for more than a century and a quarter the government of every great nation of the world has undergone radical and fundamental changes. In 1789 France was still a monarchy under the dying splendor of the house of Bourbon. Since then she has passed through three revolutions, has been three times a republic and three times an empire. In 1789 Germany was a collection of fragments of feudal States. Italy did not claim national existence. Since that period Spain, Portugal, Russia, Austria, Belgium, Holland, Denmark, Norway, and Sweden have all passed through successive changes. Even England, which boasts of a continuous national existence since the landing of William the Norman, in 1066, has changed her form of government so completely that the words of Blackstone fall upon uncomprehending ears when read to a British lawyer. In 1830 the celebrated reform bill passed the British Parliament. By this bill the power to control the House of Commons was taken out of the hands of the House of Lords, and the Commons became the representative body of the Empire. Aristocracy as the permanent source of political power ended, and the control of both the purse and sword passed into the hands of the representatives of the people. Even the King could summon to his cabinet only the leaders whom they selected. The result has been a democracy more complete and more direct than any that has ever existed outside the cities of ancient Greece.

Our isolated condition is not the sole cause for the remarkable permanency of our institutions. Revolutions are as indigenous to the Western Hemisphere as to any other part of the world. The cause of our conservatism lies deeper and is found in our national history. The war for independence was conducted by the Continental Congress, a feeble body of ambassadors from a loose and jarring set of allies. The Articles of Confederation which followed proved to be but a rope of sand. They did not make us a nation, and their weakness would have left us a prey to our own passions in our poverty and to the greed and cupidity of the stronger nations as we grew more prosperous. The Federal Constitution came at a happy time to weld these little communities into a nation, but a full generation must live and die under that instrument before we begin to realize its strength. In the Southwest were many who were willing at any time to organize independent republics or to make alliances with Spain. Hardly had the Southwest been cemented to the Union by the Louisiana Purchase, which removed the fear of the Spanish power, than New England cherished the same idea that she could detach herself from the Federal Union and unite herself with Canada for the greater security and prosperity of her trade under the British flag. South Carolina produced a statesman who proved by the logic of theory that any State had the right to nullify Federal legislation that was hostile to her local interests. Calhoun had everything in favor of his argument but the facts. If South Carolina had really found wider opportunities outside of the Union than in it, Calhoun would have been right. He was fundamentally wrong, because such opportunities did not exist.

The long struggle over constitutional powers and the relation of the States to the Federal Union, which occupied the American public from the Missouri compromise in 1821 until the inauguration of Lincoln in 1861, established so completely the supremacy of the Federal Constitution and embedded in the American mind so thoroughly a subconscious conviction of both the strength and wisdom of that great instrument that veneration for it became almost a religion.

The vigorous and able defense of the Federal Constitution in the period preceding the Civil War produced a natural feeling in the mind of the average American that it was a sacred instrument, to change which in any respect would be a species of sacrilege. Strange to say, both sides of that great controversy claimed to be defenders of the Constitution. Nobody attacked the Constitution. Everybody appealed to it and defended it, even those who claimed the right of secession. The happy result of this, as I have said, was to embed deeply in the American mind a respect and reverence for the Constitution and a belief that it could in no possible way be improved. Three amendments grew out of the Civil War, but nearly half a century elapsed after the Civil War before a successful attempt was made to amend it.

Can we be certain, however, that our governmental institutions will remain rigid and static because we do not amend the written charter? We can be sure of the reverse. Government is a progressive science. It can not stand still. It must develop and expand with the growth of civilization and the advance of public opinion. An attempt to keep governmental institutions static is like binding the limbs of a growing child. Our Federal system has grown in an astonishing degree since the Civil War. Whether this growth has been constitutional or extraconstitutional is a question that the wisest lawyer would not undertake to solve. For exactly 100 years—that is, from the forming of the Constitution in 1787 down to 1887—every Federal official, every judge, and more than 90 per cent of our lawyers and legislators believed that the clause of the Constitution giving the Federal Government jurisdiction over commerce between the several States was purely negative and restrictive in its operation. The clause had never been evoked as the basis of affirmative legislation by Congress. Its effect was supposed to be fully exhausted in preventing discriminatory laws by the several States which would interfere with the natural course of commerce. In 1887 Congress passed the first feeble experimental draft of the interstate-commerce law providing for an affirmative control over one of the greatest channels of commerce. In the quarter of a century which has followed the enactments on the subject of interstate commerce have been so numerous and so far-reaching as to defy legal classification and analysis. The Federal Government not only regulates rates; routes; terms and conditions of service; safety of passengers and employees; expenditure, organization, and accounting of transportation companies; payment of damages to shippers; equipment and construction of engines and cars; but it passes upon the character and quality of goods that are to be carried in interstate commerce; it prohibits entirely commerce in certain classes of commodities; it controls the packing and handling of poisons and explosives and imposes a multitude of restrictions. The pure-food law prevents a citizen from carrying a can of corned beef across a State line unless it is marked "United States inspected and passed." Scarcely an article can be bought in either a corner grocery or drug store that does not bear the O. K. of Uncle Sam. Two people of the opposite sex can not travel together from one State to another until the Government is satisfied that they carry no improper intent in their minds. This remarkable expansion of the interstate-commerce clause is but one example of the widening sweep of our Constitution. I might instance many others—the construction of the Panama Canal; the socialization of Alaska, by which the Government becomes a vast proprietor, improving and developing a commercial property; the irrigation projects in the West; and, more recently, the water-power projects by which the Federal Government becomes a public-service corporation engaged in constructing and operating a public utility. The temptation at the present time is to find somewhere in the four corners of the Constitution power for the Federal Government to do anything which seems to be beneficial at the particular time. I do not complain of this. I believe in it. I think that we should frankly admit to ourselves that the Constitution is a growing instrument and that government is a progressive science. Our conception of the powers and functions of government increase with our growing confidence in our country. It is not a bad sign that such a universal appeal is made by the American public to Congress for legislation upon every conceivable subject from religion or the price of bread to deciding how much powder a woman shall use on her face before her marriage.

I think we should frankly acknowledge that changes may still be made in our Constitution, the powers of our Government enlarged and its control put more strictly into the hands of the people without serious danger to our institutions. Public opinion, once thoroughly formed and crystallized into a settled conviction, will find a way of expressing itself. It would have been a blessed thing for this country if Congress had had the courage or the wisdom to submit the thirteenth amendment, abolishing slavery, in 1850, at the time California applied for admission. It might have taken a generation to have secured the adoption of the amendment by the requisite number of States, but it would have been done eventually, and would have saved untold blood and treasure, while producing in the end exactly the same result. Whenever any respectable number of American citizens so generally diffused throughout the Nation as to represent national rather than local sentiment desires the submission of an amendment to the Federal Constitution, and that desire is the result of settled conviction rather than temporary agitation, Congress should heed their demands. There is but one way to tell whether the people want the Constitution amended, and that is to let them vote on it. It is manifest that 36 States will not unite in adopting an amendment which either invades the liberty of individual citizens or destroys the fundamental rights of the remaining 12 States. Not a dozen amendments will be made to the Federal Constitution in the course of a century, and it is not likely that those will be of a fundamental character. The way to preserve the Constitution and to make it really American is to keep it constantly adapted to the best thought of the American Nation.

Agricultural Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. MOSES P. KINKAID,
OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 1, 1915,

On the bill (H. R. 20415) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1916.

Mr. KINKAID. Mr. Speaker, it will be a great disappointment to me, and it will be keenly regretted by my constituents, if the right kind of a rural-credits law shall not be passed at this session. Right now it is within the power of the Congress, and the authority is positively in the hands of the House, to secure such an act by the adoption of the McCumber bill, already passed by the Senate. Unless the McCumber bill shall be adopted precisely or practically as written, it is clear to me we shall not pass a rural-credits act at this session, or if any should be passed it will not be what farmers want or what the farming industry requires.

Mr. Speaker, the main difficulty is that the membership is divided into two schools as to what should constitute the fundamentals of a rural-credits act. The particular feature of this issue is whether middlemen shall be given the administration of the law with the right to a commission or compensation which will prevent a reduction of interest rates below what has now to be paid by farmer borrowers. It ought to be granted that it would be useless to pass a rural-credits act unless interest rates are to be materially lowered. Whatever kind of a bill may be passed, useless overhead expenses should be avoided, otherwise the first and main purpose of such legislation will be nullified. For my part, while I do not regard the provisions of the McCumber bill as complete as are desirable, I shall vote for it and otherwise give it my hearty support, because it contains the very best it is possible to secure in the way of rural-credits legislation during this Congress, which will be extinct in a few hours.

Mr. Speaker, a rural-credits law ought to have been passed two or three years ago, and there was a greater reason still why such relief ought to have been afforded a year ago, and naturally the demand has been more imperative for such relief at this session than ever. The demand for such relief has been increasing, because the subject has been all the time receiving greater and more widespread attention. The friends of rural-credits legislation, with whom I count myself, were promised in the last session of Congress that if we would just wait until this session such a measure would have the support of the

administration. We yielded, because we could do no better, for we did not have the votes to overcome the administration opposition to favorable action taken at the last session. But we did believe that the promise of the administration forces would be fulfilled at this session, and I for one, by letters written and words spoken, encouraged many constituents to expect that such an act would be passed before the adjournment of this session. But the friends of such legislation were very greatly disappointed when they found right at the commencement of this session a well-settled disposition of the administration forces to not allow the question to be taken up and disposed of during the present Congress. Instead of fulfilling the promise made at the last session, the administration forces insisted at the commencement of this session, and still insist, that action must be deferred until the next Congress. I am frank to say I fear, notwithstanding that the House now has in its hands to adopt the McCumber bill as passed by the Senate, and thus require it to go straight to the President for his approval, that those who favor further delay are going to have their way about it, and that the question will be sidetracked for the present, but with a renewed promise that it will be taken up in the next Congress.

Mr. Speaker, there can be no object in passing a rural-credits measure unless interest rates upon farm loans will thereby be lowered, and unless also longer time shall be secured and, what is equally important, unless also amortization shall be one of the features of the measure, because as desirable and beneficial as lower interest rates and long time will be to borrowers the scheme to pay a very small percentage of the principal every time an interest payment is made, which is the equivalent of unconsciously paying the principal with ease, will constitute one of the greatest virtues of a rural-credits measure. It will mean that when a farmer is done paying interest that, to his surprise, no part of the principal will remain to be paid. Under the present farm-mortgage system the crisis occurs when the mortgage matures, with all of the principal yet to be paid, with the consequence that, in too many instances, foreclosure, with the loss of the home, results.

Mr. Speaker, I fear I should be misunderstood as intending to be partisan if I should not here grant the fact that quite a number of the Democratic membership have all the time been earnest advocates of a rural-credits act which would bring needed relief to the farming industry; but the difficulty is that they and the rest of us are so greatly outnumbered by the other members of their own party.

Mr. Speaker, a rural-credits law is inevitable, and, whether just the right kind of a measure shall be attained at the start, sooner or later the industry of agriculture will be accorded its rights, and the whole public will enjoy the benefits. Then, why should the Congress delay longer the relief, benefit, and justice which the millions need and for which so many are waiting?

Rural Credits.

EXTENSION OF REMARKS
OF
HON. EDWARD E. BROWNE,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES.

Tuesday, March 2, 1915.

On the bill (S. 6692) to facilitate credits and decrease interest charges on farm securities.

Mr. BROWNE of Wisconsin. Mr. Speaker, I am in favor of this bill because it will give the farmer a chance to borrow money on long-time loans at 5 per cent interest.

The Government in this bill is safeguarded so that it stands no chance of losing a dollar.

This bill has already passed the Senate, and if we concur in it at this time it will become a law. A bureau of farm credits will be established in the Treasury Department, presided over by a commissioner of farm credits, and $10,000,000 appropriated and loaned on gilt-edge farm security. When $1,000,000 of this amount is loaned, bonds will be issued for that amount and sold, so the Government will not at any one time have more than $10,000,000 invested.

This bill is not perfect, and perhaps is not as good a bill as some of the others which have been introduced and which have been slumbering in the committees. But, in my opinion, with only two days remaining before Congress will adjourn, the substitution of any other bill for this one, or the amendment of this bill, will necessitate its going back to the Senate, where it will stand no show of passing.

I believe if this bill becomes a law the Government will demonstrate within a very few years that we can lower the rate of interest that this bill provides, from 5 to 4 per cent, and maybe even lower, and also enable the farmer to borrow money for from 20 to 30 years, with the privilege of paying any part of his indebtedness at the end of any interest-paying year.

The farms of the United States are mortgaged to the amount of $3,460,172,851. If interest rates could be reduced even 2 per cent, it would mean an annual saving to the farmer of over $60,000,000.

If farmers could borrow money for a long term, say, 20 to 30 years, it would mean more home owners and fewer farm renters.

Farm mortgages are regarded by investors as the safest and most reliable securities, and yet the farmers of the United States are paying double the rate of interest charged the farmers of any other country in the world. The rate of interest on farm mortgages is from 6 to 15 per cent, when you include the commissions and charges incidental to making the loan and drawing up the papers. The farmer who is obliged to borrow money must do so for a comparatively short term, which is another great handicap.

TENANT FARMING INCREASING.

The result of this is that tenant farming has increased in the United States at an alarming rate. Mortgage foreclosures are increasing, and young men are becoming afraid to purchase farms and run in debt for part of the purchase price. They prefer to play safe—rent farms and live and die as farm tenants.

In 1880, 25.6 per cent of all our farms were operated by tenants; in 1890, 28.4 per cent; in 1900, 35.3 per cent; and in 1910, 37.1 per cent. This shows a steady and positive increase of tenantry.

Since 1900 the farm owners have increased only eight-tenths of 1 per cent, while the farm tenants have increased 16.3 per cent. The farm homes mortgaged in 1890 were 28.2 per cent of the whole; in 1910, 33.6 per cent.

A farmer who owns his farm is the most independent man in the world; a farmer who rents a farm—becomes a tenant—is the most dependent man in the world.

The tenant system has been the curse of European countries for years. Is it not possible for the United States to establish a system by which the farmers of the country can marshal their securities so that the farmer can get money at a low rate of interest and for a long period of time?

Farmers of other countries get money at a low rate of interest. Germany, France, and other European countries have solved this problem. They have established a system by which the farmer can get money for from 20 to 30 years, with the privilege of again renewing the loan at a very low rate of interest.

Germany's great farm-loan institution, the landschaft, is loaning over $750,000,000 to the farmers of that country on 20 and 30 year loans at from 3 to 4½ per cent interest.

The Jewish Farm Cooperative Credit Union of the United States, an offshoot of the Baron Hirsch Foundation, which came into existence in 1890, has $1,800,000 loaned to 2,500 Jewish farmers in 31 States of the Union at a rate of 4 per cent interest.

Is the American Congress not capable of giving the people a law that will enable the farmers to obtain money at a reasonable rate of interest and on long-time loans, or are certain competitive interests preventing such legislation?

The express companies for years prevented parcel-post legislation, but the people at last made such a demand that we obtained a parcel post, and now no one would ask for its repeal.

PLATFORM PROMISES.

The last Republican and Democratic platforms provided for rural credits. The Democratic platform pledge upon this subject was as follows:

> Of equal importance with the question of currency reform is the question of rural credits or agricultural finance. Therefore we recommend that an investigation of agricultural credit societies in foreign countries be made, so that it may be ascertained whether a system of rural credits may be devised suitable to conditions in the United States.

A commission to investigate rural credits went to Europe. Their report and hearings are embraced in several volumes.

Many rural credits bills were introduced in Congress, some of them very complete and embodying the best thought upon the subject, yet the Banking and Currency Committee in either House, with an overwhelming Democratic majority, has never reported out any of these bill or given the Members a chance to vote upon them.

When the banking and currency law was reported we looked for a provision in it providing for rural credits, but were disap-

pointed. We were assured by the Democratic leaders that they would report a rural-credits bill at an early date as a separate measure.

June 1, 1914, I called the attention of the House of Representatives to their broken promises in their neglect to give us a rural-credits law and in their neglect to pass a good-roads law. I quote from my speech of that date:

THE DEMOCRATIC PARTY HAS NOT DEALT FAIRLY WITH THE FARMERS.

I charge the Democratic Party with not dealing fairly with the farmers of the North and West.

I ask, What have you done for the farmers who, during the last crop year, produced nearly $10,000,000 worth of wealth?

You have appropriated $141,000,000 for battleships. You have appropriated $100,000,000 for the Army, although you spent almost two weeks' time making speeches on the Winston Churchill peace resolution. You have appropriated $44,000,000 for rivers and harbors.

You have done all this after talking economy and accusing the former Republican administration of being extravagant.

The 12,000,000 farmers of this country have received very little consideration at your hands.

NOTHING FOR GOOD ROADS.

The $25,000,000 appropriation for wagon roads that passed this House in February is sleeping the peaceful sleep of death in one of the committees of the Senate.

RURAL CREDITS SHELVED.

The farmers of the country demanded and were promised by this administration a law that would enable them to borrow money at a lower rate of interest and on easier terms. This would help the farmer in moving his crops and enable the tenant farmer or the young man with small capital to become the owner of a farm with a fair chance of paying for it.

Many wanted rural-credit legislation to be written into the banking and currency law, where it could have been appropriately placed, but "the powers that be" said no, and it looks as though rural-credit legislation had been relegated with the other broken promises of the Democratic Party.

UNDERWOOD TARIFF DISCRIMINATES AGAINST THE FARMER.

By taking off the tariff on farm products you have opened wide the doors of the great home market of the United States to the farmers of the world and invited them to dump their surplus.

Argentina, since the tariff bill went into effect, has sent millions of dollars' worth of butter, beef, and corn into the United States.

THE GOVERNMENT LOANS MONEY TO BANKS, WHY NOT TO FARMERS?

The Government takes the people's money from the postal savings banks of the country and loans it to the national banks.

To-day over $75,000,000 of the people's money is being loaned to the national banks by this Democratic administration at 2½ per cent interest, and yet the Government has so far refused to establish a bureau of rural credits, which would only require $10,000,000, which would be loaned on as safe security as the national banks can give.

DEMOCRATIC PARTY HAS NOT DEALT FAIRLY WITH THE FARMERS.

No one can dispute that agriculture is the greatest industry of our country. Thirty millions of sturdy, hard-working people are engaged in it, which is practically one-third of our total population. Forty billions of dollars are invested in it. The wealth of agriculture in the United States amounts to more than the total wealth of Great Britain, including England, Scotland, Ireland, and Wales, and yet the present Democratic administration has refused to give the farmer a means by which he can borrow money at a reasonable rate of interest. It has refused to aid in improving the wagon roads over which he annually hauls $10,000,000,000 worth of farm products. It has also refused to extend the rural delivery routes, but, on the contrary, the present administration is practicing all its economy on this branch of its service. In this connection I quote from the ruling of the Postmaster General, found in the speech of Representative THOMAS, page 5462 of the CONGRESSIONAL RECORD of March 3, 1915:

A sweeping reorganization of the Rural Delivery Service throughout the United States for purposes of economy will be completed within the next six months in accordance with amendments to the existing postal laws and regulations issued to-day by Postmaster General Burleson. The effect of the new regulations will be the discontinuance of many rural routes in sparsely settled communities and reduction in frequency of service in many routes. During one month of each quarter every piece of mail carried by rural carriers shall be counted and weighed, and an accurate count shall be made of the number of patrons served. Routes on which the count of mail collected and delivered has averaged for six consecutive months less than 756 pieces per month per mile are to be discontinued unless they can be arranged so as to come under the new rule. The regulations are in effect now, but their full force will not be felt under six months.

When we take into consideration that this Congress has extended the delivery of mail to small cities of less than 3,000 inhabitants so that the people of these cities get their mail several times a day, delivered at their houses and offices; when we consider that the humblest citizen in our great cities living 5 or 10 miles from the central post office gets his mail delivered at his front door several times a day, we can see no fairness in any law or ruling which prevents the establishment of rural delivery of mail so that the great farming classes can get their mail daily without inconvenience and without traveling an unreasonable distance.

When this Government can afford to appropriate $30,000,000 of the people's money for rivers and harbors, in addition to $61,000,000 appropriated the two years preceding, when this Government can afford to appropriate $35,000,000 to build a railroad in Alaska to accommodate 60,000 people, it is hard to conceive why the Government can not appropriate $25,000,000 for the improvement of the wagon roads, which would benefit directly 30,000,000 farmers and indirectly every man, woman, and child in the United States.

The present House of Representatives has a Democratic majority of over 140 Members. The Senate has a good working Democratic majority. The Democratic Party is therefore responsible to the country for legislation, and its failure to give the people, especially the farmers, of this country this legislation, which it promised in its platform and which would have been of inestimable benefit to the great producing classes of the United States, either shows incompetency on the part of the Democratic Party or else a willful disregard on its part of its solemn pledge to the people. In either case it can not appeal to the farmers of the country for their support at the next general election.

RIVER AND HARBOR BILLS.

A powerful secret lobby demands $50,000,000 annually.
The fight begun against waste and extravagance saved $41,000,000 to taxpayers in two years.
Was it a "good thing" to accomplish?

EXTENSION OF REMARKS

OF

HON. JAMES A. FREAR,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 3 (legislative day of Tuesday, March 2),

Mr. FREAR. Mr. Speaker, during this Sixty-third Congress I have frequently spoken against different projects contained in the two river and harbor bills that were defeated. At the outset I was advised by older Members that for a dozen years not a single item had been stricken from "pork-barrel" bills. To expose their true character and bring about their defeat has required the combined help of many agencies and saved more than $41,000,000 to the Government Treasury. Recently a Democratic weekly in my own district published the following criticism:

Will some one of the numerous Republican newspapers in the tenth district, who are such ardent admirers and defenders of our Congressman, J. A. FREAR, speak right up in the meeting and name one good thing that the pork fighter has accomplished for the people of this district, or one thing that he may reasonably be expected to accomplish if he continues in that course?

My attention was directed to this peculiar wail by an answer from a leading editorial in the foremost Democratic paper of my own State, the Milwaukee Journal, which commented, in part, as follows:

The country generally recognizes the necessity of a determined fight against "pork." But the Times thinks it sees a chance for a partisan whack, and what does economy in public money matter? The Times, we believe, is a Democratic paper, but it is doing its party no good when it upholds "pork." It is free to disagree with Mr. FREAR if it wants to do so, but it shows poor judgment when it attacks him for the best thing he has done.

Mr. Speaker, I do not feel called upon to defend my "fight," and am sure that hundreds of constituents in my district will testify to my active and successful efforts to serve them in countless ways in which every Representative is legitimately called upon to act. I am not disturbed if criticized at home or by interested Members on this floor because of the successful fight made against the last two pork barrels. Nor is it my purpose to discuss at length a contest which has covered many days of active debate in the House and also in the Senate.

The annual river and harbor bill is vicious, wasteful, and indefensible, and will continue to be so as long as the people permit it to be built in pork-barrel shape. In the RECORD for January 29 last I placed before the House a recapitulation of wasteful items contained in what was claimed to be the 1915 "expurgated" bill—as bad in character if not in amount as its predecessors. For several days these vicious items were exposed and thoroughly discussed during debate. Placed in the bill at the behest of dredgers, contractors, and special interests working through waterway lobbies, they will annually confront us, until the public is awakened to the situa-

tion. Men who believe the sole end of public life is "pork" are often supported in that belief by special interests, voicing their demands through innocent constituencies. The value of propositions may generally be determined by a willingness of localities or special interests to contribute some share of the proposed burden which now is placed entirely on the Government Treasury. Contribution removes incentive to graft.

WASTEFUL PROJECTS GET MOST OF THE MONEY.

As has been repeatedly pointed out, river and harbor bills are largely bad, and scores of wasteful, worthless items will annually drain the Treasury unless we can overthrow the present system. Good men privately commend the fight against this annual "humbug and steal," as TILLMAN calls it, but because of some local project they say, "I can not explain my vote to my constituents, who have an item in the bill." Therein lays the vice of "pork-barrel" legislation, because in order to save some insignificant local project Members have voted in 1915 to give $6,500,000 to a wasteful, indefensible Mississippi River land-reclamation scheme, which has been denounced by reputable papers of the Mississippi Valley as a "pork-barrel" grab for "Yankee money."

To save some local project in the 1915 bill honest Members voted $8,200,000 for a scandalous $64,000,000 Ohio River canalization fraud, which was condemned by Senator KENYON in debate as one of the worst projects in the country. In the 1915 bill the House voted $1,200,000 for what Senator BURTON denounced as a vicious, worthless $20,000,000 Missouri River reclamation scheme. To save some small item for home constituents, Members annually vote extravagant appropriations for the notorious Coosa, Brazos, and Trinity Rivers, that propose to filch $30,000,000 from the Treasury before completion—good money wasted beyond possible doubt.

The House voted $800,000 in the 1915 bill for the idiotic $5,400,000 Beaufort Canal project, located in North Carolina, where a score of smaller worthless projects exist. Defended only by irresponsible Army engineers and strong political pull, ridiculed and denounced by Senator Burton, it was voted for, together with dozens of other wasteful, worthless projects in Florida, Mississippi, Arkansas, Louisiana, and Texas. Why are these vicious projects retained? We all know it is because they are placed in the "pork barrel" by political pull.

A legitimate waterway, the greatest river in the world, flows past my own district and needs annual improvement, but it has been shown on this floor that a prodigious waste of money occurs in handling the entire Mississippi River project. In the 1915 bill is an item of $1,200,000 for the upper Mississippi, while $6,500,000 is appropriated for the lower part of the river to continue an extravagant land-reclamation scheme. Compare the amounts. Why is Wisconsin required to pay for reclaiming Louisiana lands? Will the levee lobby answer?

Over $140,000,000 of Government money has been recklessly poured into the Mississippi River in recent years. Wisconsin's proportionate contribution was about seven millions. What has my State or the country to show for this criminal and stupid waste of public funds? Where has it gone and what is to be the limit? Ask the Mississippi River lobby.

LET ME PRESENT THE "PORK BARREL" IN ANOTHER WAY.

The Mississippi, Missouri, and Ohio Rivers were given approximately $17,500,000 under the 1915 sundry civil bill and the river bill reported by the Senate committee. After deducting floatable logs and timber, sand and levee-construction material, and deducting duplications as presented on January 29, the following remarkable statistics appear, based on the 1914 engineers' report:

Three rivers given $17,500,000 in 1915 bills.	Tons.
Upper Mississippi (including duplications)	233, 315
Lower Mississippi (no definite data, but possibly)	300, 000
Missouri River (deducting sand hauled 1 mile)	35, 000
Ohio River (Kingman's letter), continuous traffic	2, 000, 000

Total, less than 3,000,000 tons.

Verified tonnage of four Lake ports given $499,000 in 1915 bills.	Tons.
Ashland ($20,000 in 1915 bill)	5, 623, 309
Milwaukee ($15,000 in 1915 bill)	8, 647, 230
Chicago ($464,000 item in 1915 bill)	13, 275, 000
Superior-Duluth (no appropriation)	46, 875, 416

These four Lake ports handled about 75,000,000 tons. The river traffic costs the Government about $6 per ton annually; the Lake traffic less than 1 cent per ton. The latter is for navigation; the former is for land reclamation and other scandalous schemes. Where does the pork go and who pays for it?

Most of the annual appropriations go to Southern States, where navigation is a joke. Sectionalism has been forced upon us by indefensible pork-barrel legislation. Take Wisconsin for illustration. While no accurate estimate can be made because of Federal revenue-producing methods, Wisconsin contributes presumably about 5 per cent of the income tax, war tax, and other Government revenues, based on its own share of the Nation's wealth. A proportionate contribution of 5 per cent toward appropriations, if a direct tax was levied, is a fair basis of determining comparative burdens per capita.

The 1914 pork barrel, including sundry civil bill waterway items, reached over $60,000,000. The 1915 bills reached over $42,000,000, or $102,000,000 for two years. After a hard fight this total amount was cut down to $61,000,000 for both years, a saving of $41,000,000. Of the $61,000,000, Wisconsin's share of the burden is about $3,000,000. Possessing several of the finest harbors in the world, Wisconsin receives from the Federal Treasury less than $300,000. In other words, Wisconsin gets back less than 10 cents on every dollar contributed in 1915. If given for educational purposes, national defense, or any other beneficial use, it would be beyond criticism; but this money is largely used for special interests on wasteful or worthless waterway projects, and is secured through political pull, not merit.

Of the $41,000,000 saved to the Treasury from two pork-barrel bills Wisconsin's saving, based on a 5 per cent contribution, would be about $2,000,000, or nearly $1 per capita for every man, woman, and child in the State. A saving of $2,000,000 for Wisconsin is an example of the saving that results to practically every Northern State. However this apportionment may be determined, a saving of $41,000,000 to the country is indisputable, and that saving is of inestimable value during these strenuous days of income taxes and war taxes.

Pork-barrel defenders, supported by dredgers and contractors and all the waterway lobbies in the country, can not disguise facts disclosed to the country during the debate, and for myself I am content in having taken a small part in defeating two scandalous bills and in helping to save to the people $41,000,000 of Government money that the lobby demanded and almost secured.

Yet money waste is not the worst part of pork-barrel legislation, although it is bad beyond description. Another incalculable evil comes through the system of bargain and sale whereby this annual pork barrel and other extravagant legislation is rammed through Congress. How long will the people of this country permit such bills to suck millions of dollars annually out of the Treasury, just because it is part of the game? A sober, honest, intelligent citizenship is not willing to use any different standard of morals for legislative bodies than for private individuals. We represent those who pay the bills.

A discriminating public desires to give credit where credit is due, and Senators who fought the pork barrels to a finish primarily helped to save $41,000,000 of the people's money. They were aided by the public press, which gave splendid encouragement by exposing fraudulent items that masquerade under the name of waterway improvements.

In the House Mr. CALLAWAY, of Texas, hit hard blows effectively, and my colleague Mr. LENROOT gave invaluable aid in the defeat of the $18,700,000 Muscle Shoals private water-power scheme, which was cloaked under $150,000 initial appropriation. My colleague Mr. ESCH also gave substantial help when he insisted upon a detailed report of work performed on the Mississippi River project. Nearly the entire Wisconsin delegation, including Democrats and Republicans, joined in opposition to the 1915 bill, and were with the 99 votes recorded against it. To defeat the scandalous Muscle Shoals private water-power scheme would be a big victory, but to keep new projects out of the bill and to secure a record vote for the first time in many years and to aid in saving two score millions is a matter of congratulation for all who engaged in the fight. Never has a better or more successful fight been waged for honest legislation than this one which was concluded yesterday in the Sixty-third Congress.

STRAINING AT GNATS AND SWALLOWING CAMELS.

A number of Members who annually fight Quixotic battles against garden seeds, voted for the pork-barrel bill, and yet $6,500,000 given in 1915 to the lower Mississippi reclamation scheme alone would pay for garden seeds for a quarter of a century. Several of our southern friends who fight vigorously against special pension bills for northern veterans, voted for the waterway bill, and yet all increases for special pensions for the Sixty-third Congress reached about $150,000, or less than one-fiftieth part of the $8,200,000 to be wasted on the Ohio River this year.

No foreign Government spends half as much for all its waterways as we throw away annually on the Mississippi, Missouri, Ohio, Tennessee, Cumberland, Brazos, Trinity, and other wasteful projects, and no other Government on the face

of the earth permits a legislative pork barrel. Why do we submit, when every intelligent man knows our river commerce is a stupendous joke, as has been shown by statistics based on Army engineer's reports.

In the House and Senate many kindly words have been expressed by able men for my own efforts to expose the viciousness of both bills, and because of captious criticism on this floor and occasional complaints from "pork" defenders elsewhere I venture to insert two letters that speak for themselves, letters which come unsolicited from two distinguished Senators who led a successful fight against both bills.

UNITED STATES SENATE, *September 23, 1914.*

Hon. JAMES A. FREAR,
House of Representatives, Washington, D. C.

MY DEAR MR. FREAR: Now that the river and harbor bill is defeated, I can not refrain from giving credit where credit is due. You are the man who started the whole fight; you are the man who is entitled to the credit. You, in my judgment, performed one of the greatest public services that any man has ever done in Congress. I congratulate you from the bottom of my heart.

If you need me in your campaign, I will be glad to come there and tell the people what a splendid Representative you have been. Would that we had more men in Congress like you.

Sincerely, yours, W. S. KENYON.

Among hundreds of generous letters at hand, the following letter is one of several received from the greatest waterway expert, and one of the ablest public men in the country:

HOT SPRINGS, VA., *October 1, 1914.*

Hon. JAMES A. FREAR,
House of Representatives, Washington, D. C.

MY DEAR MR. FREAR: I learn that the House concurred night before last in the Senate substitute, after a lively debate.

I am here for a brief rest, but can not omit to congratulate you on your part in this most happy outcome. I am sure that you will be listened to more attentively next winter than you were last winter or spring.

Yours, sincerely, T. E. BURTON.

Of many words of commendation spoken during debate, the following from the September 29 RECORD, uttered by the able Republican leader, Mr. MANN, are highly prized:

The gentleman from Wisconsin [Mr. FREAR], I think, is entitled to the thanks of the country for what he has done. * * *

The country knows that MANN and MURDOCK, two party leaders on this floor, voted against both bills. Is it not significant? Can fake waterway lobbies control future appropriations? I do not believe so.

To show that legitimate transportation companies are not misled as to the real issue, a brief extract is offered from a lengthy resolution passed at its annual meeting in 1914 by the leading commercial body of the country, the New York Board of Trade and Transportation:

* * * * * * * *

Resolved, That while we regret the defeat of certain items in the rivers and harbors bill, * * * we nevertheless regard with approval the defeat of the bill as a whole, and commend Congressman JAMES A. FREAR, of Wisconsin, and Senator THEODORE E. BURTON, of Ohio, for their courage and perseverance in opposing the inflated rivers and harbors bill, and cordially congratulate them upon the success of their efforts.

* * * * * * * *

The Chicago Tribune, Milwaukee Sentinel, Free Press, Boston Transcript, Christian Science Monitor, New York Herald, Sun, Press, Washington Times, and scores of other papers of acknowledged standing throughout the country, including practically every daily paper in my own State, have given strong support to this fight. Collier's, La Follette's, Pearson's, the Outlook, Chappel's, World's Work, Saturday Evening Post, Harper's, and other magazines have rendered signal service in exposing the vicious pork-barrel system, while many of these publications have kindly commended my own efforts.

These opinions I place in the scales against itching palms of hungry pork hunters. The battle is not half won, because the system of bargain and trade is firmly intrenched, but it is probable that the powerful river and harbor lobby, including its eight railroad contributors, will be more secretive hereafter. Congress has unconsciously abrogated its powers of waterway legislation to discredited Army engineers and irresponsible lobbies supported by secret agencies, from private water-power interests to land-reclamation schemes. The confidence of the American people has been grossly abused, and the most deadly leprous spot on the legislative program is the annual river and harbor pork barrel. If a "humbug and steal" a dozen years ago, it is a scandalous, hypocritical fraud to-day, and the steal has more than doubled in size during that period.

Let us place the power and responsibility for managing our waterway improvements in the hands of a competent, high-class, responsible board that will command the confidence of the American Congress and of the country. Appropriations must be made by Congress, but the amount and application should be based on authoritative advice.

Personal Rural Credits.

EXTENSION OF REMARKS
OF
HON. HENRY T. HELGESEN,
OF NORTH DAKOTA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, March 4, 1915.

Mr. HELGESEN. Mr. Speaker, on February 20, 1915, I introduced the following resolution, House joint resolution 430:

Joint resolution to authorize the Committees on Agriculture of the Senate and House to investigate a system of rural personal credit.

Whereas none of the several rural-credit investigating bodies appointed by Congress within the past few years has drafted a personal rural-credit bill; and

Whereas personal rural credit is more necessary than a land-mortgage system, although such system is good so far as it goes; and

Whereas nearly every highly civilized country has in successful operation a personal rural-credit system through which the farmers of those countries obtain credit for productive purposes at low rates of interest and in sufficient amounts to enable them to produce agricultural products more economically than is done in this country, even though our farmers possess many natural advantages not enjoyed by them; and

Whereas the great European war now being waged is wasting capital at a rate never before approached, which condition is bound to result in materially affecting the world's capital and credit markets; and the American farmers having no organized credit machinery, it naturally follows that their interests will suffer more than any other interests in the country and make it more difficult for them to obtain credit in the future than it has been in the past; and

Whereas the function of a body to investigate a scientific question like credit is judicial in character and not legislative in any sense, because its chief mission is to ascertain the truth to form the basis of sound legislation, just as it is the mission of the court to ascertain the truth to form the basis of its judgment, and the function of an investigating body being judicial in character, it follows that its machinery should conform to that of other judicial bodies, which provides that the interested parties may appear in open court and establish the merits of their respective contentions; and if the selfishly interested parties are brought into court to fight out their own battles, in an orderly manner and on fair terms prescribed by the commission, then the Members of Congress would not be charged with representing any special interest: Therefore be it

Resolved, etc., That the Committees on Agriculture of the Senate and House of Representatives are hereby authorized, through a subcommittee, to investigate and hold hearings on such personal rural-credit bills as may be presented to them, in the manner hereinafter more specifically set forth, and make a report thereof not later than the 10th day of December next.

SEC. 2. That such subcommittee or investigating body, which is hereinafter referred to as the commission, shall hold its hearings and investigations in such manner that will permit persons who, in the commission's opinion, have sufficient authoritative backing to present bills for a personal rural-credit system in the United States to the commission and appear before them by experts of their own selection to establish the merits of their respective bills and to disprove any provisions contained in bills not presented by themselves. The commission shall notify at least one leading representative of every interest affected by such bills, including the president of the American Bankers' Association, of his privilege to appear before the commission by an expert of his own selection and to advocate or oppose any bill presented, who shall enjoy the same rights and privileges before the commission as the experts of the proponents.

SEC. 3. That it shall be the further duty of the commission to send for persons and papers; to administer oaths; to summon and compel the attendance of witnesses and have the same examined by themselves or by the representatives of the parties at interest appearing before them, or both; to adopt rules of procedure and the same to amend; and to employ such secretaries, experts, stenographers, and other assistants as shall be necessary to carry out the purposes for which the commission was created.

SEC. 4. That the members of the commission shall receive no compensation for their services on the commission except traveling expenses incurred while attending to the duties imposed under this act.

SEC. 5. That the sum of $9,000, or so much thereof as may be necessary to carry out the purposes of this act and to defray the expenses of the commission, is hereby appropriated out of any moneys in the Treasury not otherwise appropriated. Such appropriation shall be immediately available and shall be paid out on the audit and order of the chairman or acting chairman of said commission, which audit and order shall be conclusive and binding upon all departments as to the correctness of the accounts of said commission.

I did not introduce this resolution because I had any pet plan for providing the country with a system of personal rural credits, but because I realized the vital importance of the proposition, and because I find that it is so little understood, not only by the people at large, but by those who are charged with the responsibility of legislating on the subject, that I thought it wise to provide for a hearing that would give all those who are interested in the subject a chance to be heard, no matter whether they be for or against the proposition.

Such a hearing as I have proposed would give us the arguments on both sides, presented by the best experts obtainable, and would, therefore, furnish us with the best possible basis for the drafting of a bill that would bring the necessary relief, and by having constantly before us the arguments of those who

are opposed to the proposition we would be aided in drafting a bill that would not unnecessarily antagonize their interests.

My resolution, and the kind of an investigation it calls for, is indorsed by farm journals representing the views of millions of readers, and it has brought petitions from all over the country praying for its adoption. And why should it not be adopted? It is certainly the only sane and businesslike way to deal with an absolutely new proposition that is of such vital importance as is the question of a sound system of personal credits for our farmers.

The ordinary method of legislating is to depend on the bills introduced by the individual Members of the House or Senate, and while some of these bills represent the views of men who have given the subject patient and thoughtful study, many of them are drawn in a haphazard manner and introduced solely for political effect. Whenever the subject of these bills is finally taken up for consideration by Congress the authors of these various bills fight strenuously for their own measures and do not enter the discussion with open minds, ready and willing to accept whatever may be shown to be for the best interest of all concerned. This makes intelligent consideration of important legislation extremely difficult, especially when dealing with an entirely new problem and where there are no American precedents that can be taken as guides.

If the commission provided for in my resolution were appointed and authorized to take charge of this matter, it would furnish the information upon which a committee bill could be drawn and would eliminate the confusion, delay, and opposition caused by a lot of bills introduced by individual Members.

Every Member who is really friendly to rural credits ought, it seems to me, to welcome the creation of such a commission, and even those who are honestly opposed to rural credits in any form should not object to its creation, for they, too, could appear before this commission and present to it their arguments in opposition, knowing that their case would be given full and fair consideration.

Agricultural Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. MARTIN D. FOSTER,

OF ILLINOIS,

Monday, March 1, 1915.

Mr. FOSTER. Mr. Speaker, this Congress has passed the Federal reserve banking act, which, it is believed by those who have studied the financial history of our country and are fully conversant with the laws on the subject, will be a great improvement on the old inelastic banking system which had been on the statute books for 50 years. We need in commercial business an elastic currency, one that will afford credit to those engaged in business at the time when they need it. Men who are engaged in large enterprises usually require a large amount of capital, and they are compelled to be borrowers to successfully carry on their businesses. The Federal reserve act will afford an expansion of currency by the banking interests to meet this legitimate need of business.

There is another class of people in our country, and they are producing the basic wealth of the land. Farming must ever remain the chief source of our prosperity. And while the Federal reserve act does give to the farmers more relief than they had under the old system, yet it does not furnish them with the kind of credit they need and on such terms as they ought to have to carry on their work.

There is no better security than land security. When the Federal reserve act was under consideration it was promised to the farmers of the country that at a later date this matter would be taken up by Congress and fully considered and a bill passed giving them the kind of credit that is necessary to carry on their business. It is the duty of Congress to carry out this pledge and to fulfill the demand made to the farmers everywhere for a credit system that will permit them to borrow money at a lower rate of interest and on more favorable terms than they are now able to do. As a rule they are not large borrowers, but desire to secure loans for the purpose of buying land, improving the farm, or to meet demands that are necessary until a crop can be made and the money secured by selling the product to meet their obligations. It is to be regretted that in this Congress it has not been possible to secure some system to aid the farmer so that he might meet his financial condition on more favorable terms. It is true that on an Agricultural appropriation bill it is difficult to harmonize the different interests and secure a bill which will give the farmer relief. The closing hours of Congress usually are so congested with bills that must be enacted into law that matters of such great importance can not properly be considered. I regret that we are not able to pass some bill which would start this work which is of such vital importance to this class of our people. A commission was sent to Europe to study the different systems in operation in those countries. They have made a report, and yet there seems to be much difference of opinion as to what system ought to be put into operation in this country. Whatever system may be adopted ought to provide some means whereby the man who has no land may be able to secure it, and any system that will afford a credit to those who are already owners of land to borrow and increase their holdings will eventually work a system of landlord and tenant, a condition to be avoided if possible. Everyone will admit that we ought to have more actual owners of the land who live upon it than we have now. If we are to put into operation a system that will only help the landowner, it will be a mistake, and will only furnish partial relief to those engaged in agriculture. It is necessary for the farmer to have some way whereby he may meet his temporary requirements. It is necessary for his need oftentimes to borrow money for a few months to be able to operate the farm until he markets his crops. Loans of this kind, which are granted for a short time, ought to be secured without having to give a mortgage upon his farm, or he may not own one on which he could give a mortgage to secure the debt; so that in considering a plan for rural credits there ought to be some provision for the organization of associations along the lines of personal credit. It is said that the most perfect system of short-time credits which are afforded through local institutions are those found in Germany, and in that country they have proven very satisfactory and very successful. It is to be hoped that the committee selected to make this investigation and report to Congress will not overlook this important provision.

I beg to insert, in this connection, an article by Mr. John P. Doyle, of Mount Vernon, Ill., State secretary-treasurer of the Farmers' Educational and Cooperative Union of America. Mr. Doyle is an actual farmer, and one who has lived upon the farm all his life and has some idea of the needs, the problems, prosperity, and the failure of the farmer.

THE PROBLEM OF SHORT-TERM RURAL CREDITS.

[By John P. Doyle, Mount Vernon, Ill., State secretary-treasurer Illinois Branch of the Farmers' Educational and Cooperative Union of America.]

It has been well said, "A man buys a farm once or twice in a lifetime, but he needs a short-term credit every year." The voluminous reports that have been made and the many bills that have been presented by Members of Congress will surely soon lead to a solution of the long-term loan question; but the seemingly more necessary short-term loan proposition has yet received far less than its due need of consideration.

To one who has farmed all his life, and who has gone through all the hardships that lack of sufficient means entails, this subject of short-term credit would seem one of the most important considerations of all the farmers' needs. Might I illustrate and make this more concrete by giving some actual experiences in an impersonal way? A young couple having, by previous individual effort or by inheritance acquired sufficient for a first payment, invested it all in a piece of land. They have thus burned their bridges, destroyed their ships, and must go forward; there is no turning back; and they start the march and battle of life with high hope and courage. But they soon discover that it is a Marching Through Georgia; that they have abandoned their supplies, and must forage as they go. Little unforeseen happenings occur which can not be foretold.

Even with the farmer's best skill he is always a partner with nature and the elements are his master. A glare of ice in the winter has smothered the wheat and it must be put in oats, thus calling possibly for extra hired help and cash for seed oats; an expense not looked for. A wet spot over there would be increased in value ten times by a few drain tiles. Can he do it? Yes; he is young and strong and the little woman at the house consents and so he will try. A line of fence down this side will give a lot of pasture and must be done; some accidents to machinery by careless "help" require more repairs than calculated, and he finds himself, before any crop is made, asking credit of the grocer, the tiler, the hardware merchant, the blacksmith, the worst and usually the dearest forms of credit known. Prospects are good though and the harvest is here. But as the golden color increases in the grain the golden color in the price steadily and always declines, and when his crop is finally ready for the market the quotations are invariably at the bottom. Then he sits long at the after-supper table and consults with the good woman: "Oh, if I could only hold this 75-cent wheat it will be worth a dollar later on, or this 30-cent corn will be worth 50 cents by spring. Some one must hold it for the needs of humanity throughout the year, then why not we who have given it our toil? These hogs are just now at the point for greatest gains and the market is at its lowest. It is ruinous to sell them now. Of course I could go to the bank and borrow, but with the obligating myself to a friend for his indorsement, the high rate of interest, and the short time for payment I may be as bad off as ever, and these bills must be paid." And so a large part of the fruits of his toil is given to others "Who toil not, neither do they spin." But with each spring he starts in with renewed hope, and well was it said by an observer watching the farmers leaving town of an afternoon, "There go the most courageous set of people on earth; amid drouth and flood, bugs and disease, cholera and death, they ever go bravely on."

Something ever demands the ready cash and makes credit necessary. This time it is a case of sickness, possibly of death, that depletes the little surplus; again one of the work team dies and must be replaced, and fortunate indeed is the farmer who does not pay a heavy tax to death each year. The family is increasing, as it should, and an extra room must be built; the dreaded hog cholera comes just as the shoats are putting the second kink in their tails, and he sees his prospects of clearing off the debts swept away as by theft. In the meantime this usually falls heaviest on the farmer's wife. No matter what his efforts, she generally goes him one better.

While he dozes after the toil of the day she may be out around the henhouse with a lantern giving the final care to those hatchers whose broods will be of so much value in the fall. Up again in the early dawn, she is the dynamo that keeps the whole machinery moving. Suddenly some day the spring of life breaks, the heartstring, too constantly tense, snaps, the tired hands are folded in rest for the last time, and the bereft, sitting by the bier asks, "My God! Was it all worth while?" Our observation is that there are more farmers with second and third wives than in any other calling.

In the meantime it has not been all clouds and disaster. Such strenuous effort and close living must meet some reward. A husky family of boys and girls is growing up, and a place and work is found for each one from the time he can slop a hog, milk a cow, or handle a hoe; and it all tells in the increasing betterments of the home each year.

Here and now comes the keynote of this address in the exodus of the young from the farm.

With the ever-incessant need for cash, the major portion of our crops are rushed on to a glutted market at far less prices than our efforts demand. The bright farm boy sees this and becomes restless. To use his own words, "Pop furnishes plenty of work but no pay; he doesn't shower." Too true, for the golden shower comes too slow to him, and so the boy, too, early leaves. We talk blithely of how to prevent this; of better roads, better schools, better social advantages; but make farm life as remunerative as it should be and you will have solved the problem of "How to keep the boy on the farm." The great need, then, would seem to be a means of ready cash to supply the constantly occurring demands while crops and stock are being raised, matured, and marketed profitably. While a perfected system of rural credits would not be a panacea for all ills, I believe it would go far toward ameliorating the conditions above described, each of which are worse with the landless than with the landholding man.

A METHOD.

Before commencing any undertaking, especially one in which living things are concerned, it would be the part of wisdom to study the surroundings and, too, the conditions. One would not expect to raise bananas in Alaska or polar bears in Brazil. There are commercial banks in every little town, but they do not meet the needs of farm life. The European peoples appear to have solved this question, but their environment is different from ours.

In the meantime there is a form of rural credit that seems absolutely indigenous to American soil; that has grown with the growth of the United States farmer. This is the kind found embodied in the ordinary farm auction sale. In this the credit extension is almost always 12 months. The farmer seems to recognize instinctively that he needs a full year "to make a turn," and he usually looks with some suspicion on a sale billed for less time. The consideration which he gives is generally a two or three name paper. This paper is then indorsed by the owner and often sold at a home bank at a discount of 10 per cent. The bank again has been known to offer these notes with its indorsement for rediscount at a reserve bank; this again to a central reserve, from this to a broker, and finally into the hands of a money lender; at each change becoming stronger with each indorsement.

Recently our Government has perfected a financial system by which the mercantile operator can offer his paper at a member bank for discount; this sent again to the Federal reserve bank, passed upon by higher authority, and money issued under a safe system. This could not be used conveniently in rural finance, because the commercial man or firm has a rating known to the world while the agriculturist has not. Here would be a place, then, for some features of the European systems.

Summing up, I believe that a plan of rural credits can be devised, starting with the essential principles of the Raiffeisen system for security, holding to our indigenous American idea as to time facilities, and patterning after our Federal reserve system for the legal machinery. At the base should be the rural-credit associations of not less than 20 bona fide farmers in a restricted area so close as to give community of interests. There should be unlimited liability among these so as to equal the commercial rating held by the business man, restriction as to the use to be made of loan, and a minimum of office and official expense. Thus limitation of persons, of area, of use, and of cost. The time limit should be arranged on the farm-sale credit idea before mentioned rather than on the commercial custom.

The bill of exchange, rather than the promissory note, as used in some European forms and so clearly explained by Mr. R. C. Milliken, of Washington, D. C., in his outline of a bill and presented by Senator OWEN, should be used.

I see no reason why this bill of exchange, having the unlimited liability of the rural association back of it, could not be treated much similar to other commercial paper. It is the general feeling that any plan of stock subscriptions to provide funds at first will be too slow, and that the Government should here make provision for placing the system upon its feet, with whatever guaranties of stock thought necessary. One more point needs to be met: Many of our farm leaders believe that the rural-credit association and unlimited liability can not be used under American conditions.

In this connection I would like to relate a circumstance in opposition to this: It was my privilege to plan and superintend the construction of some 50 miles of the first hard roads of northern Indiana. Every conceivable objection was raised against these in the beginning; but after once built the most strenuous objector would not do without them. Some years later a son was developing typhoid fever and needed to be brought home quickly. To make quick train connection an overland trip of 20 miles was undertaken. Half of this was over these smooth, hard roads of Indiana and then a sudden drop at the State line into the mud and ruts of Illinois; every jolt seemingly taking the life out of the sufferer. The line itself was not even marked at the point by a wire fence. The same country, the same climate, land, people, money, material; only that on one side of an imaginary line they had the legal machinery, and on the other they had not.

Moreover, we have a form of rural association and unlimited liability all over our country at the present time in our farm mutual fire insurance companies, and which works to perfection.

So we would urge our legislators to give us the legal machinery and equipment for a system of rural credits, and we feel confident of results.

Whatever system is to be adopted ought to be such as will not give profit to those who are not actual farmers, and should be established and operated with the sole idea of giving the farmer as cheap a rate of interest as possible and on such terms as will enable him to repay the loan. It seems to me that, whatever system of farm credits is to be established, the Government should furnish aid and should have supervision over the system. Without such aid and supervision, it seems to me, it must be a failure. In the system of Federal reserve banks we have aided the banker. Why not the farmer?

A large number of farm loans under this system must necessarily be for a long time, and so can not be handled by purely commercial banks, and which they are unable to furnish at a rate of interest the farmer should be required to pay; so that if we inaugurate a system of this kind, it must be done on a plan which will give to the farmer the aid he needs and which can not now be supplied by commercial banking institutions.

It is estimated that the value of all the farms of the United States is about $40,000,000,000. There is an indebtedness owing by the farmers of something like $6,000,000,000, $2,000,000,000 of this representing mortgages upon the land. In this indebtedness on the farms, it is said, the interest rate and expenses connected with loans amounts to 10 per cent each year; so the farmers of the country to-day are paying interest charges amounting to $600,000,000. This high interest rate is too much to be paid by this class of our people, and in the past we have given too little attention to helping them secure loans on more favorable terms and at a less rate of interest. A farmer necessarily can not make a large amount of money in any one year, and in order to make any profit he must be very economical, and at the end of each year he can at best have but a small amount for his year's work. He must contend with the many disadvantages that may be adverse to his production on the farm; and if he is compelled to pay a highe rate of interest, it must necessarily work a very great hardship on him when these failures come, and often he loses the land and must become a tenant.

It is to be hoped that the committee having this matter in charge will take into consideration the land-mortgage banks and also personal credit, which seems to be necessary if this system is to be made a success. It is to be hoped that early next year when Congress convenes this question will be taken up and a bill will be passed which will afford relief to this class of our citizens. If we are to do anything to help keep people on the farm, it must be made more profitable and their condition, financially, socially, and otherwise, must be improved.

Monument to the Memory of Nathan Hale.

EXTENSION OF REMARKS

OF

HON. AUGUSTINE LONERGAN,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. LONERGAN. Mr. Speaker, pending before the Committee on the Library at the present time is a bill introduced by me which has for its object the honoring of one of the most loyal patriots whose name is written in American history. This bill calls for an appropriation for a monument to be erected on the public grounds in Washington, D. C., in memory of Nathan Hale, the scholar, teacher, soldier, and patriot, who died in the loyal performance of his duty, and whose dying words constitute a message to posterity, expressing the enduring faith and unconquerable spirit of America. Although a native of Connecticut, educated at Yale College, that State realizes that in the contemplation of the character and service of the patriot Nathan Hale mere imaginary lines of statehood disappear, and he is essentially American, beloved and revered by all States in the Nation which he served so well.

The history of our Revolutionary War records the perilous undertaking in which Hale engaged. Gen. Washington desired accurate information regarding the strength, position, and plans of the British Army which was encamped at Long Island. He made this desire known to Col. Knowlton, commander of a regiment of light infantry in the American Army. Nathan Hale was a captain in the regiment known as Knowlton's Rangers, made up largely of Connecticut men, with Col. Knowlton in command. Gen. Washington's wishes were made known through Col. Knowlton. One historian gives a description of a meeting

between Col. Knowlton and his officers, in which an appeal in the name of Washington for a volunteer to enter the enemy's lines met with no response from anyone. A painful silence followed. Then came the ringing words, "I will undertake it," spoken by Capt. Hale. Other authorities believe that this historian accepted tradition. At any rate, it is known that through Col. Knowlton the needs of Gen. Washington were communicated to Hale. The sturdy young officer confided to his college associate and fellow captain, William Hull, his intention to cross the enemy's lines in search of information. Alarmed at the risk involved, Capt. Hull tried to dissuade Hale, reminding him of the hateful duties of spy service and the consequences of detection, the closing of a promising career by an ignominious death. Hale's reply, according to Capt. Hull, was spoken with warmth and decision:

I am fully sensible of the consequences of discovery and capture in such a situation. But for a year I have been attached to the Army and have not rendered any material service while receiving a compensation for which I make no return. Yet I am not influenced by the expectation of promotion or pecuniary reward; I wish to be useful, and every kind of service necessary to the public good becomes honorable by becoming necessary. If the exigencies of my country demand a peculiar service, its claims to perform that service are imperious.

During the second week in September, 1776, Hale set out with his sergeant, Hempstead, to accompany him a part of the distance as an attendant. The safest route lay across the Sound and along the roads of Long Island around to the rear of the British Army on the East River. Hale proceeded through Westchester County and into Connecticut as far as Norwalk. In that city he discarded his uniform, donned a plain suit of brown clothing, with round, broad-brimmed hat, and assumed the character of a Dutch schoolmaster. Here Capt. Hempstead left him and he crossed the enemy's lines. Then Hale was completely lost to view—the movements of those in the spy service seldom come to light—and the movements of the young soldier may have been of thrilling interest, but as to this history must remain silent, for the facts can not be obtained. However, it is known that soon after landing on the shores of Huntington Bay he learned that New York had been captured by the British on September 15 and that the Americans had been defeated and crowded back to the heights above Harlem. At Huntington Hale was 40 miles distant from his objective point, the main British Army on New York Island. There were also camps on the Long Island side, opposite Hell Gate. With courage and skill Hale conducted his desperate business and made drawings and outlines of the enemy's works.

Meanwhile the young patriot's friends were anxiously awaiting news of him. The news came with shocking force when it became known that on the evening of September 22 the regular daily orders from the British commander in chief to his army contained an unusual announcement couched in military brevity and reading as follows:

HEADQUARTERS, NEW YORK ISLAND,
September 22, 1776.

PAROL, *London, Count, Great Britain:*

* * * * * * *

A spy from the enemy (by his own confession) apprehended last night was this day executed at 11 o'clock in front of Artillery Park.

There is uncertainty as to where Capt. Hale was captured. Some writers assert that he returned to Huntington, and while waiting for a boat to convey him back to Norwalk approached the shore and was confronted by the crew from a barge from the British boat *Halifax*, with leveled muskets, demanding his surrender. Other writers maintain that Hale was captured in New York or its immediate vicinity. A brief examination followed the capture, pointed questions were put, concealed papers were searched for and found—sketches of fortifications and military notes—and they convicted Capt. Hale. The accused was immediately sentenced by Gen. Howe, and the penalty was execution.

No better example of self-poise, undaunted youth, and nobility of character can be found in all history than is furnished by the manner in which Hale faced death. What an inspiration! On Sunday morning—September 22—without the comfort of the presence of a spiritual adviser or a single friend, Hale took his place at the gibbet and gave the fullest measure of service which any man can give—he gave his life for his cause—and gave it with the immortal words on his lips: "I only regret that I have but one life to lose for my country."

In the words of Judge Miles Finch, late judge of the New York Court of Appeals:

In the long night, the still night,
He kneels upon the sod;
And the brutal guards withhold
E'en the solemn word of God!
In the long night, the still night,
He walks where Christ hath trod.
His last words, his message words,
They burn, lest friendly eye
Should read how proud and calm
A patriot could die,
With his last words, his dying words,
A soldier's battle cry!

Mr. Speaker, when we consider the life and sacrifice of Hale, particularly his devotion to duty, his unfaltering courage, and his ringing words of patriotism even at the moment of death, must we not admit that this martyr of the Revolution richly deserves the honor of a monument to his memory on the public grounds of the National Capital of the country which he loved and died for?

Connecticut is honored by statues in Washington which bear testimony to the national service of two of her distinguished sons. In the National Statuary Hall in the Capitol there are statues of Roger Sherman and Jonathan Trumbull. Both were completed and installed in 1872. However, space for many statues would be required in Statuary Hall if the National Government were to bestow this recognition in honor of the services of Connecticut men in the Revolutionary War and during the years closely following the Nation's birth. Surely space would be reserved for such men as Gen. Israel Putnam, Oliver Wolcott, Maj. Durkee, Brig. Gen. Spencer, Lieut. Col. Wyllys, Maj. Mayo, Col. Waterbury, Col. Coit, Capt. Chester, Oliver Ellsworth, and Gen. Knowlton; also for Lyman, Whiting, Parsons, Dyer, Fitch, and Wooster.

But Connecticut does not ask that in memory of all of these patriots—deserving and meritorious though their services were—there be erected statues in Washington. But she does ask that, as fitting reward for the heroic service and unselfish sacrifice of the scholar and soldier Nathan Hale, a monument in his memory be erected on the public grounds of the Nation's Capital.

Rural Credits and Farm Mortgages.

EXTENSION OF REMARKS

OF

HON. RICHARD WAYNE PARKER,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Under the general leave granted by the House, Mr. PARKER of New Jersey submits the following remarks on the subject of rural credits and farm mortgages:

A SYSTEM OF RURAL CREDITS HAS BEEN ORDERED TO BE REPORTED.

Mr. Speaker, a joint committee of 12 Senators and Representatives has been ordered to report a system of rural credits "adapted to American needs and conditions." The country ought to know what this means, and we must judge what it may mean by what the two Houses have already done. In foreign countries local associations of farmers are formed to encourage husbandry and guarantee each other's loans. In this country the savings banks and building and loan associations that have sprung up everywhere have done much to give rural credit and afford farm mortgages at lower rates of interest. But a cry has gone up for more, that cooperation is not enough, and that the United States Government must find the money for these mortgage loans, even if it has to be borrowed on an issue of Government bonds.

GOVERNMENT LOANS TO PRIVATE ENTERPRISE A REAL ISSUE.

This is a matter that the country must realize and consider, for the policy of Government loans to private enterprise is becoming as real an issue as greenback or specie payments or free silver or the subtreasury schemes were in the past.

THE M'CUMBER AMENDMENT, A BOND ISSUE TO RAISE MONEY TO LEND ON FARM MORTGAGES.

The Senate and the House each amended the appropriation bill for the Department of Agriculture by a rider that embodied this idea. The so-called McCumber amendment, however, can perhaps hardly be regarded as the action of the Senate, for only five or six Members were present when that amendment was adopted in Committee of the Whole, and the debate when the bill came into the Senate seems to show that some Senators who had come in did not realize what had been done. This McCumber amendment provides for an unlimited issue of United States bonds to raise money to be loaned on farm mortgages through National and State banks by a Treasury Department bureau of farm credits. Ten million dollars are appropriated to start the work of the bureau.

THE HOLLIS BILL FOR FEDERAL LOANS—FIFTY MILLION DOLLARS TO BE FURNISHED BY THE UNITED STATES.

The House of Representatives substituted another scheme, namely, that of Senator HOLLIS's bill, under which the United States are to spend up to $50,000,000 a year in buying the bonds of "Federal land banks," and the banks use the money in buying farm mortgages, preferring those held by any "national farm-loan association." A Federal farm-loan board supervises the work. The Federal land bank in each Federal reserve district is to have a capital of $500,000, which the United States must subscribe if others do not. The bonds of the bank may be bought by outsiders, if marketable. The national farm-loan associations are organized like building and loan associations, the stock being payable by installments. The whole plan is careful in detail; but as the interest on the farm mortgages is to be under 5 per cent the profits on the other securities will be less, and the only live thing in the scheme is that it is to be financed with United States money, and this will probably be the only money that will go into it.

MAJORITIES FOR THESE SCHEMES.

These schemes, and many more, were voted upon and will go before the joint committee. They all include loans of Government money. The country ought to realize that "rural credits" has come to mean this. If the joint committee report any plan, it will probably be on this model. The House of Representatives voted for the Hollis plan by a large majority. There is no record vote to show the real opinion of the Members. The ayes and noes on the adoption of the Hollis scheme were refused by 213 to 53. But it is to be understood that Grangers everywhere are demanding that the Government shall lend them money on their lands at an interest that they can not secure from others. The older States do not quite comprehend this. They have savings banks in every small town to lend money on all good property at fairly reasonable interest.

FARM LOANS AS SECURITY.

In other States it must be admitted that farm loans are hard to obtain at reasonable rates. There is reason for this. Farm values fluctuate. Worn-out lands, with dilapidated houses, barns, and fences, are worth less than nothing. Wheat has trebled in price in my recollection, and cotton fallen to a third of what it once brought. Land values go with those of the crops. In 1870 farm lands in some places in my State sold for several times what they are selling for now. New England is full of deserted farms; the rivers south of us are fringed by plantations once the abode of wealth and now of poverty, and even some western values have fallen as the pioneers have moved to Canada. As towns grow up and taxes increase, farms are abandoned if they can not stand a 2 per cent tax on a high valuation. Tax sales and tax titles imperil the mortgage security, which is dangerous unless in the hands of some one near by who can watch the property. The business of the Federal land banks has been tried by mortgage companies, quite a number of which have been instituted in our great cities to lend on farm mortgages, and those companies have often failed. Perhaps a farmer ought not to risk being in debt. Crops, wages, and prices are all uncertain, and debt means destruction in any bad year.

COOPERATION, AND NOT UNITED STATES AID, IS NEEDED.

The system of rural credits abroad is such as will encourage the farmers of each locality to save and to help their poorer neighbor. The system now proposed is that a paternal Government should help one class of the community, the farmer, out of his difficulties by running him into debt.

There is no doubt that the rates of interest charged on farm mortgages in certain parts of the country are at present excessive. Under the new Federal reserve system national banks are allowed to do a savings-bank business and to lend to a certain extent upon lands. A bank in the neighborhood can lend with reasonable safety where distant capital should be afraid to do so, because the lender could not see the land or know whether it had been kept up, and the present system of tax sales makes it unsafe to be far away.

SUBTREASURY SCHEME.

The country ought to understand what it is asked to do. The United States was lately asked to lend on cotton. Now, it is asked to lend on land, although that form of investment was till lately forbidden to the national banks. Perhaps it needs worse times to teach us the danger of putting money into land, which sometimes has an unearned increment and sometimes an undeserved decay.

SIMILAR LAND SCHEMES IN COLONIAL DAYS.

It is historically interesting to know that Government loans on farm mortgages are not new. Before the Revolution all the Colonies loaned legal-tender "bills of credit" on farm mortgages, and the interest paid the governor's salary. General prosperity followed until the mortgages were due and then lands fell to a tithe of their value. Thirty years before the Revolution New Jersey refused to raise taxes unless these mortgages were renewed and extended. In New England the bills of credit fell to one-seventh of the face value. When rents or interest or mortgages are payable to a Government, a revolution against the hard-hearted creditor is in prospect.

STATE CONTROL.

We need not go into the details of the various loaning schemes proposed in the debate in the House of Representatives. They all ask Uncle Sam to do the financing. We shall hereafter have to argue the matter of "rural credits." Under the old ideas of State and National Government, such credit would be a local matter subject only to State control, but those that hold the new ideas of national functions insist that the United States can and shall finance all the farmers of the country. This is the proposition.

The country should understand the issue and make up its mind before the joint committee reports at our next session.

N. B.—The McCumber amendment will be found on page 4991 of the CONGRESSIONAL RECORD. The Hollis bill modified, as reported by the Committee on Agriculture, is printed on pages 5013–5019 of the RECORD. It leaves out section 30 of the Hollis bill, which provides for the Government subscription of $50,000,000 a year, which was reinserted by the Committee of the Whole, as printed, page 5048, and was dubbed the "very life of the whole proposition." (See Mr. BULKLEY's remarks, p. 5048.)

Commerce of New York City.

SPEECH

OF

HON. HERMAN A. METZ,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES.

Thursday, March 4, 1915.

Mr. METZ. Mr. Speaker, the one discordant note in my otherwise very agreeable service here has been a certain sectional hostility, often expressed and more often indicated, toward the commercial north, and especially toward the city of New York, which I have the honor in part of representing.

It would seem as if the belief existed among certain Members that New York is a selfish, inert part of the body politic, ever receiving and never rendering good. In very truth there never was so empty and senseless a bias. The city of New York is preeminently the central source of strength, power, and life for the whole country. I will not call her great. That worn and abused adjective, so incessantly and indiscriminately applied here to every hamlet, town, county, and State of the Union, is inadequate to describe her distinction.

She is metropolitan, cosmopolitan—civilization's latest and best civic expression—and always, and above all, the symbol of America enlightening the world.

She is the vanguard of the Nation, intrepidly facing the world in the strife for commercial and financial supremacy.

She is the good mother who stretches out her arms in welcome to countless immigrants and fosters and sustains them in her bosom for the common weal.

She is the fountain of finance, enriching every acre and developing every industry of the land.

She is the skilled producer who supplies alike your necessities and your comforts.

Stay her advance, clog her supply, or hamper her hand, and back you may go to your swamps and sage brush, your coonskins, and wild-cat notes, your homespun and linsey-woolsey.

There is naught of this jealousy about New York. Her country—it is her life; a matter of fact requiring no deliberation or reason. Hence, she is ever responsive to the public good.

In time of war, her troops have been the first to march to the front and stay there.

In time of panic, her bankers have been the Atlas that has sustained the world of credit.

In time of economic vagaries, the learning of her professional men and the judgment of her merchants have insisted on the maintenance of high and pure national integrity toward all mankind.

At the very top of her commercial code is set the golden rule.

To the cry of "Give, give, give," which the wind from every quarter keeps echoing through her narrow canyons and around her lofty turrets, she ever makes generous response. Who ever heard of her asking aught in return? Her national buildings

are her poorest public buildings; while her mighty harbor is neglected by the Government for Dry River and Slim Creek.

Let me tell a very few of the very many things New York is doing:

She is the largest manufacturing center in the United States.

Her imports and exports are unequaled, exceeding those of either London, Liverpool, or Hamburg, the leading ports of Europe.

She carries on about one-half of the total foreign commerce of the United States.

Her bank clearings are nearly 60 per cent of the total clearings of the United States.

How, then, does the average business man of New York, while so faithfully and efficiently doing his part in such vast undertakings, feel about the slurs that are said and the clogs that are laid against him?

He is sore; not in body, but in spirit. He cares little for the raps he gets; he can give back as good, and a little weightier and a little swifter, for that matter. But he has a sense of wrong over honest and honorable men made criminal by process of law.

He believes that legislation that does not mete out equal justice to all is unjust legislation. He resents the exemption of labor unions and farmer combinations from the operation of the antitrust law. This seems to him but another instance of that Machiavellian policy of balancing something vicious which is wanted with something harmless which is not needed, so often employed by President Roosevelt. He resents, too, the evident relish with which the districts of the Federal reserve bank were so carved out as to give to New York the least territory possible—as if artificial metes and bounds could curb her financial power.

From the prying trend of legislation he fears that the country is in danger of becoming administration bound, as France was just prior to the Revolution. He knows that he who runs a race can not go far or fast if hobbled, and that the best regulation, even in a school, is the regulation of honor.

He believes that the more commissions there are created the more the business of the country will go out of commission. He fears lest President Wilson, in wiping the interrogation points off his slate, may wipe the slate bare, and that legislative cure-alls may prove legislative kill-alls. While he hopes for constructive legislation, he keeps getting obstructive legislation; and so what is airily termed "psychology" is downright "sickology" for him.

He has far more respect for the enforcement of existing laws than for the enactment of new laws, and far more reverence for decisions than for statutes. The former seem to him the orderly, progressive development and construction of the law adapted to changing conditions. The latter seem to him a heterogeneous, conflicting mass, dead at the bottom and dying at the top. He recognizes the difference between common law and law that is common—the one as effective, the other as inefficient. What he wants is the reign of law, not a rain of laws.

He feels that he should be left free to work out his own salvation instead of being forced to work out his own damnation, and so he detests the word "reform" as much as he does the word "uplift," because it also seems to him the mere cloak of sophistry and hypocrisy.

He recognizes that there is a difference between big business and business that is big—that while the one should perhaps be curbed, the other should most certainly be encouraged. But he feels that the many are being punished for the faults of the few, while even the culpable few are unable to determine just why, when, and how much they may be punished. His one prayer is that theory may give way to practice and words to work.

He favors a strong government—a government that is strong in self-respect, able to help itself, able to protect itself. He believes that the Army and Navy should be a competent fighting force, not a skeleton on which an undisciplined mob is to be imposed, nor a school for the creation of clerks.

He believes that our own business is best tended when it is best minded; that we should avoid entangling alliances; and that, above all, we should not meddle internationally, however altruistic our intentions may be.

In this time of storm and stress he believes in strict and constant neutrality, subject always to as strict and constant an insistence on our rights under the law of nations.

He meets the distrust of Congress with a dislike for Congress. Ninety-nine out of a hundred if asked what would best serve business conditions, would answer: "Let Congress adjourn, and stay adjourned."

He feels that imaginings rather than ideas prevail in our process of legislation; and he regards our interminable debates as a mess of bunk, punk, and junk for the misleading of the Nation. To his ears the voice of the people, as uttered in Congress, is the voice of the small lawyer from a southwestern village—loud, assertive, and ignorant.

Since, notwithstanding, we are all good fellows, in Congress and out—yes, every one of us—what is the remedy for this mutual distrust and dislike? It lies in a deeper consideration and a fuller understanding. It lies in the intimacy that comes from harmony. It lies in the truth that we are all members of one body. It lies in the closeness and perpetuity of our Union—one for all and all for one; North, South, East, West, brothers in blood and brothers in arms—yes, one for all and all for one.

The following statistics may serve in a degree to show New York's position in manufacture, commerce, and finance:

NEW YORK'S INDUSTRIAL POSITION.

New York City is the largest manufacturing center in the United States, producing 10 per cent of the total value of the manufactured products of the entire country.

The Federal census gives the following figures for New York City for 1909, the latest statement available:

Capital employed in manufacturing	$1,364,353,000
Value of manufactured products	$2,029,693,000
Number of manufacturing establishments	25,938
Persons employed	680,510
Annual wages paid	$323,698,000

The New York State Department of Labor published in 1912 an industrial directory which credits New York City with 34,128 manufacturing establishments, approximately 8,000 more than are given in the Federal census.

The value of the goods manufactured in New York City in 1909 exceeded the value of the combined output of Chicago and Philadelphia. It also exceeded the combined output of Boston, St. Louis, Cleveland, Detroit, Cincinnati, Milwaukee, Buffalo, and Pittsburgh. In fact, the value of the manufactures of New York City surpassed the value of the similar products of every State in the Union with the exception of the States of Pennsylvania and, of course, New York.

During the five years between 1904 and 1909 the number of manufacturing establishments in New York City increased over 5,000 in number, or almost one-fourth. During the same period the value of her manufactured products increased over $500,000,000, or 33 per cent.

The borough of Brooklyn alone manufactured products to the value of $417,223,000 in 1909, which represents over 2 per cent of the value of manufactured products of the entire country and surpasses the value of the manufactured products of every city in the United States except New York, Chicago, and Philadelphia.

The industries which go to make up this large total are widely diversified. In the following lines of manufacturing New York City surpasses every city in the United States in the value of the products manufactured (census, 1909):

Artificial flowers and feathers	$21,098,000
Blacking, cleansing, and polishing preparations	1,998,000
Bread and other bakery products	61,904,000
Boxes, cigar	1,843,000
Boxes, fancy and paper	9,450,000
Buttons	5,235,000
Chemicals	12,945,000
Clothing, men's (including shirts)	218,411,000
Clothing, women's	266,477,000
Coffins, burial cases, and undertakers' goods	2,102,000
Confectionery	20,062,000
Cooperage	3,446,000
Copper, tin, and sheet-iron products	23,303,000
Cordage, twine, jute, and linen goods	7,374,000
Engravers' materials	328,000
Fancy articles	6,987,000
Flags, banners, regalia, society badges, and emblems	1,347,000
Food preparations	8,046,000
Furnishing goods, men's	25,496,000
Furs and fur skins, dressed	41,083,000
Gas and electric fixtures, lamps and reflectors	10,750,000
Gas, illuminating, and heating	34,117,000
Gold and silver leaf and foil	833,000
Hair work	7,817,000
Ink, printing	3,965,000
Jewelry, including cases	20,589,000
Leather goods	17,775,000
Marble and stone works	12,205,000
Millinery and lace goods	51,239,000
Musical instruments, pianos, organs, and materials	25,516,000
Paint and varnish	26,664,000
Paper goods	8,833,000
Patent medicines, compounds, druggists' preparations	24,984,000
Pens, fountain, stylographic, and gold	3,219,000
Photo-engraving	2,517,000
Pipes, tobacco	3,137,000
Printing and publishing	183,509,000
Smelting and refining, not from ore	8,417,000
Tobacco manufactures	62,488,000
Toys, novelties	1,634,000
Umbrellas and canes	6,374,000
Stereotyping and electrotyping	1,961,000
Window shades and fixtures	4,125,000

In several of the above industries New York City not only leads every other city in the Union but produces a large part of the total product of the industry.

New York City produces over one-half of all the clothing worn by the men and women in the United States.

Almost 70 per cent of the women's clothing manufactured in the United States is manufactured in New York City.

New York City produces one-quarter of all the printed goods manufactured in the United States, and this is true in spite of the fact that every corner in the Union has a printing shop.

One-third of all the pianos and piano players manufactured in the United States are produced in New York City.

New York City produces 95 per cent of all the artificial feathers and flowers manufactured in the United States.

New York City produces 70 per cent of the fountain pens used in the entire country.

This city also produces over one-third of the men's furnishing goods, almost one-quarter of the gas and electric fixtures, almost one-quarter of the jewelry, almost 60 per cent of the millinery, and over 20 per cent of the paint and varnish manufactured in the United States.

NEW YORK CITY'S COMMERCIAL POSITION.

The port of New York is the greatest port in the world.

The port of New York has 445 miles of direct water front. Boston, Baltimore, Philadelphia, and New Orleans have less than 100 miles.

The port of New York has 343 miles of wharfage available for shipping, whereas the combined wharfage of Liverpool (36 miles), London (28 miles), Antwerp (12 miles), Hamburg (21 miles), Philadelphia (18 miles), and San Francisco (11 miles) is only 126 miles.

The trade routes of the world will change with the opening of the Panama Canal. New York will then be nearer to the Far East than European ports. This is shown as follows:

Distance after completion of the Panama Canal from great ports of the world to—

Ports.	New York.	Liverpool.	Hamburg.
Panama	2,017	4,591	5,110
Valparaiso	4,633	7,207	7,726
San Francisco	5,262	7,836	8,355
Shanghai	10,649	10,637	11,156
Yokohama	9,798	11,678	12,197
Sydney	9,811	12,235	12,754
Wellington	8,851	[1] 12,989	[1] 13,503

[1] Via Suez Canal. Wellington to Liverpool via Panama is 11,425 miles; Wellington to Hamburg via Panama is 11,944 miles.

The total value of the imports and exports in New York City is on a par with the corresponding figures for London, Liverpool, and Hamburg, which are the leading shipping ports of Europe. This is shown as follows:

Ports.	Year.	Total value of imports and exports.	Net tonnage of vessels.	
			Entered.	Cleared.
New York	1913	$1,966,326,617	14,464,161	14,370,619
Hamburg	1912	1,960,779,855	13,567,913	13,837,076
London	1912	1,866,930,782	10,800,716	8,748,008
Liverpool	1912	1,816,983,279	7,253,016	7,446,873

The total foreign commerce of the port of New York during the fiscal year ended June 30, 1913, amounted to $2,140,241,845, against $1,915,644,233 in 1912, an increase of $224,597,612. This was the first year of the foreign commerce of New York exceeding $2,000,000,000. New York's commerce in 1913 was greater than that of the United States in 1897.

The total foreign commerce of the rest of the country (outside of New York) in 1913 was $2,398,490,012, against $2,160,148,842 in 1912, an increase of $238,341,170. The total foreign commerce of the United States including New York in 1913 was $4,538,731,857, an increase of $462,938,782.

The comparative exhibit is as follows:

Ports	Gain in commerce.	Per cent of increase over 1912.
New York	$224,597,612	10.49
All other ports	238,341,170	9.93
Total United States	462,938,782	10.20

New York's share of the total foreign commerce of the United States was, in 1913, 47.15 per cent, as compared with 46.99 per cent in 1912, 46.12 per cent in 1911, and an average of 47.85 per cent in the 10 years from 1900 to 1910.

The above figures included foreign and domestic exports and imports of merchandise and gold and silver.

In 1913 importations to the value of $1,048,290,620, or 57.82 per cent of all the importations of the United States, entered the port of New York.

In 1913 exports to the value of $917,935,988, or 37.22 per cent of the total for the United States, were shipped from New York. Over 50 per cent of all the manufactured exports of the United States are shipped from New York.

The value of the exports from New York City in 1913 was more than three times the combined value of the exports from Philadelphia, Baltimore, and Boston.

The exports of flour in 1913 from the chief shipping ports of America were as follows:

	Barrels.
New York	4,549,838
Boston	238,229
Philadelphia	1,172,241
Baltimore	878,545
Newport News	133,774
Norfolk	23,487
New Orleans	1,071,410
Galveston	392,536
Portland (Me.)	8,138
Montreal	1,760,653

The list indicates that New York City shipped between two and three times as much flour as its nearest competitor, Montreal. All of these ports show increases over last year in such shipments, New York and Montreal making the most noticeable gains. New York's gain was larger than Montreal, however, both in the actual amount, 847,000 barrels, and in its percentage, 23 per cent.

Exports of wheat from New York and Montreal.

Years.	New York (bushels).	Montreal (bushels).
1909	17,589,885	25,004,491
1910	9,278,270	20,089,558
1911	20,571,965	17,718,723
1912	38,240,639	30,652,475
1913	49,019,674	33,706,089

New York's jump into prominence as a shipping center for wheat dates from 1911. In 1913 New York shipped over 50 per cent more wheat than Montreal.

New York's facilities for handling these cargoes is shown by the fact that in 1913 the port of New York had a scheduled steamship sailing every 2 hours and 41 minutes, as compared with a scheduled steamship sailing every 18 hours from Boston, every 31 hours from Baltimore, and every 36 hours from Philadelphia.

The terminals of 77 foreign steamship lines are located in New York Harbor.

NEW YORK CITY'S FINANCIAL POSITION.

The volume of the bank clearings of the entire United States last year was $173,765,288,300, which is an increase of $5,564,362,000, or 3.2 per cent over the prior year. The clearings of the principal cities of the United States are shown as follows:

Annual bank clearings of the principal cities of the United States, September 30, 1913.

Cities.	Total bank clearings (millions of dollars).	Per capita clearings (based on population of 1910).
New York	$98,121.5	$20,584
Chicago	16,018.2	7,330
Boston	8,326.2	12,416
Philadelphia	8,543.5	5,515
St. Louis	4,122.1	6,000
Pittsburgh	2,951.9	5,529
San Francisco	2,666.6	6,396
Total, 162 cities	173,765.3	.....

Bank clearings of the New York Association were $98,121,520,000, or nearly 56½ per cent of the total clearings for the United States. The increase in clearings in New York City over the preceding year was $1,449,000,000, or 1.5 per cent.

Chicago, the second city in size, has bank clearings of $16,018,200,000, which is but 9.2 per cent of the total clearings of the United States.

Considering New York City alone, its bank clearings are six and one-tenth times those of Chicago, approximately twelve

times those of Boston, and twenty-three times those of St. Louis.

Reduced to a per capita basis, the clearings of the New York association show the same margin over the other cities. Almost three times as much money passed through the clearing house of New York for every resident of the city as passed through the Chicago Clearing House for each resident of that city.

The banking resources of the city of New York amount to over 17 per cent of the total resources of the United States.

The following statement includes national, State, and savings banks, private bankers, and trust companies, June 24, 1913:

Cities.	Number of banks.	Total resources.	Average resources per bank.
New York	144	$4,460,360,980	$30,905,284
Chicago	88	1,182,172,332	13,433,776
St. Louis	44	405,683,463	9,220,078
Boston	60	905,939,522	15,098,992
Philadelphia	100	966,518,263	9,665,182
Pittsburgh	83	616,744,641	7,430,658
San Francisco	45	495,604,585	11,013,437
Total seven cities	564	9,033,023,786	16,016,001
Rest of the United States	25,429	16,679,139,813	655,910
Total United States	25,993	25,712,163,599	988,349

The table indicates that the total resources of New York City are three and seven-tenths times greater than those of Chicago and almost five times greater than those of Philadelphia and Boston.

Personal Rural Credits.

EXTENSION OF REMARKS

OF

HON. MOSES P. KINKAID,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. KINKAID. Mr. Speaker, it is disappointing to me, and I apprehend it will be a great disappointment to farmers generally scattered throughout the United States, that this Sixty-third Congress has failed to do anything in the way of providing a personal rural-credits system. The present administration is long on promise and short in performance on this important subject. I agree with some others that a very great improvement may be made in the method of investigating these important new subjects of legislation. By thorough and intelligent investigation the right kind of a foundation for a commencement can be laid for a personal rural-credits system, and I am strongly in favor that this method be preferred to having a bill handed to the Congress and that bill railroaded through a caucus by the majority party in one night and then in due course brought up for consideration on the floor of the House and passed under a rule restricting amendment and curbing or prohibiting debate. Farmers themselves should play the larger part in investigating this subject of such great direct importance to them and the great industry they represent.

Mr. Speaker, why a personal rural-credits system is needed is that too often the ordinary local lending institutions which now exist find themselves unable to respond to the applications of farmer borrowers when their necessities for relief are the very greatest. When crops fail, money is found to be scarce and the security which the farmer may be able to offer not satisfactory. The interests of agriculture, and, consequently, the interests of the public in general, would be preserved and promoted by a system which would afford relief by loans to farmers when their necessities are greatest, usually caused by a general failure of crops. It is not singular that merely local banks often find themselves unable to cope with the situation, unable to command enough funds for the extraordinary demand, even though the security offered would be satisfactory. It is only a strong national combination system that can be capable of certainly meeting such exigencies, and that is what should be provided to tide farmers over, not merely for one year, but perhaps for two or three years, until good crops shall have restored their losses and credit.

But I wish to call attention to a letter received from Mr. R. C. Milliken on this subject, which I ask to be incorporated with my remarks. He has given a great deal of time and study to this question of personal rural credits, is exceptionally well informed on the subject, and what he says is entitled to the consideration of all concerned. I believe his efforts to secure a fair and open investigation of the subject should have the sympathy and cooperation of the Congress and the press, especially the rural press, of the country. Mr. Milliken's letter reads:

WHY NEW RURAL-CREDIT COMMISSION SHOULD HOLD THEIR HEARINGS ON PERSONAL CREDIT IN MANNER PROVIDED BY THE SHEPPARD AND CANDLER-DOOLITTLE-HELGESEN RESOLUTIONS.

WASHINGTON, D. C., *March 4, 1915.*

Hon. M. P. KINKAID,
Washington, D. C.

MY DEAR SIR: Pardon me while I call your attention to the necessity for the newly created Rural Credit Investigating Commission holding its hearings on personal credit in the manner provided by the Sheppard and Candler-Doolittle-Helgesen resolutions. In the first place, we must not fail to consider the distinctive American financial institutions and pecular characteristics of our investing public when we inaugurate a personal rural-credit system. I might name three classes of financial institutions which are peculiar to this country—the trust company, savings bank, and life insurance company. The trust company is wholly unknown to any other country; our life insurance companies do more business than all the companies of Europe, Asia, Africa, and South America combined. The mutual savings bank has had its greatest growth here.

Statement of savings bank deposits and population.

	Savings bank deposits.	Population.
France:		
Private	$754,409,859	38,691,945
Postal	328,890,226	
Total	1,083,300,085	38,691,945
Massachusetts	861,416,889	3,366,416
Indiana	13,056,514	2,700,876
Kansas	4,689,387	1,690,949
Nebraska	3,197,031	1,192,214
Oklahoma	334,547	1,657,155
Total	21,277,479	7,240,194

Because Massachusetts, with less than half the population of those four Western States, has forty times more savings bank deposits than they, does not mean that she has forty times their wealth and prosperity. It means that the character of the investments of the two sections are different, and that the wage earners of Massachusetts have forty times as many demand payable mortgages on the prosperity of that State as do the people of those four Western States. An excessive amount of bank deposits is unhealthy for any community, because credit may be more injuriously inflated through deposits than by the issuance of currency. France not only limits the amount of deposits one may put in a year in any one or number of savings banks, but she will not permit the bank receiving them to invest one penny of the same. Her statesmanship encourages the use of savings banks until the depositor has accumulated a corporate unit, and then it encourages the masses to become permanent investors. Hence it is she has the greatest race of investors in the world.

The French personal rural-credit system (the Credit Agricole) does not do a deposit business, but accepts bills of exchange drawn on it by its members, and those bills are placed on the money markets of France through the Credit Agricole. They are accepted at the Bank of France as the basis for the issuance of currency. If that farm paper is safe for a bank whose obligations are all payable on demand, it certainly would be safe for a savings bank. But the wage earners of France buy the farm paper of the Credit Agricole. Congress has no power to prescribe the class of investments our citizens or the corporations chartered by the States shall make, but a rural-credit investigating commission could so conduct its hearings as would inspire public confidence in the securities to be created by our personal rural-credit system, and, after all, public sentiment, is the best of laws. If that commission should properly conduct its hearings, then it would enable our rural-credit system to sell its sound farm paper to the wage earners of our industrial centers. Those people now are realizing only from 2½ to 3 per cent on the billions they have deposited in their savings banks. Show them that that farm paper is more liquid than the investments held by those institutions and that they can realize nearly 50 per cent more interest on them, and I tell you our farm paper would find ready purchasers in those markets.

If the commission conducts its investigation in the usual manner, it will be worth nothing to the American farmer, but if it adopts the method provided by the Sheppard and Candler-Doolittle-Helgesen resolutions they can accomplish much in establishing public confidence among investors in that farm paper. Suppose that the best expert in the country should go before that commission and testify to what I have written, and even if the members of the commission agreed with him, and so report to Congress, that would have little effect in establishing public confidence in those securities, unless that expert and the members of the commission enjoyed national reputations as experts on that matter. But it is impossible to find an expert who bears such a reputation among our small investors. But suppose they should conduct their hearings in the manner provided by those four resolutions, then a group of farmers could present a bill to the commission and appear by an expert to prove it up, and it would be the duty of the commission to notify at least one leading representative of every interest affected by that bill of his right to appear before the commission and oppose the farmers' expert. The representatives of those savings banks, who represent more than five billions of investments, would

select an expert to properly represent their interests. Now, if the commission should find, after such an investigation, that that paper was a good investment for those institutions, it would be a powerful factor in establishing public confidence for that paper.

There is no cheap money in the West and South, but the wage earners of our industrial centers have billions seeking investment. They have not the same opportunities for safe investments as have our farmers. Therefore we must inaugurate a system which will place the farmers' paper on the markets of our great industrial centers. The only way the commission can aid in that matter is to conduct an investigation which will inspire public confidence in that paper, and that can not be done by an ex parte investigation. The investigation of this subject is a judicial matter, as has been so ably presented by Judge E. W. SAUNDERS, of Virginia, in his great speech delivered on this subject. Therefore all the parties at interest should be brought into court and heard, and then the report of the commission will be of benefit to the farmers.

Let me call your attention to the movement which Mr. H. S. Gilleylen, of Aberdeen, Miss., is going to inaugurate to get the rural press to take this up and urge the commission to conduct its hearings in the manner provided by the Sheppard and Candler-Doolittle-Helgesen resolutions. Mr. Gilleylen desires the press association of each State to select one successful and wide-awake farmer in each rural congressional district to cooperate with him and the press. He desires such an association of farmers to aid, first, in securing a proper investigation from the new commission; second, in selecting a monetary expert to represent them before the commission; third, to meet him in Washington, D. C., one week after Congress convenes next December, and take time in going over the bill presented to the commission by their expert and meeting Members of Congress and letting them know their views on the bill.

If the rural press would take this up and keep at it from now until the commission decides to grant this request, they would accomplish the greatest good for the farmer that was ever accomplished by the press in the same length of time. Let every paper which takes this up send to the Rural Credit Press Association, Washington, D. C., a marked copy of each paper containing editorial mention of this method of investigation, so that they may be presented to the commission. There should be no let-up by the press until this simple request is granted by the commission. Mr. Gilleylen is a most successful farmer and a man of the highest standing for honor and integrity. So let's all rally to his call.

Yours, sincerely, R. C. MILLIKEN.

Workingmen's Compensation Acts.

EXTENSION OF REMARKS

OF

HON. GEORGE R. SMITH,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. SMITH of Minnesota. Mr. Speaker, in June, 1910, Congress passed a resolution authorizing the creation of a commission to make a thorough investigation of the subject of employers' liability and workingmen's compensation and to submit a report of their proceedings and findings through the President to Congress. After nearly two years devoted to investigation and consideration the commission created by said resolution made to Congress on February 20, 1912, an exhaustive report covering every phase of the subject. It also submitted with its report a carefully drawn bill which worked out in detail a system of payments for accidental injury of employees of common carriers engaged in interstate business on the theory "that the injuries to workingmen under existing conditions should be regarded as risks of the industry," and therefore chargeable to the industry as a part of the operating expenses, and recommending that the common-law system of liability based upon negligence, with its defenses of contributory negligence, assumption of risk, and negligences of fellow servant, that has been the law on the subject in this country since 1841, be abrogated and replaced by a compensation law based on the fact of injury and not on negligences, as at common law.

I have tried, without success, to find out why no apparent effort has been made by this Congress to pass a workingmen's compensation bill. Under the present Federal liability law, as well as the liability laws of nearly all the States, no liability attaches to a railroad for any injury to or for the death of an employee unless it can be proven that the company was negligent in some degree and that the workman was free from negligence on his part. The number of accidents and deaths paid for by the company under this law is quite limited.

It is admitted on all sides that the present system of liability for negligence is wasteful and unjust—wasteful because more than one-half the money that the company expends for damages to its workmen goes to maintaining expensive claim departments, lawyers' fees, and court costs, and unjust because it imposes upon the workman the greater share of the financial risk of the business without permitting him to share in the profits. A few of the injured employees get large verdicts, while a great number of worthy cases get nothing by reason of the injustice of the system of recovery.

Under the bill drawn by the commission the railroads, regardless of how injury or death occurs, must pay the injured workman, or his dependent family in case of death, thus eliminating the question of negligence and requiring the company to pay in all cases instead of a few, as under the present law—changing the policy of payments for injury or death from an unscientific and highly speculative one to a humane and scientific method. Why the Federal Government should hesitate about adopting a policy that modern conditions have made necessary in order that justice be done to the great body of employees who contribute so large a share to the prosperity of the Nation at the constant risk of their limbs, and in many cases of their life, is beyond my comprehension.

Between 4,000 and 5,000 railroad men lose their lives in the service every year, and from 75,000 to 80,000 more are injured. The railroads of the United States, under the present system, pay about $10,000,000 for injuries to and for death of their workmen. Not more than five millions of this amount reaches the pockets of the injured or the dependents of those who are killed. It is claimed for the commission bill that if it is adopted the railroads of the country will be compelled to pay about $18,000,000 per year, assuming the number and character of the accidents will remain about the same as that of the years 1908, 1909, and 1910. Moreover, practically every dollar of the eighteen millions will go to the injured employees or their dependent families, who under the present system are too often compelled to seek charity from fraternal organizations and kind-hearted neighbors.

There may be a substantial reason why legislation that would secure justice for so many unfortunate souls has not been enacted into law during this session of Congress. If so, the universally recognized justice of the railway-man's cause makes it incumbent upon those of this House charged with the duty of reporting to the House either the commission bill, or, if that is not satisfactory—and, in my judgment, it does not provide, in many cases, adequate compensation—some bill framed upon the same basic principles, to explain why they have not done so.

It is to be regretted that in modern industry the railway employees in particular and the workmen in general have to operate under a system that places "the greater part of the financial burden as well as the physical" on them when that system has long since been recognized as an unjust and unwise economic policy not only by the people of the United States, but by the Governments of the industrial world.

Prior to 1884 Germany had a law dealing with accidents in industries similar to our present law of negligences. It became apparent to the German Government that while this law was efficient under the early simple conditions of industry, it worked an injustice to the employee under highly improved conditions, and therefore should be supplanted by a more equitable and just rule of relationship between the employer and the employee. Hence, in 1884, Germany abrogated her law of negligence and instituted in its stead a law based on the principle of compensation for every accident, irrespective of negligence. In 1897 England discarded the common-law rule of negligence that had been the system of dealing with industrial accidents in that country since 1837 and substituted in its place the principle of compensating accidents in industry regardless of the question of negligence.

About 4,000 American railway employees lost their lives in the accidents of their employment in 1912, and the fatal accident rate was 3.02 per thousand, while the British rate for the five-year period from 1907 to 1912 was 0.65 per thousand and the German rate for the same five years was 1.13 per thousand. It has been estimated that there are annually 2,000,000 nonfatal accidents in this country. The number of accidents in Germany and England is about one-third the number in the United States in similar occupations.

It is apparent from the foregoing statements that there is a greater necessity for the enactment of industrial accident laws in this country than in either Germany or England, for in those countries careful study has been given to the cause of accidents and the best methods of prevention, with the result that the accident rates have been reduced by two-thirds.

Furthermore, our country is rapidly changing from an agricultural nation to an industrial nation—at least 60 per cent of the exports are wholly or partially manufactured goods and 20 per cent of the population are engaged in industrial occupations. Hence it is a grave and serious neglect of duty on the part of those upon whom the responsibility rests not to enact legislation that will tend to establish a just and equitable relationship between employer and employee, and thus prevent countless cripples and dependent women and children from becoming objects of charity.

The United States is, and of right ought to be, a progressive Nation, and will continue to be such so long as its laws keep abreast of the times, and no longer. Law, being a rule of conduct, must adapt itself to new conditions and new necessities of the people that it expects to guide, and unless it does it is apt to work serious injustice to a certain class of citizens, which I contend is the case with the present industrial accident law of this country. Though there has been a wonderful change in the conditions under which an employee works and though the dangers have increased manyfold, there has been little or no change in the law to meet these changed conditions in the last 73 years. During that time we have advanced from the use of hand, horse, and water power to that of steam, gas, and electricity, and with this change to a more dangerous motive power has come wonderful inventions of exceedingly dangerous mechanical devices for use in all lines of industry. From a Nation of small and independent factories, operated by the workmen that own them, we have become, by discovery and invention, a Nation of mammoth industrial plants owned by corporations that are in many cases controlled by the owners of their stock who live across the sea.

About $4,000,000,000 of United States industrial stock and securities are held by Europeans, and it goes without saying that these nonresident owners have no special interest, as did the small factory owner, in the welfare of the great army of American workmen that operate these industrial wonders of the twentieth century, not on the basis of mutual profit, but on the theory of making the plants yield the greatest possible dividend for the owners of its stocks.

Every industrial country in the world, except the United States, recognizes "that the vast majority of industrial accidents of to-day are due to the inherent dangers of the industry itself and should be regarded as risks of the industry and paid for by the industry in the same way as are other losses occasioned by the breaking of machinery and appliances," and have long since abandoned the system of negligence in dealing with industrial accidents and adopted the just and wise method advocated by all thoughtful men, both in this country and abroad, called workmen's compensation.

How long will it be before the Federal Government will recognize its obligation to the industrial workers of this country and pass a workmen's compensation act? The question as to whether or not Congress has power under the Constitution to enact the proposed legislation has been answered in a very able and satisfactory manner by the commission in its report. Their report called attention to the fact that the Supreme Court in the employers' liability case (207 U. S., 463) held that legislation of this character comes within the provisions of the commerce clause of the Constitution and is considered to be a regulation of interstate and foreign commerce. In deciding the case referred to above the court said:

> We fail to perceive any just reason for holding that Congress is without power to regulate the relation of master and servant to the extent that regulations adopted by Congress on that subject are solely confined to interstate commerce and therefore are within the interstate commerce clause of the Constitution to regulate that commerce, or within the authority given to use all means appropriate to the exercise of the powers conferred.

In Watson, administratrix, *v.* St. Louis, Iron Mountain & Southern Railway Co. (169 Fed., 942), District Judge Trieber, in a well-considered opinion, said:

> That provisions for the safety of employees of a railway, if not directly, at least indirectly, add to that of the passengers can not be doubted. The knowledge of the fact that in case of an accident some provision will be made for him in case of disability, or for the family dependent upon him if death results from the injury, relieves the employee's mind to that extent of the anxiety incidental to the fear entertained by every man, and especially if he has a family dependent upon his earnings, as to what will become of them if he became helpless or be killed. This anxiety, ever present to those engaged in such a hazardous occupation as that of railways propelled by the dangerous agency of steam, may materially affect the safety of the passengers intrusted to them in an emergency in which cool judgment is so essential. By making this provision for him legislators might well have reasoned that the safety of passengers is as much promoted as that of the employee.

It is further urged that the proposed legislation is repugnant to the fourteenth amendment of the Constitution, inasmuch as it makes the employer liable to the employee for every industrial accident, even though in the given case the employer may have exercised the highest degree of care, and therefore violates the due-process clause of the Constitution. While the commission in its report takes up this question and reviews the authorities at length, I am satisfied that the speech delivered by ex-Gov. Burke of North Dakota and the present Treasurer of the United States in June, 1911, before the Iowa Bar Association is the best exposition of the law relating to this question that I have examined, not excepting the highly meritorious report of the commission. Therefore, I believe that Mr. Burke's speech will make a valuable addition to the very excellent report of the commission, and I take the liberty, with his permission, of incorporating it into my speech. He said in part:

EMPLOYERS' LIABILITY AND WORKINGMEN'S COMPENSATION ACTS.

The marvelous development in the industrial world in the last quarter of a century has made the employers' liability and workingmen's compensation for industrial accidents one of the most important and interesting legal and economic problems now awaiting solution in the United States.

Only a little while ago we had no great industrial institutions. Every little village, town, and hamlet was supplied with small manufactories. The song of the spinning wheel and the loom was heard in every country home. Our homespun clothes were made by our mothers or by the village or country tailor, and our shoes by the village or country shoemaker. In almost every home there was one handy man, who mended the harness and the shoes, set broken limbs, cut hair, and pulled teeth. Even in the larger cities manufactories were small and the employees few in number. The owner of the institution gave it his personal supervision, often working side by side with his employees as a coworker and friend. The machinery was simple and accidents were few. On account of the personal contact between employer and employee, there was a bond of sympathy existing between them that brought forth the employee's best efforts for the success of his employer, and the employer in return naturally exercised the same care for the protection and life of his servant that he did for himself. If there was an accident resulting in an injury to an employee, it was usually one that was unavoidable, and any liability was easily settled through the mutual sympathy and friendship existing between employer and employee. If death resulted from an accident, the sorrow of the relatives of the deceased was shared by the employer and employee alike, for all were friends.

But the development in the industrial world has changed all this; the corporation has taken the place of the individual, and finally the trust the place of the corporation. The concentration of wealth has made some of our cities the greatest manufacturing centers of the world, and it binds ocean to ocean with rails of steel. The little manufactories have been purchased or driven out of business by the large industrial institutions, to which the owners no longer give their personal supervision. They are now managed by foremen and superintendents, whose business it is to make the institution pay dividends. The capital is owned by stockholders in the corporation or a combination of corporations known as a trust; they know little about the management of the great institution in which they are stockholders; they are interested in its economic management and in the dividends which it pays. The institution with employees few in number has been replaced by the institution which employs thousands upon thousands. The simple machinery of the old-fashioned factory has been replaced with new, modern, complex machinery, which cheapens the cost of production and correspondingly increases the hazard to human life. The bond of sympathy between employer and employee is severed. They do not know each other. They have no interest in each other as individuals. The one invests his money in the institution for the dividends it will earn, and the other enters into the employment for his daily wage. The conditions of each have changed so that it must be very apparent that the rule of liability under the former conditions is not adequate nor just under present conditions.

While modern inventions and improvements in machinery have facilitated manufacturing and cheapened the cost of production, human ingenuity has not been able to construct machinery that will run without human agency. Ingenious as it is, it must be set in motion and operated by man. If this development is credited with the decrease in the cost of production, should it not be charged with the increased waste of human life and limb? It is responsible for both. This is an age of conservation, and should not every industrial institution conserve its own waste, not only in material and machinery, but in the agency that operates the machinery; and should not this waste in human life and limb be charged up to the cost of production and the industry made to bear the burden, the same as it must bear the burden of replacing machinery and other wastes connected with the institution? If this can be accomplished, it ought to result in the invention of safety appliances for the protection of life and limb and the decrease in waste along this line in the same way that there has been a decrease in waste in other lines.

Every practitioner knows that the laws governing the right of recovery for industrial accidents under the old conditions are grossly inadequate under present conditions, for, while the employee may recover on proof of negligence on the part of the employer, it is often very difficult, if not impossible, to prove negligence; and there are any number of accidents for which no recovery can be had because unavoidable or incidental to the operation of the industry. In many cases the employers are insured against liability in casualty companies, and in case of an accident resulting in litigation the right to recover is strenuously resisted by trained men in the employ of the casualty companies to avoid payment of the insurance. If not insured against liability for accident, the employer has his own claim agents, who, immediately upon the happening of an accident, proceed to procure a signed statement from the injured, if living, and if dead, from the relatives, which is usually colored in favor of the employer and signed at a time when the injured is suffering from pain or the relative overwhelmed with grief. The employer is practically compelled to have his claim agents or insure in a casualty company against industrial accidents to protect himself from false and fictitious claims presented or instituted by claim attorneys, sometimes called "ambulance chasers," who often in the race to the injured workingman beat the claim agent or the representative of the casualty company, and sometimes recover upon a manufactured case. One is just as reprehensible as the other; but while the employer is sometimes held liable in damages in large amounts when there is no real liability, it much more frequently happens that there is no recovery when there should be, and that in only a small percentage of the cases is the compensation adequate. The law governing the right to recover has not kept pace with our industrial development.

Take, for instance, the fellow-servant law which was established in England in 1837 in the case of Priestley *v.* Fowler (3 Meeson & Welsby, 1). In this case the defendant Fowler, who was a butcher, directed his helper, Priestley, to take certain goods belonging to the defendant in a certain van also belonging to the defendant, used by him and conducted by another of his servants in carrying goods for hire. The van was loaded by the other servant and Priestley, the plaintiff, and upon the journey the van broke down and the plaintiff was thrown with such violence

to the ground that his thigh was fractured. The evidence at the trial showed that the defendant had knowledge of the load that was placed upon the van; it further showed that the van was overloaded. In delivering the opinion of the court Lord Abinger said:

"In most of the cases in which danger may be incurred, if not in all, he (the servant) is just as likely to be acquainted with the probability and extent of it as the master. In that sort of employment, especially, which is described in the declaration in this case, the plaintiff must have known as well as his master, and probably better, whether the van was sufficient, whether it was overloaded, and whether it was likely to carry him safely. In fact, to allow this sort of actions to prevail would be an encouragement to the servant to omit that diligence and caution which he is in duty bound to exercise on the behalf of his master, to protect him against the misconduct or negligence of others who serve him, and which diligence and caution, while they protect the master, are a much better security against any injury the servant may sustain by the negligence of others engaged under the same master, than any recourse against his master for damages could possibly afford."

How vastly different are the conditions surrounding the butcher's helper and the van driver in this case, and the employees in a great manufactory of the present day. The butcher's helper and the van driver knew each other; they worked together in the loading of the van, and as the court well says: "The plaintiff must have known as well as his master, and probably better, whether the van was sufficient, whether it was overloaded, and whether it was likely to carry him safely." To hold the master liable under such circumstances would be unreasonable and unjust; but it is just as unreasonable and unjust that this rule should govern industrial accidents under the conditions which exist to-day.

This principle was first followed in this country in the case of Murray *v.* South Carolina Railroad Co. (1 McMullan, 385), but the court was very careful to say that the decision was confined strictly to the case before the court; that it did not intend to prejudge other questions that might arise between the company and its servants, and that a case might occur where the owner, whether individual or company, would be liable for the acts of one agent to another. This case seems to have been decided upon the theory that the plaintiff, who was a fireman, was well acquainted with the engineer through whose alleged negligence he was injured; that he had selected him as an engineer to work under; that he had been working under him for some time; and that the engineer was thoroughly competent.

This case, together with the case of Priestley against Fowler, is next approved in the case of Farwell *v.* The Boston & Worcester Railway Co. (4 Metcalf, 49). In this case the plaintiff was an engineer in charge of an engine which ran off the track at a switch left open by another servant of the defendant, who had been long in their employment as a switchman and tender and had the care of the switches and was careful and trustworthy of character, and as such servant was well known to the plaintiff. It further appears that the engineer, the plaintiff, and the switchman were appointed by the superintendent of the road, who was in the habit of passing over the same frequently and often rode on the engine. It further appears that for his services the engineer received $2 per day, which was more than the pay of a machinist. Aside from the precedents of Priestley against Fowler and Murray against South Carolina Railway Co., two things are considered that seem to have a controlling influence over this case, which are wholly inapplicable to present conditions, and one is unsound in principle. First is the question of the wages that the plaintiff received. I quote from the opinion on page 57:

"The general rule, resulting from considerations as well of justice as of policy, is, that he who engages in the employment of another for the performance of specified duties and services, for compensation, takes upon himself the natural and ordinary risks and perils incident to the performance of such service, and in legal presumption the compensation is adjusted accordingly."

And again, on page 59, the court says:

"In applying these principles to the present case it appears that the plaintiff was employed by the defendant as an engineer at the rate of wages usually paid in that employment, being a higher rate than the plaintiff had before received as a machinist."

This is the doctrine of assumed risk, founded upon the theory that the risk is assumed for the extra pay received by the plaintiff as an engineer. In other words, the fact that the engineer was receiving more pay as an engineer than he had previously received as a machinist must have been considered by the court as payment for any injury that he might receive by the increased hazard. The increased pay was his insurance against accident. If not, why was the defendant permitted to show that the plaintiff received more pay as an engineer than as a machinist; and why is this fact twice referred to in the opinion and the principle laid down that the servant takes upon himself the natural and ordinary risks and perils incident to the performance of such service, with the legal presumption that the compensation is adjusted accordingly? Compensation adjusted how? According to the risks and perils incident to the performance of the service; hence, it was competent to show that the engineer was receiving more pay than a machinist, and this extra pay was his compensation for the increased hazard and liability to injury as an engineer. Surely if this principle was ever entitled to any consideration, certainly it is no remedy or adequate relief from industrial accidents. It does not benefit the injured, but rather the uninjured. If extra compensation is paid on account of increased hazard, it is of benefit to those who are not injured; but if the employee is injured, his compensation stops and there is no relief from that source whatever. Dangerous employments do not always pay the highest wage. This is regulated by the law of supply and demand, and unskilled labor, however dangerous, is poorly paid because of the great supply, while skilled labor, because of the great demand, commands a higher wage.

Second, the question of knowledge on the part of the employee. Quoting again from the opinion on page 59: "The rule is founded upon the expediency of throwing the risk upon those who can best guard against it." This rule was no doubt applicable to the conditions existing at the time the decision was written. The switch that was left open was probably the only switch in the yard; the switchman who left it open was, no doubt, the only switchman at that point. The conditions were probably such that the engineer could better guard against the risk than the railway company. But the modern railroad yard in the city is a perfect network of sidetracks and switches in the care of many switchmen, and the same rule of throwing the risk upon those who can best guard against it, as applied literally, would shift the burden of responsibility. The court in this case was also careful to disclaim any intention of establishing a precedent, but for years this was the leading case in this country on the fellow-servant rule, although it is difficult to tell which rule had the most influence on the court.

Because of the changing industrial conditions the fellow-servant rule has been much modified. Out of its harshness grew the doctrine of vice principal. Many of the States have abolished the rule by legislative enactment. It was abolished as to railroads in North Dakota in 1903; it was modified by the Legislature in Arizona in 1901; abolished in Arkansas in 1907; abolished in Georgia in 1909; modified in Idaho in 1909; abolished in Iowa as to railroads, and in 1909 the legislature of that State abolished the doctrine of assumed risk and modified the law of contributory negligence, as follows:

"The fact that the employee may have been found guilty of contributory negligence shall not bar a recovery, but the damages shall be diminished by the jury in proportion to the amount of negligence attributable to such employee. No employee who may have been killed or injured can be held to have been guilty of contributory negligence in any case where the common carrier or corporation contributed to the injury or death of such employee. It shall not be any defense to such action that such employee assumed the risks of his employment."

In 1909 Michigan abolished the fellow-servant rule as applied to railroads; by section 2042, laws of 1905, Minnesota has modified the fellow-servant rule making railroads liable for all damages sustained within the State by any agent or servant thereof, without contributory negligence on his part, by reason of the negligence of any other servant. The rule was abolished in Mississippi in 1908; modified in Missouri by section 2873, Revised Statutes of 1899; abolished in Ohio in 1908; abrogated by the constitution of Oklahoma; while Texas in 1909 abolished the fellow-servant rule and modified the law on contributory negligence by providing that in all actions brought against any common carrier to recover damages for personal injuries to an employee, or where such injuries have resulted in death, the fact that the employee may have been guilty of contributory negligence is not a bar to recovery, but damages shall be diminished by the jury in proportion to the amount of negligence attributable to such employee.

Every argument that can be used against the fellow-servant law is applicable to the doctrine of assumed risk under present conditions. The employee in a large industrial institution can not possibly know the risks that he assumes. He may thoroughly understand his own duties and the risk immediately incident to such duties, which may be only a small part of the risk assumed in an institution where there are thousands employed. Only a week ago I visited a manufactory in Beverly, Mass., which has a floor space of 21 acres. In this institution 150,000 pounds of steel are used per week; 1,800 tons of steel are carried in the stock-supply room for use in manufacturing; over 19,000,000 parts of machines are sent out from the stock room annually and over 24,000 complete machines. To do up and ship the 19,000,000 parts of machines takes an army of men, and yet every piece is manufactured in this institution from the molding to the finished product; and in addition to the 19,000,000 parts, 24,000 complete machines for the manufacture of shoes are shipped annually from this one institution.

If an injury results from negligence that is willful or intentional, there is no reason in justice why the rule should not be enforced; but there are so many cases where "through momentary distraction or inadvertent miscalculation, probably induced by mental or physical fatigue, resulting in accidental injury to the workingman without any intention or moral fault of his own." Such cases are now everywhere recognized as inevitable, a necessary hazard to the work, as certain to happen as machinery is to break. Nearly all accidents are the result of such conditions, whether it be through the negligence of the fellow servant or the contributory negligence of the injured party. The fellow servant has no object in injuring his fellow workingman, and the workingman certainly would not injure himself intentionally, for self-preservation is the first law of nature. Both are unavoidable accidents, occurring with surprising regularity.

Every industry must of necessity employ the most modern appliances and use all the mechanical powers usually employed in such industry. Competition demands this; success depends upon it, and as a result the risk of the workingman daily increases with modern methods of production—risks that increase with our growth and development, and conditions which lead to the conclusion that with every reasonable precaution we will still have injuries from unavoidable accidents. The employer is benefited by modern machinery with increased production, greater profits, and greater opportunities to enrich himself; the public is benefited for the reason that modern machinery has cheapened the cost of production and given to it cheaper commodities; and while the workingman's pay may have increased it has not increased in accordance with the increased risk. This has led to the theory of compensation to the workingman, paid by the employer in the first instance and distributed upon the public generally that consumes the commodity. This principle has been recognized in all European countries, all of which either have some form of compulsory insurance or a direct law fixing the responsibility directly upon the employer.

New York, Illinois, Wisconsin, Minnesota, Washington, and other States have appointed commissions (and all have reported against the present system and in favor of laws of compensation), usually elective, for compulsory insurance or fixing responsibility directly upon the employer. It is true that in some of our industrial institutions there is a scheme of mutual insurance which works out as satisfactorily as the compulsory insurance in Europe. This, however, is to a very limited extent. Many casualty companies have been organized for the purpose of insuring the employer against liability for accidents to workingmen and against suits instituted for injuries occasioned by industrial accidents. Such insurance, however, is of no benefit to the workingman; the companies are not organized for the benefit of the workingman; they are organized for the purpose of making money for the company. They undertake to insure the employer not only against industrial accidents but against suits, and in case of an accident to settle with the injured person, and if settlement is not effected the defense of the action, and it is to the interests of the company to make the best possible settlement, and, failing in the settlement, beat the case if possible. In an address delivered last month in Chicago to the National Lumber Manufacturing Association, James A. Emery, of Washington, D. C., counsel for the National Association of Manufacturers, stated in substance that, according to the last report of the insurance commissioner of Connecticut, there were 49 insurance companies doing business in the State of Connecticut, and that throughout the United States they received $26,500,000 in annual premiums for employers' liability insurance, and that they paid out in claims about $9,000,000 during the last year. In other words, of the $26,500,000 that the employers paid for insurance against accident to their employees $9,000,000 of it went to the injured employees, while $17,500,000 flowed into the coffers of the insurance companies. Employers' liability insurance is surely not for the benefit of either employer or employee. How much better would it have been if the entire $26,500,000 had been paid to the employees as compensation for injuries or as increased wages if the injuries were

few, and how much closer it would have brought employer and employee together in the friendly relation that should exist between them.

The theory of such insurance is wrong in principle, for the theory upon which the employer is liable is that he has committed a wrong, he has been guilty of negligence and is liable in damages for his wrongful act, and his insurance against the consequences of his wrongful act is wrong in theory and it is wrong in practice, as it is neither for the benefit of the employer or the employee. It is not permitted in many of the countries of Europe, and while it is permitted in some since the enactment of laws providing for compulsory insurance for the compensation of workingmen the private insurance companies have practically gone out of business. While we in the United States are behind all the European countries, we are fortunate in having their laws and their experience to guide us in the final solution of this problem. New York was the first State to appoint a commission to investigate and report to the legislature, and as a result of the investigation and report New York enacted a law practically the same as the English law, making the employer directly liable in damages for a fixed amount. It preserved to the employee his common-law remedy, giving him the choice between it and the new act, and the employer had to submit to the election without a right to trial by jury on the amount to be recovered. This law was held unconstitutional in the case of Ives *v.* South Buffalo Railroad Co., reported in Ninety-fourth Northeastern Reporter, 431, and while you are all no doubt familiar with this decision a discussion of the same for the effect it will have upon other enactments upon the same subject may be profitable. In the opinion in this case there is one thing that stands out prominently and above all others, and that is that the law is unconstitutional, because it makes the employer liable when he is not at fault, when he has omitted no legal duty and has committed no wrong. Every other principle laid down in the decision could be evaded or provided against but this, which is bound to be more or less of an obstacle in every law that may be enacted upon the subject.

It is this principle that controls in the decision on the due-process clause of the Constitution and likewise in the discussion of the police regulation. The court recognizes the necessity for such legislation in the following language, namely:

"In arriving at this conclusion we do not overlook the cogent economic and sociological arguments which are urged in support of the statute. There can be no doubt as to the theory of this law. It is based upon the proposition that the inherent risks of an employment should in justice be placed upon the shoulders of the employer, who can protect himself against loss by insurance and by such an addition to the price of his wares as to cast the burden ultimately upon the consumer; that indemnity to an injured employee should be as much a charge upon the business as the cost of replacing or repairing disabled or defective machinery, appliances, or tools; that, under our present system, the loss falls immediately upon the employee who is almost invariably unable to bear it, and ultimately upon the community which is taxed for the support of the indigent; and that our present system is uncertain, unscientific, and wasteful, and fosters a spirit of antagonism between employer and employee which it is to the interests of the State to remove. We have already admitted the strength of this appeal to a recognized and widely prevalent sentiment; but we think it is an appeal which must be made to the people and not to the courts."

In that part of the decision upon the question of the act being in violation of the due process clause in the fourteenth amendment to the Constitution, and in the constitution of the State of New York, the court said:

"'Process of law' in its broad sense means law in its regular course of administration through courts of justice, and that is but another way of saying that every man's right to life, liberty, and property is to be disposed of in accordance with those ancient and fundamental principles which were in existence when our constitutions were adopted. Due process of law implies the right of the person affected thereby to be present before the tribunal which pronounces judgment upon the question of life, liberty, or property in its most comprehensive sense, to be heard by testimony or otherwise, and to have the right of controverting, by proof, every material fact which bears upon the question of right in the matter involved. If any question of fact or liability be conclusively presumed against him this is not due process of law. * * * When our constitutions were adopted, it was the law of the land that no man who was without fault or negligence could be held liable in damages for injuries sustained by another. That is still the law, except as to the employers enumerated in the new statute, and as to them it provides that they shall be liable to their employees for personal injury by accident to any workmen arising out of and in the course of the employment which is caused in whole or in part, or is contributed to, by a necessary risk or danger of the employment or one inherent in the nature thereof, except that there shall be no liability in any case where the injury is caused in whole or in part by the serious and willful misconduct of the injured workman. It is conceded that this is a liability unknown to the common law, and we think it plainly constitutes a deprivation of liberty and property under the Federal and State Constitutions, unless its imposition can be justified under the police power, which will be discussed under a separate head."

In holding that the act is not within the police power, on page 443, the court falls back upon the same principle that there can be no liability where there is no wrong or omission, in the following language:

"Conceding, as we do, that it is within the range of proper legislative action to give a workman two remedies for a wrong, when he had but one before, we ask: By what stretch of the police power is the legislature authorized to give a remedy for no wrong? If, before the passage of this law, the employer had a right to a jury trial upon the question of liability, where and how did he lose it? Can it be taken from him by the mere assertion that this statute only reverses the common-law doctrine that the employee assumes the risk of his employment?"

The members of the court did not agree on all of the questions discussed in the two opinions in the case. Judge Werner says in his opinion, on page 438, that the doctrines of contributory negligence and the fellow-servant rule may be regulated or even abolished, and that this is true to a limited extent as to the assumption of risk by the employee. The first paragraph of the syllabus reads as follows:

"The legislature has full power to modify or abolish the fellow-servant rule and the law of contributory negligence, as applied to injuries to servants, and also to a limited extent to regulate the application of the doctrine of assumed risk."

While Judge Cullen in his concurring opinion, on page 449, says:

"I concede that the legislature may also abolish as a defense the rule of assumption of risk and that of contributory negligence, unless the accident proceed from the willful act of the employee."

Thus, one opinion holding that the doctrine of assumed risk can be regulated by law only to a limited extent, and the other holding that it can be abolished altogether; while upon the question relating to the scale of compensation and settlement of disputes without a trial by jury, the court disagreed and did not decide.

It is very difficult for me to see any analogy between the case under discussion and the authorities which the court, on page 440, says state clearly the legal principles which it thinks applicable to the case at bar. The first was the case of Parrot *v.* Wells, Fargo & Co. (15 Wall., 524, 21 L. Ed., 206):

"The plaintiff, who was the common landlord of the defendants and other tenants, sought to hold the defendants liable for damages occasioned to the premises occupied by the other tenants by an explosion of nitroglycerin which had been delivered to defendants as common carriers for shipment. It appeared that the defendants were innocently ignorant of the contents of the packages containing the dangerous explosives, and that they were guilty of no negligence in receiving or handling them."

Surely this case is not analogous; it is not brought under any statute claimed to be unconstitutional; the plaintiff is simply seeking to recover damages for an injury, and the court held that there was no liability. There being no statute, of course the plaintiff could only recover upon the ground of negligence, and there being no negligence he could not recover.

The next is a case of the Ohio & Mississippi Ry. Co. *v.* Lackey (78 Ill., 55, 20 Am. Rep., 259). Plaintiff sought to recover under a statute making every railroad company running cars within the State liable for all the expense of the coroner and his inquest and the burial of all persons who might die on the cars or who might be killed by collision or other accident occurring to such cars, or otherwise. This act made the railroad company liable for every death on any of its trains and for the expenses of the coroner and the funeral. The company was liable without regard to whether death was occasioned by accident, self-inflicted, or from disease. If it had been confined to deaths caused by negligence of the company or its employees, or to deaths caused by unavoidable accidents, it would no doubt have been upheld. It was held unconstitutional because it made the company liable for deaths for which it was in no way responsible, that were not caused by or the result of the journey, but from some other agency.

Then follows a number of cases holding laws unconstitutional for making railroad corporations absolutely liable for the killing or injuring upon their right of way horses, cattle, etc., by running over them. Such cases can not be analogous, for horses and cattle killed upon a right of way are trespassers; they are there wrongfully, and to make the company absolutely liable for the killing of trespassing animals when there was no negligence on the part of the company or its servants would be unreasonable and unjust. A number of cases are cited to show that the railroad is liable for the killing of animals when the law requires them to fence their right of way and they have failed to do so.

Even had the courts held otherwise, I can not see the applicability of such cases to the case at bar. Neither can I see any good reason in the argument advanced in favor of the decision on page 440, namely:

"If the argument in support of this statute is sound, we do not see why it can not logically be carried much further. Poverty and misfortune from every cause are detrimental to the State. It would probably conduce to the welfare of all concerned if there could be a more equal distribution of wealth. Many persons have much more property than they can use to advantage and many more find it impossible to get the means for a comfortable existence. If the legislature can say to an employer, 'You must compensate your employee for an injury not caused by you or by your fault,' why can it not go further and say to the man of wealth, 'You have more property than you need, and your neighbor is so poor that he can barely subsist; in the interests of natural justice you must divide with your neighbor, so that he and his dependents shall not become a charge upon the State'?"

This argument does not apply and such an enactment would be unconstitutional for the same reason that the law making the railroad company liable in any event for a death on its trains was unconstitutional. It can not be in justice said to the man of wealth: "You have more property than you need, and your neighbor is so poor that he can barely subsist; in the interests of natural justice you must divide with your neighbor," for the reason that the man of wealth is under no obligation to support his poorer neighbor. You can tax him under a uniform system of taxation for the support of the poor, but he being under no obligation to support the poor generally can not be made to do so directly; but if he had a poor father, or mother, or a son, or a daughter, or any near relative that he is naturally under obligations to, a law compelling him to take care of such relatives and contribute to their support would be upheld.

Is there not almost as great an obligation existing between employer and employee, while the relation exists, and upon this same theory could not the law be sustained? They are coadventurers; the employer furnishes the money, the employee the labor and the skill and takes all the risk. From the combination of the employer's wealth and the employee's skill comes the finished product, the profits on which go exclusively to the employer, the employee receiving only his daily wage. The law of compensation is not asking charity; it demands justice. And justice demands that the employer should assume the risk, to be paid ultimately by the consumer.

Again, on page 440 of the opinion:

"If it is competent to impose upon an employer, who has omitted no legal duty and has committed no wrong, a liability based solely upon a legislative fiat that his business is inherently dangerous, it is equally competent to visit upon him a special tax for the support of hospitals and other charitable institutions, upon the theory that they are devoted largely to the alleviation of ills primarily due to his business. In its final and simple analysis that is taking the property of A and giving it to B, and that can not be done under our constitutions. Practical and simple illustrations of the extent to which this theory of liability might be carried could be multiplied ad infinitum, and many will readily occur to the thoughtful reader."

This may be true, but none of the illustrations offered by the court give any light to me upon the subject. Indeed, the cases offered by the plaintiff in support of the law, and rejected by the court, seem more nearly analogous; for instance, the admiralty cases of *The Osceola* (189 U. S., 159), *The City of Alexandria*, District of Columbia (17 Fed. Rep., 390), and the case of Scarff *v.* Metcalf (107 N. Y., 211). In relation to these cases the court says:

"They seem to us equally inapplicable as authorities for the proposition that the law recognizes liability without fault. It is common knowledge that the contracts and services of seamen are exceptional in character. A seaman engages for the voyage. He is subject to physical discipline and exposed to hardships and dangers peculiar to the sea. He is, in effect, a coadventurer with the master and shares in the risks of shipwreck and capture, often losing his wages by casualties which do not affect workmen on land. For these and many

other obvious reasons the maritime law has wisely and benevolently built up peculiar rights and privileges for the protection of the seaman which are not cognizable in the common law. When he is sick or injured he is entitled to be cared for at the expense of the ship, and, for the failure of the master to perform his duty in this regard, the ship or the owner is liable. That is a right given to the seaman and a duty enjoined upon the master by the plainest dictates of justice, which arise out of the necessities of the case; and because of the reason of the rule the right and duty cease when the contract has terminated and the seaman has been returned to the port of shipment or discharged, or has been furnished with means to do so. But beyond this duty on the part of the master or owner there seems to be no liability whatever for injuries sustained by the seaman in the course of his work."

The contract and service of seamen are exceptional in character. The seaman engages for a voyage, it is true, for when he starts out on the voyage it is natural that he should want to return. He would not want to be turned loose in midocean, and the master would want to make sure of sailors sufficient in number to bring the ship home; hence, he engages for the voyage. He is subject to physical discipline, for there is no other discipline on the ocean; he is out of the reach of courts and physical discipline may be necessary. The service demands all this for the safety of the ship, the cargo, and the lives of the pasengers. But compare in parallel columns what the court says about protection to the seaman and the employee on land, and the remedy for each, as follows:

WORKMAN. (P. 439.)	SEAMAN. (P. 446.)
"There can be no doubt as to the theory of this law. It is based upon the proposition that the inherent risks of an employment should in justice be placed upon the shoulders of the employer, who can protect himself against loss by insurance and by such addition to the price of his wares as to cast the burden ultimately upon the consumer; that indemnity to an injured employee should be as much a charge upon the business as the cost of replacing or repairing disabled or defective machinery, appliances, or tools; that, under our present system, the loss falls immediately upon the employee who is almost invariably unable to bear it, and ultimately upon the community, which is taxed for the support of the indigent; and that our present system is uncertain, unscientific, and wasteful, and fosters a spirit of antagonism between employer and employee, which it is to the interest of the State to remove. We have already admitted the strength of this appeal to a recognized and widely prevalent sentiment."	"It is common knowledge that the contracts and services of seamen are exceptional in character. A seaman engages for the voyage. He is subject to physical discipline and exposed to hardships and dangers peculiar to the sea. He is, in effect, a coadventurer with the master and shares in the risks of shipwreck and capture, often losing his wages by casualties which do not affect the workman on land."
REMEDY.	REMEDY.
"But we think it is an appeal which must be made to the people, and not to the courts."	"For these and many other obvious reasons the maritime law has wisely and benevolently built up peculiar rights and privileges for the protection of the seamen which are not cognizable in the common law. When he is sick or injured he is entitled to be cared for at the expense of the ship, and, for failure of the master to perform his duty in this regard, the ship or the owner is liable. That is a right given to the seaman and a duty enjoined upon the master by the plainest dictates of justice, which arise out of the necessities of the case."

According to the foregoing, the employee on land needs the protection of the law as much as the seaman, and greater reasons are given for legislative action in his behalf. The public is interested in a general way in behalf of the seaman, while the sentiment in favor of legislation protecting the employee is widely prevalent and favored by the State, in whose interest it is to remove the antagonism fostered by the present system between employer and employee. But legislation making the master liable, when without fault, for sickness and care of the seaman "is a wise and benevolent right given to the seaman and a duty enjoined upon the master by the plainest dictates of justice"; while the law making the employer liable when without fault for injury to an employee is "taking his property without due process of law." From whence does the power come to make the master of the ship liable for the care and sickness of seamen and the act of Congress requiring the master of the ship to contribute monthly for each sailor employed for the maintenance of a marine hospital? It does not come from the Constitution, but from Congress and the courts, and can not the same power that requires the master of the ship to care for the sailor in sickness, that requires him to contribute to the support of a marine hospital, also require him to respond in damages for injuries resulting from unavoidable accidents? "Seamen have been designated as wards of admiralty, in need of the protection of the courts because peculiarly exposed to the wiles of sharpers and unable to take care of themselves." (1 Parson's Ship and Admiralty, 32.) "Every court should watch with jealousy any encroachment upon the rights of seamen, because they are unprotected and need counsel, because they are thoughtless and require indulgence, because they are credulous and complying, and are easily overreached," as said by Mr. Justice Story in Harden *v.* Gordon (2 Mason, 541). And as said by Mr. Justice Thompson, in Cadmus *v.* Mathews (2 Paine, 229): "Due weight ought to be given to the character and situation of this class of men."

The Constitution does not make the seaman an exception, and the decisions referred to show how far legislation and the courts may go when the exigencies of the case demand. The seaman is exposed to hardships and dangers peculiar to the sea; the laborer is exposed to the hardships and dangers peculiar to his employment. The seaman is, in effect, a coadventurer with the master and shares in the risks of shipwreck. The employee in the industrial institution likewise is a coadventurer with the master, but he does not share the risks of life and limb with the master; he assumes them all himself. The sailor is liable to physical discipline, a rule that is not necessary for the employee, for he is within the reach of the courts. The sailor can not break his contract; neither can the employee, without great inconvenience and sometimes suffering on the part of his loved ones, who are depending upon his daily wage for their daily bread. The sailor is improvident and with a prodigal hand lavishes his earnings upon a "sweetheart in every port," while the employee is usually industrious, frugal, and a home builder, entitled to at least equal rights with the improvident, prodigal seaman.

There are many cases cited where legislative enactment has absolutely fixed liability without fault upon railroads, for setting fires, for injury or death of passengers, for stock killed on their own unfenced right of ways, and section 634, Freund's Police Power, approves the principle of liability without fault; and upon these authorities the court might well have said, as did Mr. Justice Brown in the case of Holden *v.* Hardy (169 U. S. 366):

"That the law is to a certain extent a progressive science, that in some of the States methods of procedure which at the time the Constitution was adopted were deemed essential to the protection and safety of the people or to the liberty of the citizen have been found to be no longer necessary; that restrictions which had formerly been laid upon the conduct of individuals or of classes of individuals had proved detrimental to their interests, while, upon the other hand, certain other classes of persons, particularly those engaged in dangerous or unhealthful employments, have been found to be in need of additional protection. * * * The law will be forced to adapt itself to new conditions of society, and particularly to the new relations between employer and employee as they arise."

And as said in Hertado *v.* California (110 U. S., 516, 28 L. Ed., 232): "The flexibility and capacity for growth and adaptation is the peculiar boast and excellence of the common law" and adapted to modern conditions in Muller *v.* Oregon (208 U. S., 412, 52 L. Ed., 551).

The use of modern machinery by the employer has increased the danger to employee, and while neither is to blame for unavoidable accidents if the workingman is made to bear the burden he and his family must bear it alone, while, on the other hand, the employer reaps large profits from the use of the dangerous machinery and is in a position to add the burden to the cost of the manufactured article and distribute it among the consumers. It is necessary to protect the sailor, Congress and the courts say, because he can not protect himself. It is likewise necessary to protect the workingman from unavoidable accidents, for he can not protect himself, while the employer can. The burden to the injured workingman and his family is the cause of poverty, and poverty begets crime. The antagonism between employer and employee is the cause of frequent disturbance of the peace and good order of the State, often resulting in crime. Is it not in the interests of the general welfare of the State to promote peace and good order, to prevent poverty, and suppress crime? "The fourteenth amendment was not designed to interfere with the power of the State to protect the lives, liberties, and property of its citizens, and to promote their health, peace, morals, education, and good order." This principle has been clearly held in ex parte Kemler (136 U. S., 436, 34 L. Ed., 519), St. Louis & San Francisco Railway Co. *v.* Mathews (165 U. S., 1, 41 L. Ed., 611), Holden *v.* Hardy (169 U. S., 366, 42 L. Ed., 780), in re Converse (137 U. S., 624, 34 L. Ed., 796), Barbier *v.* Connolly (113 U. S., 27, 28 L. Ed., 923), Muggler *v.* Kansas (123 U. S., 560, 31 L. Ed., 205), Connolly *v.* Union Sewer Pipe Co. (184 U. S., 540, 46 L. Ed., 679), Lochner *v.* New York (198 U. S., 45, 49 L. Ed., 937), Thorpe *v.* R. & B. Railway Co. (27 Vt., 149), Slaughterhouse cases (16 Wall., 36, 21 L. Ed., 305), Passenger cases (7 How., 283, 12 L. Ed., 702), and Lawton *v.* Steele (152 U. S., 136; 36 L. Ed., 388). Conversely, the police power is a limitation upon the freedom of contract secured by the fourteenth amendment. (Holden *v.* Hardy, supra; Harbison *v.* Knoxville Water Co., 53 S. W., 993; 183 U. S., 13; 46 L. Ed., 55; St. Louis, Iron Mountain & Southern Railway Co. *v.* Paul, 173 U. S., 404; Atchison, Topeka & Santa Fe Railroad Co. *v.* Matthews, 174 U. S., 96; Beer Co. *v.* Massachusetts, 97 U. S., 25). This law would promote the health and peace and morals and education and good order of the citizens of the State by relieving the distress and poverty of the family of the injured workingman at the time when they were most in need, and it would seem to me to come fairly within the police power of the State in the light of the decisions quoted.

The decision in this case is based upon the theory that the Constitution does not permit the legislature to enact legislation making a person liable in damages "when he is not at fault," "when he has omitted no legal duty, and has committed no wrong." Upon this theory all the legislation making railroad companies absolutely liable for fires started by the use of locomotives when the company is without fault would be unconstitutional, and yet such legislation is uniformly held constitutional. In the case of Union Pacific Railway Co. *v.* De Busk (12 Colo., 294) the court in construing legislation which declared that every railway company shall be liable for all damages by fire that is set out or caused by operation of its road, said: "Such statutes are not penal, but purely remedial in their nature, and enacted for the better protection of property exposed to such unusual dangers."

Chief Justice Shaw, of Massachusetts, declared that the "design as well as the legal effect of such a statute was to afford indemnity for those suffering damages from fire caused by the use of a dangerous apparatus." "It is not a penal statute, but purely remedial in its nature; and it is to be interpreted fairly and liberally, so as to secure to parties injured an indemnity from those who reap the advantages and profits arising from the use of a dangerous mode of locomotion, by means of which buildings and other property are destroyed." (Hart *v.* Western R. R. Co., 13 Met., 99, 46 Am. Dec., 719; Lyman *v.* Boston, etc., R. R. Co., 4 Cush., 288; Pratt *v.* Atlantic, etc., R. R. Co., 42 Me., 579; Smith *v.* Boston, etc., R. R. Co., 63 N. H., 25; Ross *v.* Boston, etc., R. R. Co., 6 Allen, 87; Rodemacher *v.* Milwaukee, etc., R. R. Co., 41 Iowa, 297, 20 Am. Rep., 592; St. Louis & San Francisco R. R. Co. *v.* Mathews, 165 U. S., 1; Grissell *v.* Housatonic R. R. Co., 54 Conn., 447; Hartford Ins. Co. *v.* C., M. & St. P. Ry. Co., 62 Fed., 904; Ingersoll & Quigley *v.* Stockbridge & Pittsfield R. R. Co., 8 Allen, 438; Grand Trunk Ry. Co. *v.* Richardson, 91 U. S., 454.)

Can it be possible that the legislature can go further in the protection of property than it can for the protection of human life? No; such is not the intention of the Constitution. This legislation held unconstitutional by the New York Court of Appeals is likewise remedial legislation. It is intended to regulate the use of dangerous machinery

in industrial institutions and dangerous employments connected therewith; and unless the Constitution intends to place a higher value upon mere property than it does upon life and limb, the law is constitutional. The railway company is made absolutely liable for fires started by the locomotives when without fault, when it has omitted no legal duty and has committed no wrong, because the railway company is using locomotive power that is dangerous, that is liable to set fires, and is making large profits out of the business. So, too, the employer to increase his profits uses dangerous machinery, the operation of which causes great loss of life and limb to the employees. The one is destructive of property, the other destructive of human life and limb; and shall it be said that the laws of this country under the Constitution shall afford protection to the one that is destructive of property and no protection to the one that is destructive of human life? If the courts are to make a distinction, it should be in favor of the legislation which affords protection to life rather than to property, and ultimately such will be the distinction. The scale of compensation and settlement of disputes provided for in the New York law deprives the employer of the right to have the jury fix the amount which he shall pay when his liability to pay has been determined. This is a dangerous provision in the law, for it has always been one of the functions of a jury to pass upon the amount in controversy, or the amount of damages sustained, as well as upon liability. This subject is thoroughly discussed in the elaborate notes following the case of Flint River Steamboat Co. *v.* Roberts (48 Am. Dec., 178). The seventh amendment to the Constitution of the United States does not, of course, apply to State legislation, but there are similar provisions in all the State constitutions, usually a little stronger. I quote from the notes referred to:

"The trial by jury secured to the subject by the Constitution is a trial according to the course of the common law, and the same in substance as that which was in use when the Constitution was framed. On this all the decisions agree."

It being one of the functions of the jury to pass upon the amount of recovery as well as the liability, and such being the law at the time of the adoption of the different constitutions of the different States, it will be seen that the provision referred to in the New York law, which takes away from the jury this function, is a dangerous provision. For if the legislature can take from the jury one of its legitimate functions it can take them all, and thus take away the right of trial by jury altogether. This objection, however, is not serious, for it can be avoided in a compensation law by providing for a trial with a jury upon the election of either party. This would preserve the right and the employer would never ask for a jury trial, for he knows that the jury would be more liberal with the employee than would the legislature.

It is claimed that the compulsory contribution of both employer and employee to a fund created for a public purpose, having for its object compensation for industrial accidents, can be sustained as a taxing measure; but if an employer can not be made wholly liable upon what principle can he be held partially liable? The State of Montana recently passed such a law which is now being considered by the supreme court of that State in an action contesting it on the grounds that it is unconstitutional, and the outcome will be watched with interest. It is claimed that the law recently passed in New Jersey, and which is similar to the laws of Wisconsin and Washington on this subject, avoids all the objections to the law held unconstitutional by the New York Court of Appeals in the case of Ives *v.* Railroad Co., by making the system of compensation optional. If the employer elects to come under the law of course he can raise no legal objection; if he refuses he is deprived of his common-law defenses, namely: the fellow-servant defense, the doctrine of assumed risk and the defense of contributory negligence. But the depriving him of these defenses does not make him liable unless he is negligent and at fault, and if he can not be held liable when he is not at fault and has done no wrong, of what use will it be to abolish these defenses? You can tell him "You shall no longer plead the negligence of the employee as a defense," but this does not make the employer liable, for under the New York decision he can not be liable unless he is personally at fault. You may say to him that he shall no longer plead as a defense the doctrine of assumed risk, but taking from him this defense does not make him liable. You may take from him the right to plead as a defense that the accident was caused through the negligence of the fellow servant, but this does not make the employer liable, for the doctrine of respondeat superior never did apply to such case. Possibly the law might go so far as to say that every industrial accident is prima facie evidence of negligence on the part of the employer, but this, however, would be only a presumption easily overcome by showing that the employer and his agents used all the care that the law required and all the modern appliances for the protection of human life and limb; and so it appears to me that this decision in the Ives case is going to be more or less of an obstacle to all legislation upon the subject if it is followed generally by the courts. It is to be hoped, however, that the employers will recognize the great necessity there is for legislation that will give to the employee adequate compensation for industrial accidents, and that the employer and employee may get together and agree upon a uniform law for every State of the Union. This is one subject upon which the laws should be uniform, that the employers of one State might not have an advantage over the employers of other States.

Practically all the civilized countries of Europe have adopted the insurance plan against industrial accidents, and in adopting the compulsory principle have been careful that compensation shall be proportioned to actual financial loss to the injured. It is based upon the actual current earnings of the workingman, and fixed at a percentage in cases of total disability on concurrent wages varying from 50 in Great Britain to as high as 70 per cent in Holland.

The German system has given the most general satisfaction. It is conducted entirely by mutual association of employers, supervised by the State. Every employer contributes yearly in accordance with the risk of his establishment and his pay roll, the risk being determined by means of a classified tariff of rates drawn up by the association. The law confers on them the privilege of prescribing preventive rules and regulations that have the force of law and must be complied with. The association may send inspectors to any factory or establishment at any time, and in case of negligence the employer may be fined or given a higher rate for a higher risk. In case of flagrant neglect the factory may be closed. Workingmen are also subject to regulation on the part of the association.

This subject received consideration in Germany as early as 1838, in the recognition of the new principle of liability by employers to provide compensation for industrial accidents. To check the force of discontent after the Franco-Prussian War, Bismarck, one of the greatest statesmen of his or any other age, in 1881 presented a plan of compulsory insurance of workingmen. In commenting upon this in the work entitled "Workingmen's Insurance in Europe," by Frankel and Dawson, the author says:

"In the short period of nine years, 1881–1889, every detail of this comprehensive scheme was put into operation. Legislation so far-reaching in its consequences had never before been attempted. Though at the time regarded as revolutionary in character, it has served the country better than its great author dreamed possible. Now, at the close of a period of 25 years, it is recognized as the most effective instrument for the protection of the great body of people in the important exigencies of life; and its merits are warmly appreciated by all who have the welfare of the Nation at heart."

Bismarck's compulsory insurance bill, presented to the Reichstag in 1881, received the approval of that body, but it refused to vote financial support and also desired to substitute separate departments for the kingdom, which amendments were rejected by the Government, whereupon Emperor William sent a message to the Reichstag, as follows:

"We consider it our imperial duty to impress upon the Reichstag the necessity of furthering the welfare of the working people. We should review with increased satisfaction the manifold successes with which the Lord has blessed our reign, could we carry with us to the grave the consciousness of leaving our country an additional and lasting assurance of internal peace, and the conviction that we have rendered the needy that assistance to which they are justly entitled. Our efforts in this direction are certain of the approval of all the federate governments, and we confidently rely on the support of the Reichstag without distinction of parties. In order to realize these views, a bill for the insurance of workmen against industrial accidents will, first of all, be laid before you, after which a supplementary measure will be submitted, providing for a general organization of industrial sick relief insurance. Likewise those who are disabled in consequence of old age or invalidity possess a well-founded claim to more ample relief on the part of the State than they have hitherto enjoyed. To devise the fittest ways and means for making such provision, however difficult, is one of the highest obligations of every community, based on the moral principles of Christianity. A more intimate acquaintance with the actual capabilities of the people and a mode of turning these to account in corporate associations, under the patronage and with the aid of the State, will, we trust, develop a scheme to solve which the State alone would prove unequal."

This humane and patriotic appeal resulted in the passage of the first compulsory insurance law in Germany, under which the same authority claims:

"The most striking fact in the remarkable industrial advance made by Germany during the last half century is the improved condition of the great body of its working people. On all sides are evidences of greater effectiveness, contentment, and prosperity. Many causes have undoubtedly contributed to this end, but perhaps the most important has been the fostering care of the Government. It has met the requirements of its people in an orderly and businesslike manner, looking upon their occupations as both social and individual in character. * * * The wide scope of this branch of workingmen's insurance is evident from the fact that at the close of 1907 more than 21,000,000 working people, employed in nearly 5,500,000 separate establishments, were directly insured under the provisions of the law. * * * Notwithstanding great improvements in safety appliances and other means of prevention, the number of accidents, with the single exception of those resulting in complete permanent disablement, has increased rapidly per thousand insured. The average duration of disability has also increased, doubtless partly due to the broadening of the statutes. The same condition has been observed in all other countries where liability laws have been liberalized. The increase is also ascribed to simulation and to malingering, as it is certain that some workmen take advantage of the slightest accident to claim compensation. But the chief cause of increase in the number of accidents in Germany is unquestionably the greater complication of industry, the greater hazard necessarily resulting therefrom, and intensity of pressure upon workingmen. With the strong tendency to migrate from the country to industrial cities, thousands of men enter factories who are not by training prepared for the complex machinery they must handle. These factors augment the number and the seriousness of accidents.

"In general accidents increase in number as workmen become older. Thus, in the industrial, building, and marine associations of employers, the rate per annum was 3.6 per 1,000 insured for those between the ages of 18 and 20, 5.4 for those between 20 and 30 years, 9.2 for those between 30 and 40, 12.3 for those between 40 and 50, and 13.8 for those between 50 and 60 years. More accidents occur in the summer months when the activity in certain occupations is greatest and when more men are at work; and Monday and Saturday are accountable for a heavier toll than the remaining week days. The large number of accidents occurring on Saturdays is doubtless caused by the strain of the week's work, while those of Monday are very likely the result of Sunday's jollification.

"The four classes of accidents, taken together, have almost doubled in frequency in the last 20 years, while those resulting in temporary injuries only, but exceeding 13 weeks in duration, have increased fivefold in the same period. The one striking exception is the constant reduction in the number of completely disabled and killed. This is very likely due to the care which the mutual associations of employers exercise in dealing with cases of serious injury.

"The operation of the law has, on the whole, been satisfactory to the German people. There has been much improvement in the efficiency of workmen, and employers have indirectly reaped returns for their compulsory outlay. It may be true, as is sometimes claimed, that the law has had some tendency to decrease the sense of personal responsibility on the part of workmen and to tempt them to secure compensation for the slightest injury; but they, on their part, have never been content with the arrangement that placed the adjustment of compensation in the first instance in the hands of the employers' associations. As a result of this dissatisfaction these adjustments are constantly challenged. Appeals from the awards of the associations of employers as well as those of the arbitration board are only too common, the more so because litigation is free."

It appears from this report that while compulsory insurance in Germany is generally satisfactory, that it is not free from objection and it is very far from perfect. A commission appointed by the English Government will make its report on the English law the last of this month. This will no doubt give us much valuable information upon that law. We are living in a progressive age and we must meet and solve this economic problem in accordance with the spirit of the age. More depends upon the employer and employee than on any other class. If they can in some way be brought closer together, as they were when the employer and employee worked side by side as friends and coworkers, the problem will be solved.

Rural Credits.

EXTENSION OF REMARKS
OF
HON. ROBERT J. BULKLEY,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. BULKLEY. Mr. Speaker, it is not without significance that, in the closing days of this session, after all hope of rural credits legislation at the present time had been abandoned, both Houses of Congress should pass, as amendments to the Agriculture appropriation bill, bills proposing to establish agricultural land-mortgage systems with Government aid. The two systems proposed differed materially, and the committee of conference between the two Houses saw fit to recommend the present abandonment of both plans and the establishment of a joint committee, representing the Senate and House, to investigate and report to Congress not later than January 1, 1916.

A brief review and analysis of the several steps which led to the present situation may now be worth while.

On Thursday evening, February 25, the Senate adopted, as an amendment to the Agriculture appropriation bill, the so-called McCumber amendment, which is identical with the Senate bill 6692, proposing to create in the Treasury Department a bureau of farm credits to loan on farm mortgages, at 5 per cent, an unlimited amount of Government funds, to be raised by the sale of United States 4½ per cent bonds at par. The amendment is short, and is here reproduced in full:

Be it enacted, etc., That there is hereby created in the Treasury Department a bureau to be known as the bureau of farm credits. Said bureau shall be presided over by an officer who shall be designated commisioner of farm credits. The Secretary of the Treasury shall provide for sufficient clerical force to perform the duties of said bureau.

SEC. 2. That there is hereby appropriated and set aside for the use of said bureau, in the manner hereinafter provided, the sum of $10,000,000, or so much thereof as may be necessary.

SEC. 3. That the said sum so provided shall be used for the purpose of purchasing notes secured by first mortgages on agricultural lands, as hereinafter provided for stationery and clerical expenses, and such other expenses as may be incident to the business of said bureau.

SEC. 4. That every national bank and every State bank desiring to avail itself of the privileges herein provided are hereby created and declared to be agencies of the Treasury Department for the purpose of receiving from mortgagors notes and mortgages securing same, advancing the moneys to the said mortgagors and transmitting said notes and mortgages to the bureau of farm credits, and receiving in return therefor the amount advanced to the mortgagor by the said bureau.

SEC. 5. That it shall be the duty of the Secretary of the Treasury to apportion the sum hereby appropriated among the several States according to the agricultural population, importance of the agricultural productions of each State, and percentage of agricultural lands encumbered by mortgages or trust deeds, and to pay for such notes and mortgages as may be presented to the extent of the amount apportioned to any State.

SEC. 6. That any owner of agricultural lands within the United States, who is living upon and farming such lands, desiring a loan under the provisions of this act, shall execute a promissory note due in 10 years, bearing interest at the rate of 5 per cent per annum, interest payable annually, which interest shall be evidenced by 10 coupon notes attached to said principal note, and which coupons shall also bear interest at the rate of 5 per cent per annum from the date of maturity until paid, payable annually. Said note shall also provide that the principal may be paid on any interest-paying day after the expiration of five years. Said note shall be secured by a first mortgage upon the lands so farmed by the owner, and executed and recorded in the manner provided by the laws of the State in which the land is situated for the execution and recording of mortgages on real estate. Such mortgage shall be accompanied by an application for loan, which application shall recite the purpose for which the loan is desired, the market value of the land, the value at which it was last assessed for taxation, the value and kind of buildings thereon, the number of acres under cultivation, the character and quality of the soil, the number of acres capable of being cultivated, and such other information as may be required by the rules of the said bureau. Said application shall have attached thereto or made as a part thereof an affidavit signed by the owner and at least two neighbors who are thoroughly acquainted with land values in the vicinity, stating the market value of such lands and the market value of the particular lands to be mortgaged. Said note, mortgage, and application shall also be accompanied by an abstract of title duly certified by an abstract company, the register of deeds, or other officer authorized by the laws of the State to make and certify abstracts of lands, which abstract shall show no other mortgages, judgments, delinquent taxes, or other liens of any character against the said lands, unless the purpose of the loan is to secure money to cancel such liens. Said owner shall then present to any national bank or State bank accepting the provisions of this act the said loan papers. The said abstract and papers shall be carefully examined by the president, cashier, or other officer of the bank for the purpose of ascertaining whether the title is perfect in the mortgagor, whether the land is affected by any liens, who shall certify the result of his examination of the abstract, and who shall further certify what in his opinion and judgment is the actual cash selling price of the land. And no mortgage shall be accepted for a greater amount than one-half of the value of such lands, including improvements; nor in any event to an amount exceeding one-half of the actual market value thereof. The said bank may charge the borrower for its services in examining papers and abstract and in forwarding the papers to the bureau of farm credits a sum not exceeding 1 per cent of the amount of the mortgage. No mortgage shall be less than $300 nor more than $10,000 to one person or company, and shall be in multiples of $100. The said notes and mortgages shall not be dated at the time they are executed and presented to the bank. The said bank shall forward all the said papers to the said bureau of farm credits, which bureau shall examine the abstract, note, mortgage, and application, and if said abstract shows the land to be clear or to have no liens of greater amount than the amount desired to be loaned, and all papers properly executed, it shall remit to the bank forwarding the papers the amount of the loan, and shall date the notes and mortgage the date on which the remittance is made, from which date interest shall begin to accrue; and all coupons shall be dated to correspond with the date affixed to the principal instrument; and said bureau shall return, with the remittance, the abstract of title. Upon receipt of the said abstract of title by the bank, said bank shall require the abstract to be continued up to date of payment by said bank to the borrower, and if said abstract after being continued shows the land clear, the bank shall indorse over to the borrower the remittance made by the bureau of farm credits. If there are any liens upon the land, the bank, out of the remittance, shall first pay and have canceled such liens and pay the balance to the borrower. The bank shall be held responsible for any negligence in the performance of its duties as agent of said bureau. The principal and all interest coupons shall be payable at the bank where and through which the loan is negotiated and remitted by said bank to said bureau.

SEC. 6. That whenever the bureau of farm credits shall have received such mortgages to the extent of $1,000,000 it shall issue bonds in the name of the United States, payable in 20 years and bearing 4½ per cent interest, payable annually, with the privilege and option of the said bureau to pay the principal at the expiration of 10 years. Said bonds shall be issued in denominations from $100 to $500 each, and the said commissioner of farm credits shall sell the said bonds for the face value thereof to any persons applying therefor, preference being given to those desiring small investments. Said bonds shall not be subject to taxation by the United States, a State, or municipality. All moneys received by the said commissioner in the sale of bonds and the principal and all interest paid on said mortgages shall be covered into the said fund of $10,000,000 and used in the payment of mortgages as they may be presented, the expenses of the bureau, the interest on bonds, and payment thereof at maturity.

SEC. 7. That all mortgages shall run to the commissioner of farm credits, and said commissioner shall have all the rights and authority of a mortgagee under the laws of the State wherein such mortgage is executed.

SEC. 8. That all taxes of every kind levied by a State or municipality which may become a lien prior to said mortgage shall be paid by the mortgagor at least 30 days prior to the time such lands could be sold for delinquent taxes. Upon his failure to do so, or to pay any other lien that may attach to said lands and become superior to said mortgage, the commissioner may pay the same and the mortgage shall stand as security for such sums so paid and interest thereon at 8 per cent per annum. And said mortgage shall further provide that in default of the payment of any interest or the payment of taxes, or other superior liens, as aforesaid, the commissioner may foreclose the premises pursuant to the laws of the State in which the land is situated. All papers necessary for the foreclosure proceedings shall be prepared and premises foreclosed by the proper law officer of the bureau. In lieu of foreclosure the commissioner may sell the mortgage to any person desiring to purchase the same, without recourse, and the money so received shall be covered into the said fund. Upon foreclosure, the said commissioner may transfer and assign the certificate of sale to any purchaser, and after the period of redemption has expired may sell the lands. And any sum received therefor shall in like manner be covered into said fund.

SEC. 9. That it is the purpose of this act not only to secure and facilitate borrowing upon agricultural lands at a reasonable rate of interest, but also to afford a means for those who desire a safe investment, and so long as the said bureau shall be able to dispose of bonds at par it shall accept mortgages presented to any extent above the $10,000,000 hereby appropriated.

SEC. 10. That said bonds shall be negotiable in form, and transferable by indorsement, and may be bought and sold by Federal reserve banks under the provisions of sections 13 and 14 of the Federal reserve act, approved December 23, 1913, and may also be received as collateral for the issue of Federal reserve notes under the provisions of section 16 of said act.

SEC. 11. That the word "mortgage" shall be construed to include deeds of trust or any other instruments of security on agricultural lands.

SEC. 12. That the Secretary of the Treasury shall make all needful rules and regulations to carry out the provisions of this act.

SEC. 13. That this act shall take effect from and after its passage and approval.

This bill proposes a very radical reform in an extremely crude manner. In parts it is so vague as to be hardly workable at all. For instance, section 1 provides for a "commissioner of farm credits," but does not tell how he shall be appointed nor what compensation he shall receive. Again, section 5 provides for the apportionment of the loanable fund among the States by the Secretary of the Treasury, not according to his discretion but according to a rule stated so vaguely as to be practically impossible of application. The bill contains two sections numbered 6, the second of which contains some very loose language concerning the application of "moneys received" by the farm-credit commissioner. It would appear to authorize the use of the proceeds of sales of United States bonds in the payment of mortgages. Such a meaning can not, of course, be intended. It is problematical how much trouble and loss might result from the vagueness and looseness of the whole bill, further examples of which I shall not now pause to show.

The proposition is open to more fundamental objections. For example, it altogether fails to make any provision for the payment of loans on the amortization plan. Amortization is perhaps not yet sufficiently understood in this country to be fully appreciated, yet its benefits to the American farmer will be as great as a substantial reduction in the interest rate. When loans are so made that they may be extinguished by small and easy installments, the whole principal sum never coming due,

the borrowing farmer will gain much in a feeling of security in the permanent possession of his farm, and will save much in renewal fees and commissions. The proposed plan, with no amortization feature, would bring no benefit whatever to some sections of the country which already enjoy an interest rate as low as 5 per cent.

The amendment adopted by the Senate provides no adequate safeguard against land speculation with the proceeds of the loans. There is, it is true, a requirement that the borrower in his application must state the purpose of the loan, but the proposed bureau of farm credits is required to make the loan, if the borrower has a clear title and offers a first lien, and there is no discretion in the bureau or elsewhere to reject the loan merely because the purpose of it may be improvident or speculative. Again, the loans are not adequately restricted to actual farmers living on their own land. The first few lines in the first section 6 seem to contemplate such a restriction, but later in the same section there is a reference to loans to a "company," which is, of course, inconsistent with the first restriction and inconsistent with the idea of home building. The importance of careful safeguards against speculation can hardly be overemphasized. If these safeguards are not adequate, the whole system will prove to be of advantage only to the owner of land, and will actually make it more difficult for the new settler and the tenant farmer to become independent owners of their own homes.

Another vital defect in the so-called McCumber amendment is that it requires every application for a loan to be made to a bank and passed upon by a bank. Banks and bankers do a very great service to the country, but if the farmer is to get real relief in the land-mortgage situation he must be placed in a position to borrow independently of the banks. There is no good reason for giving new privileges to banks, as this amendment does, frankly so stating at the beginning of section 4.

Brevity and simplicity are merits claimed for the McCumber bill. These merits are apparent rather than real. Obviously a land-mortgage credit system can not be established without the creation of a considerable amount of machinery which must be set up with some technical skill. The Senate amendment disposes of all questions of mechanical operation by leaving to the Secretary of the Treasury a very broad discretion. No one need doubt the capacity of the Secretary to set up a land-mortgage system, but many will believe it appropriate for the Congress to prescribe just what the system shall be and just how it shall work, rather than to leave too much to executive discretion.

The Senate amendment does not adequately safeguard the Government in the matter of appraisals, unless it be assumed that the general authority given to the Secretary of the Treasury would permit him to assume powers of appraisal which might be expensive to exercise and which might be inconsistent with the appraisal powers given elsewhere to the borrower's neighbors and the local bank.

But the most fatal defect in this ill-considered amendment is that provision requiring the Government to sell its 4½ per cent bonds at par. A United States bond bearing such a rate of interest is obviously worth much more than par on the market, yet no discretion as to price is allowed; the bonds must be sold at par, no more, no less. The effect on the national credit can easily be imagined; it would at once become impossible to borrow at a rate less than 4½ per cent. Surely no one who had given the matter so much as a second thought could seriously advocate this wanton blow at the national credit.

To sum up, then, the defects of the McCumber amendment: First, it is vague and very loosely drawn; second, it fails to provide for repayment of loans on the amortization plan; third, it contains no adequate safeguards against land speculation; fourth, it places the control of loans with the banks; fifth, it leaves to the Secretary of the Treasury too much power in prescribing the methods of operating the system; sixth, it does not properly safeguard the Government in the making of loans; and, seventh, its bond-sale provisions would be absolutely ruinous to the national credit.

So far, I have confined my criticism of the McCumber amendment to defects which are fairly obvious and which will no doubt be generally acknowledged. It is but fair to say, however, that none of these defects, with one exception, is fundamental; only one of them is necessarily incidental to a plan of direct loans from the Government to the farmer. There is, indeed, no very good evidence that such a plan could not be made to work successfully. It is unfortunate that the direct-loan idea did not come before Congress in well-considered form, free from obvious and unnecessary defects.

A full discussion of the question of direct Government loans would necessarily be very lengthy. For the present I shall only state the two fundamental difficulties which are inherent in such a plan, and which I for one do not know how to overcome. The first difficulty relates to the interest rate. A flat rate to all is manifestly unfair, as it calls upon the Government to absorb differences in conditions among its citizens to the great benefit of some and probably to the relative detriment of others. On the other hand, rates varying according to persons and localities must give rise to the possibility of political favoritism. Again, it is difficult to determine what rate represents the true value of the use of the money advanced, and the tendency would be to fix a rate below the true value. If that were done a subsidy and special privilege would be established, not a very vicious one in itself, but involving a moral principle which ought not to be sacrificed.

The other fundamental difficulty in the direct-loan plan is that of safeguarding the Government in appraisals and collections. In these respects the way is opened for frauds so insidious that it would be all but impossible to draw the line between liberality on the part of a Government appraiser or collector and actual fraud. And even without fraud, liberality might well be extended so as to be inordinately costly to the Government. All are familiar with the constant tendency toward greater liberality on the part of the Government in any matter in which its financial interests are opposed to those of a large part of its citizens.

Directly related to both of these great obstacles is the inevitable necessity that any direct Government loan system must be controlled, not by the borrowers, not by individuals under a competitive system, but by a bureaucracy.

The direct Government loan plan is in actual operation in a number of foreign countries, but there has been no experience sufficiently long to be entirely conclusive as to results under conditions similar to ours, with the possible exception of the New Zealand experience, and there is hardly sufficient first-hand information about New Zealand now available to justify using her system as a model.

The direct-loan plan is beset with dangers and difficulties and is not adequately justified by any foreign experience. It should not be adopted, then, unless it is absolutely necessary for the establishment of the amortization plan, the substantial reduction of excessive interest rates on farm mortgages, and the liberation of the farmer from financial exploitation. But these purposes can all be accomplished without these dangers and difficulties under a system controlled by the borrowing farmer himself. This is the system embodied in H. R. 16478, known as the Hollis-Bulkley bill, which is fully explained in the report of the House subcommittee on rural credits.

I have said that it was of some significance that the Senate should pass the McCumber amendment. We must not, however, overestimate the significance. It is current rumor that at the time this amendment was adopted the attendance in the Senate Chamber was very small. The amendment was subject to a point of order, and therefore must have failed if a single Senator had insisted on the point of order. The RECORD discloses the presence at the time of at least two Senators whose declared views on land-mortgage credits are absolutely inconsistent with the provisions of the amendment as adopted. As either of them could have prevented its adoption, it is not unfair to assume that both relied on very substantial changes being made by the committee of conference between the two Houses. We may even venture to suspect what was intended to be written into the bill, for the Senate Committee on Banking and Currency unanimously reported, on Saturday morning, February 27, S. 5542, the Hollis-Bulkley bill, with a number of amendments, most of them meritorious but unimportant, two of them fundamental and subversive of the whole plan of the original bill.

These two amendments are so important that they should be set out in full. The first was to strike out section 30 of the original Hollis-Bulkley bill, providing for the purchase of farm-loan bonds by the Government, the full text of which follows:

PURCHASE OF BONDS BY GOVERNMENT.

SEC. 30. That the Secretary of the Treasury shall, upon application of one or more of the Federal land banks herein established, and upon the recommendation of the Federal Reserve Board, purchase from Federal land banks farm-loan bonds not previously issued or sold, in an amount not to exceed $50,000,000 during any one year, and shall pay for the same out of any money in the Treasury not otherwise appropriated: *Provided*, That any land bank which may sell its bonds to the Secretary of the Treasury, as provided by this section, shall, by appropriate action of its board of directors, as consideration for the accommodation afforded by the Secretary of the Treasury, enter into an agreement that at any time, on 30 days' notice from the Secretary of the Treasury, said land bank will cease to make any investments whatever, and will devote all receipts from every source, except so much as may be necessary for the payment of maturing liabilities, to the redemption of its bonds so purchased and held by the Secretary of the Treasury. The enforcement of said agreement shall be at the discretion of the Secretary of the Treasury.

Whenever the Secretary of the Treasury shall have purchased any farm-loan bonds under the provisions of this section, he may hold the same until maturity or may sell such bonds, at his discretion.

The other important amendment was the insertion of a new section providing for the incorporation of private banking institutions to compete with the farmers' cooperative associations proposed by the original bill. The matter proposed to be inserted was as follows:

FEDERAL FARM-BOND BANKS.

SEC. 17. That associations to be known as Federal farm-bond banks for carrying on the business of lending on farm-mortgage security and issuing farm-loan bonds may be formed by any number of natural persons not less than five. They shall be organized subject to the requirements and under the conditions set forth in section 4 of this act, so far as the same may be applicable: *Provided*, That the board of directors of every Federal farm-bond bank shall consist of nine members, three of whom shall be appointed by the Federal farm-loan board for terms of three years each, and six of whom shall be chosen as herein provided for the election of directors of farm-loan associations. Every director of a Federal farm-bond bank shall have been for two years preceding his selection a bona fide resident of the farm-loan district in which such bank is situate.

Any director of a Federal farm-bond bank may be removed at any time by the Federal farm-loan board at its discretion.

In the business of lending on farm-mortgage security, said Federal farm-bond banks shall be limited to a single State, and shall be subject to all the restrictions and conditions imposed on national farm-loan associations by this act, so far as such restrictions and conditions are applicable: *Provided, however*, That borrowers from such banks shall not be required to become shareholders in said banks.

In the business of issuing farm-loan bonds said Federal farm-bond banks shall be subject to all the restrictions and conditions imposed on Federal land banks by this act, so far as such restrictions and conditions are applicable: *Provided, however*, That the Government of the United States shall not be authorized or required to purchase or subscribe for any of the capital stock of any such bank; and each shareholder of any such bank shall have the same voting privileges as holders of shares in national banking associations.

No Federal farm-bond bank shall be authorized to do business until capital stock to the amount of at least $250,000 has been subscribed and paid in cash.

Farm-loan bonds issued by such banks shall be so engraved as to be *readily distinguished* in form and color from farm-loan bonds issued under this act by Federal land banks.

Federal farm-bond banks shall be subject to the provisions of section 10 and section 25 of this act as to interest rates, but any such bank may, by majority vote of its directors, make loans at less than the normal rate.

The bill as thus amended is in substance the original Fletcher-Moss bill, as was stated with some satisfaction by the able gentleman from Indiana [Mr. Moss] on the floor of the House. The same gentleman also stated that, in his judgment, under the provisions of the bill as amended, the private banking institutions would do practically all of the business, and the farmers' cooperative institutions would do practically none. It is a bankers' system as distinguished from a farmers' cooperative system with Government aid.

Having already made one long speech on the subject of Government aid to agricultural land-mortgage credit, I shall not now discuss this question at length. However, in order to make my position entirely clear, it will be necessary to answer in some detail the argument against Government aid advanced by the gentleman from Indiana [Mr. Moss] on the floor of the House on January 2 last. The gentleman from Indiana has made himself the leader of the opposition to Government aid, and whatever is said by one so able and industrious as he deserves careful attention.

In two important respects the gentleman from Indiana seemed to misunderstand my position. He, like some others who oppose section 30 of the original Hollis-Bulkley bill, inveighs against subsidy and special privilege, and cites authorities to show that subsidy and special privilege are not justified under the circumstances. This is all a sham battle against a man of straw. Our opponents would do well to abandon it and address themselves to the task of showing what subsidy or special privilege is involved in section 30 of the original Hollis-Bulkley bill. Again, the gentleman from Indiana seemed to think I had stated that mortgage banking is impossible without Government aid. Of course, I did not say it, and it is not true. What I did say I will now repeat: "No system of long-time agricultural land mortgages for the benefit of the small borrower has ever been successful without Government aid." This the gentleman can not successfully contradict.

Having called attention to these rather material misconceptions of my position on this subject I proceed to reply to the argument of the gentleman from Indiana. He cites several authorities with the strong implication that they have all indorsed the position of the United States commission in proposing a bill without Government aid, though the language he quotes from them is in most of the cases equally consistent with the provisions of the original Hollis-Bulkley bill. Then he undertakes to show that Government aid in five European countries was given only as a result of feudalism, war, or other condition not existing in this country, and finally reaches the conclusion, which he bases on German experience, that "the vast volume of all rural-mortgage business is transacted by agencies operated without Government credit or Government cash." This is altogether unfounded in fact, as I shall presently show.

Let us consider first his authorities. Dr. Augsbin, of Berlin, is twice quoted, and following the second quotation the gentleman from Indiana says, "With these curt words this eminent authority dismissed the State-endowed institutions of Prussia and disposed of the contention" for Government aid. I do not believe that the curt words of any authority in Prussia, however eminent, can dispose of the contention of the American farmer, that he, no less than the other great interests of this country, shall have such Government aid as may be necessary to establish a system providing for his legitimate needs for credit. It happens, however, that there is nothing in what Dr. Augsbin said that is inconsistent with the Hollis-Bulkley bill. He said "the American farmer of to-day does not need any subsidy," and we agree with him. He said "what he needs is a cheaply acquired credit on long time and with the right of amortization," and we agree with him again. I do not know what, if any, bill now pending Dr. Augsbin might approve, but what he said is entirely consistent with the findings of the joint subcommittee.

The gentleman's next authority is President Wilson, from whom he quotes a sentence not inconsistent with the Hollis-Bulkley bill.

Mr. David Lubin is mentioned and highly praised by the gentleman from Indiana, and his opinion is entitled to consideration. It may be remembered that Mr. Lubin said of the Fletcher-Moss bill:

> I am sorry to say that the bill is disappointing to me. * * * I find it to be in substance a plan for mortgage banks by bankers, instead of being for cooperative mortgage associations operated by farmers and for farmers. * * * I believe it would tend to so standardize the farm-loan business as to lend itself readily to an understanding between the proposed banks for a general control of terms and interest rates to the exclusion of a voice in the matter by the farmer. In short, it seems to me that the bill would be likely to create an artificial barrier between the farmers and the lending public.

Yet, when this criticism was uttered, the gentleman from Indiana did not at once throw up his hands and yield to Mr. Lubin's view. He will therefore be indulgent with us if we venture to differ from Mr. Lubin on another point, though substantially agreeing with what he said about the Fletcher-Moss bill.

In the article of Mr. Jesse E. Pope, in a recent number of the Quarterly Journal of Economics, which was quoted by the gentleman from Indiana, there are some important errors which it is not worth while now to discuss in full. But it is worth while to say that the European authorities against State aid which were referred to by Mr. Pope were discussing the question of short-term personal credits and not at all long-term land-mortgage credits.

The gentleman from Indiana is entitled to whatever satisfaction he can extract from the executive bulletin of the governor of Alabama, chairman of a committee of 12 governors of States which was organized to prepare bills on rural credits to be submitted to State legislatures, but decided, after some effort, that it was impracticable to draft such bills. The Government-aid question was disposed of completely in 12 lines of mere assertion without reasoning and without authority.

Ambassador Herrick is cited as an authority against Government aid, and I have heretofore discussed my reasons for differing from his conclusion on this subject, as widely as the gentleman from Indiana and I would both differ from him on the protective tariff or on the ship subsidy question. Whatever may be Mr. Herrick's conclusions, his scholarship and industry have made it apparent to us that Government aid has been used to establish every successful agricultural long-time mortgage system which ever did anything for the small borrower.

The other authority cited is the Secretary of Agriculture. The Secretary does not, either in his annual report or in his letter of January 2 to the gentleman from Indiana, state whether he is for or against such a plan of Government investment in agricultural-land securities as is proposed in the Hollis-Bulkley bill. The gentleman from Indiana, however, says that the Secretary is against us on this point, and it seems likely that this is true, as the Secretary has taken pains to quote passages from Ambassador Herrick's book, "Rural Credits," which are opposed to State aid to agricultural credit. These quotations, which were printed in the RECORD of January 2, with the speech of the gentleman from Indiana, are five in number, and concerning them an interesting fact is worthy of note. Ambassador Herrick's work is in two parts: "Part I, Land Credit," "Part II, Cooperative Credit." Part I is concerned with the same subject matter as the Fletcher-Moss and Hollis-Bulkley bills. Part II is concerned with cooperative short-term credit not based on mortgages, an entirely different matter. Of the Secretary's five quotations from Herrick, four are from Part II and relate to personal short-term credit, concerning which it is cheerfully conceded that there is not the same fundamental

reason for Government aid that I have shown to exist in the case of land-mortgage credit. It is quite likely that the experience of the world may tell a different story about short-term credit from that which it teaches on land mortgages; without more exhaustive study than I have had an opportunity to give to personal credits, I am not prepared to say. It is interesting now to note to what extent Secretary Houston's opinion is based on a misapprehension of what Ambassador Herrick was talking about in the passages quoted. The one passage quoted from Herrick which was written on the subject of land-mortgage credit is unquestionably in line with the position taken by the gentleman from Indiana and would be worthy of serious consideration were it not so abundantly contradicted by other passages from the same work, to which I have already referred in my speech of last December.

The gentleman from Indiana advances the erroneous notion that in other countries Government aid to agricultural credit has been extended only for the purpose of establishing ex-serfs as independent farmers, emancipating agricultural labor from the feudal system, or rehabilitating agriculture immediately following the devastation of war. This idea also pervades Secretary Houston's discussion of the subject. My friend from Indiana has taken some trouble to show that Government aid given to agriculture by five European countries was more or less directly the result of one of the extraordinary causes which I have mentioned. In my speech on this subject I discussed State aid in 22 different countries, and from these the gentleman from Indiana has selected 5 in his attempt to show that State aid has been given only under the circumstances mentioned. He is wrong about all 5.

The Russian Government, it is true, made direct loans on agricultural lands in order to help establish the economic independence of ex-serfs. But the serfs have been free in Russia for more than 50 years, and the Government still makes direct loans to farmers. It is promoting the colonization of Siberia by Government aid—a problem in many respects similar to our settling of the West. It is, of course, cheerfully conceded that Russian conditions are in many respects very different from our own, and so also are the character and extent of Government aid proposed by our bill very different from the Government aid given by Russia.

As to Hungary, the gentleman has been at great pains to describe the distressing financial and agricultural conditions resulting from the war of 1848–49, which preceded State endowment of the Hungarian Land Mortgage Institute in 1863, but omits to tell us of any war, devastation, or emancipation from slavery or feudalism which occurred in 1911, when the State endowed the National Federation of Land Credit Institutions.

Of course it is not contended that slavery or feudalism existed in France in 1852 when the crédit foncier was endowed by the Government, but the gentleman from Indiana paints a dark picture of economic conditions existing at that time. However this may be, it will not be questioned that France was one of the richest nations on the face of the earth in 1906, at which time it inaugurated a policy of Government aid to agriculture much more direct than that afforded by the law of 1852. How is it possible to contend that this law has anything to do with recovery from war or emancipation from bondage other than the bondage of the money lender?

As to the activities of the British Government in land-mortgage credit, the gentleman from Indiana took pains to explain that conditions in Ireland are very different from our own conditions, but entirely avoided reference to the great Government-aid laws enacted for England and Wales in 1908 and for Scotland in 1911. But, of course, it was necessary for him to make very careful selections in order to maintain his precarious position. And even in Ireland he does not allege that war, feudalism, or serfdom existed when the estates commission was established in 1903, but only that Irish tenants working their lands have had to pay too much to their English landlords. That which the producer must pay to the non-producer is to some extent a handicap, whether it goes by the name of rent or of interest on the investment or by any other name. We have conditions in our own agriculture which should be improved, even though they be not so bad as the conditions in downtrodden Ireland.

A novel argument is advanced by the gentleman from Indiana to show that the landschaften of Germany have had no State aid. While admitting that special privileges and financial endowment were granted to the first landschaft organizations, the gentleman from Indiana contends that inasmuch as Napoleon probably robbed the institutions of an amount in excess of their original endowment, they have practically existed without financial help from the Government. In other words, he contends that an act which happened about 35 years after the establishment of the first institution may somehow be related back to establish the theory that the institutions at their inception could have succeeded without State aid. At least we must admire the ingenuity of this contention. The wretched state of war-torn Prussia at the time of the establishment of the first landschaft organizations and the troubles arising from the Napoleonic wars are alleged to have been the imperative reasons necessitating Government aid to the early landschaften. But what shall be said of the Bavarian Agricultural Institute, the latest and one of the largest of the landschaft organizations, which was created and endowed by the Bavarian Government in 1896?

I turn now to the gentleman's further discussion of rural credit conditions in Germany, and especially to his extraordinary statements that the landschaften were established without grants of Government capital or credit, and that State-endowed banks only hold 5 per cent of the agricultural mortgages in Germany.

In support of this last statement the gentleman presents the following estimates of the amounts loaned by the several classes of institutions on agricultural mortgages in Germany, and I do not question the substantial accuracy of the table:

Savings banks	$850,000,000
Landschaft associations	750,000,000
Joint-stock banks	170,000,000
State and provincial banks	100,000,000

(See Economic Quarterly for August.)

This shows that he regards the State and provincial banks as the only ones which have had State aid.

In discussing Government aid to the landschaften, I have endeavored to make my remarks fair and conservative. In my recent speech I stated of the landschaften that "they exist practically without Government aid to-day," and that "most of their strength has come from cooperation and not from Government aid," but to this I added that "it is important to note that Government aid established that first confidence which is so absolutely essential to a new financial enterprise." This last sentence is the milk in the coconut. The whole point of the argument for Government aid is that it is necessary in order to create public confidence in a new financial enterprise which would otherwise be of slow growth, such confidence being absolutely essential in order to secure a market for land-mortgage debentures running for a long enough time and at a low enough rate of interest to make possible the granting of loans to farmers on favorable terms. When an institution of this character is once firmly established it may indeed be possible to withdraw all Government support. But this no more proves that the institution could have been started without Government support than the ability of a boy of 18 to earn his own living would prove that he needed no parental support during his first year of life.

Let it be reiterated, then, that the earliest German landschaften were given Government grants, as stated by all authorities, and especially by Cahill, on page 42 of his "Report on Agricultural Credit and Cooperation in Germany," a passage which the gentleman from Indiana himself quotes, though it utterly disproves his contention that these land banks were established without Government capital or credit. It is also true of the early landschaften that they were not established by private initiative at all, but were created by the royal decree of Frederick the Great. And in order to establish beyond question the necessary public confidence in them they were given a much more extreme form of Government aid than the grant of a moderate amount of Government capital or credit—the lands of all manorial owners within a Province being made security for their debentures by royal decree, regardless of whether the owners were borrowers or not, and regardless of whether they wished to go on the security or not.

These being the undisputed facts established by abundant authority, it is remarkable that anyone should contend that the early landschaft associations were established without Government aid. Yet in order to support his contention that only 5 per cent of the agricultural loans in Germany are held by State-aided institutions, the gentleman from Indiana counts all the landschaft associations, early and late, as being non-State aided institutions. But even if, by tortuous reasoning, we could in anyway delude ourselves about the early landschaften, the evidence about the latest one to be established is incontrovertible. I refer to the Bavarian Agricultural Bank at Munich, which was established in 1896, "practically founded and capitalized by the State," as Cahill says on page 41 of his work already referred to. This bank has already become one of the largest and most important of the landschaft associations. The statement of the president of the Bavarian Council of Agriculture that this bank is endowed with State funds appears on page 268 of the printed report of the United States commission of which the gentleman from Indiana was a member.

He is equally mistaken in supposing that the German savings banks have no State aid. Cahill says of these institutions, on page 75, that—

> They have been established usually by and under a guarantee of public authorities, and in normal cases do not aim at profits beyond the obtaining of an adequate interest on the money deposited with them and the payment of the expense of management.

At page 76 he says:

> The great majority of savings banks are commercial, district, or urban, and are public institutions established, supervised, or managed and guaranteed by these governmental units, apart from which they do not possess a separate legal status.

Figures which may be found on page 77 of Cahill's report shows that about 90 per cent of the German savings banks are public institutions.

It is not even true that the so-called joint-stock banks have grown up entirely without State aid. Out of the $170,000,000 of agricultural loans held by these institutions more than $50,000,000 is held by the Prussian Central Land Credit Joint Stock Co. In the founding of this institution the Prussian State Bank subscribed to the original capital, as stated by Cahill on page 72. Herrick, on page 108, says that this joint-stock bank—

> Was the outcome of the efforts of Prince Bismarck to create a national mortgage institution for the great Empire that he was forming. * * * The Government bank of Prussia bought a large block of stock, so as to give the new concern prestige and aid its first ventures.

The only other joint-stock bank which lends largely on agricultural mortgages is the Bavarian Mortgage & Exchange Bank of Munich, of which Herrick says, at page 108:

> The King and Queen of Bavaria and high state officials were charter members when it was founded in 1835.

This bank holds $55,000,000 of agricultural mortgages. It will therefore be noted that these two banks hold nearly two-thirds of all the agricultural mortgages held by joint-stock banks.

Cahill tells us on page 65 that the proportion of business done by the joint-stock banks on agricultural loans is small, only about 6 per cent of their business, having sunk from about 10 per cent in 1897. He continues:

> Some banks do not grant loans on such security, and others do so only in exceptional cases.

From the point of view of agricultural land credit, Herrick regards these banks as a failure. He says, at page 107:

> The lack of success of the German land banks, as regards farm loans, has been attributed to various causes, but the trouble seems to be that only a few of them have the necessary size and standing to enable them to sell bonds which have no fixed time for maturity, and, in consequence of their inability to raise money by such investments, they are not in position to grant long-term reducible loans of the kind needed by agriculture. The proof of this lies in the fact that the two big banks which have gained the confidence of the investing public do a large farm-mortgage business.

These two are, of course, the banks I have just referred to which have had public support of the character I have stated. It would seem that this experience ought to teach a lesson to the gentleman from Indiana and others who advocate putting our agricultural mortgage credit in the hands of private institutions. The lesson is that only large institutions can succeed. Large ones can be easily financed by big financial interests if the proposition is made sufficiently attractive, but can not be financed by the farmers who need the help. It thus appears on the statement of acknowledged authorities that about 90 per cent of the agricultural land mortgage business in Germany is done by State-aided institutions, instead of 5 per cent, as the gentleman from Indiana seems to think. If he holds such erroneous conceptions as to material facts, we must not be surprised if he comes to wrong conclusions.

I do not attach particular significance to the fact that as much as 90 per cent of the agricultural loans have been made by State-aided institutions; a much smaller proportion would have been entirely sufficient to act as a leaven for the whole situation. Government-aided banks, doing a much smaller proportion of the total business, might well set such an example as to be of material benefit to the farmer with respect to all his borrowings. I believe this would be true under the operation of such a law as the subcommittee has proposed, and it would not seem to me at all necessary that the proposed public-aided institutions should crowd all other lenders entirely out of business in order to prove their success in aiding the farmer. In support of this view, let me cite the statement prepared by the royal Hungarian department of agriculture for the American and United States commissions, printed in their report beginning at page 121:

> There is no denying the fact that by virtue of their moral weight and the guiding influence they manifestly exercise, the two land-mortgage institutions occupy the foremost place among the institutes engaged in advancing mortgage loans, though in the amount of such loans they are surpassed by the joint-stock banks and savings banks.

The two land-mortgage institutions referred to are the Hungarian Land Mortgage Institute and the National Small Holdings Land Mortgage Institute, both of which received substantial contributions from the Hungarian national treasury.

So much for a general discussion of the question of Government aid. The fact is that no substantial affirmative reason has yet been advanced for striking section 30 out of the Hollis-Bulkley bill. It is contended that the section is unnecessary; but, even if that be true, it can do no harm, as it is worded so that it could operate only in case of need. And if there be any wrong principle in Government aid the Senate Committee on Banking and Currency went wrong when it reported out the new Hollis bill, retaining from the original Hollis-Bulkley bill the provisions for exemption from taxation investments of postal-savings funds and Government subscription to land-bank stock. Whatever of principle there may be in opposition to Government aid is thus sacrificed, and the only real insistence seems to be that Government aid must not be allowed to be effective. The excision of original section 30 went hand in hand with the addition of new section 17, providing for the incorporation of great capitalistic banks under private ownership and control. The prospectus of such an institution, already in print, suggests annual dividends in the neighborhood of 15 per cent, and it is proposed in the new Hollis bill that the securities of these institutions shall be tax-exempt.

The remainder of the narrative can be quickly told. On Saturday afternoon, February 27, the gentleman from South Carolina [Mr. LEVER], the chairman of the Committee on Agriculture, asked unanimous consent that the House disagree to all of the Senate amendments to the Agriculture appropriation bill, nearly 100 in number, including the McCumber amendment. Objection was made, and the gentleman from South Carolina then sought to accomplish the same result by moving to suspend the rules. But the House refused to take such action without having an opportunity to vote on the rural credits question. This made it necessary for the Committee on Agriculture to consider all of the Senate amendments.

On Monday, March 1, that committee reported to the House its recommendation that the House concur in the McCumber amendment with an amendment, substituting for the McCumber amendment the new Hollis bill as reported by the Senate Committee on Banking and Currency. Amendments to this proposition, which I offered on the floor, to reinsert section 30 of the original Hollis-Bulkley bill and to strike out the new section 17, providing for the private banks, were adopted by substantial majorities, approximately 3 to 1. And so the House went on record strongly in favor of cooperation and Government aid. The amendment which passed the House was substantially the original Hollis-Bulkley bill. There were some improvements over the original bill, the most important being an amendment to place the control of the land-mortgage system in the hands of a farm-loan board instead of the Federal Reserve Board as originally provided.

In order to make the amendment passed by the House conveniently accessible, I introduced it verbatim, as a new bill, on March 2. It is H. R. 21603.

The bill went to conference, and the conferees, so far as rural credits are concerned, adopted the traditional method of dodging a difficult question—they provided for a commission to investigate. The investigating committee is to be made up of six Senators and six Members of the House, appointed, not by the Vice President and Speaker, as is usual in such cases, but by the chairmen of the House and Senate Committees on Agriculture and on Banking and Currency. It will be remembered that of the four chairmen charged with selecting members of the committee two are chairmen of committees which have already unanimously reported the new Hollis bill, with Government aid eliminated. As each chairman was required to select two additional members from his own committee, it follows that there must be six members of the new investigating committee who, presumably, have voted to report the new Hollis bill. As all meetings of the House Committee on Banking and Currency are open, I violate no confidence in saying that the three members of that committee who are to serve on the new investigating committee have consistently opposed any action on rural credits ever since the original Hollis-Bulkley bill was reported from the subcommittee, and may be counted on to oppose Government aid. In addition to these nine, one of the remaining three was a member of the United States commission which reported the Fletcher-Moss bill. Only one man who has shown an unflinching adherence to Government aid has been offered a place on the investigating committee. The friends of Government aid, therefore, must not expect too much from the coming investigation. However, it may be too early to form judgments.

The Unemployed.

EXTENSION OF REMARKS
OF
HON. H. ROBERT FOWLER,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. FOWLER. Mr. Speaker, as I have been one of the leaders in the fight for efficiency in our Navy and seacoast defense, and have had the pleasure of witnessing a forward movement in this direction during the closing days of Congress, I have also been anxious to lead the fight for relief to the unemployed before my term of office expired. Several weeks ago I introduced a bill for this purpose, which proposes an amendment to the law creating the Department of Labor by the addition of a new section thereto, to be known as section 12. I have repeatedly urged the chairman of the Committee on Labor to call a meeting of his committee for the consideration of this bill, but so far he has not done so, and I presume he will not do so now, as the days of this Congress are about numbered. I am much disappointed at this turn of affairs, and regret very much that I have not been given an opportunity to bring this question before Congress for final action before adjournment.

The terms of my bill, Mr. Speaker, provide for a new bureau in the Department of Labor, to be known as the bureau of the unemployed, to be presided over by a commissioner, assisted by a deputy commissioner. The bureau has the power to take the census of the unemployed as often as may be necessary; to keep a record of the unemployed; to make and keep a record of the commercial and industrial conditions affecting the unemployed; to furnish full information of business places where employment can be had, and to facilitate the movement of the unemployed to such places; to make investigations as to the extent of enforced idleness and the cause of the same, and to suggest remedies for relief; and to make reports to Congress and the President on the 1st day of December of each year and oftener if deemed necessary.

"A bill (H. R. 21331) to amend an act entitled 'An act to create a Department of Labor' by providing for a bureau of the unemployed.

"*Be it enacted, etc.*, That an act entitled 'An act to create a Department of Labor,' approved March 4, 1913, be, and the same is hereby, amended by adding the following section:

"'SEC. 12. That there shall be in the Department of Labor a bureau to be called the bureau of the unemployed, and a commissioner of the unemployed who shall be the head of the said bureau, to be appointed by the President, who shall receive a salary of $6,000 per annum. There shall also be in said bureau a deputy commissioner who shall receive a salary of $4,000 per annum, and who shall, in the absence of the commissioner, act as and perform the duties of the commissioner of the unemployed, and who shall also perform such other duties as may be assigned to him by the Secretary of Labor or by the said commissioner.

"'The said commissioner shall have power and authority under the direction of the Secretary of Labor—

"'(a) To take a census at as frequent intervals as possible, not less than once per month, of the unemployed in the United States.

"'(b) To make and keep a classified enrollment of the unemployed by avocations.

"'(c) To correct and keep full records of the industrial and commercial conditions throughout the United States, especially in relation to opportunities for the employment of labor.

"'(d) To furnish the fullest possible information to the unemployed of opportunities for employment in any part of the United States and to devise plans for facilitating the movement of the unemployed to places where opportunity for employment exists.

"'(e) To make investigations and report to Congress and the President annually on the 1st of December and oftener, if requested, the extent of enforced idleness and unemployment in the United States and the causes thereof, with suggestions for remedies for the same.'"

Mr. Speaker, if this bill were enacted into law, the Department of Labor would have full authority over this whole subject matter, and, undoubtedly, would be able to furnish employment to thousands of idle men who are anxious to work. Every man is entitled to an opportunity to work, and when deprived of this right he has a right to know the cause and to demand its removal.

Surrounded, as we are, by nature's handbook of evidence, we must conclude that the divine plan of our heavenly Master in creating the earth was to warm it with a sun and water it with the dews from heaven, so that it might be productive and suitable for the home of intelligence, and then to populate it with a people upon a plane of equality, enjoining upon all alike the necessity of laboring to supply themselves with food, raiment, and shelter. Whatever agency is set in motion which deprives men of this divine right to supply themselves and their families with these three great and overshadowing necessaries of life is an evil; yea, more, it is a sin. If the state has so administered the affairs of government as to deprive the citizen of the opportunity to work, it is the duty of the state to restore this opportunity, and this is the object of my bill, Mr. Speaker. There are many causes which have brought about enforced idleness in the country, and it is the duty of the Government to discover them and remove them as fast as possible.

That there are idle men in the country no one can deny. Mayor Mitchel, of New York, gave out a report in the second week of February, 1915, that there were 400,000 idle men in the city of New York; and about the same time the Chicago Tribune claimed that there were about 200,000 unemployed in the city of Chicago. In his Indianapolis speech, the President referred, with a marked degree of pride, to the noble work of the Department of Labor in securing employment for idle men. During the winter of 1907 and 1908 the country was full of idle men. There were more business failures during that year than has occurred in any one year either before or since that time. Millions of unemployed people suffered for the want of the necessaries of life, many of whom died of starvation.

In a rich country like ours this should not be the case, Mr. Speaker. Approximately we have a hundred and fifty billion dollars of wealth. We have more than 800,000,000 acres of productive soil, more than 400,000,000 acres of which are unimproved. Here is a vast opportunity for employment, if the lands were properly distributed. We have more than 3,000,000 miles of public roads in the United States, with less than 10 per cent of them improved. Again, Mr. Speaker, here is room for all of the idle men in America, and I see no good reason why the strong arm of the Government should not be extended in this direction to furnish work for all who are out of jobs.

Mr. Speaker, we need trained soldiers, and several hundred thousand men could be employed on Government works, devoting a portion of their time each day to military drill and a portion to labor for the Government. Every soldier in Cæsar's army was a skilled artisan, able to make and repair all the sinews of war. This is what made his army so invulnerable. We pay out annually more than $250,000,000 on account of our Army, Navy, and coast defense. We need manufacturing plants for the production of armor and armament. This would afford an opportunity for labor and for military drill, which would create a large reserve force for emergencies. Mr. Speaker, if the President should issue a call for half a million men to work on public roads and Government works, with the privilege of devoting a portion of their time to military drill, I have no doubt but what twice that number would respond readily, and within less than two weeks thereafter, our industrial and commercial masters would be advertising for men at increased wages in order to supply themselves with labor. It is well known that the business of our country is now and has been for many years conducted by a few rich corporate magnates, who assume that it is their privilege to open up or close down business concerns at will, thereby entailing upon the country enforced idleness and extreme want. The divine right to labor demands that the strong arm of the Government should be used to relieve the people from this dreadful condition. This must be done sooner or later, for it is well known that enforced idleness brings on want and misery, and to relieve this condition men are often forced to commit crimes, which have often resulted in revolution. One is raging in Mexico now.

Mr. Speaker, since introducing my bill I have been interrogated as to the method of securing means to pay for labor on public roads and public work. Congressman LOFT, of New York, has a bill now pending before the Committee on Labor, which, if enacted into law, will furnish all the means necessary for this purpose.

"A bill (H. R. 21332) to provide for the unemployed, strengthen the national defense, and for other purposes.

"*Be it enacted, etc.*, That the President be, and he is hereby, authorized and directed to take an immediate census and enrollment of all unemployed persons in the United States between

the ages of 16 and 65, all expedition to be used in making such enrollment, employing as fully as possible the forces of the Department of Labor, the Post Office Department, the Census Bureau, and other departments of the Federal Government and such additional employees in those departments as may be needed. The President shall also invite the State and municipal governments to aid in making such census and enrollment as complete and speedily as possible.

"SEC. 2. That at the completion of said census and enrollment of unemployed persons, and earlier if possible, the President is hereby authorized and empowered to enlist such unemployed persons volunteering for such employment for labor on public works of the United States at the prevailing rate of wages. The President is also authorized to cooperate with the various State and municipal governments in facilitating employment on local public works.

"SEC. 3. That the President is hereby authorized to select from among the said enrolled and enlisted persons all able-bodied male citizens of the United States and all able-bodied males who have declared their intention to become citizens of the United States between the ages of 18 and 35 and detail them for training in military service for four hours each day, the remaining four hours each day to be employed on public works of the United States as laborers and mechanics; such employment and training to be as near as possible to the place of residence of those with families or dependents to support. All enlistments and details under this act to be voluntary.

"SEC. 4. That the term of service under enlistment and detail as provided in sections 2 and 3 of this act shall be four months, any extension of said time of enlistment to be by voluntary agreement between the Government and the person so enlisting. All able-bodied male persons between the ages of 18 and 35 enlisted and detailed for part-time military training under this act shall, after their discharge or termination of service, be maintained on the rolls of the Government as a special military reserve force, without pay, until they have reached the age of 40 years, and during such period be subject to call for home service in the national defense in time of war and shall report to the Government for two weeks' military training each year.

"SEC. 5. That the pay of persons so enrolled and enlisted by the United States Government shall begin at one-half regular rates on the day of enlistment and at full rates on the day they are assigned to work. No one shall be eligible for employment through enlistment under this act unless he shall have continuously resided in the United States for at least one year. The sale of Panama bonds already authorized shall be used to defray the expenses of this act so far as may be required."

A large portion of the cost of building the Panama Canal has been paid out of the Treasury, whereas the original plan was to sell Panama Canal bonds for this purpose. We could very well afford now to sell some of these bonds in order to relieve the unemployed. We must have better roads in America, and the Nation must help build them. We must have a military reserve to meet emergencies, and the Nation must devise means to defray the expenses thereof. We must have relief from the oppressive trusts, and the Nation must enforce the law in order to restore normal conditions. If our commercial masters have so conducted the business of the country as to disturb its equilibrium, then the Government must either bring them to justice by enforcing the laws or it will be compelled to take over the business of the country and operate it. Government aid in the construction of good roads is clearly within the provisions of the Constitution, and the production of military and naval supplies by the Government is just as clearly within its provisions. A strong effort has been made by Members of this and the Sixty-second Congress to pass laws for this purpose. The House has passed a bill twice for national aid for good-road building, but neither of them passed the Senate.

Samuel Gompers, in the January issue of the American Federationist, in commenting upon the proceedings of the convention of the American Federation of Labor, held at Philadelphia, said:

> Unemployment is a serious matter as long as a single man or woman wants work and can not get it.

Further on he says that the Philadelphia convention refused to indorse a resolution for bureau employment agencies. This indicates that labor organizations are demanding something much more substantial than employment bureaus. We need a well-thought-out plan for permanent employment, so that the poor and helpless may escape the hardships of business depression. As long as business men hold that a moderate fortune is three-quarters of a billion dollars, as was done by Senator LIPPITT in the hearings before the Ways and Means Committee in 1909, and refuse to operate their plants unless the incomes will produce such "moderate" fortunes, the employment of labor will always be uncertain; and unless business masters change their views upon this subject, we will either be compelled to submit to the present inhuman system of employment or resort to Government regulation and control. Indeed, many writers upon this subject have advanced the doctrine of Government ownership as the only solution of this vexed question. But my confidence in the ability of American statesmanship has always led me to believe that it is sufficient to meet and solve all questions of social and economic concern according to the fundamental principles of this Republic as laid down by our forefathers, and I trust that the question of the unemployed will not be the cause of a departure from any of the basic principles of our Government.

Yet, while we cherish this fond hope, we must not forget that as time passes our population grows more dense, and the opportunity to secure homes grows more difficult. If we should fail to take time by the forelock and make the bed of labor as easy as the bed of capital, and permit the disease of enforced idleness to grow until it spreads to the four corners of our country, pouring out its wail of hunger and a cry for bread throughout the land, who knows but what we will be compelled to resort to drastic measures. It will then require a large military force to subdue the unemployed and hold them in proper check to prevent revolution, or the Government will be compelled either to regulate business so as to give steady employment or take over the business of the country and operate it for the purpose of giving employment to the hungry in order to prevent revolution. Mr. Speaker, I seek by the terms of my bill to avert just such a condition, and if it were enacted into law, along with Congressman LOFT'S bill, I feel sure that it would be the beginning of the proper solution of this question.

"The North Pole Aftermath"—Reply to Some Criticisms in the North Pole Controversy.

EXTENSION OF REMARKS

OF

HON. HENRY T. HELGESEN,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. HELGESEN. Mr. Speaker, the gentleman from Ohio [Mr. FESS] says, "American history must not be perverted"; and adds that he speaks not only as a Member of Congress, but in the spirit of an educator—a college president, a teacher of history, and as a citizen jealous that there shall be no perversion of our American history.

It is true that the gentleman from Ohio does at present hold the position of president of an institution of learning called Antioch College, located somewhere in his native State. In this connection, Mr. Speaker, I will quote, as some of my distinguished colleagues have already quoted, from recent letters written by the educators of other institutions of learning, not so obscure and possibly of as high rank as Antioch College, of which the gentleman from Ohio is president.

President Emeritus Charles W. Eliot, of Harvard University, universally recognized as one of the leading, if not the leading, educator of the world, in a letter dated December 29, 1913, said:

> CAMBRIDGE, MASS., *December 29, 1913.*
>
> DEAR SIR: Your letter of December 26 has just reached me.
>
> By national authority you probably mean authority of the United States Government. I am not aware of any statement that the Government has made that Robert E. Peary is the discoverer of the North Pole unless it be contained, incidentally, in the act which promoted him in the Navy.
>
> Very truly, yours, CHARLES W. ELIOT.

The gentleman from Ohio also refers to the verdict of some of the newspapers at a time when the campaign of calumny against Dr. Cook was at its height. I shall speak on that point at greater length later, but just now I would call the gentleman's attention to the following letter from a man whose position as district superintendent of schools in the State of Vermont renders his opinion worthy of consideration:

> READSBORO, VT., *January 26, 1914.*
>
> DEAR SIR: Replying to your letter of recent date, I will say that I regard Cook rather than Peary to be the real discoverer of the North Pole. I base my opinion on the fact that the most reliable newspapers at the time of the much-heated controversy unreservedly championed Cook as being the first to reach the pole.
>
> F. E. SAWYER,
> *District Superintendent of Schools, Readsboro, Vt.*

Prof. R. D. Salisbury, of the University of Chicago—with which the gentleman from Ohio was at one time connected—wrote, on February 13, 1914:

I do not think that there was ever a "national indorsement" of Mr. Peary's discovery of the North Pole in the sense you mean. It follows that I can not refer you to any official document showing that Mr. Peary had "national indorsement."

R. D. SALISBURY.

In an article printed by the New Yorker Zeitung August 9, 1913, taken from the Berliner Tageblatt, Prof. Otto Baschin, president of the Geographic Institute of the Berlin University, said:

It is unbelievable that anyone who is willing to study the facts can doubt Dr. Cook.

The gentleman from Ohio is proud of the fact that he was the author of the amendment creating the department of State superintendent of public instruction in Ohio.

I have before me a letter signed by the deputy superintendent of public instruction, Columbus, Ohio, written on January 24, 1914, from which I shall quote:

Permit me to say that it is my firm conviction that Dr. Cook was as near the North Pole as was Peary. I do not like the attitude of Peary in all of this matter. The National Geographic Magazine seems to accept the statements of Peary. Nevertheless, this does not change my views at all in regard to the discoveries made by Dr. Cook.

CHARLES C. MILLER.

The writer of the above letter also signed a special memorial, addressed to the Congress, asking for a congressional investigation into the merits of the polar controversy.

On February 8, 1915, the distinguished Member from Kentucky [Mr. FIELDS] included in his remarks a letter from which I quote, signed by Dr. G. Frederick Wright, of Oberlin College, Ohio, president of the Ohio State Archæological and Historical Society, and author of the "Ice Age of America." Dr. Wright explored the Muir Glacier in Alaska in 1886, and was a member of the Arctic expedition in the steamship *Miranda* in 1894, to study glacial formations in the far north. The degree of D. D. was conferred on him by Brown University in 1887 and L. L. D. by Drury in the same year. His letter from which I quote is dated December 28, 1914:

DEAR SIR: In reply to your letter of the 25th instant I would say that in the summer of 1894 I accompanied Dr. Frederick A. Cook to Greenland in the ill-fated *Miranda*, and had abundant occasion to observe his straightforward and honest character and his great resourcefulness in times of peril. When our ship was injured upon the rocks the courage and skill which he showed in venturing 100 miles northward along the rugged coast of Greenland in a small boat to get relief, prepared me for believing that he could accomplish any daring enterprise that was within reach of human effort. In an interview which I had with Admiral Schley a year or two before his death he expressed to me his perfect confidence in Dr. Cook's honesty and ability to make observations, since he knew that Dr. Cook took great pains to perfect himself in handling instruments before his last Arctic tour.

Trusting that the truth in this whole matter may come out, I am,

Very truly, yours,

G. FREDERICK WRIGHT.

Again I quote from a letter written by Rev. William F. Rigge, astronomer of Creighton University, Omaha, Nebr., dated August 11, 1914.

Father Rigge was a college professor in Chicago from 1884 to 1887; in St. Louis from 1891 to 1895; and from September, 1895, to July, 1896, he was connected with the Georgetown College Observatory, engaged in scientific research. His principal work consisted of the photographic determination of the variation of latitude. Since September, 1896, he has been instructor in astronomy, mathematics, and physics at Creighton University, which is probably the best equipped students' observatory in the United States. He is a contributor to "Astronomische Nachrichten," Astrophysical Journal, the Astronomical Journal, Popular Astronomy, Scientific American, Benziger's Magazine, Familienfreund, Regensburger Marien Kalender, and many other publications, including the Omaha Bee and the Omaha World-Herald, from which the gentleman from Ohio makes a quotation. Father Rigge is a member of the Royal Astronomical Society of the Academy of Science, St. Louis, Mo., and a Fellow of the Royal Astronomical Society of England. Altogether he ranks quite as high in the scientific and educational world as does the gentleman from Ohio. His letter to Senator O'GORMAN reads:

OMAHA, NEBR., *August 11, 1914.*

Senator O'GORMAN, *New York.*

HONORED SIR: Allow me to respectfully ask your honor to use your influence in having Congress investigate Dr. Cook's claims as to the discovery of the North Pole.

It is only fair that Congress should take up his case, as it did that of Admiral Peary, and that Dr. Cook himself should ask for such a hearing shows that he is not afraid of submitting his data to the Nation's scrutiny.

While I am personally convinced of the many advantages, and even of the necessity of this investigation, my name does not in any way imply the official sanction of the Creighton University.

Respectfully, yours,

WILLIAM F. RIGGE.

Rand, McNally & Co., of New York, Chicago, and London, are without question the best-known publishers of commercial and academic geographies, maps, and atlases in the United States, if not in the world. In a letter dated February 24, 1914, their representative, Mr. Newkirk, writing for the firm, said:

You ask us to advise the authority on which the statement is made that Peary discovered the North Pole. Your question is a very proper one, and indicates the same question mark which has been in our own minds. The New York office received from the office of President Churchill, of the New York Board of Education, some time ago, a telephone communication asking if there was any reference to the discovery of the North Pole in the Dodge Geography. The New York office thereupon called up Prof. Dodge, and he replied "That inasmuch as this question had not been decided no mention was made of it."

From many original letters now before me I shall quote one addressed to Senator ROBERT M. LA FOLLETTE, written under date of March 25, 1914, and signed by a man of high standing in the educational world, Dr. Robert J. Usher, at the present time in charge of the library of the University of California, Berkeley, Cal.; at the time this letter was written, assistant reference librarian of the John Crerar Reference Library, Chicago, Ill.:

CHICAGO, ILL., *March 25, 1914.*

Hon. ROBERT M. LA FOLLETTE,
United States Senate, Washington, D. C.

DEAR SIR: I hope you will be inclined to interest yourself in the matter which I believe is about to be presented in Congress—an investigation of the merits of the claims of Dr. Frederick Cook.

I am told every effort is being made to prevent any action, on the ground that this is a personal matter between two men, Peary and Cook; that it is a scandalous affair, to be let alone. My own feeling, after a careful investigation of the subject, is that it is much more than a personal matter; it is a question of whether we who are in position to know the facts are to allow a man's character to be blackened through the agency of a heavily capitalized press bureau. Most people have their opinions on public questions made for them by newspapers or magazines, and the articles in the latter are ordinarily based upon newspaper accounts. Public opinion was so made in this controversy, and it was notably true that articles tending to discredit Dr. Cook were given widest publicity, retractions or corrections almost no space.

Up to the time Dr. Cook announced his discovery of the North Pole, in September, 1909, there had been nothing against his record. His climb of Mount McKinley in 1906 had been generally acknowledged. His book on the subject had been sold for three years, and, so far as I can find from the geographical literature of the period, no question was raised as to its veracity. Peary himself had praised Cook's work in the Arctic regions. A campaign to discredit Cook began from the moment when Peary announced to the world that it had been "handed a gold brick."

Successively the following events, all of which were given wide publicity to Cook's discredit followed:

1. Cook's own story of his polar trip, "a confession" of nothing more than that he could not be certain that he was at the exact boreal center, was published in Hampton's Magazine, with the glaring caption "Cook's confession" upon its cover; this without Cook's consent or knowledge, of course.

2. A self-appointed jury from the Pro-Peary Explorers' Club, of New York, decided that Cook could not have climbed Mount McKinley in 1906.

3. Edward Barrille, a guide, who accompanied Cook on the McKinley trip, and who for three years had proudly boasted of the fact, made affidavit that the story of the climb was false. Dr. Cook says he has proof ready to be produced in court that Barrille was bribed with a large sum of money by the Peary press bureau to make this affidavit.

4. The Copenhagen jury to which Dr. Cook had submitted such records of his trip as he could produce found that in his evidence there was nothing to prove conclusively that he reached the pole, nor, on the other hand, was there anything to prove the contrary. This statement was much garbled by the newspapers. Absolutely no publicity was given to the statement later admitted in the hearings before Congress by two of the three men in the jury of the National Geographic Society which passed upon Peary's records that there was nothing in them to prove that he—Peary—had reached the North Pole.

5. Two men, Dunkle and Loose, after worming their way into Dr. Cook's confidence, attempted to get him to publish as his own a set of faked observations prepared by themselves.

6. Mountain-climbing expeditions have been fitted out at great expense under the direction of Belmore Browne and Herschel Parker to discredit Cook's ascent of Mount McKinley. The evidence they submit in the matter, together with that offered by Archdeacon Stuck, will not, in my judgment, bear a scientific investigation.

Is not this a combination of circumstances to prove Cook's contention of a conspiracy to destroy his good name at whatever cost? For three years Cook from the lecture platform has charged Peary and his financial backers with a series of criminal actions. R. E. Peary is a rear admiral, thanks to Congress. He is not a poor man. Why do he and his friends not answer these charges?

There was an officer—I can't now recall his name—who was unjustly accused of cowardice in battle in the Civil War. It was not until some time in the eighties that he was able, after a long fight, to prove his case and leave to his family an unsullied name. A good part of his lifetime spent for it.

Some day Cook's contentions will all be proven. Later travelers will verify his statesments as Edwin Balch has clearly predicted in his recent work, The North Pole and Bradley Land. But, is it not a duty in the name of American fair play to give this man a chance to prove his case to ourselves rather than to leave it to a coming generation to be proven to others to our shame?

I hope you will lend your powerful support to this proposed investigation.

Very truly, yours,

ROBERT J. USHER,
Acting Reference Librarian,
John Crerar Library, Chicago, Ill.

Dr. Usher and other officials of the Crerar Library also signed a special memorial to the Congress, in their official capacities, asking for an investigation of the polar discovery.

Mr. Speaker, on December 23, 1914, in a speech on education in the House of Representatives, that distinguished and able statesman from Illinois, Mr. FITZHENRY, said:

* * * Dr. Frederick A. Cook claims that he discovered the North Pole, having reached it on the 21st day of April, 1908, and I find that a great preponderance of the authorities upon this subject are inclined to give Dr. Cook the credit for having made this exceedingly valuable addition to science as well as to the territory of the United States. In justice to him, as well as Admiral Peary, the conflicting claims should be finally settled.

On January 15, 1915, the gentleman from Illinois [Mr. FITZHENRY] received the following letter of appreciation and compliment from one of his constituents, which I shall quote:

ILLINOIS WESLEYAN UNIVERSITY,
Bloomington, Ill., January 15, 1915.

Hon. LOUIS FITZHENRY,
Washington, D. C.

MY DEAR SIR: I have just read a copy of your speech before the House of Representatives, December 23, 1914, on the case of Dr. Cook and his claim as the discoverer of the North Pole. Allow me to congratulate you and also thank you for the amount of information you brought to bear on the subject.

I have always felt since the controversy began that Dr. Cook did not have a square deal, and I hope Congress will soon sift the whole evidence and fairly decide which is the right claimant to the honor—Cook or Peary. As one of your constituents I want to say that I admire the stand you have taken on this as well as nearly all other questions (perhaps all) which have come before Congress since you became a Member.

Very truly, yours,

F. M. AUSTIN.

Mr. Speaker, in his remarks of March 4, extended in the RECORD of that date, the gentleman from Ohio [Mr. FESS] says:

Admiral Peary's stand, persisted in through many years, not to demean himself by any controversy with Dr. Cook, is one which must receive the hearty approval of all right-thinking Americans. A few, perhaps, not knowing the character of Dr. Cook's propaganda, do not understand that no self-respecting man could stoop to engage in such a controversy.

It seems to me a pertinent question, Mr. Speaker, to ask if the gentleman from Ohio [Mr. FESS] really considers that the men whose names and opinions I have quoted, together with others whom I shall quote, including other Members of Congress and myself, are men without self-respect?

The gentleman from Ohio further makes the statement that—

Peary's journey in quest of the North Pole and to make polar soundings and tidal observations was undertaken with the sanction and full approval of the President of the United States and of the Navy Department; indeed, he went to the Arctic under the direct orders of the President as Commander in Chief of the Navy.

A misapprehension seems to exist in the mind of the public and of some Congressmen as to the sponsors for Mr. Peary's latest Arctic expedition. When it is convenient for Mr. Peary to make it appear that his polar expedition was a Government enterprise such statements as the one above quoted are made. When Mr. Peary wishes to dodge the accusation that his various expeditions were conducted at Government expense he refers the interested person to the book published over his name, "The North Pole," on page 326 of which is a copy of the record left at Cape Columbia, which reads in part:

PEARY ARCTIC CLUB NORTH POLE EXPEDITION, 1908.

S. S. "ROOSEVELT," *June 12, 1909.*

This monument marks the point of departure and return of the sledge expedition of the Peary Arctic Club, etc.

From the report of the congressional committee investigating Peary's alleged trip to the pole the gentleman from Ohio makes what he calls a "few salient excerpts." In these "excerpts" he mentions—

a report from Hugh C. Mitchell and C. R. Duvall, expert computers of astronomical observations from the Coast and Geodetic Survey of the United States—

but neglects to state that these "expert computers" were two men employed personally by Mr. Peary, who were not serving in their official capacity when making their computations for Mr. Peary.

For proof of this statement I quote from a letter signed by O. H. Tittmann, Superintendent of the United States Coast and Geodetic Survey, under date of March 4, 1914:

The computations of Peary's work were made by Messrs. Hugh C. Mitchell and Charles R. Duvall, who were employed for the purpose by Mr. Peary.

These computations were, therefore, not made officially by the Coast and Geodetic Survey.

O. H. TITTMANN, *Superintendent.*

It is quite evident that the gentlemen, as Mr. Tittmann says, were not acting in their official capacity, otherwise they would hardly have cared to risk their professional reputations on the confirmation of "observations" containing such grossly palpable errors as are contained in the "observations" reproduced on pages 293, 294, and 359 of "The North Pole."

The report also states that—

on the return of the Peary party to the United States the standard chronometer used by Peary was sent to its makers for rating and comparison—

but again fails to state that this same standard chronometer was found to be so much in error that as Meyers Lexikon (published in Leipzig and Vienna in 1912) says:

The investigation appointed by the Congress of the United States of North America, into Peary's data and material, found that Peary came only to within 1.5 minutes distance from the North Pole, and even that nearness could not be proved, because his chronometers were shown to be wrong.

Nor does the gentleman from Ohio make any note of the fact that at the present time the sale of Mr. Peary's book, "The North Pole," is not permitted in Germany, as it is not allowable in that country to sell a book under a false title, and the University of Berlin has decided that Mr. Peary did not discover the pole.

The question of Peary's speed on his alleged polar trip is a subject that has been worn so nearly threadbare that it seems almost futile to discuss it further; nevertheless, since the gentleman from Ohio has seen fit to reopen a subject on which it would seem the part of wisdom for a Peary advocate to maintain a discreet silence, I will quote from a book written by one of our English cousins, W. Henry Lewin, entitled "Did Peary Reach the Pole?"

On page 28 of this book Mr. Lewin says:

The distance from Cape Columbia to the pole is 475 statute miles; that is, in a perfectly straight line.

On pages 34 to 42, inclusive, the author says:

No man ever yet traveled over the polar ice in a straight line. The straight line of Peary's route seems, therefore, to show an entire absence of continuous observations for latitude and longitude. Peary's book contains no real sequence of observations. There are not more than four recorded observations for latitude on the whole journey to the pole, and an entire absence of observations for longitude. In the absence of the latter, the commander had no option but to draw his line of route on the map with an almost straight line. * * * He states, "There was no lateral movement of the ice on the journey," but in the absence of observations to verify that "estimate" the statement must be accepted with considerable reserve. The statement is a curious one also from the fact that every strong east or west wind on the journey (and there were many) must have caused lateral movements of the ice.

In the absence of any real chart of the alleged journey to the pole by Peary, or of his return from the pole, we shall attempt to construct a record of the real mileage that it would have been necessary for Commander Peary to have covered to achieve success in the time at his disposal. In doing this we shall attempt to err, if at all, upon the side of moderation, even at the expense of exactitude.

The first point to be considered to enable us to make an addition to Peary's straight-line mileage may be summed up under three headings:

1. The unequal surface of the ice and the necessity for being compelled to climb small mountains in the shape of ice hummocks.
2. The deviation from straight line caused by avoidance of the worst places on the ice.
3. The deviations from straight line caused by the avoidance of open leads and searches for the lost trail when the lead had been crossed.

A quotation from the commander himself has an interesting bearing upon these three headings:

"The ice of the polar sea is not an immovable surface. Twenty-four hours—even 12 hours—of strong wind will set the big blocks grinding and twisting among themselves, crushing up into pressure ridges on one side, breaking into leads (open water) in another place."

One of these leads on the early part of the journey caused a deviation of nearly 2 miles to connect up with the other end of the trail, while upon the return journey one end of the trail was lost, owing to an opening of the ice, which necessitated a long and anxious search before connection with the other end could be made.

For the reasons given, therefore, under the three headings, we shall place the addition to the straight-line route at the very conservative estimate of 10 per cent. * * * It is admitted that this estimate must be purely speculative, but the estimate arrived at is by no means on the side of exaggeration.

We have, therefore, to add 105 miles to Peary's mileage of 1,050 miles from Cape Columbia to the pole and back to Cape Sheridan via Cape Columbia, which brings the total at this point to 1,155 miles. It must be remembered that no allowance has yet been made for standard or windward drift, the 10 per cent having been made up by a consideration of the elemental difficulties of travel over the actual surface only, and this does not allow for the daily changes of latitude and longitude caused by standard and windward drift.

Pages 43 to 47, inclusive, state:

Peary states, in his book, the prevalence of winds from all points of the compass. We read of "strong east winds," strong west, north, and south winds, but there is no record on the chart of the enormous extra distance this eastward, westward, and, particularly, southward drift caused by north winds must have caused him to travel.

Peary mentions the handicap of drift in one place only. During the observation taken for latitude prior to Bartlett's return, it was found that "our latitude was the direct result of the northerly wind of the last two days, which had crowded the ice southward as we traveled over it northward." Twelve miles were lost here, but if we examine Peary's chart in the region of the eighty-eighth parallel we find no trace of the admitted 12 miles backward drift shown. How much, therefore, is to be added to the commander's figures of 1,155 miles to allow for loss by drift?

We shall add only 30 per cent to the commander's figures to represent the extra distance covered owing to movement of the ice caused by drift. This brings the total mileage to be accomplished by Commander Peary, on the basis of our formula, to roughly 1,500 statute miles.

The journey was accomplished in 45 marches—27 marches in 37 days for the outward journey and 18 marches on the homeward journey. Although the whole journey therefore occupied 55 days, the 10 days upon which the expedition was resting, from one cause or another, must be written off, and only the 45 days of actual travel considered in working out the speed average.

Fifteen hundred miles in 45 days gives an average of 33⅓ miles per day * * * (p. 53). His average for the last 6 marches to the pole after the return of Bartlett, 41⅔ miles per march.

His average from the pole to steamship *Roosevelt* via Cape Columbia on the return, 45⅔ miles per march; and his average for the final 2 marches, 73½ miles per march.

Pages 66 to 70, inclusive:

"It is obviously necessary to find some method of checking Peary's great speed after leaving Bartlett at 87° 46′ 49″ north latitude. That method of checking is found in Peary's book, 'The North Pole,' and the result of this checking furnishes one of the most dramatic points of the whole of our criticism of the commander's claims."

Capt. Bartlett was sent back south at a point 87° 46′ 49″—about 145 statute miles from the pole—and the position when they parted was that Peary could have said to Bartlett: "You hurry back to the ship—about 430 statute miles straight line via Cape Columbia from that point. I shall go north a farther 145 miles to the pole, spend 30 hours there, and then return and follow you to the ship. I am therefore going to undertake a journey of 290 statute miles—straight line—more than you, and before I see you again on the *Roosevelt* I shall have done 720 miles to your 430 miles from this point."

That was exactly the position, and in ascertaining the result of this little polar handicap the straight-line, point-to-point statute mileage will only be considered in this instance.

Who won this race?

"Why, Capt. Bartlett, of course, by several weeks," the reader will reply.

No! Commander Peary had covered the distance of 720 statute miles to Cape Columbia at least 24 hours before Bartlett reached the *Roosevelt*, and was thus considering the speed at which Peary's last 2 marches were covered, only about 24 hours behind him.

"Impossible!" the reader will exclaim.

But we have the commander's own evidence on the point.

He states: "It was almost exactly 6 o'clock on the morning of April 23 when we reached the igloo of Crane City, Cape Columbia, and the work was done."

And in another place: "Capt. Bartlett reached the *Roosevelt* on the return journey on April 24."

Peary and his party slept for two days at Cape Columbia; but had that two days and also the 30 hours spent at the pole been spent in marching, Peary must have won a sensational race to the *Roosevelt* by a "short head."

If Capt. Bartlett expressed any astonishment at Peary's return, so closely behind him, it is not recorded, nor is any information supplied as to how the news of the commander's success was conveyed to Bartlett or to the rest of the party.

I could quote much more along the same line and from many other authorities, but the above will suffice at this time.

The gentleman from Ohio quotes a list of medals which have been awarded Mr. Peary "for his discoveries," but makes no note of the fact that these medals were not awarded for the discovery of the North Pole, notwithstanding Mr. Peary's statement on page 364 of his book, "The North Pole":

Among the home and foreign honors awarded for the attainment of the pole are the following: * * * The Royal Geographical Society of London, etc.

Facing page 365 of that same book is a life-size reproduction of the medal presented to Mr. Peary by the Royal Geographical Society of London, showing plainly that the words "discovery" or "North Pole" do not appear on it. The inscription reads, "For Arctic explorations." Other medals presented to Mr. Peary by other geographical societies bear similar evasively worded inscriptions. The gentleman from Ohio very wisely forgot to be specific in mentioning medals awarded to Mr. Peary "for polar discovery."

The distinguished gentleman also quoted "the committee's tribute to Peary and its recommendations," which includes the following:

Finally having successfully followed a carefully laid plan, resulting in his reaching on April 6, 1909, and bringing back to civilization the conditions existing at the North Pole, that Robert Edwin Peary has performed a most remarkable and wonderful service, etc.

But the gentleman from Ohio fails altogether to make any note of the fact that one week before any word was heard from Mr. Peary announcing his return, Dr. Frederick A. Cook gave a detailed, explicit account of those same "conditions existing at the North Pole"; furthermore, that Peary stayed in silence at Battle Harbor for 10 days before transmitting his account of those conditions to the world; that during those 10 days Dr. Cook's detailed account had been transmitted to Mr. Peary; and that when Mr. Peary did see fit to give his description of polar conditions to the world, it was almost a word-for-word facsimile of that published by Dr. Cook before Mr. Peary returned to civilization. This is a matter of history, confirmed by practically every newspaper in the world; a fact which I have yet to see any of Mr. Peary's supporters successfully explain.

The gentleman from Ohio says, "So much for official American recognition of the services of the explorer (Mr. Peary)." It is only necessary to say that before the bill granting Mr. Peary this "official American recognition" had passed both Houses, the words "discovery" and "discoverer" were stricken from it, making the bill read only "for reaching the pole," thus recognizing that a prior claim for discovery exists. Incidentally, it is worthy of note that in writing of this bill three years later, ex-President William H. Taft, in a letter, the original of which is before me, states that he "has no doubt that Gen. Thomas Hubbard wished him to sign the bill promoting Engineer Peary, but as he recollects it, it was not due to his (Gen. Hubbard's) intervention that he signed it." Why, may I ask, did the ex-President have to stop to scratch his head and stir up his recollection to remember whether or not he signed this bill because of the intervention of Gen. Thomas Hubbard, or anyone else? (Gen. Hubbard was at that time the president of the Peary Arctic Club, one of Mr. Peary's heaviest financial backers, and is now the manager of the Peary press campaign, being the owner of one New York newspaper and interested in several others.)

The gentleman from Ohio says, "The American press sees the humor of the situation"—re Dr. Cook's claim for recognition—and quotes several undated newspaper items to support his statement. Mr. Speaker, I would say that some notable representatives of the American press see the injustice of the situation, and I, too, quote newspaper items to support my contention.

The Johnstown (Pa.) Leader, in an editorial dated October 13, 1914, entitled "Time to square it with Cook," says:

Cook reached the pole April 21, 1908. We can not deny his claims. No proof has been brought against him to sustain the Peary charge that he lied. There is no good reason apparent at this time why the Congress of the United States should not pay to Cook the honors which none denies him except his rival.

The Altoona (Pa.) Times editorially says under date of October 14, 1914:

It is not possible to come in contact with this great man (Dr. Cook) and not feel that he has been mistreated by his fellow countrymen. His quiet, unassuming manner invites respect and confidence. There is little reason to doubt that ultimately his labor and sacrifices will be accepted at their real value.

Under date of May 1, 1914, the New York Journal, in reporting the Poindexter resolution, which it "featured" in large type on the front page, said:

PEARY VERDICT RAILROADED.

From the beginning there have been numerous persons who have declared that Congress railroaded through the recognition of Peary and heaped honors upon him that he did not deserve.

Dr. Cook has never asked anything but an investigation and "a square deal."

The Marion (Ohio) Tribune, of July 29, 1914, in large headlines stated:

Cook sincere and honest, Marion verdict—That he reached goal, belief here—Explorer's story and appeal win sympathy of big audience at Chautauqua—Many sign petitions asking justice for him.

The Jackson (Mich.) Citizen-Press, December 1, 1913, said:

It would seem that, in justice to himself, Peary should accept the doctor's challenge to answer certain questions propounded during the latter's lecture.

The Benton Harbor (Mich.) News-Palladium, of November 19, 1913, in flaring headlines across the first page of the paper said:

Cook's pole tale wildly cheered—Copenhagen honors repeated in visit of explorer to Benton Harbor—Cause is popular—Ovation tendered speaker when he steps upon stage, and at conclusion theater rings with applause.

The Racine (Wis.) Daily Call, December 12, 1914, says editorially:

COOK COMING BACK.

By persistency that is equalled only in his heart-rending dash to the pole, and a sincerity that no man can doubt, Cook is convincing the American people that he actually reached the pole when he said he did.

Scientists now generally credit Cook with having reached the pole, and congressional action naming him as its discoverer is expected shortly.

The Arlington Heights (Ill.) Review, on March 27, 1914, editorially:

The Review has always believed in Dr. Cook—even when it has been unpopular dared to say so.

Arlington Heights will eagerly await the day when Congress shall yield unto him his own, so modestly referred to as "a square deal," and when all the world will recognize and gladly honor Dr. Frederick A. Cook, the discoverer of the North Pole.

The Paterson (N. J.) Press of December 19, 1913, in an editorial headed "The Cook-Peary controversy," said:

The American people do not care a whit which of the two men discovered the North Pole, but they are very much interested in seeing justice done. No man can read Dr. Cook's book and hear him talk, no matter how ardent an admirer and how firm a believer he may have been in Admiral Peary, without having his faith shaken. Admiral Peary, therefore, needs the official investigation as much as Dr. Cook. What, therefore, stands in the way?

The Hartford (Mich.) Day Spring, in an editorial called "The polar claimants," said on November 19, 1913:

The world loves a good fighter, and it is quite incomprehensible that an insincere man could wage the determined fight that Dr. Cook has made. His determination, courage, and apparent sincerity in waging his claim are qualities which Americans admire.

Let the gentleman from Ohio read the following editorial printed in the Rockville (Ill.) Tribune in December, 1913:

It is a monstrous injustice that the children of the United States should be taught that Peary discovered the pole, when it was really discovered a year before by another man. But falsehoods in history rarely survive. Sooner or later the real historian will get the truth on record. In this case, the sooner the better. This is why every American should demand an honest investigation of the polar controversy.

I admit that editorial utterances are important as showing the trend of public opinion; and I would again call the attention of the gentleman from Ohio to the fact that he has omitted

the dates on each one of the quotations which he makes, thereby rendering them valueless as an up-to-date expression of opinion. I wish to quote but one more, and that from the Des Moines (Iowa) Tribune of June 23, 1914, which is especially worthy of note, for thereby hangs a tale:

Whatever else Dr. Cook may be right or wrong about, he is most certainly right about the efforts that are being made to suppress him and his contentions over the North Pole discovery.

The Evening Tribune is in receipt of a mass of printed matter about the doctor, sent from no acknowledged source, that in the preparation must represent weeks of labor and hundreds of dollars' expense.

The question that naturally suggests itself is why such an effort should now be considered necessary to discredit the doctor, and who is financially interested enough to go to the expense?

The "mass of printed matter" which was "sent from no acknowledged source" to which the Tribune editor refers consists of an imitation newspaper, made up of clippings from the pro-Peary press, most of which are nearly 5 years old. This anonymous material, I am reliably informed, is sent to every town where Dr. Cook is booked to lecture a few days in advance of the date of the lecture. I have a copy of it in my possession. Mr. Speaker, some time ago many Members of this American Congress, both Senators and Representatives, were the recipients of a copy of this imitation newspaper which is being sent anonymously over the country, with this difference: In the case of the Members of Congress each copy of this imitation newspaper was accompanied by a circular letter signed by one Lucien Alexander, a Philadelphia lawyer, with offices at 713–714 Arcade Building, Philadelphia.

It is a singular circumstance, Mr. Speaker, that two days before the remarks of the gentleman from Ohio were extended in the RECORD this Lucien Alexander came to Washington by appointment, and, by appointment, visited the offices of a select few of the Peary advocates in Congress; and it is a yet more singular circumstance, which can not truthfully be called a coincidence, that the remarks of the gentleman from Ohio, which were extended in the RECORD, are largely a line-for-line duplicate of the letter which accompanied the imitation newspaper sent to the Members of Congress, and which was signed by Lucien Alexander.

We have therefore, Mr. Speaker, direct evidence connecting this chain of scurrilous, anonymous, faked newspaper material, sent broadcast over the country, with Lucien Alexander, of Philadelphia.

I repeat the inquiry of the Des Moines editor: "Who is financially interested enough to go to the expense of these very expensive efforts to discredit Dr. Cook?"

The gentleman from Ohio quotes a paragraph from a letter written by Hon. Josephus Daniels, Secretary of the Navy, in which Mr. Daniels presumes to advise Congress in regard to the matter of an investigation; but the gentleman from Ohio omits the preceding paragraph of that letter which reads:

The department has never conducted any investigation or made any findings in regard to the discovery of the North Pole, and is therefore, should the joint resolution 282 be approved by the Congress, unable to submit a report of finding in reference to the matter under consideration.

In this connection I wish to quote from a letter written by ex-Secretary of the Navy G. von L. Meyer, at the time of the Peary investigation in Congress, under date of February 10, 1910, to the chairman of the Committee on Naval Affairs:

His (Peary's) various exploring expeditions can not be regarded as having been conducted for a strictly military or naval purpose, and for this reason it seems inappropriate to confer upon him a title for which his previous education, training, and service have not fitted him.

DR. COOK'S CASE IN THE SENATE.

Mr. Speaker, I wish to call especial attention to the statement of the gentleman from Ohio [Mr. FESS] relative to the Cook resolution in the Senate. That resolution is S. J. Res. 144, and was introduced in the Senate by that distinguished Senator from Washington, Mr. POINDEXTER.

Mr. Speaker, I have now in my possession a letter addressed to me, written by Senator POINDEXTER under date of March 12, 1915, which I shall here quote verbatim:

[MILES POINDEXTER, Washington, chairman; WILLIAM S. KENYON, Iowa; GEORGE W. NORRIS, Nebraska; HARRY LANE, Oregon.]

UNITED STATES SENATE,
COMMITTEE ON EXPENDITURES IN THE WAR DEPARTMENT,
March 12, 1915.

Hon. HENRY T. HELGESEN,
House of Representatives.

DEAR MR. HELGESEN: My attention has been called to the statement, "It (the Cook resolution in the Senate) was referred to the Library Committee and a subcommittee, which was named to look after the matter, flatly refused to give aid or encouragement to the investigation of any such subject, and there the matter ended in the Senate."

This statement is wholly incorrect; in fact, the reverse of what actually occurred. No subcommittee of the Library Committee "refused" flatly or otherwise to investigate the subject; but, on the contrary, the subcommittee which was selected did expressly agree to act and to hear testimony and conduct the investigation referred to.

The hearing was not had because a committee of the House of Representatives took the matter up and began a hearing, holding one sitting, so that it was not regarded as advisable at that time to duplicate the proceeding in the Senate, and consequentiy the sponsors of the resolution referred to did not bring it up or request a hearing upon it.

Very truly, yours,

(Signed) MILES POINDEXTER.

Mr. Speaker, the unqualified assertion of Senator POINDEXTER in his letter of March 12, above quoted, that "this statement is wholly incorrect; in fact, the reverse of what actually occurred," disposes finally and effectually of the erroneous statement of the gentleman from Ohio [Mr. FESS] that the Senate Committee on the Library refused to investigate the Cook resolution.

In the "Illustration of Dr. Cook's evidence," given by the gentleman from Ohio, in which he tried to belittle the testimony given before the Educational Committee, on January 26, I need only call attention to the report of the hearing of that date before the Committee on Education, which is inserted in the RECORD by the distinguished Member from Arkansas, Mr. CARAWAY, which report immediately follows in the RECORD the extended remarks of the gentleman from Ohio. It is relevant to state also that the chairman of the Committee on Education, of which committee the gentleman from Ohio is a member, refused to sanction the printing of this evidence in favor of Dr. Cook, and that every possible effort was made to suppress this evidence. Why? Furthermore, Mr. Speaker, it was only through the energetic efforts of the distinguished Member from New York, Mr. CHARLES B. SMITH, and the fine spirit of fair play and justice which characterized the distinguished Member from Arkansas, Mr. CARAWAY, that the report of the hearing before the Committee on Education was ever made public.

As to the Copenhagen verdict, I personally have in my possession the original document giving the report of the University of Copenhagen in regard to Dr. Cook's claims. This report is printed in Danish, which I read fluently, and that original report does not repudiate Dr. Cook. This fact is further attested in Salmonsen's Danish Encyclopedia, published in Copenhagen, Denmark, in 1911, two years after the so often mis-quoted verdict was rendered.

The Danes never have repudiated Dr. Cook. The claim that Dr. Cook submitted his data in full to the Danes is unjust. I shall quote from a letter by Dr. Frits V. Holm, of whom Who's Who says:

Dr. Frits V. Holm, G. C. C. M., K. C. L. O., M. R. A. S. (Navigator, journalist, explorer, lecturer.)

Born near Copenhagen, Denmark, July 23, 1881, he passed a preliminary examination at the Copenhagen University and received (1895–1900) an officer's education in the Royal Danish Navy, visiting many countries on men of war. He has lectured in English, French, and Danish in 28 universities and institutions in the United States of America, Canada, and Mexico about his explorations.

He is the author of numerous papers on Far Eastern and other subjects, a doctor of philosophy, a (Boy) Scout commissioner, a consulting editor of The Records of the Past, and holds a royal Danish license as sworn interpreter-translator, commanding many languages. He is a member of the Royal Asiatic Society (London), a gold medalist of the International Historical Society (Paris), an honorary member of the Royal Sauveteurs Society (Brussels), a corresponding member of the Archaeological Society of 1816 (Paris) and of the Romanic Academy of Sciences, a life member of several Red Cross societies, of the Kihin Kai (Tokio), and the Royal Yacht Club (Copenhagen); also of the Authors' Club (London).

He has been decorated with the Grand Cross, with swords of the Order of St. Cyrillus and St. Methodius (Holy See), the Knight Commander Badge and Star of the Order El Busto del Liberatador (Venezuela), the Knight's Cross of the Royal Order of the Redeemer (Greece), and with other decorations and medals from Russia, France, Spain, Belgium, Japan, Mexico, Liechtenstein, Cambodia, and Luang-Prabang—in all, 14 decorations.

Dr. Holm writes, under date of May 8, 1914:

"During my travels I have been lucky in making the acquaintance of many explorers, including arctic travelers. Among the latter have been Dr. Frithiof Nansen, Sir Ernest Shackleton, the Duke of the Abruzzi, Knud Rasmussen, Roald Amundsen, and also Robert E. Peary and Dr. Frederick A. Cook.

"I feel convinced that all fair-minded and unbiased persons must admit that had there been no Peary expedition Dr. Cook's claim would have stood unchallenged.

"It was solely and exclusively the machinations of Mr. Peary and his henchmen that made it possible, temporarily, to discredit Cook. Their work was indeed relentless, ungentlemanlike, and self-damnatory. Dr. Cook never had a chance against the wealthy coterie of the 'polar trust,' and if he had one he did not avail himself of it.

"There is, as far as I can see, absolutely no reason to disbelieve him. His book is a convincing document and sincere.

"It is impossible to predict what a congressional investigation of the Cook claim may bring—it has been so long deferred—but I certainly hope it will come, and soon. But, if I may venture a prophecy, I should say that Dr. Cook will receive the thanks of Congress as well as his well-deserved gold medal, and that an investigation, if earnest, of his affairs will bring to light facts and matters that will necessitate, for the honor of the country, a new Peary investigation, an investigation into the affairs of the National Geographic Society, and, possibly, the prosecution of certain individuals."

Does the gentleman from Ohio [Mr. FESS] consider Dr. Frits V. Holm to be a man without self-respect?

The gentleman from Ohio says that Dr. Cook makes false claims of support by polar experts and arctic explorers. Mr. Speaker, I make the plain statement that I personally have read

the original letters of indorsement from the men whom Dr. Cook claims as his supporters nearly all of which are dated in 1914 and some in 1915.

The gentleman from Ohio makes special mention of Amundsen, the discoverer of the South Pole, and quotes an alleged newspaper interview with Amundsen which he forgets to date, but which will be found in some of the newspapers of December, 1909.

Mr. Speaker, I shall quote from Capt. Amundsen's latest book, written since his discovery of the South Pole, long after the alleged interview above referred to was supposed to have been given:

From Roald Amundsen's History of the South Pole, volume 1, page 19:

"Frederick A. Cook, of Brooklyn, was surgeon to the expedition, beloved and respected by all. As a medical man his calm and convincing presence had an excellent effect. As things turned out the greatest responsibility fell upon Cook, but he mastered the situation in a wonderful way. Through his practical qualities he finally became indispensable. It can not be denied that the Belgian antarctic expedition owes a great debt to Cook."

From volume 1, pages 23–24:

"Scurvy especially increased and did such havoc that finally there was not a single man who escaped being attacked by this fearful disease. Cook's behavior at this time won the respect and devotion of all. It is not too much to say that Cook was the most popular man of the expedition, and he deserved it. From morning to night he was occupied with his many patients, and when the sun returned it happened not infrequently that after a strenuous day's work the doctor sacrificed his night's sleep to go hunting seals and penguins in order to provide the fresh meat that was so greatly needed by all. * * * New Year's Day came and went without any change in the ice. The situation now began to be seriously threatening.

"Again Cook came to the aid of the expedition. In conjunction with Raconitza he had thought out a very ingenious way of sawing a channel and thus reaching the nearest land. The proposal was submitted to the leader of the expedition and accepted by him. Both the plan and the method of carrying it out were well considered. After three weeks' hard work, day and night, they at last reached the lead (open water). Cook was incontestably the leading spirit in this work and gained such honor among the members of the expedition that I think it just to mention it. Upright, honorable, capable, and conscientious in the extreme—such is the memory we retain of Frederick A. Cook."

So far as Capt. Evelyn Briggs Baldwin and his recent repudiation of Dr. Cook is concerned, I will only say that Capt. Baldwin went too far in his support of Dr. Cook to enable him to withdraw his support gracefully. He boasted that he based his arguments in favor of Cook on no personal opinion, but on scientific facts, which he as a practical and scientific navigator knew to be true and indisputable. He has many times stated that he could not deny the truth of Dr. Cook's claims, even if he wished to do so.

Even some of Mr. Peary's friends look with disfavor on Capt. Baldwin's change of attitude. In an interview given to a reporter of the "N. E. A." on April 5, 1914, Mr. Henry Collins Walsh, the secretary of the explorers' club of which Mr. Peary is a prime factor, said:

Baldwin! That scoundrel? Why, he's a downright crook! The scum of the earth. Cook has nothing to fear from Baldwin. He can't do Cook any harm. Nobody believes him.

The above interview took place more than three months after Capt. Baldwin's "repudiation" of Dr. Cook.

The gentleman from Ohio makes great capital of Dr. Cook's expulsion from membership in the Arctic Club of America, but fails to make any note of the fact that said expulsion took place at a forced meeting of the club when no quorum was present. Although this action occurred when Admiral Schley was president of the club, the admiral, who up to the day of his death was a staunch supporter of Cook, was not present at that meeting.

In this connection I shall quote from a letter written less than a month ago—February 11, 1915—by a former vice president of the Arctic Club, which shows the secret manner in which Dr. Cook was dropped from the list of membership:

I was not present at the meeting at which Dr. Cook was dropped from the roll of membership of the Arctic Club of America. I did not know that such action had been taken or I would have resigned my membership at once.

TARLETON H. BEAN.

Dr. Tarleton H. Bean is State fish culturist of the State of New York, with his office in the capitol at Albany. He has held this position since 1906. Prior to that time he was for seven years, 1880 to 1887, curator of fishes in the United States National Museum, and director of the New York Aquarium from 1895 to 1898. He is also an educator of note, having been principal of the Wilkes-Barre (Pa.) High School for three years. He is a Chevalier, Légion d'Honneur, and officer of Mérite Agricole, France; Knight of the Imperial Order of Red Eagle, Germany; member of the Order of the Rising Sun, Japan; of the Danish Fisheries Society and the Finland Fisheries Association. He is also an Arctic explorer of renown and the author of several valuable papers on Arctic subjects. Does the gentleman from Ohio [Mr. FESS] consider Dr. Bean a man without self-respect?

The action which the Arctic Club really took and which has never been repudiated is shown in the following quotation from a letter which is before me:

The Arctic Club gave Dr. Cook a medal for discovery of the North Pole. It was presented to him by a committee at the city hall of New York; the same day Cook was given the "freedom of the city." The medal was of pure virgin gold, about 4 inches in diameter, three-eighths inch thick, designed by Count Santa Eulalia.

The Arctic Club as a body has never considered Mr. Peary in any way, officially or otherwise.

KERSTING.

Mr. Rudolph Kersting wrote the above letter on February 26, 1914, at which time he was secretary of the Arctic Club of America.

The favorite bugaboo of Mr. Peary and his friends is Dr. Cook's ascent of Mount McKinley. As was to be expected, the gentleman from Ohio refers to this as an unanswerable argument. In reply to his misleading quotations it is only necessary, Mr. Speaker, to refer to the remarks of the distinguished Member from Illinois, Mr. FRANK T. O'HAIR, as extended in the CONGRESSIONAL RECORD of January 22, 1915. In those remarks the gentleman from Illinois disposes of the Mount McKinley slander effectually and finally. The statements made by him and the authorities quoted by him are ably supported and corroborated in a book entitled "Mount McKinley and Mountain Climbers' Proofs," by Edwin Swift Balch, of Philadelphia. Mr. Balch is a graduate of Harvard University, with the degree of bachelor of arts; a fellow of the American Association for the Advancement of Science; member of the American Philosophical Society, of the National Geographic Society, the American Geographical Society, and in 1895 was president of the Philadelphia Geographical Society. He is a member of the Appalachian Mountain Club, a fellow of the Royal Geographical Society of London, England, and the author of many interesting and valuable works on comparative art, geography, Arctic and Antarctic discoveries, and other scientific subjects. Does the gentleman from Ohio [Mr. FESS] consider Mr. Balch a man without self-respect?

The gentleman from Ohio refers with admiration to Mr. Peary's refusal to openly discuss the polar controversy.

I wish to say most emphatically, Mr. Speaker, that I am firmly convinced beyond doubt that Mr. Peary and his friends have neither the courage nor the evidence to appear before a final examining board of unbiased investigators, as Dr. Cook, to my knowledge, is ready and anxious to do.

Furthermore, Mr. Speaker, the silence of Mr. Peary on the charges made against his claims to discovery and the use of anonymous material by his friends in attempting to bolster up those claims must be accepted as proof, positive and final, that he can not defend his title as discoverer. Since the polar controversy has assumed the proportions of a debate on the floors of Congress—some speeches on the subject having appeared as far back as December, 1914—why has the gentleman from Ohio, Mr. Peary's champion, failed to bring forth one argument or utter one word in reply to the plain statements of fact in the remarks by various Members, including my own of February 25, 1915, quoting the leading authorities of the world that Mr. Peary not only has no right to the title of discoverer of the North Pole, but that all of his other so-called discoveries are but figments of his overheated imagination and have no foundation in reality?

Dr. Cook's campaign for recognition has not been conducted with the widespread distribution of anonymous and untruthful material, but with substantial and scientific facts. His observations determining his position at the North Pole on April 21, 1908, have been recomputed, and his data shown in diagram, recomputed and plotted by Clark Brown, associate member of the American Society of Civil Engineers, and an engineer of the New York State Barge Canal. Mr. Brown's computations and diagrams have been recomputed and verified by five engineers and scientists of the highest standing, working independently of each other and without Dr. Cook's knowledge, not one of the five being an acquaintance of Dr. Cook or in his employ, directly or indirectly. The names of these men are:

David R. Lee, B. S., C. U., 1889, member of American Society of Civil Engineers.

J. M. Taylor, M. E., Cornell University, 1888.

E. G. Raynor, C. E., B. S., New York University, 1903.

R. L. Holt, C. E., Rensselaer Polytechnic Institute, 1904.

J. C. Green, Michigan Agricultural College, 1901, associate member American Society Civil Engineers.

The recomputations and scientific calculations of Dr. Cook's astronomical and nautical observations by these unbiased and impartial experts place Dr. Cook at the North Pole beyond doubt or logical question on April 21, 1908.

Mr. Ross's Letter—Recent Progress in the Philippines.

EXTENSION OF REMARKS

OF

HON. MANUEL L. QUEZON,

RESIDENT COMMISSIONER FROM THE PHILIPPINES,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. QUEZON. Mr. Speaker, I shall avail myself of the leave granted me to extend my remarks in the RECORD by printing two papers, one written by Judge James Ross, of Manila, for the World Outlook, and the other by me for the Journal of Race Development.

The papers referred to are as follows:

MR. ROSS'S LETTER.

NEW YORK, *March 8, 1915.*

EDITOR WORLD OUTLOOK, *New York.*

DEAR SIR: While I fear that due to limitations of time and space I may not be able to do justice to the subject, I nevertheless welcome the opportunity you have given me to reply to an article which, I understand, is to be published in this issue of your paper, written in the form of a letter addressed to the Hon. William H. Taft. I am deeply appreciative of the spirit of fairness shown by you in thus offering an opportunity to present the other side. It has been some years since the writer held public office in the Philippines. He aspires to no public position, would accept none in any department or branch of the United States Government, and although a supporter and admirer of Gov. Harrison, holds no brief for him, and what is here written is without his knowledge and not at the request or suggestion of anyone authorized to act for him. The writer is engaged in business in the Philippine Islands—every material interest he has in the world is there—and it will hardly be claimed by anyone that he would look with indifference upon the carrying out of any policies inimical to the business interest of the islands or to the welfare of the residents, native, American, or foreign.

The writer lays no claim to knowledge of conditions in the islands or of the history of the American occupation of the Philippines not possessed by many others who have had equal opportunities for acquiring information, nor would he have anything that may herein be said understood as an attempt to detract from the credit due the many able and conscientious men have had a part in the great work that has been done by our country for the benefit of the Filipino people. Nothing is taken from them by giving credit where credit is due, and it in no way detracts from their merits to assert, as I do, that Francis Burton Harrison is a worthy successor of those who have preceded him in his high office. There has been an active, persistent, and apparently organized effort to discredit and misrepresent every act of the present Governor General, and in certain quarters a fixed determination to see nothing good in anything he may do or propose. A most attractive gentleman—kindly, courteous, and affable in his dealings with all elements of the community, and with every individual coming in contact with him—Mr. Harrison has, since the day of his arrival in the islands, been made a target for a torrent of abuse and unfair criticism such as has never before been directed against any chief executive of the islands, with the exception of Mr. Taft, who in the early days of his direction of Philippine affairs became extremely unpopular with a large and influential section of the American community, and for reasons almost identical with those which have inspired the bitter feeling now shown against Mr. Harrison. Mr. Taft early announced the policy of "the Philippines for the Filipinos," thereby bringing down upon his head the wrath of hundreds of his fellow countrymen. An able and fair-minded man, inspired by the loftiest sentiments and holding very near to his heart the welfare of the Filipino people, Mr. Taft's motives, purposes, and policies were misunderstood and misrepresented, as are now those of Mr. Harrison. The conditions under which these two men began their work in the islands are strikingly similar, with this difference: That it fell to the lot of Mr. Taft to inaugurate the McKinley policy and set in operation theories and practices of government absolutely new to the people of the country, whereas the Democratic administration at Washington and Mr. Harrison, as its representative in the Philippines, came into office bound by precedents established through 15 years of administration under the McKinley policy, of which they became the heirs and executors. Under the McKinley policy there had been steady, if slow, progress in enlarging the participation of the Filipinos in their own government; never has there been a backward step, and it is inconceivable that there could have originated in the White House, the War Department, or the executive mansion at Manila a reactionary policy, or that there could be any thought of less liberal treatment of the Filipinos than that accorded them under the administrations of McKinley, Roosevelt, and Taft.

I am not asserting that the McKinley-Taft policies were wrong; I believe that in the main they were right, which is a good reason for continuing them; but is it not, I ask, most unfair for the adherents and supporters of those originally responsible for the present Philippine policy of the United States to complain of the conscientious and consistent carrying out of these policies? The trouble, it seems to me, is that Gov. Harrison has treated very seriously the promises and pledges of the United States to the Filipino people, and that, finding the machinery moving slowly, has "speeded it up"—translated words into deeds and promises into performances. Much has been heard during the past year about the Filipinization of the Philippine service. Why not? Could the Americanization of the American civil service be made a subject of serious political controversy in this country? We have, as presently will be seen, the word of a distinguished and able administrator under the Republican régime that the Filipinization of the Philippine service had not made satisfactory progress under his own administration. And yet we hear from men who were closely associated with Gov. Gen. Forbes bitter complaints against Gov. Harrison for his efforts to make satisfactory progress along this line. These complaints have been founded largely upon the assertion that Filipinization has been carried out in a manner detrimental to the efficiency of the government service and with injustice to old and faithful American employees. I think it can be shown that this charge is absolutely unfounded, and that in this, as in other matters, Gov. Harrison has acted with justice, moderation, good sense, and a due regard for the stability and efficiency of the civil service. The Hon. Dean C. Worcester, for many years a member of the Philippine Commission, and now a vigorous opponent of the Harrison administration, has said:

"Many persons who do not believe that Filipinization has been actively pushed by making nationality, not merit and faithful service, the basis of appointment, retention in office, and promotions have been misled."

Permit me to here quote from President McKinley's instructions to the first Philippine Commission, afterwards made, in effect, a part of the organic law of the Philippine Islands, certainly a very fixed and definite part of the policy of the United States Government in the islands:

"That in all cases the municipal officers, who administer the local affairs of the people, are to be selected by the people, and that wherever officers of more extended jurisdiction are to be selected in any way natives of the islands are to be preferred, and if they can be found competent and willing to perform the duties, they are to receive the offices in preference to any others."

It is possible that Mr. McKinley was wrong, but no one—not even Mr. Worcester—has ever suggested the abandonment or material changing of this policy, notwithstanding it would be difficult to make anything more clear than Mr. McKinley's statement that nationality was to exercise an important influence in the selection of officials and employees under the Philippine government. As late as 1909 Gov. Gen. Forbes, in his annual report, said:

"The figures for this year reveal the fact that the progress made in increasing the proportion of Filipino employees is not satisfactory."

It would seem from Gov. Forbes's statement that while the soundness of the McKinley principle was recognized the practice had not come up to the desired standard and that difficulties had been encountered in carrying out this well-understood policy, but now that Mr. Harrison has endeavored to overcome these difficulties, and make progress satisfactory where it had been unsatisfactory before, he has met with criticism, complaint, and even with abuse. It is not denied, and no apology is offered therefor, that one of the most important policies of Mr. Harrison's administration has been to Filipinize the Philippine service, but it is equally true that in carrying out his policy he has been guided by prudence and a due regard for the efficiency of the government, as well as the greatest consideration for deserving members of the public service. That this is true is shown by undisputed evidence, including public records. Space does not permit of an extended review of the changes in the civil service made under Mr. Harrison's administration, but I make the assertion, and point to the records for its confirmation, that the Americans who are to-day the heads of the different bureaus under the Philippine government average a longer period of service in the islands than did the heads of the bureaus on the date when Gov. Gen. Harrison was inaugurated. Several changes were made by Gov. Harrison in the heads and assistant heads of bureaus; several were due to the voluntary resignation of the incumbents, others to removal for cause, and others to the necessities of the service and decreased appropriations. Only two Filipinos have been appointed to head bureaus formerly directed by Americans, one of them being to the position of executive secretary made vacant by the promotion of Mr. Frank W. Carpenter to the important post of governor of the Department of Mindanao and Sulu. The spoils system has not been operated in the Philippines, very few men having been brought out from the United States to fill positions there, and there have been a great many cases of promotion of Americans who had rendered long and faithful service to the government. A few examples that may be cited are the case of Mr. Carpenter, above referred to; the selection of Mr. Sam Ferguson, an old employee of the bureau of justice and executive bureau, as private secretary to the Governor General; Capt. Shearer, as special agent of the executive bureau; Mr. J. J. Rafferty, promoted from a subordinate position in the bureau of customs to be director of the bureau of internal revenue; and Mr. Edwards, promoted from assistant director to director of the bureau of agriculture. Many other cases could be cited if space permitted. And what of Warwick Greene, a close personal friend of Gov. Gen. Forbes, retained as director of public works, and of French and Manning, promoted to the positions of auditor and treasurer, respectively, on Gov. Harrison's recommendation? But to keep within the allotted space, permit me to take up briefly the specific charges contained in the Taft letter. The writer of that letter says "business is utterly stagnant," and claims that this condition existed before the European war began. I deny the implication that the alleged stagnation of business is the fault of the present administration. There had been a general and widespread depression in business throughout the world before the beginning of the war, and the war has worked no greater havoc with business in the Philippine Islands than it has in this country, notwithstanding we have suffered severely from the closing of the markets of the world to our hemp, tobacco, and copra.

Mr. Taft's correspondent says that no new investments have come to the islands. May I ask whether there is an abundance of capital for investment in new enterprises in the United States? As a matter of fact, it is a matter within my knowledge that several investments in enterprises initiated after the inauguration of Mr. Harrison are held up for no other reason than the European war, and I am in a position to assert and maintain that Gov. Harrison has shown himself friendly to business and has done everything within his power to encourage the investment of capital in the islands, and in carrying out this policy has refuted the charge that "practically no relations exist between the new officials and the American community." I am surprised that anyone with sufficient standing to warrant Mr. Taft's making a communication from him public would make the assertion that "there is practically no government." Anyone who had resided in the islands for a year previous to Mr. Harrison's inauguration and for the year succeeding it could go about from one department and bureau of the government to another, from the highest to the lowest, without observing any material change in conduct of government business. And the statement that what government there is is in the hands of the Nationalist Party and Messrs. Osmeña and Palma is no more true than it was under the administrations of Gov. Forbes, Gov. Smith, Gov. Ide, or of Mr. Taft himself. Messrs. Osmeña and Palma and Mr. QUEZON, Resident Commissioner of the Philippine Islands in Washington, are men of the highest character and standing. They are natural, selected, and approved leaders of their people, and very properly they are consulted about appointments and other matters closely related to the welfare of their people, as they were, or at least were supposed to be, under former administrations. The statement that the Governor General seldom comes to his office, while perhaps not intentionally misleading is so in

effect. The fact is that Gov. Harrison has adopted the practice of doing office work and seeing visitors at Malacanang Palace, his official residence, where commodious quarters are provided for that purpose, rather than at the Ayuntamiento or government building, where much valuable time was consumed in having to receive callers with no important business and being bothered with small details properly attended to by subordinates. Mr. Harrison has been most regular and punctual in his attendance upon meetings of the Philippine Commission, over which he presides. He is a hard-working and painstaking official, and neglect of duty is about the last accusation that anyone at all well acquainted with him would venture to bring against him.

I pass, for lack of space, the statements of Mr. Taft's correspondent concerning certain other minor matters, but wish briefly to notice the charge concerning the bureau of agriculture. As heretofore stated, Mr. Edwards was promoted from assistant director to director of this important bureau, succeeding Mr. Taylor. It will be well to note that Mr. Taylor was an importation from the United States, without experience in the islands or knowledge of local conditions, while Mr. Edwards, a man of high attainments and character, has been connected with the bureau for 12 years, is thoroughly familiar with its operations and with the peculiar conditions with which this bureau has to deal.

If the bureau of public works has been disorganized, as charged, it is due to the retention of Mr. Forbes's appointee and personal friend. Again, space does not permit of a detailed analysis of the charges made by Mr. Taft's anonymous correspondent, but at this moment I recall in connection with the bureau of prisons, concerning which complaint is also made, that the head of that bureau resigned voluntarily and was succeeded by a thoroughly competent and qualified man, long in the Philippine government service. The alleged disturbances at Iwahig came to my notice for the first time in Mr. Taft's letter, but even if the statements concerning them are true they can not be connected with the change of bureau chiefs, and the incident referred to is one that might occur at any time in any prison. Much is made of the killing of an American school-teacher. School-teachers as a rule receive the most kindly treatment and the greatest consideration from the people of the country. There have, however, been several instances under former administrations where teachers have been the victims of murderous attacks made for purposes of robbery. This, however, is the first time I have ever heard of such an unfortunate occurrence being charged against the administration. Perhaps the most unfounded charge of all, and showing how little knowledge the writer of the letter to Mr. Taft has of the conditions in the islands, is the one relating the reorganization of the judiciary, an incident of which was the abolishment of the court of land registration. I confidently assert, and will be sustained by the vast majority of residents of the islands, including Americans and nine-tenths of the practicing lawyers, that the judiciary reorganization act was one of the best measures ever enacted by a Philippine Legislature. Instead of impairing the efficiency of the courts in the matter of registration of land titles, it has greatly increased it by abolishing a special court composed of 5 judges, which formerly had exclusive jurisdiction in the adjudication and registration of land titles, and vesting this jurisdiction in the court of first instance, composed of about 40 judges. Every one of the judges of the land court was provided for by being reappointed a judge of the court of first instance, and a few new districts were, for the good of the service, created. The judiciary reorganization act provided that all the judges of the courts as they existed prior to the passage of the act should on a specified date vacate their positions. This placed it in the power of the Governor General to appoint in the neighborhood of 40 judges, and let it be recorded and remembered to the everlasting credit of Francis Burton Harrison that with this power placed in his hands and confronted with the temptation of making spoils of judicial positions, with pressure being brought upon him from all sides for and against candidates for these positions, he reappointed every one of the old judges, all of whom had received their appointments under former administrations. It is also generally conceded that the appointments made by him to the newly created positions and the changes in assignments and stations of judges made necessary under the new act were made with admirable judgment, the appointments when made meeting with general commendation, even from newspapers opposed to many of the policies of Mr. Harrison's administration.

I have no idea as to the identity of the writer of the letter to Mr. Taft—I impute no bad faith or misrepresentation to him—but it is as clear to me as it must be to anyone familiar with the conditions in the Philippine Islands that if a nonresident of the islands, he has been very badly misinformed, and if a resident, he has not taken the trouble to ascertain the facts, or else has allowed his judgment to be distorted by partisanship.

JAMES ROSS, *Manila, P. I.*

RECENT PROGRESS IN THE PHILIPPINES.

[By Manuel L. Quezon, Resident Commissioner from the Philippines.]

(Reprinted from the Journal of Race Development, vol. 5, No. 3, January, 1915.)

The genuine interest which is felt by at least a small section of the American public in the future of the Philippines and in the present solution of the problem of America's relation to the islands is seen in the constant inquiry which comes from thoughtful Americans the country over: "What progress is being made by Filipinos? Are they succeeding in establishing a stable government? Are they showing capacity for managing their own affairs?" These questions are sincerely put by many of those who ask them, and when thus put, they are worthy of an equally sincere reply. In order to afford that reply, it is, however, necessary to know exactly what is meant. If the answers to the questions are to be more than alarmist declarations, on the one hand, or soothing assurances, on the other, it must be stated exactly what we mean when we speak of progress, stable government, and national capacity. This at once opens a very wide field of thought. It raises questions to which no adequate or satisfactory answer has been afforded. For a long time past it has been customary to discuss the Philippine question in the language of cant and hypocrisy, and to seek to apply to it standards which have no, or only a very remote, bearing upon the situation. I make this statement at the outset in order that I may not be misunderstood in what I shall have to say and in the presentation of facts that I am about to make. I am particularly anxious that it shall not be assumed by any that I accept the standards of progress for the Philippines that have been proposed, whether consciously or unconsciously, whether directly or indirectly, by insincere or thoughtless speakers who have expressed themselves upon insular questions.

I.

I will begin, however, by assuming that what is desired first of all is a discussion of progress in the Philippine Islands from an American standpoint, and that what it is desired to know is the extent of the progress that has been made since the inauguration of the Philippine policy of the present administration as regards government, economic affairs, and national and social development. Let us start with the question of government. In the year 1907 the American rulers of the Philippines, acting in accordance with the provisions of the Philippine civil government act, brought into existence the Philippine Assembly, a legislative body intended to represent the people of the islands and to act as a lower house of legislature, the Philippine Commission, with its minority of Filipinos, acting as the upper. It is a well-known fact that this assembly in its earlier years was regarded as a highly creditable and efficient body, measured by standards of western civilization and governmental method. The fact that it was so was attested by former President Taft, then Secretary of War, by many Members of Congress, by nonpartisan observers, as well as by politicians with their own axes to grind. In fact, too much was said of the efficient and satisfactory quality of the Philippine Assembly. It became an article of party faith in the United States to show that the assembly had worked well because of the fact that it had been created by a certain political party, and must therefore be held to justify the expectations and predictions of those who had established it. The simple fact in the case was that had the assembly been in truth what its fulsome admirers said it was it would not have been a very serviceable or useful body. Had it continued to be docile, not to say subservient, merely meeting the political desires and wants of those who had created it, in order that it might be used as a pawn in their political game, it would not have been a body in which any native Filipino could fairly feel pride. The fact that it was a genuine governmental agency was evidenced by the fact that as soon as its members had gained experience in the methods they were to follow and had squarely before them the public questions with which they were to deal, they began to be somewhat restive. They felt that the Philippine Commission, with its great body of subordinate foreign officeholders, receiving salaries which to native minds seemed utterly exorbitant, was not managing affairs in the public interest. They were disturbed at the apparent inability to reduce the amount of money paid to foreigners, at the bad distribution of appropriations, and at the lack of satisfactory legislation on economic topics. It was upon these grounds that the assembly for three years in succession refused to pass the budget recommended to it by the Philippine Commission acting as the upper house of legislature, and it was because of this refusal to grant the increasing exactions of the foreign officeholders in the islands that the assembly was constantly denounced as a recalcitrant and inefficient body and that efforts were made to demonstrate to the American public that it had been a failure.

President Wilson, upon the advent of his administration, took up the Philippine question for very thoughtful study, and determined that the difficulty did not lie in too much "native government," but in too little. Without waiting for legislation by Congress, he took a step placed within his power by the Philippine organic act. He determined to name a majority of Filipinos as members of the commission, and in so doing he placed the control of both branches of the legislative department of the Philippine government in the hands of the inhabitants of the islands. It is true that the Filipinos thus named as members of the commission were appointed by him and were not elected by the people, but his choices were satisfactory to the rank and file of the population, and the result, therefore, was to give the control of their own legislative body to the inhabitants in a very real sense. I have shown that the Philippine Assembly had already demonstrated its capacity by refusing to become a mere tool in the hands of a group of foreign autocrats. So the House of Commons acted during the critical early years when the establishment of English self-government was in the balance. So every self-governing nation has demanded that its legislative representatives should act. A different kind of test was, however, to be imposed upon the representatives of the Filipino people upon the advent of the new régime in the Philippines in October, 1913. Could the newly constituted legislative body do constructive work? Could it deal successfully with the problems presented to it? I do not care, writing in a scientific journal, to pass too hastily upon either of these questions, however strongly I may entertain opinions and beliefs. Little more than one year has elapsed since the beginning of the new era. What I can say with confidence is that that year has been conspicuously successful and has produced results which would be held by any standards to be eminently satisfactory.

When Gov. Gen. Harrison, who had been named by President Wilson to succeed former Gov. Gen. Forbes, reached the Philippines, he found a serious threat of financial disaster in the islands. The insular government had been brought to the brink of bankruptcy. I can best describe the situation which existed there in the words of Gov. Gen. Harrison himself, who in his first message to the Philippine Legislature said:

"The most pressing need of the hour is economy in the public expenditures. This matter, in my opinion, is the most important question now affecting the success and welfare of this government. Based upon the estimates of probable receipts and expenditures for the current fiscal year, as published by the auditor, it is probable that the government, without the adoption of a drastic program of economy, is face to face with a deficit of about four and a half million pesos.

"From June 30, 1908, when the surplus in the insular treasury was ₱17,499,894.97, the surplus has fallen as of June 30, 1913, to ₱14,230,220.23. Of this sum, however, about ₱5,000,000 is only nominally available, it being invested in supplies and having been carried to the surplus account in 1911, thus leaving an actual cash surplus in hand at the conclusion of the last fiscal year of only about ₱9,000,000.

"This shrinkage in the available surplus of the Government has come about notwithstanding the fact that during this period of four years the sum of ₱6,000,000 has been obtained by the sale of an issue of public-works bonds, and expended out of the treasury, and notwithstanding the further fact that a little less than ₱3,500,000 from the gold-standard fund has during this period passed through the treasury in the same way.

"At the present rate the auditor on June 30, 1913, estimated that the current expenditures of this government would exceed the income by about ₱2,000,000 in the course of the fiscal year. In this connection it is fair to say that the insular collector of customs, in making his estimate to the auditor, properly discounted the fact that owing to the limited importation of rice the customs revenues would fall, and they actually have fallen in the first two months about ₱1,600,000. It is also fair to state that the estimates made at the same time by the collector of internal revenue were probably exaggerated when he pre-

dicted an increase of about ₱1,000,000 in internal revenue; in any event it is certain that this expected increase has not only failed to materialize thus far, but that we are actually running behind the internal-revenue receipts of the preceding fiscal year in a sum which for the first three months has exceeded ₱100,000. This decrease may possible be offset by the collection of the new income tax.

"While it is possible that the income from customs may improve somewhat from the present date, approximately ₱3,000,000 may be figured as the probable deficit based upon the ordinary income and expenditures of the government for the present year. To this we must add the sum of ₱1,500,000 of which the treasury is to be deprived in the balance of the current year by the passage of the Underwood tariff bill, which removes the tax upon exports."

These words of Gov. Harrison were not exaggerated. It was for the new government to attempt to remedy the state of things they indicated. The subject was at once taken in hand and substantial economies were effected. A revised budget was prepared and adopted and thereby a saving of over one million and a half dollars in current expenses annually was brought about. Gov. Gen. Harrison was able at the end of his first session's work with the Philippine Legislature to review the work done in terms of the utmost satisfaction and to give the legislature the highest encomium for its industry, diligence, and ability. His opinion in this regard has been echoed by reliable witnesses of every shade of political opinion, and to-day there is a general, if in some quarters unwilling, agreement that the new government of the islands has been wholly successful, and that the fears expressed by professionally pessimistic persons at the outset were baseless.

These were not idle words of compliment. Their truth has been amply attested since the time they were uttered by many different observers, although to those who knew Mr. Harrison and his motives no such attestation was necessary. Persons who are interested in knowing how far Filipinos were responsible for the work thus accomplished should remember that this was done during a period when no American commissioners were present in the islands, with the sole exception of Gov. Gen. Harrison, who had then just arrived. It is no detraction from the high quality of Mr. Harrison's leadership to say that the successes which he has so generously recognized were the product of Filipino effort and Filipino determination to improve governmental conditions.

Nor was the improvement in the situation entirely confined to financial affairs. In the following table, prepared by a capable journalistic observer resident in the islands, is given a digested summary of exactly what has been accomplished:

	Sessions.			
	1910–11	1911–12	1912–13	1913–14
Bills introduced in commission	63	69	71	103
Bills passed by commission	48	52	61	69
Commission bills enacted by legislature	17	17	18	50
Bills introduced in assembly	484	518	421	398
Bills passed by assembly	98	181	131	169
Assembly bills enacted by legislature	33	69	51	51
Percentage of commission bills enacted by legislature	35	25	30	72
Percentage of assembly bills enacted by legislature	34	38	39	30
Percentage of bills passed by either house enacted by legislature	34	37	36	42

The same observer in commenting upon this showing says:

"It will be seen that whereas the percentage of bills passed by the assembly and enacted by the legislature fell from 39 last year to 30 for this year's session, the percentage of commission bills passed by the legislature rose from 30 to 72.

"The decrease in the number of assembly bills enacted was largely due to the fact that the extraordinary labors involved in the framing in the general appropriation bill resulted in the holding over of a great many bills in the lower house without action. Moreover, due to the renaissance of the national spirit, there was more activity in the lower house in the matter of framing bills and more initiative in the presentation of measures. Then, the commission was very cautious in its consideration of bills arising in the lower house, and brought its superior wisdom and experience to bear on measures arising there. It thus performed its intended function as a check upon the more youthful and exuberant spirits of the assembly.

"On the other hand, the unbounded confidence of the assembly in the commission, a new condition in Philippine legislation, is demonstrated by the fact that 72 per cent of bills passed in the upper house were approved by the lower chamber. Compare this figure with the 30, 25, and 35 of the three previous years.

"During the last session 101 bills were enacted into law. For the three previous years the figures are 69, 86, and 50.

"In the session of 1910–11, outside of a 'negotiable instruments' act, a bill for the reorganization of the justice of the peace courts, and a bill granting a gas franchise for the city of Manila, no important measures were enacted. In the following session the most important laws passed were an act permitting the utilization of the 'gold standard and reserve' fund for public-works loans to Provinces and municipalities; a warehouse-receipt act, governing the use of this class of business documents; an automobile law, fixing speed limits, etc.; and an act providing for systematic government inspection of the municipal police forces in the islands. This latter law was never enforced for lack of appropriation. During the session of 1912–13 the only important laws enacted were a bill providing for the registration of patents, a law regulating the practice of veterinary medicine, and a bill appropriating funds for a portion of the cadastral survey of the islands."

I should not, of course, attempt to conceal the fact that what has been done has been received with the utmost hostility and criticism, not to say execration, by those who were affected by it. The charge was made that wholesale dismissals of American officials were occurring, and that incompetent Filipinos were being substituted for trained and experienced foreigners. I regret to say that these assertions, founded although they were upon no evidence of the slightest trustworthiness, were accepted as if true and were given currency by supposedly reputable journals apparently eager to prove their hypothesis that the slightest relaxation of autocracy in the islands would be followed by nepotism, incompetence, and political favoritism.

Secretary of War Garrison, in responding to this and other such attacks, has stated the situation clearly and concisely in answer to questions put to him by a trusted interviewer, and I can not do better than to cite his words:

"Question. Have there been any unusual dismissals of American employees under the Harrison administration?

"Answer. No; the number of dismissal has not been unusual. It has increased slightly, due to necessary retrenchment. The number, however, is not one-half of what it was in years like 1903 and 1904, nor so great as it was in 1905 and 1906, where there was an effort at retrenchment.

"Question. What is there in the charge that the civil-service rules have been disregarded? How many Americans, all told has Gov. Harrison taken out to the Philippines and put into positions there?

"Answer. Not a single instance has been brought to my attention where it was charged that Gov. Harrison had disregarded civil-service rules. Fewer Americans have been taken to the islands during Gov. Gen. Harrison's administration than during any similar period in recent years.

"Of Americans coming from the United States since his arrival, he has appointed the collector of customs, one member of the municipal board of the city of Manila, and one member of the public utilities commission.

"Question. What are the important positions to which the Governor General might, if he so desired, appoint his American political friends?

"Answer. First, the chiefs of bureaus of the government, of which there are about 22. Second, the judges of first instance in the islands, of which there are 36. All of these judicial positions have been filled by appointment since Gov. Harrison arrived in the islands. Third, miscellaneous appointments, such as the members of the municipal board of the city of Manila, governor of the department of Mindanao and Sulu, and members of the public utilities commission.

"Question. Now, Mr. Secretary, in how many of these has the governor actually appointed Americans brought by him from the United States?

"Answer. Of the heads of the bureaus of the Philippine government Gov. Harrison appointed one—the collector of customs—from the United States, Dr. Herstein. Dr. Herstein had been an employee of the United States Civil Service for some years. He was a tariff expert employed in the framing of the recent United States tariff. His politics are not known to me.

"He appointed as a member of the municipal board of the city of Manila Dr. Fitzsimmons, who had served in the islands formerly.

"He appointed as a member of the public utilities commission Stephen Bonsal, a well-known American newspaper and literary man.

"He reappointed every judge of first instance on the bench, and in filling the remaining vacancies he selected two Americans, one of whom had been long in the service of the islands and one who had been in the islands only a short time in the civil service, but had previously been in the civil service of the United States.

"Question. What basis is there for the statement that business is disorganized in the islands and that the economic conditions are upset?

"Answer. About as much basis as there is for such a statement with reference to the United States. It is perfectly well known to anyone who is searching for the truth that there has been a world-wide business depression, and that while in particular communities this depression may have been enhanced or mitigated by local conditions, this has only been in the matter of degree. In the Philippines, due to the exclusively agricultural basis of business, this depression has been least. Unquestionably, some business men wished to know the course that this administration purposed to pursue before they embarked in any extension of their business enterprises. But to suggest seriously that there has been any panicky condition produced in the Philippines by anything that this government has done or left undone is simply to state that which has not the basis of truth.

"I think it is not the least of the achievements of the Filipino people and of their legislative body that, in spite of every kind of misrepresentation and attack, they have continued steadfastly on their way, advancing in the policies which they have mapped out for themselves, not terrified by vicious criticism or by the fear of losing the greater powers that have been extended to them, and, on the other hand, never seeking to retaliate upon those who had subjected them to aspersion and abuse, nor allowing themselves to be led into any excesses. They have been steady, faithful, and determined.

"In economic affairs the islands have had to endure their share of the losses and difficulties consequent upon the European war, just as has been true of every other portion of the world. In some particulars they have suffered with exceptional severity, such articles as copra being deprived of almost their entire market. This, however—it is to be hoped, at least—is a temporary condition. The activity and energy of the people have been stimulated by the prospect of better government, and instead of a retrograde movement in commerce or agriculture, which has been predicted by professional pessimists at the outset of the new régime, there had, prior to the present temporary troubles due to war, been a marked advance, as the following official figures will show:

"The fiscal year 1912—i. e., the year ending June 30, 1912—was, measured by the total of imports, the most prosperous year up to that time in the history of the Philippines. The total imports were $54,549,980. But the dark spot was that of this total $10,519,949 was rice, the result of an unusually disastrous failure of the Philippine rice crop.

"In the fiscal year 1913 the total imports showed an increase over the preceding year of $56,327,583, though the imports of rice were but $7,940,857.

"The reports of Philippine commerce have now been received to include the month of May, 1914. I give the following from the records for purposes of comparison:

Total imports for 11 months ending May, 1912	$48,522,580
Total imports for 11 months ending May, 1913	51,543,134
Total for 11 months ending May, 1914	50,876,025

"For the same periods, omitting rice:

1912	39,731,895
1913	43,825,329
1914	48,395,180

"Of the total during these three periods there were from the United States:

1912	$18,560,805
1913	23,130,695
1914	25,752,233

"In face of this it is idle to talk of depression or lack of confidence."

Throughout the whole period, during which these transformations have been occurring, there has been profound peace in the islands. The native force, the constabulary, is amply able to take care of all police duty, and except for mere practice marches there is little for American soldiers and officers stationed in the Philippines to do. The Philippines are a peaceful, agricultural country, thoroughly and growingly able to manage their own affairs, keenly desirous of doing so, and hopefully awaiting the time when the United States will fulfill the many promises and assurances furnished by American statesmen that such a condition of self-control will be established. I might enlarge upon the continued and promising advance in education in the Philippines, but so much has been said upon that subject that it scarcely seems necessary to repeat what is already a twice-told tale.

II.

It would seem that the Philippine Islands have in every respect lived up to occidental standards of stability in government and advancement in popular welfare, and that during that time that they have had an increased control over their own affairs they have shown both the ability and the intention to increase and advance the beneficial elements of their civilization whether of native origin or of foreign importation. Such is in fact the case. I wish, however, at this point to dissent entirely, as indicated at the outset of this discussion, from the view of the Philippine problem which will admit no evidence of advancement except that which is gauged by conditions in the United States. The Filipinos are a people of oriental habits and types of mind, resident in the Tropics, and subject to their own conditions of life and industry. It seems to me to expect them to emulate the United States in all particulars is a gross perversion of the teaching of human experience or of any sound political philosophy. Many of the conditions which exist in the United States to-day are not ideal, but even when they are so, they are the product of many years of labor and development intended to result in the better provision of social justice and equity between man and man. They are intended to meet the peculiar needs of a highly industrialized society with a structure totally different from that which is found in any eastern country. I think that the thoughtful student of race development must feel that it is far better that a nation should evolve its own type of culture and of government and should follow its own instincts in selecting a path toward the attainment of a higher civilization than that it should be made a slavish imitator of any other country or group of countries, however elevated may be the civilization of the latter. I would go further than this and say that even if such a nation did not do as well in the initial stages of self-government as it might do with foreign preceptors, nevertheless the slower and less perfect progress was the more solid and stable, and therefore vastly to be preferred.

As I have said in another connection, I question most seriously the statement that any nation can successfully direct the course of development that must be followed by another. The education of the individual is most successful when it affords the best vehicle for self-expression; the education of the nation or the race proceeds most naturally as a matter of internal evolution. Mistakes may be made, and when made they bring their own penalty. Now, as always, it is true that experience is the best teacher, and that only by endeavoring, aspiring, and striving can a government attain to practical efficiency. That has been conspicuously the history of the Anglo-Saxon race. Magna Charta was not bestowed by some friendly conqueror, but was the product of long years of struggle and effort. American constitutional government was not the gift of Howe, Cornwallis, or the King of England. Is there not a way of national progress from within as compared with that stimulated from without, that hasty thinkers seem sometimes to overlook? Are we mindful of the fact that the one priceless advantage of self-development is that it proceeds along the proper lines, in accord with the tendencies, peculiarities, and special abilities of the people; in other words, that it is always a natural growth, while progress imposed from without may result in an unnatural type of evolution?

Without being overcritical, let me speak of this matter frankly. It is a fact that the work of Americans in the Philippines has not been as free from errors as the former officials of the Philippine Government in their self-laudation would have us believe. There have been mistakes—mistakes that were very expensive to the Filipino taxpayers; there have been injustices and wrongs. Some things have been overdone and other things have been neglected. I do not, however, on that account underrate the value of that work as a whole, and I gladly reiterate that considering all the circumstances Americans have done marvels. No government of men is free from shortcomings. I only wish to note the fact that some of the mistakes which their representatives have made in the Philippines, because of their unfamiliarity with the people and the country, would not have been made by Filipinos acting for themselves.

I do not believe that either the Filipinos or any other eastern people, if left to themselves, would either reject or be unable to assimilate western civilization. Quite the contrary. We have the example of Japan, and China herself is beginning to furnish another illustration of the same sort. Japan, without falling under the rule of another nation, nevertheless made marvelous progress within a short time. If it be remembered that when Japan began her development she was much less familiar with occidental civilization than were we when we sought to organize our own government, it would seem apparent that we should have made at least the same advance. When Japan decided that in order to live she must adopt modern and occidental methods, she knew absolutely nothing of their technique, and yet how brief a time did she require to adopt those methods and even to surpass some of the older powers. What was it that Japan did? She sent her sons throughout the world to acquire learning, and occidental instruction; she brought to her land men who could teach every branch of human knowledge and who could help to organize a modern government. Would anyone pretend to say that because of this foreign help Japan's was not a process of self-development and progress? Why can Filipinos not accomplish, by using the same means, what Japan has accomplished? Who can say that Japan would have made as much progress had she fallen under a foreign yoke?

The Filipinos are showing that they are amply capable of taking over and assimilating the beneficial ideas of western nations, adapting them to their own use, fitting them to the needs of their peculiar situation, and drawing intellectual sustenance therefrom. This has been the history of successful civilizations everywhere. They have not advanced by a process of mental inbreeding, but by a process of crossing themselves intellectually with the best strains they could find the world over. It is not progress, but just the reverse, if a nation be compelled to confine itself to imitation of another and if it be debarred from selecting useful elements of civilization, education, social custom, and government wherever it can find them throughout the world. I refuse to test the progress of Filipinos by the extent to which they have adopted American customs, law, and civilization, whether in their desirable or in their undesirable aspects. It is a sign of progress that they have succeeded in assimilating so rapidly those elements of civilization and of thought in which America stands conspicuous. This does not mean that for the future they should be debarred from following any other models. Least of all does it signify that whenever there is a departure from American practice such departure should afford the basis for bitter criticism. In the fundamentals of civilized life and thought, Filipinos, considering the opportunities they have had, the character of their preceptors, the nature of their surroundings, have done conspicuously well. The seed planted in the islands, whether indigenous or whether brought there from Spanish, American, or other sources, has not fallen upon stony ground, but has brought forth manyfold, particularly since the inhabitants have been permitted to cultivate it. It should continue to do so, and that such will be the case is convincingly attested by the accelerated advance in all good things that has been realized since the inhabitants were given the power and responsibility to govern themselves in some measure, and were made to feel the responsibility for such mistakes of temper, judgment, or policy as they might commit.

Rural Credits.

SPEECH

OF

HON. WILLIAM A. OLDFIELD.

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES.

Thursday, March 4, 1915.

RURAL CREDITS.

Mr. OLDFIELD. Mr. Speaker, I am greatly disappointed at our failure to enact rural-credits legislation during this Congress. While the Sixty-third Congress has enacted a great deal of constructive legislation in the interest of the people, yet it seems to be impossible for the House and Senate to agree on a rural-credits bill. In the closing hours of the Congress a committee, composed of Senators and Representatives, was appointed to investigate the entire subject of rural credits and report a bill by the 1st of next January, and it is hoped that this committee will hold hearings and make a real and thorough investigation of the subject and report a bill which will be workable and in the interest of the farmers of this country. There is no doubt in my mind that one of the chief troubles regarding rural-credits legislation has been the method employed in investigating the subject. Let me say, further, that it is my candid belief that the farmers will never get any desirable rural-credits legislation until we improve the methods of investigation heretofore employed.

The committee recently selected by Congress to investigate this subject and report a bill should without delay call upon the various farmers' organizations of the country and ask them to send their experts before the committee, such of their experts as have studied the financial institutions and the characteristics of the investing classes of this country, and the bills the farmers present should be drawn with reference to our institutions and the characteristics of our investors, and it is the duty of the committee to give the farmers an opportunity to present their bills. It is not the duty of the Government to become the bill collector for the public, but it is the duty of the Government to establish courts where those entertaining the belief that they have a just cause of action against others may appear and present their contention. And the same rule applies to the important question of rural credits. The requests already presented to Congress for a change in the method of investigating this question are sufficient to warrant us in acting upon them. Some of the leading farm journalists of the country have requested it. The legislative committee of the National Grange has expressly requested it; so, also has a change been requested by all the leading members of the Farmers' Union, besides there have been several hundred petitions presented to Congress by farmers demanding this method. But even if there had not been a single petition or request asking for this method, and even though the investigating bodies pursuing another method had not made such lamentable failures, still this new method appeals with such force to my judgment that I do not hesitate to say we should have given it to the farmers. Four resolutions have been introduced seeking to put this new method in operation—one was introduced in the Senate by Senator SHEPPARD of Texas and three in this body by Mr. CANDLER of Mississippi, Mr. DOOLITTLE of Kansas, Mr. HELGESEN of North Dakota.

Section 2 of those resolutions reads as follows:

SEC. 2. That such subcommittee or investigating body, which is hereinafter referred to as the commission, shall hold its hearings and investigations in such manner that will permit persons who, in the commission's opinion, have sufficient authoritative backing, to present bills

for a personal rural-credit system in the United States to the commission and appear before them by experts of their own selection to establish the merits of their respective bills and to disprove any provisions contained in bills not presented by themselves. The commission shall notify at least one leading representative of every interest affected by such bills, including the president of the American Bankers' Association, of his privilege to appear before the commission by an expert of his own selection and to advocate or oppose any bill presented, who shall enjoy the same rights and privileges before the commission as the experts of the proponents.

This section clothes the investigating body with judicial authority and gives the experts of the parties at interest appearing before them the rights of the lawyers of litigants appearing before a court to establish their contentions. It gives to the farmers' experts the right to present bills for the establishment of a personal rural-credit system in the United States and requires the investigating body to notify at least one leading representative of every interest affected by any bill presented of his right to appear by an expert and advocate or oppose any bill presented. If a commission is to benefit the farmer by its investigations it must be by molding a healthy public sentiment for the farm paper to be created by the personal rural credit system it presents to Congress for its enactment. And it can best perform its labors by bringing the interested parties into open court to establish that that paper is a good and safe investment for our investing classes. Nothing short of that method of investigation will be of any benefit to our farmers, for Congress can not legislate as to how the residents or corporations of the various States shall invest their surplus funds; but if the investigating body will establish public sentiment in favor of the farm paper to be created by the plan proposed, then they would be accomplishing much for the farmer.

Congress should do two things in the matter of establishing a personal rural-credit system: First, establish a system which will create a piece of productive farm paper which is as good and sound as the farm paper created by the best of foreign personal rural-credit systems; second, create a healthy public sentiment among the investing classes for that paper. You must have buyers as well as sellers before you can do business. If I were to take a load of cotton to Des Moines, Iowa, I would have to dispose of it as souvenirs, as there is no commercial market there for cotton in the seed. But let me take it to my home city during the season, and the moment I reached the public square there would be buyers to meet me. Precisely the same thing is true respecting investments. In planning a system for this country it is important that one should know the reasons underlying the success of those foreign systems, but it is absolutely necessary that he should know all about the financial institutions and characteristics of our investing classes. For example, Massachusetts has $861,000,000 deposited in savings banks drawing from 2 to 3 per cent interest; California has $400,000,000 in savings banks; the great insurance companies of New York have in their vaults for safe investment at a low rate of interest some $4,000,000,000. What the farmers of this country need is a workable rural-credit system which will bring them into contact with these savings bank and insurance funds, so that they may secure these funds on long time at a low rate of interest. The farmers' lands are the best securities in the world, and this is the kind of security these funds are seeking. No business can prosper when it is compelled to pay all the way from 8 to 12 per cent interest, and this is the condition which confronts the farmers of the Southwest to-day. What we need in the South to make our farmers prosperous is money at a low rate of interest, and it is hoped that we will secure rural credit legislation early in the next Congress which will bring about this greatly desired result.

Here I want to include statistics taken from the New York World's Almanac for 1914 relative to savings bank deposits and populations in the various States mentioned, which must be of considerable interest in this connection:

States.	Savings bank deposits.	Population.
Massachusetts	$861,416,880	3,366,416
Arkansas	2,283,872	1,574,449
Kansas	4,689,387	1,690,949
Oklahoma	334,547	1,657,155
Idaho	235,104	325,594
Nebraska	3,197,031	1,192,214
Virginia	9,365,413	2,061,612
South Carolina	10,699,946	1,515,400
Georgia	12,397,319	2,609,121
Indiana	13,056,514	2,700,876
Minnesota	30,977,493	2,075,708
Oregon	13,891,788	672,765
Total	962,545,303	21,642,259

I have a letter from R. C. Milliken, Esq., a local monetary statist, bearing on this point, which I wish to incorporate in my remarks; but before doing so let me say something about him and his efforts to improve our rural-credit system. He appeared before the first rural-credit investigating body created by Congress. That was three years ago. It was the House Committee on Agriculture, which was investigating Senate joint resolution 75, for the appointment of a commission to go abroad and investigate rural credit. At that time the House was Democratic and the Presidency Republican. It was decided by the committee making the investigation to cooperate with the President in the use of our consuls to make this investigation. Mr. Milliken made two predictions at that time, both of which have proven literally true. He told them that our consuls could not make such an investigation as was needed by Congress, and that if we sent abroad a commission who were not experts it would be a waste of public funds and accomplish nothing for the farmer. I desire to quote from his argument before that committee at those hearings. He said:

Our consuls can not make such an investigation as is necessary for the guidance of Congress, as they are not monetary experts. A lawyer must know something about his case before he begins to bring out the evidence before the jury. * * * Well, an attorney can not properly present his case on its merits to the jury through his witnesses unless he has previously studied and assimilated the evidence himself. He can not potluck and succeed. Therefore, if you send over there men who are not monetary experts it will be a waste of money. It would be far better to have a commission composed of philosophers of credit. They certainly should know enough about monetary science to be able to tell when they were investigating an unsound system and to discuss the subject intelligently with foreign monetary experts. * * *

It is well recognized that we have the weakest banking system in the world, yet if foreign consuls in this country should write critical analyses of it for the use of their own people and they should be published, as would be the case, does not anybody know they would have to leave this country? They would be charged with meddling with political conditions here.

If we had adopted the advice then given by Mr. Milliken, we would have been better off. Certainly we would have saved a considerable sum of money experimenting on the use of consuls and sending a commission abroad who were not experts, either on foreign or our home financial institutions. Mr. Milliken has appeared before numerous monetary bodies, is a writer of force on such subjects, and what he writes is entitled to serious consideration. His letter follows:

DUTY OF RURAL PRESS TO AMERICAN FARMERS.

WASHINGTON, D. C., *March 4, 1915.*

Hon. WILLIAM A. OLDFIELD,
Chairman House Committee on Patents.

MY DEAR SIR: I beg your indulgence in directing attention to how the recently created Rural Credit Investigating Commission may hold its hearings so as to greatly benefit the American farmers in securing an effective personal rural-credit system. In inaugurating such system we must not overlook the characteristics of our investing public and financial institutions. We have some institutions which are peculiarly American. The life insurance company is one. Our life insurance companies do more business than all the life insurance companies of Europe, Asia, Africa, and South America combined. We must not forget also that many of the largest are located in the East, though they draw a large portion of their business from the agricultural sections. To be more specific, let me direct attention to the 1905 Life Insurance Yearbook. From that you will observe that our old-line life insurance companies did $185,316,265 of new business the year before in Illinois alone, where the French companies did only $73,052,938 in all the countries in which they wrote business, including France. Of that $185,316,265 of new business written in that State that year by our companies only $760,049 of it was done by Illinois companies.

The farm paper of the credit agricole, the personal rural-credit system of France, is accepted at the Bank of France for discount and as a basis for the issuance of currency. Therefore, if that paper is safe for a bank whose obligations are all payable on demand to carry, it would certainly be safe for a life insurance company, whose obligations are deferred for years in the future. Congress has no power to legislate as to how a life insurance company chartered by a State shall invest its funds, but an investigating commission of Congress could so conduct its hearings as to mold a sound and healthy public sentiment for that paper, and, after all, public sentiment is the best of laws. Suppose the soundest monetary expert in the country should appear before the commission and state that the life insurance companies should carry a line of that farm paper. That would have little or no effect in creating public sentiment, even though the commission agreed with him, and so reported to Congress, unless such expert and the members of the commission bore national reputations as experts on that subject. But it is impossible to find such an expert. Furthermore, that would be an ex parte hearing and not conducive to the establishment of a sound public sentiment.

But suppose the commission should conduct its hearings in the manner prescribed by the Sheppard and Candler-Doolittle-Helgesen resolutions. Then any group of farmers may appear before the commission with an expert and present a bill and have the right to prove it up, and it would be the duty of the commission to notify at least one leading representative of every interest affected by that bill of his right to appear and advocate or oppose that bill. Therefore, the moment the farmers' expert announced it as his intention to show that the life insurance companies should carry a line of that paper, it would be their duty to notify their representatives, who doubtless would be the president of the Association of Life Insurance Presidents, an association of life insurance presidents whose companies have more than four billions of wealth. The representative of that vast wealth would surely carry great weight and prestige, and if the commission, after hearing his testimony and argument, should find that that paper was a good investment for those institutions, it would go a long ways toward establishing public sentiment. The farmer has everything to gain and nothing to

lose by an open and scientific investigation of this question. An ordinary investigation would not establish a market for one dollar of his paper.

Let me call your attention to the movement which Mr. H. S. Gilleylen, of Aberdeen, Miss., is going to inaugurate to get the rural press to take this up and urge the commission to conduct its hearings in the manner provided by the Sheppard and Candler-Doolittle-Helgesen resolutions. Mr. Gilleylen desires the officers of the press association of each State to select one successful and wide-awake farmer in each rural congressional district to cooperate with him and the press. He desires such an association of farmers to aid, first, in securing a proper investigation from the new commission; second, in selecting a monetary expert to represent them before the commission; third, to meet him in Washington, D. C., one week after Congress convenes in December next, and take time in going over the bill presented to the commission by their expert and meeting the Members of Congress and letting them know their views on the bill.

If the rural press would take this up and keep at it until the commission decides to grant this request, they would accomplish the greatest good for the farmer that was ever accomplished in the same length of time. Let every paper which takes this up send to the Rural Credit Press Association, Washington, D. C., a marked copy of each paper containing editorial mention of this method of investigating this subject, so that they may be presented to the commission. They will be presented and constitute a permanent memorial to the press. There should be no let-up by the press until this simple request is granted by the commission. Mr. Gilleylen is one of the most successful farmers of my acquaintance and a man of strict integrity. So let's all rally to his call.

Sincerely, yours,

R. C. MILLIKEN.

Reduction of Salaries of Postal Employees.

EXTENSION OF REMARKS

OF

HON. MARTIN B. MADDEN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 3, 1915.

Mr. MADDEN. Mr. Speaker, I have received a number of complaints recently from postal employees in Chicago and many other cities throughout the country, who claim to have had their salaries reduced without warrant of law through an order issued by First Assistant Postmaster General Roper. On investigation, I learned that about the middle of January a number of postmasters of the largest cities throughout the country had been summoned to Washington by instructions of the Postmaster General for the purpose of considering ways and means to reduce expenditures in order to meet the falling off in postal revenues. Shortly after this meeting a circular letter was mailed to the several postal stations in Chicago, of which the following is a copy:

JANUARY 26, 1915.

Circular No. 6.

ECONOMIES IN THE SERVICE.

The receipts of the office have seriously decreased. The post office being operated as a business institution, its expenditures, therefore, must not exceed its receipts, and it becomes necessary to reduce the expenses of operation.

The office does not desire to reduce the force of employees in order to meet this condition, which would involve the returning to the sublist of a certain number of employees in order of their efficiency, regardless of their period of service. It is necessary, however, immediately to practice the most rigid economy, and therefore no expense for auxiliary service must be used except in emergency and upon authorization.

The parcel-post wagons assigned to the following stations will be withdrawn on or about February 1 and arrangement made to effect delivery of parcel post now handled by these wagons by collectors under an arrangement worked out by the collection department. The carriers assigned to parcel-post wagons will be returned temporarily to subservice.

Armour, Garfield, Lake View, Carpenter, Englewood, Chicago, Hyde Park, Yards, Wicker Park, Fifty-first, C, D, Edgewater, Jackson, North Halsted Stations are directed to this office. The names of any clerks or carriers who do not fully conform to the requirements as laid down in section 679, paragraph 6, of Postal Laws and Regulations, 4, 1913 station, are requested also to make any suggestions to this office that may occur to them as to the introduction of any economies that may be worked out at their station.

LEROY T. STEWARD.

I also learned that official instructions were mailed to postmasters throughout the country urging rigid economy in expenditures and suggesting readjustment of the Postal Service and reduction in the number of employees. An order was also issued to postmasters providing that the maximum salaries of letter carriers assigned to the collection of mail be fixed at $1,000 per annum.

In order to carry out the instructions of the department officials the postmasters of Chicago and other cities sent for the letter carriers who collect the mail and submitted a paper for their signature which is supposed to be a waiver of their rights. This paper contained the following statement:

I, ——— ———, a letter carrier in the Chicago post office, assigned to duty as a collector, and understanding that the $1,200 grade is a reward for specially meritorious service as a letter carrier, and desiring to remain assigned as a collector, hereby consent to accept a salary of $1,000 per annum from ——— for my service as a letter carrier assigned to the collection branch of the service: *Provided*, That should I at any future time be permanently assigned or transferred to the exclusive delivery of mail I shall be eligible to promotion in due course.

If any carrier demurred in signing this waiver, he was handed a second paper, which he was at liberty to sign, and of which the following is a copy:

I, ——— ———, a letter carrier in the Chicago post office, assigned to duty in the collection branch, and understanding that only men who are receiving $1,000 or less salary are to be retained in the collection branch, and that my retention in the collection service would, therefore, be compensated for at $1,000 per annum, request to be transferred to permanent duty as a letter carrier in the delivery branch, understanding that the $1,200 grade in which I am at present is granted as a reward for specially meritorious service, and that if my services are not hereafter satisfactory as a carrier I will not be reassigned to the collection service or be retained in the carrier service if found deficient as a carrier.

This, to my mind, is a plain case of coercion, as the superintendents who presented these papers to the employees are the officials who pass on their efficiency rating and decide whether a man measures up to the proper standard of efficiency or not. It seems to me to be a plain case of duress, as under the circumstances if a man valued his position in the service and was anxious to remain in it he signed the waiver and accepted the salary offered him, which in nearly every instance means a reduction of $200 per annum.

It is this reduction in salary in order to effect economy that is the cause of so much unrest and discontent among the postal employees. If this policy of the administration of the Post Office Department is permitted to be carried into effect, it will lower the standard of living of the employees, cause the destruction of carefully laid plans for home buying, limit education of children, cause a lapsing of life insurance policies, and be the cause of other hardships due to reduction in wages, and will react on the Postal Service. To my mind, it is neither just nor fair to reduce expenditures by placing the burden on those who can least afford to bear it. The majority of these men who are affected by this reduction have been in the Postal Service a number of years and have regulated their living conditions according to the salaries they have been receiving, and which they supposed were fixed by law. To take away a great part of their earnings from them by a departmental order will compel them to readjust their whole method of living and to a lower standard than they have been accustomed to.

We do not want the living conditions of those who toil reduced to a lower level, nor do we want their purchasing power decreased. This administration is appealing on one hand to business men to keep labor employed and not reduce salaries, while on the other hand it is reducing the salaries of Government employees and adding to the ranks of unemployed by curtailing the Postal Service and laying off a number of employees. Another matter that has been brought to my attention, and which I am unalterably opposed to, is the so-called efficiency system or speed tests that postal employees are being subjected to.

I have been informed that the pace set in these tests is beyond the physical and mental endurance of an ordinary man, and if lived up to would result in the breakdown of any human being under the strain. The tests could no doubt be made by a man of exceptional ability and training and for a short period of time when a man is at his best. No ordinary man could stand the pace and maintain all the requirements set out in the rules and regulations for the employees. The post-office clerks and letter carriers have been surrounded by hard and fast rules for years, and have been chafing at times under the restrictions contained in arbitrary orders defining the methods for performing their duties. The system under which they are now working has a tendency to make mere machines of men, and I protest that when men are not treated as men there is lack of harmony and cooperation between the officials and employees and with resultant harm to the public service.

It seems to me to be poor policy on the part of the department to institute a system among its employees that takes away from them the incentive to take pride in their work. It is carrying the policy of economy to extremes, and has developed into a parsimonious cheeseparing policy that fosters discontent in the minds of the men who do the real work.

I am in favor of the Senate amendment which will restore the letter carriers who have been reduced in salary to their former grades, and I hope that the Members of the House will concur in the Senate amendment.

Personally, I do not believe that the Post Office Department officials have the authority to issue an order that reduces the salaries of postal employees, as such an order, if permitted to stand, would nullify the will of Congress. I was a Mem-

ber of the Congress which enacted the classification law for post-office clerks and letter carriers, and took an active part in preparing and perfecting the bill. The enactment of the classification act was the result of mature deliberation on the part of the Members of Congress that had studied conditions in the Postal Service, and was intended not only for the relief and benefit of the postal employees, but also to improve the Postal Service. That the Congress was justified in placing the law on the statute books is attested by the reports of the Postmaster General for the two years following the enactment of the law. The employees took a keener interest in their work, and it was an incentive not only to keep the best men in the service, but was an inducement for high-class men to take the civil-service examination and seek employment in the service. This resulted in increased efficiency, and, as any business man knows, is the most satisfactory kind of economy. I trust that the Members of this body will not lose sight of these facts, and that the Members will register their disapproval of the attempt to economize in expenditures of the Postal Service by reducing the salaries and placing extra burdens on the lowest-paid and hardest-worked employees.

National Prohibition.

SPEECH

OF

HON. PATRICK D. NORTON,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 22, 1914.

The House had under consideration the joint resolution (H. J. Res. 168) proposing an amendment to the Constitution of the United States prohibiting the sale, etc., of intoxicating liquors for beverage purposes.

Mr. NORTON. Mr. Speaker, the State I have the honor to represent in part has enjoyed the benefits and blessings of constitutional prohibition of the liquor traffic for more than a quarter of a century. There is no one thing of which the great majority of the people of my State are to-day more proud of than the fact that the present generation of young men and women in North Dakota are being reared in an environment free from the evils and degrading influences of saloons and other institutions of the liquor traffic. In North Dakota constitutional prohibition is not an experiment. It is a tried and true success. The operation of the prohibition law in North Dakota, as in many other States in the Union, is an absolute refutation of all arguments that the sale and general use of intoxicating liquors as a beverage can not effectively and successfully be done away with by proper legislation. Some of the weakest and most peculiar arguments that I have ever listened to have been presented to-day in this Chamber in opposition to the pending resolution. The gentleman from Wisconsin [Mr. LENROOT] opposes the resolution for the reason, among others, that if the resolution is adopted by the Congress it will then be referred to the legislative assemblies of the different States instead of to a direct vote of the people of the several States.

I would ask the gentleman if as a true friend of national prohibition he is at all fearful or if he has any real ground to fear that the legislative assembly of any State in the Nation will approve and adopt this resolution unless a large majority of the people of the State are in favor of prohibiting the sale and manufacture for sale of intoxicating liquor?

Rather I believe the friends of prohibition might have good ground to fear that in some States where a large majority of the people are in favor of this resolution and in favor of the prohibition of the manufacture for sale or sale or gift of intoxicating liquor it may be difficult on account of the well-organized power and influence of the liquor interests to secure an adoption of the resolution by the members of the legislative assemblies of these States.

The gentleman from Illinois [Mr. MANN] appears fearful that the executive forces of the Federal Government added to the executive forces of the States will not be as effective in enforcing laws prohibiting traffic in intoxicating liquors as the executive forces of the several States alone. This has not been the experience of this country in the enforcement of other and similar laws. That kind of argument will I am certain be taken by the House and by the country at large for what it is worth and for no more.

The gentleman from Alabama [Mr. UNDERWOOD] sees in the passage of the resolution the undermining of the fundamental principles of government. I venture to say that the great Thomas Jefferson and other early fathers of the Constitution never imagined that any leader of any great political party in this country would at any time seriously contend that a submission to the several States of a proposed constitutional amendment would be an undermining of the fundamental principles of this Government. Why, gentlemen, instead of the submission to the several States of this proposed amendment to the Constitution being an undermining of the fundamental principles of this Government, it is wholly and entirely in accord with the very basic spirit and principles on which this Nation and our Constitution was founded. I would ask the gentleman if he would have our Constitution amended by orderly process of government or by revolution?

The question of amending the Constitution by ratification of less than all the States was fully considered and discussed at much length during the Constitutional Convention of 1787. It was only after long debate and after all propositions limiting the method of amending the Constitution to ratification by all the States was decisively defeated by the votes of Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, and Georgia as against Massachusetts, Connecticut, and New Jersey that Article V of the Constitution was adopted in this its present form:

ART. V. The Congress, whenever two-thirds of both Houses shall deem it necessary, shall propose amendments to this Constitution, or, on the application of the legislatures of two-thirds of the several States, shall call a convention for proposing amendments, which, in either case, shall be valid to all intents and purposes as part of this Constitution when ratified by the legislatures of three-fourths of the several States, or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by the Congress: *Provided*, That no amendment which may be made prior to the year 1808 shall in any manner affect the first and fourth clauses in the ninth section of the first article, and that no State, without its consent, shall be deprived of its equal suffrage in the Senate.

The "Articles of Confederation and Perpetual Union Between the States," which was the form of the government of this Nation preceding our present system, contained this provision in its Thirteenth Article defining the way in which the Articles could be amended:

And the Articles of this Confederation shall be inviolably observed by every State, and the union shall be perpetual; nor shall any alteration at any time hereafter be made in any of them unless such alteration be agreed to in a Congress of the United States and be afterwards confirmed by the legislature of every State.

The gentlemen who argue that this proposed prohibition amendment should not be submitted by the Congress to the several States unless on its merits the amendment is satisfactory to every State appear to forget that we are living under the Constitution of the United States and not under the Articles of Confederation and Perpetual Union Between the States. The Articles of Confederation and Perpetual Union Between the States, as the first charter of our Nation, went out of existence in 1789, more than 125 years ago.

The fathers of this Nation wisely determined that the Constitution might be amended by the ratification of a proposed amendment by three-fourths of the legislatures of the several States or by conventions in three-fourths of the States. If this had not been so provided for, does anyone think that the fourteenth and fifteenth amendments to the Constitution would have been adopted in orderly process of government and without revolution, if at all? The greatest statesmen and the most learned authorities on constitutional law who have discussed this question are unanimous in the opinion that the power vested in three-fourths of the States to amend the Constitution is wise and safe.

It is wise for to require the consent of all the States to an amendment would prevent the adoption of amendments which time and changing circumstances make vitally necessary; and, on the other hand, it is wise for to require a smaller number in proportion to the whole would expose the Constitution to hasty and poorly considered amendments by the party for the time dominant in the Nation.

It is safe because the proportion of the States required to ratify a proposed amendment before it becomes a part of the Constitution is sufficiently large to prevent any dominant part of the Union or combination of the States from using the amending power so as to unfairly and unjustly affect the rights and the interests of a weaker part of the Union or a small minority of the States.

It is not so much a question for the Congress to consider the merits of the amendment as it is to determine whether any large and considerable number of people in the several States desire that the Constitution be amended in accordance with the resolution. The argument that has been advanced by the opponents of this resolution to the effect that if the resolution is submitted by the Congress to the States for their action it will likely be ratified within a short time by three-fourths of the

States is, in my opinion, and in my interpretation of the spirit of the Constitution, the strongest argument that could possibly be advanced as a reason why the Congress should adopt this resolution.

The petitions from hundreds of thousands of our best citizens that have been sent this Congress on this question, and the widespread evidence of interest and enthusiasm for this resolution throughout the Nation, convince me beyond any doubt that a very large proportion of the American people are to-day in favor of national prohibition, and that it is our plain duty as Members of the Congress to submit this amendment to the several States for their ratification or their rejection. Our Constitution must be changed from time to time to keep pace with the evolution of the Nation. If at any time the Congress long persists in refusing arbitrarily to do its plain duty and thus prevent the people from changing their Constitution in accordance with the methods of amendment provided in the Constitution itself, history records in no uncertain language that the changes will be made, even if through blood and revolution. The Constitution is but a reflection of the spirit of the ages. The highest and best thoughts, attainments, and ideals of a free people can not long be denied expression and representation in their chosen charter of government.

If the Members of this Congress fail to adopt this resolution and submit this question to the people of the several States of the Nation, the years will not be long until there will come in this Nation a Congress that, responding truly to the spirit of the Constitution, will do what we here should do to-day. The mighty movement for prohibition can not be stayed by false logic, false arguments, or by all the power and influences of the rum sellers of the Nation any more than can the rolling waters of the broad Mississippi be stayed on their way to join the sea.

The SPEAKER. The time of the gentleman has expired.

The Postalization of the Telephone.

EXTENSION OF REMARKS
OF
HON. DAVID J. LEWIS,
OF MARYLAND,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. LEWIS of Maryland. Mr. Speaker, the Postmaster General has again recommended to Congress the postalizing of the telephone and telegraph communication. His predecessors for 50 years have given like counsel, including the parcel post.

The principal countries of the world, the United States alone excepted, have already postalized these agencies. Why? Briefly, because the post office alone has the motive and facilities to makes rates low enough to render service to all the people. Before the parcel post we had the highest parcel rates. They are now among the lowest in the world. But we still have the highest telegraph rates. They run from 25 cents to $1. Where the post conducts the telegraph they run from 10 to 24 cents for the longest distances. (1) The result of our high rates is that we use the telegraph but little. New Zealand, with a 12-cent rate, shows 9 telegrams per capita, the United States only 1. (2) And yet with the lowest letter rates we show the highest use, 101 letters per capita, as against 93 for New Zealand. (3) While our telegraph rates run from two to over four times as high as countries like Australia, with distances as long and wages as high as our own, our toll or long-distance telephone rates are even more immoderate. They run from three to seven times as high as the postal telephone rates of other countries. (4) Here is a statement of the average rates for nine countries on the Continent of Europe:

Miles.	Continental rate.	Bell rate.
100	$0.20	$0.60
300	.37	1.80
400	.39	2.40
500	.46	3.00
700	.53	4.20

That is, for 100 miles we pay three times, for 300 miles five times, for 400 miles six times, and for 700 miles eight times the rate on the Continent of Europe for a three-minute conversation.

Mr. Speaker, I am obliged to make a sensational statement about these long-distance rates. It costs the American as much to ship his long-distance conversation over the wires as it costs him to ship a ton of freight over the rails. The railroads get, on the average, 7 mills a mile for moving the ton of freight. The Bell system charges 6 mills a mile for carrying the three-minute conversation (5). Gentlemen can realize how weighty their conversations sometimes are. They weigh about a ton on the long-distance wires.

SOCIAL RESULTS.

Mr. Speaker, what is the consequence of our high rates? Well, sir, their effect is to reduce the traffic to a point as abnormally low as they are high. Combining the telegrams and long-distance messages, we find that other countries use the wire for such purposes from two to four times as often as we. While Denmark shows 17 such messages per capita and New Zealand 12, we show only 3. While we rank first in the use of the letter—101 per capita—we stand but thirteenth in the combined use of telegrams and long-distance messages (6). Moreover, our companies maintain but one telegraph office to seven post offices. These postal institutions maintain an average of two telegraph offices to every three post offices (7). This is the penalty our Nation pays for permitting a private monopoly to conduct this part of the Postal Service—the highest rates and the lowest service among the nations.

LOCAL TELEPHONE RATES.

Mr. Speaker, second only to the letter in importance is the local telephone call. Perhaps it would be first if its cost permitted the use of the telephone by all the people. In other countries the average postal rate for the local telephone call is about a cent a call, or half the letter rates (8), while in our cities the rates run from 5 to 10 cents a call. We rank twenty-ninth, or the highest but two among 31 telephone institutions, on the rates for the local call, while we rank the lowest but one in the world on our letter rates. Our measured service rates run from two to three times the like rates elsewhere, even in Australia (9).

The flat or unlimited tariffs, as in Norway, run as low as $10.72 per year. And for the large cities you have Christiania $21.44, population 227,626, as against Seattle $90, population 237,194; Berlin $43.20, population 2,320,000, as against Manhattan, N. Y., $205.20, for a population of 2,331,542; while London is $82.79, and San Francisco $180. Thus the separate rate for Boston, Denver, Washington, Baltimore, and San Francisco each exceeds the combined unlimited rates of Berlin and Paris; while the New York rate, for 5,700 calls, exceeds the three unlimited-service rates of London, Berlin, and Paris combined (10). Instead of running about half the letter rate, here, as elsewhere, our local-message rate in the cities runs with the street car fare, and often twice as much. In New York and Washington the business-phone rate is $48 for the first 600 calls, or 8 cents a call. You can now send a 4-pound parcel 150 miles for 8 cents, the postal system making about a cent profit. Mr. Speaker, it seems a duty to say that these telegraph and telephone rates are the scandal of public-service rates the world over, and only to be compared with the express rates before the advent of the parcel post.

Mr. Vail, president of the Bell System, with reference to the long-distance rates, observes that "Rates more or less equal to the foreign rates" could be given (11). He has also said in apology for the limited service:

> Instantaneous and immediate transmission of communication is as yet a convenience or luxury, although under modern methods of business and commerce it is an economical alternative to the cheaper mail service in business operations. The use of the telegraph may be a popular convenience, but it is not a necessity and is still confined to the comparatively few, and for that reason should be at the cost of the few that find benefit and profit in that use (12).

This is bold language. We are virtually told that of the three great agencies of postal communication only one, the letter post, may be used by all the people.

EFFICIENCY—ECONOMY.

Mr. Speaker, the cautious man will inquire, "But do these postal rates pay?" The facts are these: The telegraph, telephone, the Parcel Post, and the mail services are conducted in the same offices and by the same postal personnel abroad. The budgets of receipts and expenditures of the 16 leading countries for the year 1910 show receipts of $631,133,621 and expenses of $503,798,404, giving a surplus of $124,335,217, or about 20 per cent (13). Such are the results when the postal hand is allowed the use of all its fingers—the letter, the parcel, the savings bank, and the telephone and telegraph functions. The parcel post alone already has saved us from deficits. Superimposing the telegraphic function on the telephone wires—and you can use the telephone wire for both purposes at the same moment (14)—all the expenses of a telegraphic system except

the operator and messenger would be eliminated. Cutting our telegraph rates in half, it appears that we should have a surplus of $85,000,000 a year to reduce telephone rates and extend the telephone system to the homes of the masses, with 3 per cent for interest and 4 per cent for depreciation (15). If our Postal Service were but given its full rights, there would be no question about it being made to pay as well as other postal establishments.

But, Mr. Speaker, it will be urged, and the conviction is common, that men will not work as earnestly for the public as when supervised by the self-interest of a private employer. Doubtless this is a weakness in some kinds of employment. But there is a fundamental exception to it. It consists of those monopolies where the work is of a character that its quantity can be measured out in advance and a fixed task be assigned to the employee as a daily duty. Such is the work of the city carrier whose route and deliveries are scheduled. Such, too, are the tasks of the telephone and telegraph operators and messengers, for as the flow of the traffic, the number of calls and telegrams becomes known, a fair task for each worker can be adjusted. Whatever merit this objection may have elsewhere, investigation discloses that it does not apply to the postal institution. Not only is it efficient, but it is much more economical than the private postal monopolies.

The race is not always to the self-seeker, but sometimes it goes with the unselfish motive to serve society. This is true of the postal monopolies, where the productive capacity of the institution—that is, its service output—is determined mainly by the price. Let us take a familiar illustration. The work of the American postal employee consists of handling an average of 60,000 mail pieces per annum (16). If the postage rates were to be doubled the traffic would likely fall to one-half. But the 60,000 post offices would still have to be conducted with but a small possible reduction of the employees. They might then average no more than 40,000 mail pieces per annum, as the effect of doubled postal rates. The degree of plant utilization for a monopoly is determined by the price charged for the product and the desulting demand, and the cost per unit of production or service will be high or low for the employees accordingly. This principle is aptly illustrated in the telegraph and telephone field. For example, the service unit in telephony is the call. The average rate per call in Norway is 5 mills, and the number of calls handled per telephone employee in 1912 was 118,500. The average rate per call of the Bell System is 19 mills, and the average number of calls handled per employee was 65,265 per annum. Among 12 countries compared the Bell System ranked but ninth in product per employee, while 5 postal and 3 private systems outrank it (17). It is the high rate of the Bell System which gives it but the ninth place in productive efficiency. In one city where the rates were twice normal the utilization per phone was less than 1,000 calls per year, while the average for the country is more than 2,000. But the operating cost per phone was quite as great. The same principle is exemplified in the telegraph field. The American telegram cost 48 cents for handling, the highest to be found anywhere, and but 27 cents in Australia and 21 cents in Great Britain (18).

	United States.	Australia.	Great Britain.
Operating cost per telegram	$0.48	$0.27	$0.21
Maintenance of offices; one office to population of	10,960	902	3,214
Traffic supply; telegrams per day per office	41.4	11.9	22.3
Maintenance of pole line; 1 mile to population of	385	100	686

Australia is strictly comparable with the United States because of the equal wages and distances involved there. The postal telegraph employee gives a greater product per year than the private American monopoly. In New Zealand the telegraph employee handled 3,980 telegrams per year, the American only 2,933, and yet the American has a traffic supply of 15,114 telegrams per office maintained, and the New Zealand only 4,573 (19).

Mr. Speaker, experience shows that there is, as the economists say, "a possible beneficent principle in the form of a monopoly," provided it is placed under the guidance of the appropriate rules of financiering. Says Dr. Adams (20):

Private financiering: The relations here set forth will present themselves more clearly to our minds if we throw into comparison the rule of public and the rule of private financiering. A private business is managed to secure a profit, and, other things being equal, the higher the price secured for any service rendered the higher will be the profit. The rule of private financiering therefore is to maintain the price of goods or services at the highest price which has no tendency to curtail profitable business.

Public financiering: The rule of public financiering, on the other hand, conforms to an altogether different principle. It is the purpose of government to render services at the lowest price consistent with efficient service. Price equals cost. This is true, because the State, being the manager of the business, has no motive in acquiring riches.

These differing rules are well illustrated in recent characteristic applications by private and postal functionaries. The Chicago & Milwaukee Telephone Co., doing business between those cities for many years, charged a rate of 15 cents for 10 words and 1 cent per additional word. After the American Telephone & Telegraph Co. secured control of the Western Union it managed to gain control of this lesser company and raised its rates to 25 cents and 2 cents per word. Under the low rate in 1909 the service rendered the public amounted to 103,248 telegrams. In 1912 under the 25-cent rate the number of telegrams fell to 57,689. By this raise in the rate the Bell Co. gained the salaries of two operators and two messengers, whom it was able to discharge, by reducing the service to the public one-half. But by the same proceeding it raised the productive cost per telegram from about 14 cents in 1909 to 24 cents each in 1912.

What the Bell Co. did in that case was according to the rule of private financiering. Under postal control and the public-service motive the 15-cent rate, while it paid expenses—and it did—would have remained to insure the maximum social service.

Per contra, now, let me illustrate the action of a postal financier. I went to Postmaster General Burleson and demonstrated that the parcel rates on the 50 and 150 mile zones were some four times the cost of service. After the fullest consideration by himself and the Interstate Commerce Commission he reduced them from 3 and 4 to 1 cent a pound. The traffic, from 1 pound and up, in these zones since then has increased by 200 per cent, and from 5 pounds and up by 500 per cent; and yet he is making a good profit at these rates, as much as the express companies ever made, after allowing for railway pay a sum per ton-mile twice as great as they are paying the railways.

Mr. Speaker, it was just as natural for the Postmaster General, acting under the rule of public financiering, to make these reductions, when he found them feasible, as for the Bell management to raise its telegraph rate from 15 cents to 25 cents; and it was just as natural under the well-known laws of monopoly economics that the traffic should increase 200 per cent in the parcels as it was that the traffic in telegrams should fall 44 per cent. In the case of the parcel you have a public-service efficiency that has been raised 500 per cent, while in that of the telegram the service efficiency has been lowered nearly half. Can such marvels be accomplished by simply changing names, from private to postal financiering, you ask? No; it is the fundamental change of motive or purpose that takes place.

ADEQUACY OF ORGANIZATION.

Mr. Speaker, I present now the elements laid down by the political economists as necessary in the working organization of a monopoly in order that its service be rendered at the lowest cost, and that society should realize the benefits of a monopoly in the class of enterprises for which that form of capital and labor is adapted. The elements are stated to be:

(a) Unity and exclusiveness of organization.

(b) Details of management well worked out.

(c) Facility for extension by mere duplication of existing structure.

(d) A social demand for the service which is widespread and constant.

(e) Adequate ability in authority.

Results:

(f) Service at less cost than if broken into groups, because—

(g) Assured demands for service admits of closest calculations.

(h) Extent of demand admits of most minute division of labor.

(i) Absence of rivalry reduces to a minimum the amount of capital and other expenditures necessary for the performance of the service.

(j) Speculative management is eliminated.

(k) And thus, with public financiering motives, the maximum of utilization and efficiency is rendered possible.

Mr. Speaker, it is, of course, not a matter of criticism that our private telephone and telegraph monopolies are lacking in the main essential—the public-service motive. As privately financiering organizations, such a motive is against nature, and should not be asked. What our people do not understand is that an entrenched postal monopoly in private hands is seldom actually efficient, but that, judged by the amount of service rendered per dollar expended, our telegraph and telephone monopolies are grossly uneconomical. In the competitive industries

the uneconomical are being constantly weeded out by "failure"; but these monopolies do not "fail." They simply pass the waste into the price to the public. Our telegraph agencies are reeking with inefficiency. They put the telegram through some 74 processes (21), some 50 of which are eliminated by the postage stamp by the postal systems. When judged by economic standards, these monopolies are merely political anacronisms in postal history, unfit to be tolerated in the court of economics or institutional efficiency. Because our competitive industries show constantly increasing efficiency and, for the most part, a cheapening of the cost of the unit of production, it is thoughtlessly assumed that this is true of all private enterprises. But it is not true of our telegraph, telephone, and express agencies—natural postal monopolies. It is costing the express company to-day three times as much to handle the parcel—barring railway pay—as it does the Post Office. It is certainly costing the telegraph and telephone companies to handle their communications twice what it would cost the post under rational rates and high plant utilization; and, with reference to the telephone, it is beyond doubt that any true competitive business would scrap the costly manual telephone, as the postal systems are doing, for the automatic, or "girlless," telephone, eliminating one-half the employees and the terrible cost of manual switchboard obsolescence. The private exploitation of postal monopolies has never failed as yet to spell with high rates the highest cost per unit of service rendered, and hence the lowest social-service efficiency. That is a matter of demonstration. If the Post Office copied the red tape of the express companies (22), its parcel rate would have to be doubled, and if it handled the letter as the telegraph companies do the telegram we would have 8 or 10 cent letter rates.

We reach the conclusion that the rules of private finance improperly applied to these postal monoplies fail to cheapen the price of the service, as they do in the competitive industries. Its rules condemn the agency to a half marketing of its potential service. The Post Office makes the profit from Chicago and New York pay for the nonprofitable rural and other services, while the private telephone and telegraph investor naturally restricts his activities to the particular points which promise a satisfactory profit.

REGULATION NOT A SUBSTITUTE FOR POSTAL MOTIVE.

What are you going to do about it? "Submit it to regulation," says the overcautious, who is without time or disposition to study the subject and who fears new ideas as a child fears new faces. With this he rids himself of the troublesome problem for a while. But does he solve it? No; it is fundamentally impossible to secure a substitute for the postal motive and methods in a postal monopoly if it is to render the maximum social service. Regulation may remove discriminations in the rates or the service and often prevent the looting of the business by corrupt corporate officers. But postal rates and universality of service, a retail rate as low as the wholesale cost, is out of the question, it would be morally wrong to impose on the private investor. He is entitled to the market rate of interest on private investments, even when the investment and interest is certain; and that rate is twice the rate on Government bonds. But the income of even a telephone company is not certain, and so something more—the regulating tribunals say from 7 to 8 per cent—must be allowed. Otherwise the private investor will decline to provide the new capital necessary where he has to take the chances on a low or no return, but is denied the right to reap the high returns of a lucky investment. Thus private capital must cost from two to two and a half times that of the postal investment. Observe the effect when regulation is applied. In a city of 600,000 the investment was $5,665,729, the receipts $1,507,550, and the net revenue, after payment of operating expenses and taxes, depreciation, and so forth, $400,169, or a little over 7 per cent on the investment. The number of phones was 43,000, and the messages per phone 993 as compared with 2,013, the average for the country. As against this low utilization the average rate was $3.53 per 100 calls as against $1.86 for the Bell system generally and 88 cents for the independents. The number of messages per capita was 71 compared with 156 for the country, while the total revenue was distributed as follows (23):

Expenditures per message:	Cents.
Operating cost	1.50
Rentals, taxes, depreciation	1.08
Profits	.95
	3.53

These double rates reduced the use of the phone to less than half normal, from 2,013 to 993 calls per year. The Postmaster General, acting on the public-service motive, would reduce these message rates one-half, and the traffic doubling would leave his gross revenues intact. But he would need to double the exchange operators, for a manual exchange, at a cost of $125,000, and reform the switchboard at an interest cost of $18,000 more. These items taken from his $400,000 profit would leave him some $257,000. His interest charge at 3 per cent for capital would be $170,000, giving him a margin of $87,000. But $257,000 would amount to but 4½ per cent for a private investor. Could a regulating tribunal order him to halve his rates, take the chances of the traffic doubling, and even so, receive but 4 per cent interest on his property? Manifestly no sane tribunal would take such chances with another man's property. And yet the Postmaster General could justly say, "I will take the chance of the traffic doubling, of its going up to normal; even if it falls short 5 per cent, I will still be safe, for if my revenue falls off 5 per cent and the public service is increased 95 per cent, since the people and the post office are convertible terms, I have gained 90 per cent in institutional efficiency. I lose 5 per cent in one pocket, but I gain 95 per cent in the other." In this very case whether the capital is to be a 3 per cent Government bond or a 7 per cent private investment determines the question whether the rate can be reduced one-half or not reduced at all. Manifestly regulation is not a substitute for the postal motive in securing to the public the lowest communicating rates. Already the regulating theory as applied to our railways has broken down. The telephone managerial interest may continue to contend for Government supervision rather than ownership long after the investor has said, "Go get your money where you get your regulations, from the Government." We can understand that the high-priced managers may have an interest in keeping the monopoly a private one, an interest entirely distinct from that of the public or even the private owners.

RELIEF, POSTAL TELEPHONES.

What are we going to do about it? Well, Mr. Speaker, just what other countries have done. Do what we did with the parcel—give the post office its institutional rights. Sir, last year the parcel post carried about 300,000,000 parcels weighing a pound and over. Not more than 50,000,000 of these were taken from the express companies, which carried about the same number. That is to say, 250,000,000 parcels—about half the potential traffic—were moved by post that would have been "killed" by the prohibitive express rates. What does this mean? Simply that half the country's express traffic for generations has been killed by a private monopoly with methods so grossly expensive that it could not make rates low enough to move it, but insisted upon squatting on the postal function. That is what is now wrong with the electrical communication. Certainly not less than three-fourths of the potential telegraph traffic is killed by our prohibitive telegraph rates. New Zealand has nine telegrams per capita; we have but one (1). Our long-distance telephone rates, three to seven times as high as elsewhere, are certainly killing four out of five such messages. Meanwhile the long-distance lines are used but 4 per cent of their potential capacity, as against 19 per cent in Germany under postal rates; and as to the local telephone service, only the business office and the well-to-do residence can afford it at all. The homes of the masses are denied this facility—the only postal facility now denied them in the United States—and this merely because a private monopoly, like the express companies, insists upon conducting a postal function.

Mr. Speaker, the opportunity to communicate ought to be made as nearly universal as science and sound business consideration will permit. Mr. Vail, president of the Bell System, has said:

> There is a road to every man's door; there should be a telephone to every man's house.

The parallel is indisputable, but its complementary fact should also be noted. It was society, and not any privately financed monopoly, that built these roads.

Now, the postal object is not merely to confer equal privileges in form. It so organizes its service and formulates its rates as to remove any economic barriers to their use. The poor man can actually utilize any form of the Postal Service. Its rates are adapted to his means.

Besides keeping the phone out of the homes of the masses, the high rates prohibit its proper use for some of the most important purposes. I take time to refer to one, of probable fundamental importance, a kitchen-to-farm rate, by which the consumer could connect with the farm and have his produce brought him direct by parcel post at its first price and with its first smell. The phone provides the personal contact necessary in bargain making. The letter does not, saying nothing of its

delays and labor. But the telephone can not be used now because of its prohibitive rates. Washington is completely environed by farms, yet I find that the housewife can not reach a single farmer here at less than 15 to 25 cents, a rate prohibitive in such small transactions. Rates below a nickel could be made, say, for the evening hours, when the use of the lines is less than 5 per cent of the potential. Rates as low as 4 cents for 20 miles obtain in Australia, Germany, and Italy. And postal rates at cost could be given here to the farm within a region of 50 miles, granted only the postal motive to put the wires in use.

THE POSTAL OBJECT.

Mr. Speaker, our problem is threefold. Stated formally, our rates for the electrical communication average—

The telegraph rate two to four times.

The long-distance rate three to seven times.

The local-call rate, two to four times the rate for such services where the postal agency is given the complete function of communication. It appears that the telephone network alone can be used for all three objects of relief. And what, sir, does the experience of the world justify us in expecting as the resultants of such postalization? In answer it may be confidently said that ultimately we should have—

(a) A 12-cent telegram for shorter, and

(b) A 30-cent telegram for longer distances.

(c) Long-distance and toll rates at one-fourth prevailing rates.

(d) A cent a call local rates, and

(e) A phone in every home.

(f) Farm-to-kitchen telephone rates, thus enabling the consumer and farmer to deal direct through the parcel post or otherwise.

Mr. Speaker, this is a rational, a safe, and practicable program. The experience and practice of all the great postal establishments proclaims it to be so—as much so as the parcel post. Australia, Austria, Belgium, Bosnia-Herzegovina, Bulgaria, New Caledonia, Dahomey, Denmark, Egypt, Formosa, France, Tunis, Germany, Switzerland, Great Britain, Sweden, Greece, South Africa, French Guinea, Servia, Hungary, Roumania, India, French Indo-China, Italy, Norway, Japan, New Zealand, Luxemburg, the Netherlands, Russia, Siam, all testify that the telephone and telegraph communication belong, with the letter, to the postal establishment. Is our postal system less worthy than theirs? Are our people less worthy than the subjects of foreign princes? What has our postal system done that it should be dishonored by a disinheritance of its functions? Sir, it is not to blame. We ourselves are to blame. Seventeen different times (24) have committees of Congress recommended the course now advised. * * *

Mr. Speaker, I rest my case upon the truth of the statement that these private functionaries, by the law of their nature, are incapable of properly discharging the postal function of communication; that they can not have even a purpose of trying to do so; that, just as with the parcel post, their operating methods are too expensive and wasteful to allow of its full discharge. That, in short, they are closing the mouth of communication three times where they facilitate its message once. What said the great Teacher of mankind to the steward who brought back the talent uninvested and without increase? And what said He to that other steward who returned his talent multiplied manyfold? Even so should this function of communication be taken from the private functionary, who is plainly incapable, and given to the Postal Department which on the mail piece, and now notably with the parcel, shows the right regard for its master's interest, and alone is able to give the maximum of service to the people of this country.

We know that the history of the United States in its normal development was greatly disturbed by the Civil War; we know that after its completion great princes of finance grew up whose activities were necessary to build 200,000 miles of railroad and to erect other great industrial institutions for our country. While they were doing this the shadow of the State and of the Government grew less, and their statures grew the greater in comparison. The real, active powers of society were not found in the State house; the power of the great Republic itself was not found in its Capital nor at the White House, but in the inner offices of these princes of finance. I challenge whether it be not true that anyone here to-day can remember the names of a half dozen great financiers of that period quicker than they can remember the names of contemporary Presidents of this Republic. It was only natural in exerting that power that they should slough over onto the Government's domain. They did slough over, not only with regard to the telegram and the telephone, but they did it also with regard to the parcel; and we have found since the Parcel Post Service has been installed that their rule under the prohibitive rates necessary for private financiering actually killed one-half of the potential parcel traffic of this country for more than 40 years. The same result obtains now with the private financiering of electrical communications. Meanwhile dangers to the Republic of the most insidious character have been presented. I speak of the fact that public functionaries, rendered weak by the deprivation of their normal powers, have yielded, often too readily, to the domination of promoters who have bribed them away from their duty. In the city of San Francisco two telephone concerns were striving for the franchise. Both sides to that controversy bought up the city council of San Francisco. The councilor went out of the municipal meeting with bribes in each of his pockets, taken from each of the contestants. As a contrast with that picture I invite comparison with the history of San Francisco, with the history of London, or of Berlin, or even of "Gay Paree." Yes, and I invite comparison, too, with our own great postal agency, the greatest public-service organization in the world. The people trust it; the people love it; for they know it to be the—

Enlarger of the common life.
Carrier of news and knowledge.
Instrument of trade and industry.
Messenger of sympathy and love.
Servant of parted friends.
Consoler of the lonely.
Bond of the scattered family.

Lincoln's Birthday.

EXTENSION OF REMARKS

OF

HON. H. ROBERT FOWLER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. FOWLER. Mr. Speaker, this is the aniversary of the birth of one of America's greatest men, and I doubt if we could serve our country more appropriately than by devoting a few moments of our time to his memory. God gave him to Kentucky, Kentucky gave him to Illinois, Illinois gave him to the Nation, and he gave to the world a Republic baptized in the blood of liberty and dedicated to the doctrine that all men are created equal. He blotted out Mason and Dixon's line, struck from the limbs of undermen the shackles of slavery, and established in America and put in practice the doctrine that governments derive their just rights from the consent of the governed. We owe to him much, and as time passes the fruits of his public service will grow in importance and be recognized as the crowning glory of American statesmanship.

Mr. Speaker, I did not rise to make a speech, but before I take my seat I desire to comment for a few moments upon the greatest speech I ever read. It was delivered at Gettysburg at a reunion in 1863. Edward Everett was the orator of the day, and delivered a powerful oration of two hours' length. Then followed Mr. Lincoln's masterpiece of only 267 words. It is said that when the exercises were about to close Lincoln took Everett by the hand and congratulated him upon his success as an orator, whereupon Everett replied in substance, "I would only be too happy if I could console myself that I, in my two hours' speech, said as much appropriate to the occasion as you did in two minutes." It has been said by some that Mr. Lincoln hastily prepared this speech, but I do not think this is true. While it is very short, yet I doubt if any orator ever breathed forth to his hearers so much crystallized thought for the occasion as is couched in these few words. It is a masterpiece and takes rank with our greatest classics. I advise every schoolboy to commit it to memory.

Mr. Speaker, history is not without other examples of short masterpieces. David's masterpiece on the Glory of God, the nineteenth Psalm, contains only 274 words, and yet it is full of information and thought. I regard it as one of the most important chapters of the Bible. It, too, should be memorized. St. Paul's masterpiece on Charity, delivered at Ephesus more than 1,800 years before Mr. Lincoln delivered his Gettysburg speech, contains only 270 words. I think it can be truthfully said that

Lincoln's Gettysburg speech, the nineteenth Psalm, and the thirteenth chapter of First Corinthians, from a literary standpoint alone, rank among the greatest literary productions in the world, yet they are among the shortest in point of words. It is said that an American once twitted an Indian chief on the shortness of the Indian language and received this reply: "Humph; don't take big language to tell the truth." I have been so impressed with the similarity between these two masterpieces of Mr. Lincoln and St. Paul that I will place them in the RECORD in parallel columns for comparison and study. The nineteenth Psalm might be read and compared with them with much profit.

"Though I speak with the tongues of men and of angels, and have not charity, I am become as sounding brass or a tinkling cymbal. And though I have the gift of prophecy and understand all mysteries and all knowledge, and though I have all faith so that I could remove mountains, and have not charity, I am nothing. And though I bestow all my goods to feed the poor, and though I give my body to be burned, and have not charity, it profiteth me nothing. Charity suffereth long and is kind; charity envieth not; charity vaunteth not itself, is not puffed up, doth not behave itself unseemly, seeketh not her own, is not easily provoked, thinketh no evil; rejoiceth not in iniquity, but rejoiceth in the truth; beareth all things, believeth all things, hopeth all things, endureth all things. Charity never faileth: but whether there be prophecies, they shall fail; whether there be tongues, they shall cease; whether there be knowledge, it shall vanish away. For we know in part and we prophesy in part. But when that which is perfect is come, then that which is in part shall be done away. When I was a child I spake as a child, I understood as a child, I thought as a child; but when I became a man I put away childish things. For now we see through a glass darkly, but then face to face; now I know in part, but then shall I know even as also I am known. And now abideth faith, hope, and charity, these three; but the greatest of these is charity." (St. Paul at Ephesus (A. D. 57 or 58), I Corinthians xiii, 2–13.)

"Fourscore and seven years ago our fathers brought forth on this continent a new nation, conceived in liberty and dedicated to the proposition that all men are created equal. Now we are engaged in a great civil war, testing whether that nation or any nation so conceived and so dedicated can long endure. We are met on a great battle field of that war. We have come to dedicate a portion of that field as the final resting place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this. But, in a larger sense, we can not dedicate, we can not consecrate, we can not hallow this ground. The brave men, living and dead, who struggled here have consecrated it far above our poor power to add or detract. The world will little note nor long remember what we say here, but it can never forget what they did here. It is for us, the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to the cause for which they gave the last full measure of devotion; that we here highly resolve these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that the Government of the people, by the people, and for the people shall not perish from the earth." (Lincoln, Gettysburg, 1863.)

Governmental Regulation of Railroads.

SPEECH
OF
HON. OSCAR W. UNDERWOOD,
OF ALABAMA,

DELIVERED BEFORE THE SPHINX CLUB,

In the City of New York, March 9, 1915.

[Printed in the CONGRESSIONAL RECORD March 15, 1915.]

Mr. UNDERWOOD. Mr. Speaker, under the general leave to print, I desire to extend my remarks by printing in the RECORD an address I delivered before the Sphinx Club in the city of New York on the night of Tuesday, March 9, 1915, on the subject of Governmental Regulation of Railroads.

The address is as follows:

"No great economic question is settled finally until it is settled right. To consider and decide the problems that confront the railroad world to-day, we must lay aside passion and prejudice, greed and desire, personal interest and political bias, and approach the solution of the problem from a judicial point of view, as seekers after the truth, with a determination to stand only for the right.

"Let us not forget that the money invested in our railroads exceeds the public debts of the four greatest nations of the world. That from the standpoint of capital, the question presents itself as an investment of money.

"Let us not forget that trade regards the railroads as its best customers; that the output of thousands of mines, furnaces, factories are required each year to supply the consumptive capacity of the great railroad systems of the United States.

"Let us not forget that labor recognizes that the railroads employ a million and a half of men and pays a wage that approximates that of the embattled armies of Europe.

"Let us not forget that in the end the public, either as passengers or shippers, must pay every dollar that is required to maintain and operate the great transportation system of our country.

"Have I defined the points of view from which the solution of the problem that confronts us must be approached? Not yet. As the human body in all its beauty and strength must fall and die when the heart ceases to drive its life blood to the extremities, so too will invested capital perish, trade languish, and labor starve when the great railroad systems of our country fail to perform the function for which they were created, and economically and efficiently transport the products of our fields and our factories to the ultimate marts of trade where they may find ready sale and rapid consumption.

"Finally, let us not forget that commerce is the vital part of a healthy business development and that an efficient transportation system is as necessary to the life of commerce as the heart is to the life of the human body.

"The railroads are the country's most important highways. Destroy the railroads as they exist to-day and you destroy our commerce and bring disaster to our people. Without their proper maintenance they will soon cease to exist. Unless you extend and enlarge our present transportation facilities the business development of our country must stop where it is to-day.

"We have undertaken the problem of Governmental regulation of railroads and the Government will not turn back. Regulation of practices and rates is here, and here to stay.

"But let us stand for wise and just regulation and not for ill-considered and dangerous regulation. We must regulate so as to insure all necessary railroad facilities both for the present and for the future.

"As the public in the end must pay the bill, they are primarily interested in the railroads securing the money needed for their maintenance and development at reasonable rates and equally interested in seeing that it is wisely expended.

"That no unnecessary highways are built in the future, and those that are selected for extension and development are best adapted to carry commerce with the least burden are Governmental problems of the first importance, for it must be remembered that when you construct two highways where one can render the service required, the public in the end will bear the burden of the cost of the additional highway without receiving a commensurate benefit in return, for rates no longer will be fixed by competition now that Governmental regulation has become the fixed policy of our people.

"To regulate the freight and passenger rates of the railroads so that the rates may be both just to the invested capital and at the same time reasonable to the public is a secondary problem, but of scarcely less importance than the one I have mentioned first. Together they embrace the alpha and omega of the railroad problem of our day.

"In the solution of these problems we must protect the rights of private property invested in the railroads and at the same time assure to the public fair and reasonable treatment in the movement of commerce of our country.

"I have said that the fixed policy of our people was regulation by the Government of our railroad systems, and it is; for whether you agree with me or not you may as well accept my conclusion. Revolutions never move backward. If governmental regulation is unable to solve the vexed problems that confront us, the people will accept Government ownership of railroads as the next step ahead. It is, therefore, a matter of great importance that we should earnestly endeavor to reach a fair and reasonable solution of the problem of regulation at as early a day as is possible.

"The transportation problem is so closely interwoven into the business fabric of our people that governmental control in some way was inevitable from the beginning. In almost all countries the railroad question is one of first importance, and has

been met in foreign lands either by governmental regulation or ownership; but in other countries the problem has not been as difficult of solution as in our own, due primarily to two causes: Our large population and vast natural resources located far inland and at great distances from water transportation makes railroad carriage indispensable, and industrial freedom could be guaranteed only by just regulation.

"Another difficulty that hinders the solution of the problem here and is not met abroad is a political one. Our dual system of government greatly increases the difficulties and uncertainties that surround the problem before us. Our Federal Government and 48 State governments constitute the 49 masters that the railroads must obey. It has been said, 'No man can serve two masters.' All of the important railroads run through two or more States and are subject to different laws, rules, and regulations whenever a train crosses a State line.

"It is true that our lawmakers and our judges have endeavored to differentiate between interstate and intrastate business, but the effort to do so had led to much confusion and to much litigation. In the passenger coach we find an interstate riding beside an intrastate passenger, and in the baggage car a package that will reach its destination within the State in which it was shipped resting against a parcel whose destination is across the State line. Consider for a moment that the one package is subject to the rule of one and the other must obey the mandate of at least three masters.

"The difficulties that confront us do not end here. If a uniform system of regulation were adopted by the Federal and all the State governments you would not have solved all the difficulties of regulation and control, because the railroads are privately owned, and our courts have held inviolable the right of the railroads to charge rates that will produce a reasonable income on the invested capital.

"If the corporation is successful in earning more than an adequate income, the rates may be regulated; but if the revenue received is not a fair return on its invested capital, the Government is powerless to act.

"Low rates and adequate facilities are demanded by the public, but the granting of one is often the denial of the other. Adequate facilities very often require the expenditure of large sums of money. Low rates prevent the accumulation of surplus capital and lessen the borrowing power of the roads. The price of new facilities must always be the acquisition of new capital from some source. Without new railroad facilities, our commerce can not expand beyond our present limitations and trade has met a permanent barrier to its future development.

"It is therefore the public and not the stockholder who must suffer most if our regulation policies are inadequate to meet conditions fairly, broadly, and safely; for the travelers and shippers must defray the cost of transportation and pay for incompetence in building, operating, and regulating. The tax paid by our people for freight and passenger transportation for the year 1912 amounted to $2,826,917,967, and the part of the gross receipts that went to the stockholders as dividends was $346,805,582, or 12 cents out of every dollar. In fact, 88 cents of every dollar paid by the public went for operating expenses, taxes, and interest before there was a cent for new facilities or dividends.

"The matter of dividends to-day is a very small part of the equation we must solve. The public must be interested in the items that make up the operating expenses of the railroads if it desires both adequate facilities and reasonable rates.

"For more than four decades the Federal Government and the States have enacted laws supervising the practices and regulating the rates of the railroads, and it can not be denied that much good and some harm has resulted to the public.

"In the beginning the railroads denied the right of any Government to control what they were pleased to call their private property, but they overlooked the fact that the grant given them was to maintain a public highway in which the public was as much interested, if not more so, than their stockholders. Step by step governmental regulation has advanced until to-day railroad corporations are controlled by the public in respect to every detail of their business, and this control has been accepted and recognized by their managers.

"It can not be denied that public control has reduced the rates charged for transportation and abolished unjust discriminations given to favored shippers. No one now contends that localities, as well as shippers, should not be treated with equal fairness.

"But the greater problem remains unsolved. Can the money be provided to expand and develop these great public works in a manner commensurate with the expanding needs of our commerce under the present systems of public control?

"For a time the growth of population on new lines and increased motive power for train service on old lines enabled the management to provide new facilities and at the same time reduce rates, but the limit to development along these lines seems to have been reached.

"In recent years accumulated surplus of railroads have largely disappeared; dividends have been greatly reduced, and the ability to secure long-time loans at low rates of interest has passed way. Without cheap money for development, new facilities can not be obtained and low rates for transportation be maintained.

"We must all give credit to the present system of regulation for the accomplishment of much good in the interest of the public, but those who are giving careful study to the railroad problems that confront us are bound to admit that our present system of regulation is breaking down, in so far as it has supervised the finances of our railroad systems with a view to allowing them to properly protect their securities that their credit may be maintained to aid in present and future development.

"If railway investments can not be made attractive to capital, is not the Nation threatened with an inevitable breakdown of its transportation systems?

"We can never have permanent prosperity in the country until our great problem of transportation is settled and settled wisely. There is no more difficult problem awaiting its solution ahead of us, and no more inviting field for the exercise of true statesmanship has ever faced our public men.

"The problem can be solved and will be worked out satisfactorily to both the investor and the shipper, but it can be solved only by wise, fearless, and patriotic men, in the daylight of publicity, with the determination to do exact and even-handed justice between invested capital and the public.

"Let us concede without cavil that transportation and commerce can only advance when they go hand in hand. Let us inspire courage and give aid to those leaders who, not by chance but through merit, direct our industry, control our trade, and manage our finance. It is not enough for our Government to permit those men to rise from the prostration which has overtaken them and their affairs. It must occasionally assist them. We have reached the point on our way to social betterment where sound progressivism must recognize that the proper regulation of business requires that it must be sometimes helped and not always hindered; must be sometimes assisted and not forever stricken; that we must occasionally say, 'You may,' and not always 'You shall not.'

"It is gratifying to know that the policies mentioned are responsive to natural growths and can be achieved without entrenching privilege and subsidizing trade. We need only to permit railways, traders, and bankers that economic freedom which is consistent with a wise and helpful regulation of all affairs and to give every citizen the national protection to which he is entitled, wherever he may rightfully be—at home or abroad—for our trade to gain its lost position and for our flag to be seen on every sea."

Rural Credits.

EXTENSION OF REMARKS

OF

HON. ANDREW J. VOLSTEAD,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 3 (legislative day of Tuesday, March 2), 1915.

Mr. VOLSTEAD. Mr. Speaker, when we had under consideration the Federal reserve act several attempts were made to amend it so as to provide cheaper money for the farmers. To defeat these efforts the administration promised that the subject of farm credits should be promptly dealt with in a separate act. A commission was appointed for the purpose of investigating the subject. This commission has long since reported, but no serious attempt has been made by the House or Senate leaders to secure legislation. A strenuous effort has been made during the last days of this session by some of those interested in the matter to secure action, but this has been defeated. Instead of action, another promise has been made and another commission has been authorized to study the matter. It is perfectly evident that many are opposed to any legislation on the subject. They appear to believe that such legislation would favor a special class and would be paternalistic in character. Some of them urge that the Federal reserve act meets the situation. These contentions are clearly without merit. There is a fundamental difference between the kind of credit demanded by the merchant and the farmer. The merchant in carrying on his business can get along with short-

time credit of, say, 30 to 90 days, the time needed in turning over his goods, while the farmer needs from six months to a year in securing and marketing his crops, and must have correspondingly longer credit. This difference in the class of credits required makes it necessary that there should be a different credit system for the farmer from that furnished by the Federal reserve banks. These latter banks are not designated to meet the demands of the farmers. They are only authorized to care for short-time paper. If it is class legislation to meet the demands of farmers, it is also class legislation to provide the Federal reserve system to care for the merchant.

The Federal reserve system is but a poor copy of the European central banks so modified as to apply to our situation. Notwithstanding that nearly every European country has a central bank like our Federal reserve system, those countries have found it necessary to provide separate credit associations for their farmers. I am not prepared to say that any European farm-credit system, either for personal credit or for land loans can be made to work successfully in this country, but it seems to me that this subject should receive the most careful consideration. A system has grown up in this country that meets the situation in an entirely different way from that abroad, but generally at much higher cost. Can this system be so modified as to reduce this cost? We know that there are hundreds of millions of very cheap money in our savings banks, insurance companies, and other like institutions. Can anything be done to make farm credits so secure that this class of money will go out on the farms to aid production? France and other European countries have solved this problem, and they have solved it without Government guarantees of these credits. In some countries the Government has aided by contributing comparatively small sums as guarantee funds or capital stock to start such systems, but so far as I am aware, farm credits are not guaranteed by any Government. There is no good reason why we might not, in aid of general welfare, make a like contribution. Under the Federal reserve act more than a hundred million dollars will be constantly kept in the Federal reserve banks for the benefit of commerce. Why not contribute, if necessary, say, $10,000,000 as a guaranty fund to aid agricultural credits; it could probably be made to pay the Government as large a return as the money contributed to the Federal reserve system. To the extent of such contribution the Government's liability would be limited. We certainly could do that if we can guarantee all the notes of the Federal reserve banks, a liability that is almost unlimited. The investigation of this subject should be, it seems to me, confined very largely to the situation in this country. The foreign systems have been quite fully explained in the report already printed. The farmers should be given ample opportunity to present their views, and explain the difficulties under which they labor. This new commission should become the clearing house for the views of those who want to borrow money and those who have money to loan. If the dreams of those who have been the most enthusiastic in urging rural-credit legislation should come true, it would greatly aid, not only the farmers, but everybody else. The prosperity of the farm means prosperous merchants, mills, and mines. Instead of passing laws to take from the farmers the protection accorded other producers, instead of trying to cripple the rural route system which the administration appears to be bent on doing, it seems to me that we should do what we can to aid the farmers to secure equal treatment with other classes of our people.

Rural Credits.

EXTENSION OF REMARKS
OF
HON. SIMEON D. FESS,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 1, 1915.

Mr. FESS. Mr. Speaker, I take advantage of the privilege of leave to print extended me when Senate amendment 89, known as the McCumber amendment, to the Agriculture appropriation bill, which was designed to provide for a system of rural credits, was under consideration, to say something about the character of the people of the seventh Ohio congressional district, which I have the honor to represent. I embrace this opportunity, first, because rural credits is a question of interest to the argiculturist; and, second, I wish to call the attention of the country to this remarkable district. It is but natural for a Congressman to think well of the district which honors him by electing him its Representative. To be selected to speak and vote for the interests of a free people is no small honor. To be intrusted with such power places any man under great responsibility. Aside from the honor which goes with the office of Representative of a people of a particular district, some districts have elements of especial interest which would do more than ordinary honor to any man who is fortunate enough to be chosen its Representative. I once heard a distinguished American statesman declare that to be chosen to represent one's compeers is a greater honor than to be born a king. Especially is this true when the people represented are a reading and independent thinking people. Such is the seventh Ohio district, composed of nine of the best counties in the State, with an aggregate population of 264,297, and with an electorate that on the last election, November 3, 1914, cast 74,432 votes—over one and one-third times the entire vote cast for the eight Representatives in the State of Mississippi in the election of 1912. This people look upon public service as not only a sovereign right, but a sacred duty as well. The election day is the one time when all men stand upon the same level. No one man can vote more than any other man.

The seventh district has a historical significance. Within its borders were fought some of the greatest battles which determined the future of the great West. For years after the adoption of the Constitution the chief activities of the people of the Republic were devoted to the winning of the West. Every step was a contest between the pioneer and the native. This section of the country became the battle ground between these claimants. Here figured the wide-reaching struggle of the Nation in the Miami Indian War, in which St. Clair, Hamer, and Mad Anthony Wayne played an important part. The records of those leaders make up a considerable portion of the history of Washington's administration. Many of the daring feats that distinguished the red man as the wielder of the scalping knife were performed in this locality.

Within this district Tecumseh spent much of his youth, having been born on its borders. Here he held councils with his own and with the representatives of the conquering race. Gen. Benjaman Logan, the famous Indian chief, after whom one of the counties was named, saw much of his activities within this district. Logan was not only brave, but is known in Indian history as the orator second only to the famous brother of Tecumseh. Within the district were famous Indian hunting grounds as well as historic convocations. One of the meeting places was at old Chillicothe, in what is now Greene County, where as many as 2,000 Indians would gather in conference. Tradition tells us that at least 2,000 Indians had gathered in this one place more than once. The mound builder has left his marks within the territory comprised within the district. Within the seventh district is located the historic Fort Ancient, of so much significance to the archeologist. Besides the mound builder and Indian we have the Indian fighter. Simon Kenton, the pioneer and Indian fighter of wide repute, performed many of his wonderful feats within this district. It was here he ran the gantlet and it was here where tradition has it that he escaped by the leap across the Miami. After a life of spectacular performances he found a final resting place in the district at Urbana. The nomenclature links back to history. The names of the various counties have significance. Warren, Greene, and Fayette bear the names of warriors; Madison and Clinton, of statesmen; Logan, an Indian chief; Clark, an explorer; Champaign, from the landscape; and Union, of parts of others.

Among the men of note who lived in the territory included in this district can be named Jeremiah Morrow, Ohio's first Congressman. Much of the early law governing the public-lands question was framed by him. John McLean, judge of the United States Supreme Court. Thomas Corwin, Ohio's greatest political orator; there is larger space devoted to the activities of this orator and statesman than to any other of his Ohio contemporaries. Robert C. Schenck, one of the Nation's greatest statesmen; Blaine pays high tribute to the service performed by this son of Ohio. Samuel Schellenbarger, than whom there was no greater Union defender on the floor of Congress. Judge William H. West, the "blind man eloquent," who was chosen to present the name of Blaine in the convention of 1884; seven years before he had led his party as its candidate for governor. He is universally rated as Ohio's best political orator of his day and one of its finest legal minds. Judge William Lawrence, who was an authority on the subject of finance and tariff; as Comptroller of the Currency he distinguished himself. In his day he was rated as the best living authority upon the subject of wool. J. Warren Keifer, the only Ohioan who ever held the position of Speaker of the House of Representatives, and who

was a distinguished soldier in the Civil War, still lives in a vital and active relationship in the affairs of the Nation. From Union County came the former manager of the Associated Press, William Henry Smith.

In the field of the writer the district has been rich. Three names of literary note are found in the records of Greene County. Foremost of all is that of W. D. Howells, the greatest name in American fiction. He lived but a short time within the limits of the district. The other two are Coates Kinney, author of the Ohio Centennial Hymn and Rain on the Roof; and William D. Gallagher, author of Fifty Years Ago, a song of the western pioneer.

In this district were born and lived some famous writers and newspaper editors. Chief in this group was Whitelaw Reid, of the New York Tribune, whose fame extended to two continents. The Reid homestead, near Cedarville, is preserved in splendid condition. Julius Chambers, of the New York Herald, was born within the district. E. D. Mansfield, of the New York Times, spent his last 30 years in this district. One of his best efforts was his address on Ohio day at the Centennial at Philadelphia. The famous family of the Piatts had their stately country seat in Logan County, where they spent most of their lives. Within this district America's greatest sculptor, J. Q. A. Ward, was born and lived. His art is viewed in many of the great parks of the country. His Seventh Regiment, Shakespeare, and his Pilgrim, all in Central Park, are examples of his work. His George H. Thomas and his Garfield, both in Washington, are also types of his work. These are some of the really great names in American history which add luster to the seventh Ohio district and, indeed, to the entire Nation.

One of the best indexes of a community's worth is the emphasis it places upon education. Education, religion, and morality were written as fundamental in the historic ordinance of 1787, which became the first Ohio charter of government. Ohio has always been alive to this interest from that day to this. Among the educators of the Nation many began their work in this State. At least 10 years before Horace Mann forced upon public attention the needs of public-school education, when he succeeded in 1837 as the secretary of the first State board of education in a State system of public schools for Massachusetts, Ohio was endeavoring to find a way to provide for it. While only a semblance of success was realized, the beginnings of a real system here were begun. Within the counties which make up the seventh district can be found the most advanced steps of modern methods in public education that can be found anywhere. Whatever is of good in the Ohio system this section of the State has given approval. The idea of township supervision has had a favorable hearing. There are more township superintendents in these counties than can be found elsewhere in a like population. The centralization plan has been tried out here. The strong and weak features have been fully laid before the public. The new code is finding a sympathetic trial as an experiment in these counties. While it is being tested in every detail with an open mind, the counties within this seventh district will probably give it the most ample try out of any place in the State. In this district are found at least eight colleges that grant degrees, some of them among the oldest as well as among the most distinguished of the country. Six do collegiate work and two are theological seminaries. Here within this district is one of the first colleges in the world to admit women and the very first to grant them full rights equal with men. At Antioch, located at Yellow Springs, labored for six years Horace Mann in what he was pleased to call his "great experiment." His educational platform had realized the public-school system, the normal-school system, and the district library system. It lacked his type of higher education. Antioch offered the opportunity. He declined the governorship of Massachusetts to accept the chance to thus work out his plans. He attracted the entire country. During his six years here he was visited by most of the great educators of the country. He was also visited here by such men as Emerson, Bayard Taylor, Charles Sumner, and others. He made up his faculty from those of his personal knowledge. Antioch was looked upon as the coming college of the West. A Harvard graduate wrote in 1867, "The plant is superior to that of Harvard." The work was nobly seconded by Thomas Hill, afterwards president of Harvard. Dr. Andrew White was extended the presidency, but Cornell was more attractive. The third president, Austin Craig, induced the famous chemist, Edwin L. Yeoumans, to cast his lot with Antioch, where he became the professor of chemistry, and who after seven years became the founder of the Popular Science Monthly. Edward Everett Hale, who served on the board of trustees from 1865 to 1898, was Antioch's greatest financial benefactor, with the exception of Peter Cooper, of New York, and Josiah Quincy, of Boston. Hale secured an endowment of $100,000. It was on this institution that Nathaniel Hawthorne drew for some of his literary characters. More than one famous writer laid his story's foundation in the hopes and aspirations aroused in the early days of promise of this "experiment." It was here that Edward A. Orton labored in the field of geology. In a glen of but a mile in length he studied the records of nature and made for Limself a reputation known wherever the science of geology is taught. Joseph Bergen likewise, in the field of botany studied another form of life in the same glen and won for himself as well as the college that nurtured him a world-wide reputation in his field. The list of names on the rolls of this historic institution is a comment upon the character of its work.

In this district is located Wittenberg, the famous Lutheran college, so widely known throughout the Nation. This institution is winning deserved recognition as a growing college of increasing influence in the higher training of the youth of the Nation, and especially for the church which is sponsor for it.

The Quaker college of Wilmington is also located in the district, as is also the United Presbyterian College at Cedarville. Both of these institutions display a devotion to the cause of higher education which promises well for their future. In the district the Lebanon National Normal School was established by Dr. Holbrook, which in its day had a marked career in a particular field of education. While this school did not attempt the character of work done in the standardized college, it has had a marked success in the short courses. In the district is also located the Wilberforce University, one of the best institutions for the colored race in the country. This great school was the response to the immediate needs of the colored people for technical training. In this place from time to time gather the greatest lights of the race. It is partially supported by the State, which is thoroughly justified by the army of young men and women it is sending out to do the work demanded by the welfare of the race. Besides these various institutions of higher learning, each of which grants degrees, there are two theological seminaries domiciled within the district. The one at Xenia is the second oldest in the United States. It will long live as the institution over which presided for many years Dr. N. G. Moorehead, one of the country's greatest Bible scholars. The other is located at Springfield and is known wherever the Lutheran faith is preached. In addition to these institutions there is a very good school for colored boys at Urbana, which is growing in usefulness. Its students are winning recognition both for themselves and their alma mater. The influence of these various institutions of higher learning is noticed upon the character of the citizenship which they serve. In every walk of life they have stamped their impress, whether professional or what not. They insure a high estimate of the value of education. Not only is it observed in the character of the local schools, but it is most common to send from the farms sons and daughters to college whose parents are not infrequently college bred.

Another index of a community is the reading habit it maintains. This may be exemplified either in the library or the magazine or the newspaper, or all of these together. It is but natural that a community of colleges would be a reading people. In this district there are at least 65 newspapers. Of these 9 are dailies. A glance at these publications indicates the character maintained, which does not suffer in comparison with an equal number of publications of similar character elsewhere. The almost universal rural mail delivery places a daily newspaper, either local or State, in most of the homes of the seventh district. It is not uncommon to find the regular appearance of a copy of the cosmopolitan press in many rural homes. Another equally suggestive item is the frequency with which some of the weekly press is favorably quoted in the city press. Every county and city has its publications, but at least one city in the district is the home of widely known popular magazines, the Woman's Home Companion, the Farm and Fireside, and the American Magazine, besides 14 other publications. The first has a circulation of nearly 1,000,000 copies and the second and third of a half a million each. Springfield is the domicile of the famous Cromwell Publishing Co. Not infrequently long delays of trains occur, caused by the vast amount of reading matter shipped from this point. Literally tons of mail matter are carried out of this city every month. This city is the first in the country in horticulture. If an order for a million roses could be filled anywhere, it would be in Springfield, where literally acres are under glass.

This district has 760 miles of steam lines of railroads, with junction points of the Nation's two greatest lines, the Pennsylvania and the New York Central. Besides these two the trunk lines of the Baltimore & Ohio and the Erie run through the district. It has 175 miles of trolley road, with one of the best

trolley centers in the State. From this center can be reached by trolley Columbus, Zanesville, Cincinnati, Dayton, Indianapolis, Lima, Fort Wayne, Toledo, Detroit, Cleveland, Erie, and many other points. A resident of my home town is within 25 minutes of a steam train that will carry him without change of cars to any city of significance in the East as far as Boston, in the South as far as New Orleans, in the North as far as Mackinaw, and in the West as far as St. Louis and Chicago. Steam and trolley transportation traverse every portion of the district, both with local and express convenience.

This district is noted for its work of altruism, especially its churches, its Young Men's Christian Associations and Young Women's Christian Associations, and fraternal homes. The people have been pioneers in many movements. The abolition movement of other days found a responsive hearing in these parts. All causes that appeal to the heroic find hearty response.

While there are many Young Men's Christian Associations throughout the district, there are two splendid institutional associations, one at Springfield and the other at Washington Courthouse. In both these cities the association owns its own buildings, fully equipped. The one at Springfield has had such a remarkable growth that while its building was sufficient for all its needs when built, long ago it outgrew its dimensions and is loudly calling for new quarters. These institutions are pioneering in some respects in both religious work, school work, and social-betterment work.

The district has one of the very few county associations for young men, and still another for young women. This feature is quite new in the association work and can well be regarded in the experimental stage yet. The first, the county Young Men's Christian Association, is in Union County, and the second, the county Young Woman's Christian Association, is in Greene County. The Young Woman's Christian Association of Springfield is one of the best in the State. It owns its own home, modernly equipped, and is carrying on its work with marked results.

This district can also boast of many State homes, so called, not because they are supported by the State, but because they serve the State. At Xenia is located the well and favorably known orphan's home, for the orphans of soldiers and sailors. This home was the response to the conviction that the children of those who served the State and were left fatherless should be cared for by the State. It is capable of widely important possibilities and its past has proved its justification. This home is supported by the State. Springfield is the domicile of the three fraternal homes for the children of the orders of the Masons, the Odd Fellows, and the Knights of Pythias. These are not State supported, but are supported by the respective orders. Each has a beautiful building situated on a beautiful high hill overlooking the country roundabout. Within the district is found a pronounced sentiment for a high moral standing. Whether country, village, or city, the church life is prominent. The religious and moral tone is marked. Within the district the women's crusade of years was inaugurated. It became most prominent in Washington Courthouse and made its early impress, which still survives. At this date only one city in the district has the open saloon. Within the district is the notable Franklin Chautauqua, located on the Great Miami in the edge of Warren County. This is one of the earlier Ohio chautauquas, and in its score of years of existence has heard most of this country's great lights, either from the pulpit, forum, lyceum, or studio. Within the district are held annually at various points at least 10 other chautauquas. These annual gatherings are an attempt to carry popular education to the very door of the resident. Some of these are of long standing, as the one at Urbana and at Bellefontaine, while others are of more recent date. The people of the district are ideally situated for education of the character of the lecture and lyceum.

Population of counties of the seventh district.

Counties.	Land area, square miles.	Population—			Per cent of increase—	
		1910	1900	1890	1900–1910	1890–1900
Champaign	421	26,351	26,642	26,980	— 1.1	— 1.3
Clark	407	66,435	58,939	52,277	12.7	12.7
Clinton	411	23,680	24,202	24,240	— 2.2	— 0.2
Fayette	413	21,744	21,725	22,309	0.1	— 2.6
Greene	415	29,733	31,613	29,820	— 5.9	6.0
Logan	451	30,084	30,420	27,386	— 1.1	11.1
Madison	497	19,902	20,590	20,057	— 3.3	2.7
Union	446	21,871	22,342	22,860	— 2.1	— 2.3
Warren	413	24,497	25,584	25,468	— 4.2	0.5
Total	3,874	264,297	262,057	251,397	0.8	2.9
Total State	40,740	4,767,121	4,157,545	3,672,329	14.7	13.2

The district is distinctively agricultural. Each county excells in certain lines. A drive through the country in any portion of the district reveals the high-grade agriculturist. The following table shows the productiveness of the soil:

Products.	State.	Champaign.	Clarke.	Clinton.	Fayette.	Greene.	Logan.	Madison.	Union.	Warren.
Corn	157,513,300	3,484,119	3,008,773	3,745,541	3,841,506	3,602,577	2,735,615	3,796,638	2,374,748	2,562,458
Oats	57,591,046	1,085,200	481,838	166,753	157,869	341,880	1,106,982	904,202	676,235	346,891

Fine stock raising has brought national recognition to this district from exhibitions at the World's Fair at St. Louis, both in cattle, hogs, and sheep. London, in Madison County, for years was widely known for its famous stock sales, which would attract buyers from far and near. Some of the most up-to-date, modern, scientific agriculturists of the country are found in this county.

In each of the nine counties there is a splendid county seat, up-to-date in evidence of civic pride. The city of Springfield, the largest city in the district, is notable in many respects. Not many years ago it was the greatest agricultural implement manufacturing center in the United States. To-day it is second only to Chicago in this industry. For many reasons it can be and is rated as the best 60,000 city in the United States.

Not the least advantage is due to its splendid location, its topography, and its rare landscape effects. It possesses the highest grade of business enterprise and the finest type of laboring man to be found in the country. The commercial club of the city consists of over 1,000 members, among whom are the headliners of business activity. A great manufacturing center, with no labor troubles. The labor is intelligent and displays in its individual as well as collective capacity a spirit of cooperation with his employer. This city is first in the number of piano plates manufactured, where 85 per cent of those used in the United States are manufactured. It is also third in the manufacture of motor fans, and third in motor trucks.

Other places, as the town of Franklin, supports a remarkable aggregation of men known as the Business Men's Club. Every county seat in the district maintains a wide-awake organization of business men, devoted to the upbuilding of the city. Within the district there are at least 75 villages, which operate as centers for markets and mails to serve the adjacent communities. In each, as a rule, can be found aggressive men and women devoted to the cause of a better citizenship. Most of them are on the railroad or trolley line, which dispels the former isolation. Each was a stranger to the other; now, if not by trolley, at least all are connected by a system of pike roads, which will admit of easy transit even with automobile in most, if not in all, parts of the year. Most of these villages have the modern high-school building and maintain a course of study that gives it its rank by the recognition of the State inspector. All of these schools offer such courses as 50 years ago could only be found in the best colleges of the country. Commencement is an annual performance. There are more first-grade high schools within this district than any other in the State, and I am convinced there is no district in the Nation that approaches it in this respect. Ohio has taken the lead in the modern high school, and this part of the State has been active from the very first. This fact insures a fairly good condition in the rural schools, as may be noted by a trip throughout the district. Everywhere, as a rule, the rural school problem is pressing upon the citizenry of the community. As the character of the school from the standpoint of efficiency of both the teacher and the taught can be judged by the appearance of the buildings and grounds, the schools of the seventh district, when tested by this standard, are among the very best in the State. The same conclusion is made when studied from the rank of salary paid the teacher and equipment provided.

The character of the people of an agricultural community can well be determined by the appearance of the farms upon which they live. It does not require much agricultural training to detect the progressive from the slovenly farmer. From this point of view the seventh district stands well. The average farm, whether large or small, shows the character of the occupant. The condition of cultivation, the absence of waste land, the presence of the wood lot, the care of the premises, including buildings, fencing, and machinery, and especially the provisions for caring for the live stock in the winter season, all serve as an index of the type of farmer on the farm.

Intensive farming and scientific agriculture, including attention to home economics, are apparent among the agricultural population of the seventh district. Whether domestic science is in accordance with the rules as taught in the technical schools or not, the evidence is abundant that the farm has long ceased to be the drudgery it once was. It has taken on the elements of both science and art. It is quite noticeable that every year sees a good proportion of the boys and girls attending a higher institution of learning to acquire the necessary technical skill demanded upon the farm, that what once was mere drudge may be displaced with the art of the agriculturist. There is a well-defined conviction among the rural peoples that a successful farmer must know more than enough to break ground, to sow and reap. This passed as sufficient years ago, but to-day he must know the science of political economy, to understand the movement of prices. The laws of the market must be comprehended. He must recognize the relation of supply and demand, the needed cooperation between the producer and the consumer. He must also know the chemistry of the soil, that he can understand what depletes it and better know the secret of production. The young man or woman of to-day looking to a successful career on the farm concerns himself as much about his education as he would were he going to enter upon some liberal profession. This is not alone that he may be an educated farmer, but that he may be an educated man on the farm. The agriculturist anticipates a most desirable field in the near future. While his primary concern will be a producer upon the soil, much of his thought will be devoted to his influence as a citizen of a community. From this point of view the farm ceases to be the place of drudgery, of lack of convenience, of exposure, and ill-success, and becomes an opportunity to find a large place in the activities of his day. In these times of modern machinery, rural mail, telephone, automobile, good roads, near-by high-schools, multiplied conveniences in the home and on the farm, easy markets, and ready pay the youth will educate for the farm rather than from the farm. The "back-to-the-farm" movement is rational and is the call of the hour. The farm is growing in attractiveness as well as in profit. In these days, when we discuss the question of rural credits, it is in the spirit of the investigator, independent in his judgments and fearless in expressing opinions.

The seventh district has within its borders just 100 banks, all doing a fairly prosperous business. These banks are rendering service to the people; and while our citizens are talking rural credits, I am wondering how many farmers of the seventh district are suffering for lack of such a system as here proposed. One caution that should be observed is the danger of too much dependence on a mere name or a mere system. There is no possible substitute for industry and economy. While I shall give the most careful and sympathetic consideration to any proposal to improve our currency situation, and shall stand for such additions to our banking system as will be beneficial to our agriculturists, for no benefit will come to the producer without a corresponding benefit to the consumer, yet I am persuaded that more is expected from these suggestions than will or can be realized. There is no greater error than to fix upon the banking system the cause of man's battle for a livelihood. Likewise, there is no question on which we have more men absolutely sure that they have the unfailing solution. Thus far a man who has credit will not have much trouble in the seventh district to secure such loans as he may need. If he has no credit, no plan yet proposed will enable him to substitute something else for it. The common error of all agitators on the money question is the theory that a money system can be inaugurated that will make it easy to get money. It is not conclusive that final success lies in the direction of easy credit. Successful liquidation is the important item which determines the wisdom of borrowing. Money borrowed beyond ability to return is not a principle that a wise course would follow. Were it not so easy to make debts, it would most likely be less difficult to pay them.

A system which would provide for some plan of amortization so as to permit the purchaser to purchase a farm upon such terms and conditions that payment could be made in such a way as to liquidate by a system of deferred payments until he becomes the owner of his farm would be a desirable system and would meet with the approval of the country. Such a scheme was recommended by President Taft. It was also urged by Ambassador Herrick, who had made a careful study of the European systems now in vogue. Such a scheme would meet with approval in the seventh district, which returned a Republican plurality of 15,325. But whatever scheme, it must be remembered that in no case will any scheme of banking take the place of industry and wise frugality. I shall gladly, Mr. Speaker, vote for any measure that will increase the fruits of both, but as yet I see no substitutes for these homely but sensible virtues. From the standpoint of these two qualities I invite the country to observe the people of the seventh Ohio district, and especially do I call attention to the brand of Republicanism as displayed in the vote of 1914 in pronouncing its verdict upon Republican policies.

An Exposure of the Taylor System.

EXTENSION OF REMARKS

OF

HON. CLYDE H. TAVENNER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 3 (legislative day of Tuesday, March 2), 1915.

Mr. TAVENNER. Mr. Speaker, what is the basis of the much discussed Taylor system of "scientific" shop management?

Will it really enable a workman, without wearing him out prematurely, to earn more wages while putting in less time than he is now putting in per day, as Frederick W. Taylor, the originator of the system, contends?

Or is the basis of the system in actual practice merely the "scientific" overworking of men for the purpose of increasing dividends regardless of whether the speeding up is injurious to the health and happiness of the victim?

It may be stated at the outset that Mr. Taylor's propaganda contains many excellent features of systemization and standardization. To these the workmen have not objected, could not object. It has been intimated the labor organizations oppose these reasonable and sensible features of the Taylor system, but there is not a word to substantiate it in the hearings of five investigations of the system—four by Congress and one by the Commission on Industrial Relations.

The Taylor system in its final analysis is based on extremes. Mr. Taylor's system is different from other so-called systems of "scientific" shop management principally in the fact that he covers in his propaganda all the ground covered by other labor-saving scientists—and they all have gone as far as they thought it would be humane to go—and then continues still farther. It is these extremes, and these extremes only, that workmen oppose. It is these extremes and not the systemization and standardization features of Taylorism which are to the mutual advantage of employee and employer that Congress has recently forbidden in Government arsenals and navy yards.

Many well-meaning employers, and many men who are sincere in their desire to see the conditions of workingmen improved, have been misled as to what the Taylor system is and as to the motive behind it. I will mention, for instance, Mr. Louis Brandeis, of Boston, a man who more than once has served the public and that, too, without being on the pay roll of the public. Mr. Brandeis has spoken approvingly of Mr. Taylor's methods. But with all respect to Mr. Brandeis, I believe he is honestly mistaken in his idea that the Taylor system was conceived in the interests of man. It was not. It was conceived in the interests of greed, and in operation it exploits man and does not benefit him.

ONLY ONE OUT OF FIVE WORKMEN COULD KEEP UP.

I do not believe the man lives who can successfully defend before an audience of average American citizens the Taylor system as Mr. Taylor himself describes it.

Imagine Mr. Brandeis, or any other man, confronted on the public platform with Mr. Taylor's own words, used in describing how he installed the Taylor system at the plant of the Bethlehem Steel Co.:

> The tasks were all purposely made so severe that not more than one out of five laborers (perhaps even a smaller percentage than this) could keep up.

Mr. Speaker, I desire to repeat that the motive behind the stop watch and other speeding-up features of Taylorism is not efficiency, as the average man understands the meaning of the word, but an inordinate desire for a greater profit from the toil of man, and back of that desire is greed.

In its last analysis the Taylor system is simply the "scientific" grinding down of the spirit, the hopes, the ambitions, as well as the physical bodies of those who toil, and for what? In order that dividends may be increased. The thing is too inhuman and too murderous to be imposed on beasts of burden, to say nothing of imposing it upon fellow human beings. It may be said to the credit of the average American employer that he has refused to go to anything like the extremes that Mr. Taylor has recommended.

ATTEMPT TO INSTALL SYSTEM IN GOVERNMENT ARSENALS.

Strange to relate, the Chief of Ordnance wants to install the Taylor system in the Government arsenals. The Sixty-third Congress deserves the unstinted thanks of the workers of the Nation for inserting in the Army and Navy bills a provision prohibiting the use in Government arsenals and navy yards of the stop watch and other objectionable speeding-up features of the Taylor system.

This provision reads as follows:

> *Provided*, That no part of the appropriations made in this bill shall be available for the salary or pay of any officer, manager, superintendent, foreman, or other person having charge of the work of any employee of the United States Government while making or causing to be made, with a stop watch or other time-measuring device, a time study of any job of any such employee between the starting and completion thereof or of the movements of any such employee while engaged upon such work; nor shall any part of the appropriations made in this bill be available to pay any premium or bonus or cash reward to any employee in addition to his regular wages, except for suggestions resulting in improvements or economy in the operation of any Government plant; and no claim for services performed by any person while violating this proviso shall be allowed.

The enactment of this legislation was accomplished in the face of the bitter opposition of special-interest servers in Congress.

Considering the powerful influences that opposed it; considering the treacherous parliamentary whirlpools through which it had to pass, and the dangers which beset it at every stage of its legislative journey, the workingmen of the Nation are to be congratulated upon its final safe arrival upon the statutes as law.

ANTISTOP-WATCH LEGISLATION IMPORTANT TO ALL WORKERS.

This legislation is of importance to all workingmen, whether they are employed in Government establishments or not, because if the Taylor system could have been installed in Government plants, the fact could have been made use of to the disadvantage of employees in private plants where the installation of the system is contemplated. Private employers would be in the strategic position of being able to assert to their protesting employees that the Taylor system had been indorsed by the United States Government, and that if it was an inhuman and bad system Uncle Sam would not be putting his official stamp of approval upon it by introducing it in the Government arsenals and navy yards.

IS THIS WHAT MR. TAYLOR MEANS?

A statement in Mr. Taylor's book on scientific shop management, which supplies food for thought, is this:

> In all cases money must be spent, and in many cases a great deal of money, before the changes are completed which result in lowering cost.

One inference which might be drawn from this language is that at first men must be paid higher wages to induce them to set the fastest possible pace, but that in the end the men will be doing a greatly increased amount of work for the same pay received before the installation of the system. Evidence is available to sustain this inference.

When Mr. Taylor undertook to install his system in the plant of the Bethlehem Steel Co. the laborers handling pig iron were receiving $1.15 per day, and were handling between 12 and 13 tons per man per day. After the Taylor system was finally installed, the men were handling 48 tons per man per day, and the wages of the fastest workers had been increased to $1.85 per day. Thus, it will be seen that before the installation of the Taylor system laborers were receiving 8.8 cents per ton for handling pig iron, and after it was installed they were receiving 3.8 cents per ton.

Mr. Taylor relates that when he started in at the Bethlehem plant workmen were turning out 4 and 5 castings of a certain type per day, receiving therefor 50 cents each, and that he succeeded in speeding up the men to a point where they turned out from 8 to 10 castings per day. The price was reduced to 25 cents each.

Permit me at this point to quote from a colloquy between Congressman EDWARD KEATING, of Colorado, a member of the House Labor Committee, and Gen. William Crozier, Chief of Ordnance of the War Department, who is installing the Taylor system in the Government arsenals, and who is not exceeded in his enthusiasm for its principles by even Mr. Taylor himself:

> Mr. KEATING. You have shown that the efficiency of your establishment has been increased 274 per cent and the wages have been increased less than 33 per cent.
>
> Gen. CROZIER. That is true.
>
> Mr. KEATING. The practical result is that the efficient workman under the Taylor system is receiving one-half as much per unit for his output as the less efficient workman.

OUTPUT INCREASED 200 PER CENT, WAGES 33 PER CENT, IN INSTANCES.

Gen. Crozier admitted frequently that under the speeding-up processes workmen had increased their output over 200 per cent, and that the wages of some of the men had been increased as much as 33 per cent. The increased profit to the employer, therefore, is the difference between 200 per cent and 33 per cent, and even considerably more than this, because where there is an increase in the output of this proportion there is a considerable decrease in the overhead charges per unit, and because not all of the men are fortunate enough to receive anything like 33 per cent increase.

And this is the milk in the coconut! It reveals the motive behind the introduction of the Taylor system. Its sole object and purpose is to induce the workman to perform more work for less pay per unit. Its operation in the end is to decrease, instead of increase, wages.

That the system increases dividends for the employer, there is no doubt. In fact, it is a get-rich-quick scheme for the employer who is heartless enough to use it to its final analysis, but there are very few employers who will resort to its use as Mr. Taylor describes it.

WHEN A WORKMAN WEARS OUT FRESH MAN TAKES HIS PLACE.

Under the Taylor system the man is of secondary importance to the machine. Here is the "science" of it: Be careful of the machinery, because if it breaks down or wears out it costs money to repair or replace it. But if a workman breaks down or wears out, it costs the employer nothing to replace him. There are always fresh men waiting at the door to be employed. So as long as the supply of men holds out, the Taylor system can go on.

But whether Mr. Taylor takes it into consideration or not, it is a fact that if a workman, because of long-continued overexer-

tion, is finally thrown prematurely on the scrap heap, some one has to stand the loss even if the employer does not, and where the workman is the head of a family it is the family that must bear the burden. One of the principles of "scientific" shop management, it should be remembered, is that it is no concern to the employer what happens to the man who can not keep up to the pace.

THE SCIENCE OF PERSUASION.

Mr. Taylor lays great stress on his system of scientific "persuasion." Eight bosses assist in the "persuading." Five of them are directly over the workman urging him on.

The tasks laid out for the men are evidently so severe that at first the foremen themselves do not have the heart to insist upon the workmen under them performing the excessive amount of work "planned" for them. But Mr. Taylor foresaw the possibility of weak-hearted foremen, and he arranged to take care of them. He provided "overforemen." I quote from his book (p. 1397, par. 254):

BOSSES NEED NERVING AND BRACING UP TO THE POINT OF INSISTING THAT THE WORKMEN CARRY OUT ORDERS.

The functions of these overforemen are twofold: First, that of teaching each of the bosses under them the exact nature of his duties, and at start also of nerving and bracing them up to the point of insisting that the workmen shall carry out the orders exactly as specified on the instruction cards.

Mr. Taylor says foremen make a great mistake in trying to persuade several men at once. He indicates the way to successfully intimidate a workman is for all the foremen to center their persuasion "right onto a single man," and to keep after him until he is persuaded.

No workman—

Says Mr. Taylor—

can long resist the help and persuasion of five foremen over him. He will either do the work as he is told or leave. (P. 1479.)

HERE IS INFORMATION THAT WILL INTEREST WORKINGMEN! MR. TAYLOR FINES HIMSELF WHEN HE DESERVES IT!

"The writer has fined men from 1 cent to $60," says Mr. Taylor in his book of instructions to employers (p. 1453, par. 449). If it will afford workmen any consolation to know that Mr. Taylor also fines himself when he thinks he has not been sufficiently "scientific," it may be stated that he makes such a claim.

"The writer has invariably fined himself," says Mr. Taylor, "just as he would the men under him for offenses committed."

It should be understood that these secrets of the Taylor system are generally not divulged to the employees, but are particularly for the consideration of employers. It is a part of the "science" of the Taylor system to introduce many of its features "quietly" and to "get them running smoothly in a shop before calling attention to the principle involved." When the effect of certain features of the system are finally realized, Mr. Taylor says, "it invariably acts as the proverbial red flag on the bull."

But these are not all of the persuasive features that Mr. Taylor has worked out. Here is an idea which can undoubtedly be employed with more or less success, especially on workers who have no other jobs immediately in sight and who have families that would be placed in want if they should quit their employment.

In piecework of this class the task idea should always be maintained by keeping it clearly before each man that his average daily earnings must amount to a given high sum (as in the case of the Bethlehem laborers, $1.85 per day) and that failure to average this amount will surely result in his being laid off. (P. 1374, par. 166.)

LAY OFF MEN "QUITE OFTEN" TO INTIMIDATE THOSE WHO REMAIN.

Men must be laid off occasionally whether it is absolutely necessary or not, however. Mr. Taylor says this is necessary for the success of the system. Here is the philosophy in his exact words:

For the success of the system, the number of men employed on practically the same class of work should be large enough for the workmen quite often to have the object lesson of seeing men laid off for failing to earn high wages, and others substituted in their place.

It is no part of the "science" of the Taylor system to be concerned with any workman who can not keep up. Mr. Taylor says it is really wonderful what a prodigious amount of work can be performed by the body of picked men who survive three or four years of his stimulating and eliminating processes. Mr. Taylor has nothing to say of bread earners who drop out in the preliminaries. The Taylor system concerns itself only with the survivors.

PUBLIC IS FOOLED SOMEWHAT AS TO JUST WHAT THE TAYLOR SYSTEM REALLY IS.

Mr. Taylor has two descriptions of his system. They differ somewhat. One is for the perusal of the general public, whose approval of his methods would be a valuable asset in imposing the system upon workmen in spite of their objections. To the public it is made to appear there is nothing about it objectionable to the workman, especially no such thing as hurry, and that it was, indeed, conceived in the interests of man instead of to exploit man.

Mr. Taylor has another description of his system intended for the eyes and ears of employers particularly. In this version he makes no claim to being a humanitarian, but reveals himself rather as a slave driver—always, of course, driving scientifically—discarding the use of the soft pedal and showing how after men have been speeded up, and speeded up, and speeded up, they will be doing more work for less pay per unit, which, of course, means increased dividends, and increased dividends constitute the plot of the play throughout.

In other words, the picture Mr. Taylor draws of his system for the public is one of gentleness personified, while the other version leaves a vision of breakneck speed and enormous profits.

WHAT THE "SCIENCE" OF THE TAYLOR SYSTEM APPEARS TO BE.

A careful perusal of Mr. Taylor's various works explaining his system of shop management would indicate—

First. That the "science" of the Taylor system in its final analysis is the relentless speeding up of workmen by the setting of a task which, in some instances, but one out of five workmen can accomplish;

Second. That it is no part of the "science" to be concerned with any workmen who can not keep up to the pace of the fastest man on the part of an operation on which he is engaged;

Third. That if the Taylor system was adopted universally, a great army of workmen would be thrown out of employment or reduced in rank, such as mechanics being forced to take positions as laborers, because it is obvious that all men are not physically able to keep up, day after day and month after month, to a pace set by the fastest and freshest workers;

Fourth. That the Taylor system would tend to destroy organization among workmen, one of the corner stones of Taylor logic being the principle that workmen must be dealt with individually and not in masses or through committees; that it is no concern of one workman what happens to another. All men working under this system must be "satisfied"; the moment he becomes dissatisfied he must quit; otherwise there would be danger of his grievance becoming contagious and the "system" interfered with.

The Taylor system means, in a sentence, that the quickest time at which a job can be completed by a first-class man is to be the standard time at which all men are to be compelled to complete the same job, with a bonus—at least, to start with—for reaching the maximum speed, and a fine or discharge for not reaching that speed.

TAYLOR SYSTEM TRANSPLANTED IN ARSENALS FROM SHOPS OF THE WAR TRUST.

The attention of the Chief of Ordnance of the War Department was first attracted to the Taylor system at the plants of the Midvale Steel Co. and the Bethlehem Steel Co., two of the three concerns which constitute the War Trust in this country and to which concerns the War Department has awarded millions of dollars' worth of contracts for munitions of war, paying them from 20 to 60 per cent more than it would have cost to manufacture these supplies in the Government arsenals. The action of the Chief of Ordnance in transplanting the Taylor system from the plants of the Midvale and Bethlehem companies to the Government arsenals is additional evidence of the close cooperation between Army officers and the War Trust.

Gen. Crozier employed Mr. Taylor and his assistants to install the system in the Government arsenals.

It has been put into effect at the Watertown Arsenal and has been partly introduced at the Rock Island Arsenal. The employees at both establishments are opposed to the system almost to a man, and it was their protests that have brought about action by Congress.

In spite of the opposition of the workmen at the arsenals and in spite of the fact that four committees of Congress have investigated this system and reported adversely, the Chief of Ordnance has persisted in extending the system.

Relative to the activity of the Ordnance Department chief in introducing the Taylor system in the Government arsenals, the report of the Committee on Labor, made to the House on September 30, 1914, had the following to say:

THE "SYSTEM" IS BEING FORCED IN.

The moving spirit behind the plan to install the Taylor system in the Government arsenals appears to be Brig. Gen. William Crozier, Chief of Ordnance of the War Department, who has jurisdiction over all of the Government arsenals. Gen. Crozier appears to be determined to install the stop watch and other objectionable speeding-up features of the Taylor system in the arsenals in spite of the protests of the workmen and even in spite of the strong denunciation of such methods by the special committee of the House of Representatives which investigated the subject during the preceding Congress.

This officer appeared before the committee and spoke in favor of the use of the stop watch and the Taylor system; and there appears to be every reason to believe that, unless Congress passes legislation absolutely prohibiting the use of such methods in the Government establishments, Gen. Crozier will proceed with the extension of the system, not only at Watertown and Rock Island, but in all the manufacturing establishments of the Government within his domain.

GENEROUS WITH WAR TRUST, BUT A SCIENTIST IN SHOP MANAGEMENT.

It is worthy of passing notice that while Army officers are not the least bit saving with the people's money when awarding contracts to the Bethlehem Steel Co., paying this concern 35 per cent more than they could obtain the same work for by Government manufacture, they are extreme economists when it comes to using the stop watch on a workingman.

Although Gen. Crozier's own testimony before the Appropriations Committee was that the arsenal workmen are turning out work 35 per cent below the price of the private manufacturers, and are saving the Government hundreds of thousands of dollars annually, Gen. Crozier is determined to make them work still faster.

ARSENAL EMPLOYEES ARE SAVING GOVERNMENT THOUSANDS OF DOLLARS ANNUALLY BY THEIR PRESENT EFFICIENCY.

For instance, the workmen at the Frankford Arsenal are producing a 3-inch finished shrapnel case for $1.75, for which the Government is paying private manufacturers $3.06.

Three-eighths-inch common shrapnel are being produced for $7.94 in the Government arsenal, while the Government is paying the private manufacturers $17.50 for the same article. And so on.

On a contract of $1,900,064.05 worth of such work manufactured at the Frankford Arsenal, the Government saved $979,840.94, or approximately, in round figures, $1,000,000 on a $2,000,000 order. These figures tend to indicate that the workmen in the Government arsenals are now efficient and do not deserve having imposed upon them speeding-up processes compelling them to work still faster than they are now working.

The table from which these figures are taken, as compiled by Col. Montgomery, is as follows:

Articles.	Quantities under manufacture.	Total arsenal costs per unit.	Aggregate total arsenal cost.	Contract cost per unit.	Total contract cost.	Saving over contract costs.
3-inch finished shrapnel cases	10,000	$1.75	$17,500.00	$3.15	$31,500.00	$14,000.00
3.8-inch finished shrapnel cases	2,000	4.68	9,360.00	6.85	13,700.00	4,340.00
4.7-inch finished shrapnel cases	3,961	8.80	34,856.80	9.65	38,223.65	3,366.85
6-inch finished shrapnel cases	5,000	17.10	85,500.00	16.48	82,400.00	−3,100.00
3-inch common shrapnel without fuses or base charges	48,000	3.55	170,400.00	5.96	286,080.00	115,680.00
3.8-inch common shrapnel without fuses or base charges	7,000	7.94	55,580.00	18.03	126,210.00	70,630.00
4.7-inch common shrapnel without fuses or base charges	14,500	15.45	224,025.00	26.02	377,290.00	153,265.00
6-inch common shrapnel without fuses or base charges	5,000	30.20	151,000.00	38.11	190,550.00	39,550.00

3.8-inch common steel shell	9,500	4.81	45,695.00	9.45	89,775.00	44,080.00
4.7-inch common steel shell	10,605	8.30	88,021.50	12.83	136,062.15	48,040.65
6-inch common steel shell	7,077	16.75	118,539.75	18.47	130,712.19	12,172.44
21-second combination fuses	48,000	2.16	103,680.00	4.43	212,640.00	108,960.00
31-second combination fuses	26,500	2.92	77,380.00	7.21	191,065.00	113,685.00
3-inch high-explosive shrapnel, fixed	55,000	10.15	558,250.00	13.17	724,350.00	166,100.00
Fuse stocks	74,500	1.66	123,670.00	2.47	184,015.00	60,345.00
Rear plugs for fuses	74,500	.18	13,410.00	.2369	17,649.05	4,239.05
Front plugs for fuses	74,500	.09	6,705.00	.1751	13,044.95	6,339.95

Grand total, contract cost	$2,879,904.99
Grand total, arsenal cost	1,900,064.05
Saving by government manufacture	979,840.94

GEN. CROZIER HIMSELF TESTIFIES THAT ARSENAL EMPLOYEES ARE SAVING MONEY TO THE GOVERNMENT.

Let us turn for a moment to certain recent testimony of the Chief of Ordnance as to the present efficiency of the plant at Rock Island, Ill., and thereby ascertain if the necessity exists for any drastic change of method, or speeding up. On January 13, 1912, Gen. Crozier said before the special committee of the House of Representatives to investigate the Taylor system, and so forth, as follows—see page 1118 of hearings:

We have recently manufactured gun carriages and are doing it still for 3-inch rifles; that is, field guns, at $2,510.60, the exact cost. We purchased those rifle carriages from experienced manufacturers, who had had preceding orders for the same thing, for $3,398.82, an increase of 35.4 per cent over our own price. Our carriages were made at the Rock Island Arsenal.

We have manufactured there, at the same arsenal, caissons for $1,128.67, and we have purchased the same caissons from private manufacturers who had had previous orders for them, so that they had experience in the manufacture, for $1,744.10, which is 54.6 per cent greater than our own price.

On page 1117 of the same hearings Gen. Crozier stated as follows:

At the Springfield Armory the principal manufacture is small-arms rifles. We make a few other things, but the manufacture is almost entirely of the small-arms rifle. We manufacture that rifle for about $15, and in doing so I take into account what I think should properly be taken into account in the cost; but the Springfield Armory, like the other arsenals, is maintained as an arsenal of storage and issue, as well as a manufacturing place; and, therefore, in computing these costs, I have subtracted from the total expense of the Springfield Armory those portions which I consider result from its character as an arsenal of issue and storage. Unless somebody goes into the details quite closely, there may be a question as to whether I subtract quite as much as I ought to.

Therefore, I, last year, for the purpose of satisfying some persons who might have some doubt, made up what I might call an exaggerated cost of the rifles at the Springfield Armory—that is, I took every cent of money that was sent up to the Springfield Armory and charged it to the rifle. Whether it was for the payment of the clerks that were used in the issue of stores, the payment of the storehouse force, whether it was for the payment of the watchmen—they are the guards and custodians of the valuable property we have up there—I charged all the pay of officers and all the pay of everybody concerned to the rifle, and by that means I arrived at a cost of the rifle of $17.64 instead of $15—that is, I found I had to add to the cost as I had reported it about 17 per cent. Now, that then became a statement of an exaggerated cost which, whatever the rifle might cost properly, it could not possibly reach. It must have been below $17.65; and if it were possible to obtain the opinion of an expert, I would be glad to ask him if he thought the Springfield rifle could be produced by anybody else anywhere and purchased for $25. My own opinion is that you could not get it as low as $25 from any manufacturer.

The rifles are also made at the Rock Island Arsenal at practically the same figure.

ARSENAL COST OF LIMBERS IS LESS THAN HALF THE PURCHASE PRICE.

On April 2, 1912, Gen. Crozier stated as follows before a subcommittee of the Appropriation Committee of the House of Representatives relative to the cost of manufacture at the Rock Island Arsenal—see pages 637–638 of hearings:

The CHAIRMAN. Do your figures show the comparative cost of manufacture and purchase?

Gen. CROZIER. Yes.

The CHAIRMAN. Put them in the record, please.

Gen. CROZIER. I will mention a few of them for the record. I think I can mention them more summarily, so they can be better comprehended in the record, than if I put in all of these details. I will take the limbers for the 3-inch rifles. The average of three contracts gave a price of $1,518 a piece for those limbers.

Mr. CANNON. What is a limber?

Gen. CROZIER. A limber is the forward portion of the wagon which transports the gun, the forward portion of the gun carriage; and the average of five orders for manufacture at the Rock Island Arsenal was $684 a piece. The arsenal cost was less than half the purchase price.

* * * * * * *

Gen. CROZIER. Now, for the 3-inch caisson, the average of five contracts shows a price of $1,708, and the average of six manufacturing orders given to the Rock Island Arsenal is $1,081. The 3-inch gun carriage proper—that is, the vehicle on which the gun rests and from which it is fired—gives as the average price three contracts, $3,268, and the average cost under five manufacturing orders at the arsenal was $2,341.

Mr. CANNON. Does that include overhead charges?

Gen. CROZIER. Yes, sir.

These figures, representing the cost of manufacture at the Rock Island Arsenal, include all overhead charges, such as pay of officers, interest on investment (which, for the ordnance department, is 3 per cent), insurance (allowance set aside for fire losses), and depreciation of plant.

It will be observed that the very shop in which ordnance materials are manufactured at approximately half the cost of purchasing from private contractors is the place where it is proposed to install the Taylor system. I submit the necessity does not exist for the installation of such a system of intensive production, with its accompanying disregard for the welfare of the employee, in a plant where efficiency has already reached such an advanced stage.

If the Chief of Ordnance had manufactured in Government arsenals all the munitions and supplies that he has purchased of the War Trust at excessive prices since he has been at the head of the Ordnance Department, he could have saved to the taxpayers more money than could be saved via the stop watch and speeding up of workmen in the next century.

LIFE IN THE MIDVALE STEEL PLANT.

Mr. Taylor received his first industrial training and first tested out his system at the plant of the Midvale Steel Co., in Pennsylvania.

Let us study the "science" of the shop management in this plant. C. H. Harrah, president of the company, happened to be testifying before the Committee on Labor of the House of Representatives on Thursday, March 1, 1900, and the transcript of his testimony fortunately remains intact to this day to throw light on the working methods of Frederick W. Taylor, the subject of our sketch:

"We had men with stop watches over the workmen working on an axle lathe, or whatever else it might be," said Mr. Harrah, "and every time a man looked up they took his time; every time he stopped to breathe they took his time, and in that way they got absolutely the amount of time employed in doing a certain amount of work.

"We made it a rule to run a machine to break," continued Mr. Harrah. "For instance, the life of a hammer bar may be two years. If that hammer bar does not break inside of the two years, I go for the forgemaster, because he is not getting the work he ought to out of the forge. It is the same way in the machine shop. If a lathe, the natural life of which might be two years, does not break down before that, I would go for the engineer in charge."

Mr. Harrah did not divulge information as to whether, in the event a workman failed to break down in a given number of years under the terrific pace scientifically mapped out by Mr. Taylor he would demand to know the reason, but he was frank enough to add, "We have absolutely no regard for machinery or for men."

Mr. Harrah's testimony was Tayloresque. See how well it corresponds with paragraph 312 of Mr. Taylor's book of instructions: "All employees should bear in mind that each shop exists first, last, and all the time for the purpose of paying dividends to its owners."

Mr. Harrah was asked whether workmen were permitted to leave the mill to take meals.

"No, sir," he replied. "Once a man passes inside the red fence he stays there until his day's work is through."

The "science" of keeping men penned in was shown when a huge container filled with molten metal gave way in this same Midvale plant and 6 workmen were killed outright and 13 others seriously hurt. The principle of this feature of Taylorism was again demonstrated in the Triangular Shirt Waist Factory fire in New York, where 160 women were locked in and could not get out until their day's work was done, and they did not get out until the grim destroyer burned them.

TAYLOR SYSTEM SMACKS OF ATMOSPHERE OF SHOPS IN WHICH IT WAS BORN.

After Midvale, Mr. Taylor installed his system in the plant of the Bethlehem Steel Co.

Thanks to an investigation of the Bethlehem Steel Co.'s strike in 1910, information is available as to conditions of labor in that concern's plants. The inquiry was made by the United States Bureau of Labor in 1910, under the direction of Ethelbert Stewart, a special agent of the Labor Bureau at the time, who bore the reputation of being one of the most experienced economic investigators in the country.

When this strike began there were no labor organizations in the plant; the company would not permit them. It was the higher grade workers who led off in the strike. Many of the highest-grade men had approximately a 10½-hour day. But they were frequently being required to work overtime on week days and to do additional work on Sundays. Fearing that the encroachments of overtime and Sunday work were leading to a 12-hour and 7-day schedule for the whole force, they therefore protested. Therefore the protesting committee was discharged; therefore the strike.

The Government investigation revealed this:

That out of every 100 men 29 were working 7 days every week.

That out of every 100 men 43, including these 29, were working some Sundays in the month.

That out of every 100 men 51 were working 12 hours a day.

That out of every 100 men 25 were working 12 hours a day 7 days a week.

That out of every 100 men 46 were earning less than $2 a day.

These are the grim figures which the United States Bureau of Labor gives us of the working shifts of the Bethlehem Steel Co. as drawn from the company's own time books.

It may be imagined from the foregoing what a fine humanitarian atmosphere must abound at the Midvale and Bethlehem plants, where the Taylor system was born. And the Taylor system is just as humanitarian as the atmosphere in the shops from which it sprang.

AVERAGE OUTPUT OF AMERICAN WORKMAN EXCEEDS THAT OF GERMAN, FRENCH, AND BRITISH WORKER.

Is it true that the American workman "deliberately plans to turn out far less work than he is able to do, in many instances failing to do more than one-third or one-half of a proper day's work"? Frederick W. Taylor is endeavoring to convince the public that such is the case, and that this condition is the disease that his system of "scientific shop management" is aimed to cure.

Before endeavoring to estimate the value of a cure one must be sure of the disease to be cured. What are the facts? There are 63 prominent occupations in the United States in which the paying of workers by the piece is more or less common. Pieceworkers come within the scope of the Taylor system more than any others. Is it common sense that a pieceworker is going to do but "one-third or one-half" of a day's work? It is the universal experience that a pieceworker will do just as much work as he can to obtain the highest amount of wages possible on Saturday night. It is obvious, therefore, that the "disease" which Mr. Taylor is setting out to cure does not exist among pieceworkers. With the cost of living so high that the average workman must have steady employment to maintain his family, it is also obvious that day workers must do a full day's work. Otherwise they would be liable to speedily lose their positions and place their families in want.

Comparisons between the United States, Germany, France, and England have demonstrated time and again that the American worker turns out more work per man in a given length of time than the worker of any of the other three nations. The same comparisons also establish the fact that because of being compelled to work so fast the product of the American worker is inferior in quality to that turned out by the German, French, or British worker. The Taylor system, by means of the use of the stop watch and similar methods of sweatshop "speeding-up" processes, proposes to increase by one-third the present output per man, regardless of the additional terrific strain on the physical and mental constitution of the worker and the certainty of still further inferiority of quality in output.

Mr. Taylor frankly admits his scheme is primarily aimed to "cheapen production." Is a decrease in the present labor cost in manufacture justified? Let us consider the steel industry, for instance. The United States Commissioner of Labor reports that the Steel Trust makes a profit on steel rails of $9.20 per ton. He also states that the labor cost of the same rails from the ingot is $1.16. In other words, the steel worker receives $1.16 for doing the work, while the Steel Trust magnates draw down $9.20.

APPLYING THE TAYLOR SYSTEM ON THE WOMEN AND CHILDREN WORKERS IN THE WOOLEN MILLS.

Here is a similar story from the woolen industry, which I heard first hand from Miss Josephine Liss, who accompanied the children of the Lawrence strikers to Washington:

"The reports in the newspapers have not told half the story of the outrages in Lawrence," said Miss Liss. She is a short, stout young woman, with a pretty face, but sad eyes, and has been working ever since she was 14 years old. "Take my case. I was walking quietly to my home one day during the strike, when I was stopped by a militiaman and told to go back. He called me horrible names and insulted me. When I refused to go back he attempted to stick me in the breast with his bayonet, and then I began to fight. I was knocked down, and then arrested and convicted.

"Even the most skilled workers do not earn more than $7 or $8 a week, and I can remember when my father was supporting a large family on $5 a week. The children earn about $4 a week. Most of us work in the mills, and our hours are long. And they are constantly putting in effect a faster pace through speeding-up systems. It means that we have no time or money for pleasure, but are practically slaves. It is not right that human beings should be treated so."

The question arises, if Mr. Taylor could put his stop watch and other scientific methods of "persuasion" at work on these men, women, and children workers at Lawrence, setting paces, which, in his own language, would be "purposely made so severe that not more than one out of five could keep up," what kind of fathers and mothers would the children make when they grew up? And what kind of children would their children be? This is as important to consider as dividends.

BILL INTRODUCED TO PROHIBIT USE OF STOP WATCH IN ALL GOVERNMENT ESTABLISHMENTS.

Mr. DEITRICK of Massachusetts introduced a bill in the Sixty-third Congress providing for the abolishment of the Taylor system in arsenals, navy yards, and other Government establishments.

The Deitrick bill was as follows:

A bill to regulate the method of directing the work of Government employees.

Whereas certain executive departments are installing in their respective establishments new systems of shop management, known by the generic term of "scientific management," which have for their purpose the attainment of the maximum efficiency from both plant and workmen; and

Whereas a stop watch is used in timing workmen while at work to ascertain the maximum amount of work possible for the most capable man in a given time and making this the "standard time" in which work must be done, and by a system of premiums and bonuses, together with disciplinary measures sufficiently severe to enforce the system, this "standard time" is the speed to which all workmen must eventually attain if they are to retain their employment; and

Whereas experience has shown that the American workman by his exceptional celerity performs about twice the work performed by the manual worker of other countries, with the concomitant condition that the ratio of accidents here is from three to four times as high as in other countries, and the tendency of so-called "scientific management" through the above timing and bonus features will be to further aggravate the accident disabilities and mortality aforesaid and reduce the workman to a mere mechanical, instead of a social and moral, relation to his work, and, moreover, are unnecessary to secure adequate efficiency of labor: Therefore

Be it enacted, etc., That it shall be unlawful for any officer, manager, superintendent, foreman, or other person having charge of the work of any employee of the United States Government to make or cause to be made with a stop watch or other time-measuring device a time study of the movements between the starting and completion of any job of any such employee. No premium or bonus or cash reward shall be paid to any employee, except for suggestions resulting in improvement or economy in the operation of the plant in which he is employed.

SEC. 2. That any violations of the provisions of this act shall be deemed a misdemeanor and shall be punished by a fine of not more than $500 or by imprisonment of not more than six months, at the discretion of the court.

LABOR COMMITTEE RECOMMENDS PASSAGE OF DEITRICK BILL.

The House Committee on Labor held hearings on the bill and reported it favorably on September 30, 1914. This bill, however, did not become a law, largely for the reason it was reported so late in the life of the Sixty-third Congress that it was impossible to get it before the House for a vote. The bill will be reintroduced in the next Congress, and it is hoped that it may be passed.

When it was ascertained that it would be impossible to obtain the passage of the Deitrick bill prohibiting the use of the stop watch in all Government establishments the friends of the measure adopted the expedient of having the provisions heretofore mentioned tacked on the Army and Navy bills, which will prohibit the use of the stop watch and the premium or bonus features of the Taylor system in the arsenals and navy yards during the life of those appropriations.

I will quote from the report of the Committee on Labor which accompanied the Deitrick bill, and which was submitted to the House by Hon. EDWARD KEATING, of Colorado.

Mr. Speaker, I believe I am justified in taking some pride in this report, because it sustains practically all the statements I have made about the Taylor system in the three and a half years I have been opposing it.

There are several systems of shop management. They agree as to essentials, but differ as to details. Probably the best known is the so-called "Taylor system," named for its author, F. W. Taylor, an efficiency engineer.

This is the system which has been partially adopted by the War and Navy Departments, which action has led to the introduction of the bill now under consideration.

The Taylor system may be divided under three headings—standardization, systematization, and stimulation. The pending legislation does not seek to interfere in any way with standardization or systematization, but is intended to eliminate the more obnoxious phases of stimulation in so far as Government workshops are concerned.

The position of your committee is very accurately stated in the preamble to Mr. DEITRICK's bill:

"The tendency of so-called scientific management through the timing (stop watch) and bonus features will be to further aggravate the accident disabilities and mortality among American workmen and reduce the workman to a mere mechanical instead of a social and moral relation to his work, and, moreover, are unnecessary to secure adequate efficiency of labor."

The Taylor system regards the workman as a machine to be "speeded up" to its maximum capacity. When this human machine fails to function to the satisfaction of the management it is to be cast aside to make room for a new machine—a fresh workman. The authors of the system do not appear to have concerned themselves about the ultimate fate of the human derelicts who may be compelled to drop out because they can not stand the pace. Mr. Taylor boasts that when he installed his system in the Bethlehem Steel Works he purposely made the tasks so hard that "not more than one out of five laborers (perhaps even a smaller percentage than this) could keep up."

That may be the kind of "efficiency" which produces dividends for the Steel Trust, but it is surely not the system which a beneficent Government should force upon its employees.

THE PURPOSE OF THE SYSTEM.

The main object of the Taylor system, and all its related "systems," is to produce the maximum of output at the minimum of expense.

The so-called bonus or premium system is a fraud and a snare. It really operates to reduce the workman's wages; not to increase them, as the proponents of the Taylor system maintain.

The following extract from the committee hearings will serve to illustrate this point:

"Mr. KEATING. Just on that point, the practical effect of this stop-watch system is to reduce the salary of the men 50 per cent?

"Gen. CROZIER. No.

"Mr. KEATING. Well, measured by the compensation per unit of output. To make myself clear, the salary of the machinist is $3.28 a day. Suppose that under your system the expert finds this machinist should produce a hundred pieces of work in the 2 hours and 20 minutes that he took as a basis. He would get $3.28 a day for doing that work. If, through his skill and physical exertion, he succeeded in coming up to the highest standard set here, which would enable him to get 33⅓ per cent increase, his output would be increased 274 per cent. That has been the effect of your reasoning. So he would produce 274 of those pieces, for which he would get $4.37.

"Mr. HAWLEY. Have you figured in there the advantage that might be given to him by better appliances and greater facilities?

"Mr. KEATING. No; what I am——

"Gen. CROZIER (interposing). Not in the case Mr. KEATING has in mind. But there is this that is included: He does get the benefit of the expert study of his own way of doing the job, and of pointing out any errors he may make or any unnecessary movements he himself makes.

"Mr. KEATING. The practical effect of the system, if my figures are correct, is to cut the labor cost of a given piece of work 50 per cent. The compensation which the workman receives for doing a particular piece of work is reduced under this system 50 per cent. It is difficult for me, not knowing anything about this particular business, to find something to use as an illustration. But let us suppose that you were producing shoes; that under this stop-watch system you found that a man should produce 10 pairs of shoes in order to do a fair day's work, which would entitle him to $3.28. Under your system, by which you allowed him half a minute for every minute he saved, when he produced 27.4 pairs of shoes he would receive $4.37. He would be receiving less than one-half as much per shoe as his less efficient colaborer received. That is, according to the figures that you have produced. You have shown that the efficiency of your establishment has been increased 274 per cent and the wages have been increased less than 33 per cent.

"Gen. CROZIER. That is true.

"Mr. KEATING. The practical result is that the efficient workman under the Taylor system is receiving one-half as much per unit for his output as the less efficient workman."

The promoters of these various systems of "scientific management" are making a determined effort to have them generally adopted by large manufacturing concerns, and labor, both organized and unorganized, is most insistent in its opposition. It can be readily seen that the advocates of the stop-watch system would have won a signal victory if they were in a position to say, "The United States Government has installed this system in its workshops. It can not be inhumane or the Federal authorities would not have adopted it."

The committee does not believe such an indorsement should be given to a system which is so inimical to the best interests of the toilers of the Nation.

PREVIOUS STUDY OF THIS SUBJECT.

A bill similar to the one under consideration was reported favorably from the Committee on Labor in the Sixty-second Congress, and a similar bill was reported favorably from the Committee on Education and Labor in the Senate. Owing, however, to the crowded condition of the calendars in both Houses the bills were not reached.

In the Sixty-second Congress these systems of shop management were thoroughly investigated by a special committee of the House, composed of Hon. William B. Wilson, present Secretary of Labor; Hon. William C. Redfield, present Secretary of Commerce; and Hon. John Q. Tilson. The hearings conducted by this investigating committee and their findings were submitted to the House in three large volumes of hearings, and a report describing many of the features of these systems, such as the method of speeding up workmen and the time study and the premium-bonus system of payment.

The findings of this special committee, as disclosed by their report, and the subsequent investigation made by the present Committee on Labor, we believe, justify the enactment into law of the provisions of this bill.

The protest against these "systems" originally came from the employees of the arsenals under the War Department, when it was proposed to introduce the Taylor system into these establishments. The protest was unheeded by the officials of the Ordnance Department at that time, and the system was gradually introduced. Practically the entire system is now in operation at the Watertown Arsenal, and the features least objected to by the employees are in operation at some of the other arsenals. From present indications it still appears to be the intention of the officials of the Ordnance Department to extend the Taylor system to the other arsenals at an opportune time.

The opposition to this system by the laboring people in general has made it impractical to apply the system in as drastic a manner as its authors evidently contemplated; but the machinery for oppression is latent in the system, and is regarded by the workmen as an ever-present menace to them and furnishing a reason for their apprehension of what is to come.

The Committee on Labor has concluded that an employer who is satisfied with a normal and reasonable day's work does not need to use a stop-watch time study on his employees to ascertain what should constitute a day's work, and the ordinary incentives in general use are sufficient as a spur to the activities of the workmen without resorting to further high-pressure methods to induce intensive production.

THE "SYSTEM" IS BEING FORCED IN.

The moving spirit behind the plan to install the Taylor system in the Government arsenals appears to be Brig. Gen. William Crozier, Chief of Ordnance of the War Department, who has jurisdiction over all of the Government arsenals. Gen. Crozier appears to be determined to install the stop watch and other objectionable speeding-up features of the Taylor system in the arsenals in spite of the protests of the workmen and even in spite of the strong denunciation of such methods by the special committee of the House of Representatives which investigated the subject during the preceding Congress.

This officer appeared before the committee and spoke in favor of the use of the stop watch and the Taylor system; and there appears to be every reason to believe that unless Congress passes legislation absolutely prohibiting the use of such methods in the Government establishments that Gen. Crozier will proceed with the extension of the system, not only at Watertown and Rock Island, but in all the manufacturing establishments of the Government within his domain.

Representative CLYDE H. TAVENNER, of Illinois, representing the congressional district in which the Rock Island Arsenal is located, appeared before the committee in opposition to the attitude of Gen. Crozier and contended that, inasmuch as the workmen at the Rock Island Arsenal are now producing war materials 35 per cent below the prices Gen. Crozier is paying outside private manufacturers, thus saving the Government hundreds of thousands of dollars annually by their present efficiency, that Gen. Crozier is not justified in installing the stop watch and other "speeding-up" processes to force the men to work still faster. He declared the same is true of the efficiency of the workmen at the Frankford Arsenal and all the arsenals, and produced figures showing the cost of various articles in the arsenals and showing the prices being paid private manufacturers for the same articles.

GOVERNMENT PRODUCT NOW CHEAPER THAN PRIVATE.

Reading from a table prepared by Col. George Montgomery, commandant of the Frankford Arsenal, Philadelphia, Mr. TAVENNER made the following specific comparisons:

That the workmen at the Frankford Arsenal are producing a 3-inch finished shrapnel case for $1.75 that the Government is paying private manufacturers $3.06 for.

That 3.8-inch common shrapnel are being produced for $7.94 in the Government arsenal, while the Government is paying the private manufacturers $17.50 for the same article. And so on.

On a contract of $1,900,064.05 worth of such work manufactured at the Frankford Arsenal, Mr. TAVENNER showed the Government saved $979,840.94, or approximately, in round figures, $1,000,000 on a $2,000 000 order. He made the point that these figures tended to show that the workmen in the Government arsenals are now efficient, and do not deserve having imposed upon them speeding-up processes compelling them to work still faster than they are now working.

EVERY COMMITTEE OF CONGRESS THAT EVER INVESTIGATED TAYLOR SYSTEM REPORTED ADVERSELY.

Mr. Speaker, the Taylor system was also investigated by a special committee of the House during the Sixty-second Congress. Two of the three members of that committee are now members of President Wilson's Cabinet, William B. Wilson, the Secretary of Labor, and William C. Redfield, Secretary of Commerce. I will now quote from the report of that committee:

Government in a mill should be like government in a State.

It appears to your committee that no one can seriously object, and as a matter of fact no one has objected, to any system which so standardizes and systematizes the work to be performed that a greater amount of production is secured with the same expenditure of labor. Employer and employee alike and the public generally are interested in securing the largest amount and the best quality of production that can possibly be secured by the amount of labor expended. All men have a mutual interest in the accomplishment of that end. It is only when it comes to a division of that which has been produced that their interests diverge. It therefore follows that any system of management which has a tendency to destroy the power of employees, individually or collectively, to secure the equivalent of the production which properly belongs to them must be looked upon as being dangerous to the welfare of the community at large.

Efficiency must not be had at the cost of the men, women, and children who labor and who should be the primary beneficiaries from efficiency. We should study how to produce the best results in output while also producing conditions to make the most efficient men and women to produce that output, and this must be done by conserving in every way not only their health and physical and nervous vigor, but by creating such conditions as will permit them to work out their own happiness and contentment, secure wages which will enable them to live in such a manner as to maintain their own self-respect and sufficient leisure to enjoy the refreshing influence of mental and moral recreation.

The Taylor system of shop management may be divided into three general heads: Standardization, systematization, and stimulation. Efficiency may be gained in whole or in part by any of these ways, by any two of them, or by all three combined. Any or all of these devices may be carried to an extreme. In the first two devices, namely, standardization and systematization, the expense which would be created by carrying them to an extreme would act as a check against the continuance of such a condition, but that check would not exist in that portion of stimulation which is applied to the workman.

The expenses of standardization and systematization are borne by the management, while the expense of stimulation in the form of increased energy is borne by the workmen. Any system of shop management which creates a burden charge through standardization or systematization which is too heavy for the shop to bear or which imposes burden charges through stimulation which are too heavy for the workman to bear should be discontinued.

That there is some loafing or soldiering amongst workmen has been shown by the testimony before your committee, but it is not general, nor does it occur in numerous instances compared with the total number employed.

Ordinary intelligent management under any system could eliminate it entirely or at least reduce it to the point where it would not be a serious hindrance to production. Because there are some loafers is no reason why the remainder of the workmen should either be compelled or induced to work up to the very edge of the breaking strain. There is need for production at the lowest cost, but no economic necessity can justify requiring workmen to speed up to the highest point which they can continue from day to day and from year to year, even without injury to their health and strength. To place workmen in a position of that kind is to put them in the position of a beast of burden which is required to go on from day to day performing a given task.

There is a margin between the work performed by the loafer and the maximum task for a man, and in that margin lies a proper day's work. What constitutes a reasonable day's work can only be determined by practical experience and intelligent observation. It can not be wholly determined by a stop watch or any other time-measuring instrument used only for a brief period of time.

By the stop watch you may be able to determine the time in which a piece of work can be done, but you do not thereby alone determine the length of time in which it ought to be done.

The time study of the operations of any machine can be made with a reasonable degree of accuracy, because all of the elements can be taken into consideration in making the computation. A machine is an inanimate thing—it has no life, no brain, no sentiment, and no place in the social order. With a workman it is different. He is a living, moving, sentient, social being; he is entitled to all the rights, privileges, opportunities, and respectful consideration given to other men.

He would be less than a man if he did not resent the introduction of any system which deals with him in the same way as a beast of burden or an inanimate machine.

In making a time study of the operations of a workman, all of the elements can not be taken into consideration, and consequently the computation can not be made with mathematical accuracy. There is no work that can be performed, or that is performed, that is not preceded by a mental process on the part of the workman. The more skill needed in the work, the greater the mental process which precedes the expression of it. So far as your committee has been able to learn, there is no method known to scientific management by which a time study can be made of the mental process preceding the physical act.

SENATOR BORAH'S COMMITTEE MADE REPORT CONDEMNING STOP WATCH.

Senator BORAH, chairman of the Senate Committee on Education and Labor, made a very exhaustive report of the Taylor system, following an investigation of the subject by his committee. This report condemns the speeding-up features of the Taylor system, reports they are wholly unnecessary, and recommends the passage of legislation prohibiting the use of the stop watch, and so forth, in Government establishments. This report is Senate Document, report No. 930, second session, Sixty-second Congress.

N. P. ALIFAS DESERVES GREAT CREDIT FOR VALUABLE INFORMATION ABOUT THE TAYLOR SYSTEM.

As an appendix to my remarks I desire to insert several documents and letters I have received from time to time from Mr. N. P. Alifas, president of District No. 44, International Association of Machinists. The information contained in them has been extensively used in both Houses of Congress during the time these anti-Taylor system clauses in the Army and Naval appropriation bills have been under consideration. The first I desire to insert is a letter under date of February 18, 1915:

INTERNATIONAL ASSOCIATION OF MACHINISTS,
Washington, D. C., February 18, 1915.

Hon. CLYDE H. TAVENNER,
House of Representatives, Washington, D. C.

DEAR SIR: The clause in this year's Army appropriation bill, on page 70, beginning with line 13, is directed against certain objectionable features of the Taylor system of shop management and similar systems, sometimes miscalled by the generic term of "scientific management." The clause prohibits time study of workmen and the premium system of payment, which together form the basis for the speeding-up scheme invented by Mr. Taylor. This clause does not interfere with standardizing shop tools and equipment, systematizing production methods, or cost accounting. It is directed only against the abnormal stimulus to activity of the workman made possible by the time study and premium system.

For your information as to our objection to these systems of shop management I refer you to the marked portions of our hearings before the Committee on Labor of the House during April, 1914. (Copy sent herewith.) This hearing contains, on pages 16 to 38, inclusive, my testimony before the Federal Commission on Industrial Relations in relation to organized labor's objections to certain features of so-called "scientific management." This testimony is considered a rather concise statement.

On pages 38 to 52 of this hearing is my written reply to a defense of the Taylor system—as in operation at the Watertown Arsenal—by Gen. Crozier, Chief of Ordnance, United States Army. The several subjects are discussed seriatim in my reply. This accounts for the disconnected presentation of the subject. This reply also contains many extracts from the writings of Mr. Taylor showing the underlying purposes and aims of the system. The very fact that any system of shop management contemplating such drastic and inhuman methods of dealing with employees should commend itself to officials of the Government is an indication of the treatment employees could expect if the opportunity to force this system presented itself to those having charge of the work.

While the present heads of the Navy Department have not urged the more objectionable features of the Taylor system in the past, serious labor troubles have been very narrowly averted at some navy yards only by the withdrawal of the obnoxious methods intended to be introduced. This was particularly true at the Norfolk Navy Yard in 1912.

From time to time efforts have persistently been made by officers at various navy yards to introduce the time study of workmen and the premium system against the continued and emphatic protest of the employees.

NAVAL OFFICERS INDICATE THEIR LOVE FOR TAYLOR SYSTEM.

A great many of the officers in charge of work at our navy yards are ardent advocates of Taylor system methods, as was disclosed during an investigation conducted by a special committee of the House in 1912. This attitude on their part has been repeatedly shown up to the present time and forms a constant ground for the suspicion of the employees, that at some opportune time the Taylor system, with all its enslaving tendencies, will be inaugurated. The employees will never be content until some assurance is given by an act of Congress that at least the time study and premium system will not be employed.

That this is not a groundless suspicion on the part of navy-yard employees is evidenced by the efforts made during January, 1915, to introduce in the gun shop at the Washington Navy Yard an elemental time-study feature of the work that was so nearly akin to Taylor-system method that the difference was almost imperceptible. In this instance the employees were required to time-study their own work.

As far as the War Department is concerned, the full possibilities of the Taylor system have not been taken advantage of at the Watertown Arsenal, where the system is furthest advanced. This we attribute to the fact that the department has been on its good behavior while several public investigations have been in progress. While the conditions of labor at the Watertown Arsenal, where they are going through the motions of using the system, are bad enough, the conditions are not as bad as they would be had no opposition to the system developed.

It is also significant to us that Mr. Taylor has not repudiated any of his writings which were completed before it became necessary for him to defend his schemes before the public; and that the Chief of Ordnance can see nothing wrong or harsh about the aims and methods advocated by Mr. Taylor. These methods to the average man seem abhorrent because of the unadulterated greed displayed and utter disregard for the welfare of the workman.

While the annual reports of the Chief of Ordnance show many glowing accounts of the advantages of the system, both to the workmen and the Government, the employees have as yet not been imbued with these alleged advantages to such an extent that they are willing to withdraw their opposition. The employees at the Watertown Arsenal even went so far as to refuse to avail themselves of a collective bargaining agreement proposed by Mr. Thompson, attorney for the Industrial Commission, unless it was specifically stated that the plan was

not for the purpose of settling by arbitration their objections to the Taylor system.

As to the advantages to the Government through reduced costs of production by means of the Taylor system, it was shown in the investigation by a special committee of the House in 1912 that the alleged savings recorded on page 16 of the 1911 report of the Chief of Ordnance was largely due to the claim that one-half the cost of material was saved by the system. It does not seem plausible that any system can save one-half of the material used in manufacture.

The information as to savings contained in subsequent reports of the Chief of Ordnance have not been investigated by others than those who are interested in proving the advantages of the system. However, all the alleged savings due to better equipment, high-speed tools, routing of work, and many other common-sense features which have been appropriated by Mr. Taylor as a part of his system would still be preserved after the passage of the restrictive clause herein advocated. Our case, however, does not stand or fall according to whether or not the system as in operation at the Watertown Arsenal has been developed to the point of oppression as yet. Any man of sound mind can see what such measures will lead to. After our power of resistance has been worn away by the system it will be too late to raise a feeble protest. The Military Affairs Committee is well acquainted with efforts made by every nation to prevent other rival nations from gaining strategic positions on the high seas because of what they can do with the advantage gained. This opposition is shown no matter what the nation about to gain the advantage promises.

CLAIM THAT SYSTEM INCREASES WAGES IS MISLEADING.

Much has been made of the presumption that this system increases wages. This is exceedingly misleading. Mr. Taylor claims that by his system he will be able to hire common laborers usually getting about $1.50 per day; and by paying them say $2.00 per day can teach them to do work for which the employer now has to pay $3 per day to a mechanic. This advanced stage of the development of the system has not been reached at the Watertown Arsenal as yet; but it can be attempted at any time the Chief of Ordnance decided. It would not prove that the system was good, even though the Chief of Ordnance should pay the men $10 per day temporarily, which might be done in order to induce some to support the system while the opposition was active. That the Ordnance Department is not given to charity ordinarily is shown by the starvation wages now being paid women employees at the Frankford Arsenal at Philadelphia. They receive $1.16 per day at present.

Just after the passage of the Army appropriation bill by the House, the Ordnance Department stopped the time study and the premium system at Watertown and Frankford Arsenals, and the officials went out among the employees during working hours to persuade (?) them to protest against the clause therein advocated, which prohibited time study and the premium system. When the premium was taken away from the aforementioned women employees, their earnings dropped from $2 per day to $1.16, the latter being the nominal day rate. It is well known that where piecework or any task system exists a wide difference is arbitrarily made between the day rate and the task earnings in order to make the task system appear attractive. If, however, the task work were abolished, everyone knows that the day rate would have to be increased. These women, who are unorganized and who probably do not understand the economic basis for wages, might readily be lead to believe that this artificial low wage is to be permanent and agree to protest for the same reason that women in Illinois protested against the eight-hour law on the ground that it would reduce wages.

During the consideration of the eight-hour law by the Senate, petitions were filed by workmen against the enactment of the law on the ground that it would reduce wages. These petitions were gotten up in much the same way as in the present case, namely, by the influence of the employer circulating the petitions.

At the Watertown Arsenal the employees have also gone back to daywork since the passage of the bill by the House; they are still anxious to have the bill pass.

It is also a significant fact that at the Watertown Arsenal, where the premium system has been in operation for several years, that the wages earned, premium and all, is no greater on the average than the wages received by the same grade of employees at the Boston Navy Yard, which is only 7 miles away, and whose wage scale is presumed to be regulated by the same facts. The reason for this is apparent. Under premium systems employees are usually expected to increase their earnings by working harder, when otherwise an increase should be given directly.

"SCIENTIFIC" MANAGEMENT MEANS CONSTANT FRICTION.

The petty injustices involved in this system are so numerous that it forms a daily ground for discontent among the employees. Employees at the Watertown Arsenal, for instance, inform us that the same amount of effort will net them vastly different results in earnings, showing that the time study is inaccurate and that it is impossible to make it accurate. The variables, in the machinists' business especially, are so great that no exact standards can be set; and where arbitrary standards are set they result only in injustice to employees.

The last four conventions of the American Federation of Labor have gone on record against the Taylor system. In 1911 the present Secretary of Labor, William B. Wilson, was secretary of the committee of the convention that recommended against the system. (See pp. 77, 287, and 296 of proceedings of the convention.) The American Federation of Labor convention of 1913 also has in its proceedings as severe an indictment against the Taylor system as was ever written. (See p. 299 of proceedings.)

THERE IS SOME REASON TO DOUBT GOOD FAITH OF ORDNANCE DEPARTMENT.

The Ordnance Department insists that we should wait for the report of the Federal Industrial Commission relative to the system in operation at the Watertown Arsenal. The department had up to date paid no heed to adverse reports made by four committees of Congress, and there is no reason to suppose they will cease their attempt to force the system on the employees unless compelled to by law. However, having had much to do with members and officers of the commission I feel safe in saying that the commission will not make any investigation of the system at the Watertown Arsenal, and therefore no special report will be forthcoming, and their general report on scientific management is not likely to be made until after Congress extends the time for the existence of the commission, due to their lack of time to complete the scope of the work started. There has been enough said by the commission to indicate that they do not think these systems safe from the employees' point of view unless accompanied by collective bargaining in which the workman shall have an equal voice with the management. This the War Department has indicated its unwillingness to agree to.

Our fear that the Ordnance Department will eventually displace the skilled, well-paid mechanic with cheap labor and by men of lower caliber is amply substantiated by a statement on page 15 of the last annual report of the Chief of Ordnance.

In order to obviate the necessity of attaching this clause to every appropriation bill passed by Congress, and thus needlessly take up much valuable time, it is respectfully requested that the clause on page 70, beginning with line 13, be modified as indicated in the accompanying amendment.

I have been advised to-day that this clause was indorsed at a mass meeting of employees of the Frankford Arsenal on the 16th instant, and that a large petition favoring this clause has been forwarded to a Member of the Senate. This is the employees' effort to offset the coercive methods adopted about three weeks ago by the management there to get employees to protest to the Senate against this clause.

As a representative of the employees concerned I shall be glad to make any further explanation that I can, either in writing or orally.

We believe the workmen of the United States have a right to say how fast they want to work and the degree of temptation and stimulus they are willing to submit to day after day. We feel that we have a right to preserve the race from deteriorating influences.

Trusting this will receive your favorable consideration, I am,

Very respectfully, yours,

N. P. ALIFAS,
President District No. 44, International Association of Machinists.

MR. ALIFAS, ON BEHALF OF ARSENAL AND NAVY YARD EMPLOYEES, MAKES CAREFULLY PREPARED REPLY TO GEN. CROZIER.

On April 17, 18, and 20, 1914, the Committee on Labor of the House held hearings on the bill H. R. 8662, subsequently designated H. R. 17800. This bill had the same purpose as the time study and premium clauses in the Army bill now under discussion. As a part of his remarks Mr. Alifas inserted a written statement which was a reply to a defense of the Taylor system as in operation at the Watertown Arsenal, written by Gen. William Crozier, Chief of Ordnance. The letter is so concisely written and presents the viewpoint of labor so well that I regard it as worthy of careful perusal by anyone interested in the subject. The letter of Mr. Alifas reads as follows:

INTERNATIONAL ASSOCIATION OF MACHINISTS,
Washington, D. C., April 18, 1914.

Hon. DAVID J. LEWIS, M. C.,
Chairman Committee on Labor,
House of Representatives, Washington, D. C.

DEAR SIR: On behalf of the machinists employed in the Government arsenals, who I am authorized to represent, and to supplement my brief statement before your committee on April 17, 1914, I desire to herewith submit a brief with a view to sustain their contention that the Taylor system of shop management should be discontinued at these arsenals, particularly the features of this system against which specific protest has been made.

Numerous protests have been made by the employees of the arsenals against the continuance of the Taylor system of shop management, particularly by the employees at the Rock Island and Watertown Arsenals.

This system has been in operation at the Watertown Arsenal to a greater extent than at other arsenals and for several years, so that if it was going to prove satisfactory to the employees, as has been prophesied by the Taylor system advocates, this opposition ought to be diminishing instead of increasing.

I shall therefore direct your attention in this brief to a defense of the Taylor system made by the Chief of Ordnance in a memorandum dated September 6, 1913, addressed to the Secretary of War. This memorandum is a reply to a petition sent to the Secretary of War by the employees at the Watertown Arsenal. The petition contained about 300 signatures; and the basis of the opposition was indicated by the heading of the petition and the accompanying letter, setting forth a number of specific grievances which, it was alleged, had been brought about by the system.

CHIEF OF ORDNANCE RECOMMENDS EXTENSION OF TAYLOR SYSTEM.

The memorandum of the Chief of Ordnance set forth the alleged advantages of the Taylor system and recommends that it not only be continued but that it be extended from time to time to include other features not yet in operation whenever it shall appear to the judgment of the office of the Chief of Ordnance to be an advantage to the Government to introduce further innovations.

I shall therefore direct my attention to the memorandum of September 6, 1913, numbering the paragraphs containing my reply to the arrangement of that document.

QUESTION 1.

The answer to the question, contained in paragraphs 1, 2, 3, 4, and 5, has little bearing on the desirability of the Taylor system since the class of expenditures to be considered in the computing of costs is supposed to be the same regardless of what kind of system of management is in use in the shops.

QUESTION 2.

6. No serious objection has been raised by the employers against systematizing the processes of manufacture, provided systematizing is not so arranged as to be a mere first step to applying the methods of stimulus to the workmen advocated by Mr. Taylor.

Our attitude toward the first part of the Taylor system can be illustrated by the following: The War Department would never allow Japan to have a coaling station and a fort in the Hawaiian islands, even though the assurance was given that the coaling station was only to enable Japan to engage in the peaceful pursuit of training the personnel of its fleet; that the fort was only to protect their property against pirates and foreign powers, and that this advantage would never be used to the detriment of the United States. The fact would remain that the temptation to press the advantage would be there as a perpetual menace.

The first part of the Taylor system is so designed as to fit in with the other parts of the Taylor system intended to follow. While it is so designed as to be used apart from the rest, it furnishes a reason and a desire on the part of the management to use the entire system.

As a battleship presupposes armament, as a large navy by a foreign power presupposes a possible war, and is the cause of preparations being made to meet such an emergency by our own country, so the first part of the Taylor system is to the workmen. It constitutes a perpetual menace to us by reason of the likelihood that the drastic features of the Taylor system may start at any time.

CHIEF OF ORDNANCE GIVES NO ASSURANCE THAT HE WILL NOT GO TO THE LIMIT.

The Chief of Ordnance has never given us the assurance that there is to be any point in the development of the Taylor system beyond which he will not go. In fact, we have every reason to fear the introduction of the complete system, since the favor with which the advanced stages of the system are regarded by the Chief of Ordnance has depended upon the success of the first steps taken. So that if each succeeding unobjectionable step is a success financially, it will indicate that Mr. Taylor's further plans should be used if possible.

In his annual report of 1911, page 17, the Chief of Ordnance says: "The confirmation of the claims as to the advantages of the features first installed, which the practical test at Watertown affords, lends such force to these further claims that, in the absence of any positive evidence to the contrary, I do not think they can be disregarded by an administrative officer honestly desirous of serving the interests of the Government."

7. (a) There is nothing in the methods of Mr. Taylor or the methods used at the Watertown Arsenal to indicate that it makes any difference whether an employee does his task "cheerfully" or not. The amount of stimulus contemplated by Mr. Taylor is regulated by the amount required to make an employee give the output. By making the stimulus strong enough it is, of course, possible to compel an employee to admit that he does his task "cheerfully," for instance: A machinist by the name of Mr. Wright was discharged at the Watertown Arsenal because he refused to work on a premium basis. It might be contended that all employees who agree to accept premium work did so cheerfully. However, petitions have been signed by these employees asking that the system be discontinued; and to prove the distastefulness of the system one need only point to the fact that the molders went on a strike against the system in 1911 at Watertown Arsenal. It would be possible, of course, to induce a man to cheerfully accept a life sentence in the penitentiary, provided the alternative was being put to death.

A WORKMAN HAS SOME LITTLE SENSE OF HIS OWN.

(b) A workman having learned a trade, knows what methods of holding and machining his work are the most expeditious; he knows what kind of steel and what shape of tool will perform the best service on any given job of any kind of material. With the same amount of experimenting as is done by the so-called expert on any given job, in conjunction with advice from his foreman, the workman can turn out a day's work that should be satisfactory to a reasonable employer. The purpose of using the stop watch is not so much to ascertain the best methods of doing the work (these are matters which can be determined from slide rules and tables of cutting speeds and feeds) as it is to ascertain the least time in which a job can be done for the purpose of compelling an employee to meet that time. The stimulus advocated by the Taylor system is so adjusted that once the least time in which a job can be done is ascertained it is comparatively easy to drive the employee to abnormal exertions in his effort to meet that time.

(c) The necessity of having experts to direct the detailed movements of a workman in order to get the utmost out of him seems to be based on the belief that it is impossible for a workman to learn the machinist trade. In the Taylor system it is aimed to gradually replace the skilled mechanic (whose faulty knowledge becomes unnecessary, when an expert is to direct his movements) with a low and cheap grade of workman whose movements will be directed by an expert and to whom a premium will be paid above his regular wages, but who will not be paid as much (premium included) as the workman he displaced. This is Mr. Taylor's method of increasing wages. It is true that this stage of the system has not yet been reached at the Watertown Arsenal, but it is believed the Chief of Ordnance will not ultimately employ men of greater skill than is necessary to do the work with the aid of these so-called experts.

8. In order to understand our reasons for opposing the Taylor system your attention is invited to the following, which is part of a report of the Senate Committee on Education and Labor on a bill designed to prohibit the use of the stop watch and the premium bonus. The quotations from Mr. Taylor's "Shop Management," pages 4 to 9, inclusive, of this report, were given under circumstances which did not require that he disguise the real purpose and methods of his system, and therefore indicate the hardships his system would impose upon workmen much better than his remarks before a committee of Congress, where his theories have to pass inspection before the public conscience.

EXHIBIT A.

In order to further elucidate the basic principles of these systems, and to ascertain the motives which have suggested their provisions and the possible extent to which they could be carried out if unrestricted, we give below extracts from the treatise on "Shop Management," by F. W. Taylor, which it appears is regarded as a sort of textbook on the subject, and from which the outline above given was deducted. The substance of this publication, which was written prior to the investigation of these systems by a special committee of the House of Representatives last winter, was defended both in whole and in part by its author at the hearings, no part of it being repudiated. Hence its aims and purposes shall still be regarded as the essence of "scientific management." Quotations are as follows:

UNIT TIME STUDY NECESSARY.

"What the writer wishes particularly to emphasize is that this whole system rests upon an accurate and scientific study of 'unit times,' which is by far the most important element in modern management. With it greater and more permanent results can be attained, even under ordinary daywork or piecework than can be reached under any of the more elaborate systems without it. (Par. 133, p. 1364.)

QUICKEST TIME IS STANDARD TIME.

"For each job there is the quickest time in which it can be done by a first-class man. This time may be called the 'quickest time' or the 'standard time' for the job.

"Under all the ordinary systems this 'quickest time' is more or less completely shrouded in mist. In most cases, however, the workman is nearer to it and sees it more clearly than the employer. (Pars. 136–137, p. 1365.)

ORDINARY SYSTEMS NOT FAST ENOUGH.

"The injustice of the very foundation of the system is thus forced upon the workman every day of his life, and no man, however kindly disposed he may be toward his employer, can fail to resent this and be seriously influenced by it in his work. These systems are therefore of necessity slow and irregular in their operation in reducing costs. They drift gradually toward an increased output, but under them the attainment of the maximum output of a first-class man is almost impossible. (Par. 90, p. 1355.)

STOP-WATCH TIME STUDY USED.

"His first step was to place an intelligent, college-educated man in charge of progress in this line. This man had not before handled this class of labor, although he understood managing workmen. He was not familiar with the methods pursued by the writer, but was soon taught the art of determining how much work a first-class man can do in a day. This was done by timing with a stop watch a first-class man while he was working fast. The best way to do this—in fact, almost the only way in which the timing can be done with certainty—is to divide the man's work into its elements and time each element separately. For example, in the case of a man loading pig iron onto a car, the elements should be: Picking up the pig iron from the ground or pile (time in hundredths of a minute); walking with it on a level (time per foot walked); walking with it up an incline to car (time per foot walked); throwing the pig down (time in hundredths of a minute) or laying it on a pile (time in hundredths of a minute); walking back empty to get a load (time per foot walked). (Par. 101, p. 1358.)

ONLY ONE OUT OF FIVE CAN KEEP UP TO TASK.

"When the writer left the steel works the Bethlehem pieceworkers were the finest body of picked laborers that he had ever seen together. They were practically all first-class men, because in each case the task which they were called upon to perform was such that only a first-class man could do it. The tasks were all purposely made so severe that not more than one out of five laborers (perhaps even a smaller percentage than this) could keep up. (Par. 125, p. 1361.)

ONLY TEMPERATE WORKMEN COULD STAND PACE.

"A careful inquiry into the condition of these men when away from work developed the fact that out of the whole gang only two were said to be drinking men. This does not, of course, imply that many of them did not take an occasional drink. The fact is that a steady drinker would find it almost impossible to keep up with the pace which was set, so that they were practically all sober. (Par. 128, p. 1363.)

A LARGE DAILY TASK SET.

"Each man in the establishment, high or low, should daily have a clearly defined task laid out before him. This task should not in the least degree be vague nor indefinite, but should be circumscribed carefully and completely, and should not be easy to accomplish. (Par. 149, p. 1368.)

"When an establishment has reached an advanced state of organization, in many cases a fifth element should be added, namely, the task should be made so difficult that it can only be accomplished by a first-class man. (Par. 153, p. 1368.)

LARGE TASK ENFORCED BY OBJECT LESSON OF LAYING OFF WORKMEN.

"Where the labor market is large enough to secure in a reasonable time enough strictly first-class men, the piecework rate should be fixed on such a basis that only a first-class man working at his best can earn the average amount called for. This figure should be, in the case of first-class men, as stated above, from 30 per cent to 100 per cent beyond the wages usually paid. The task idea is emphasized with this style of piecework by two things—the high wages and the laying off, after a reasonable trial, of incompetent men; and for the success of the system the number of men employed on practically the same class of work should be large enough for the workmen quite often to have the object lesson of seeing men laid off for failing to earn high wages and others substituted in their places. (Par. 166, p. 1374.)

THE "DIFFERENTIAL-RATE PIECEWORK" IS MOST FORCEFUL, AND SHOULD BE USED WHERE POSSIBLE.

"The 'differential-rate piecework' is rather simpler in its application and is the more forceful of the two. It should be used wherever it is practicable, but in no case until after all the accompanying conditions have been perfected and completely standardized and a thorough time study has been made of all of the elements of the work. This system is particularly useful where the same kind of work is repeated day after day, and also whenever the maximum possible output is desired, which is almost always the case in the operation of expensive machinery or of a plant occupying valuable ground or a large building. It is more forceful than 'task work with a bonus,' because it not only pulls the man up from the top, but pushes him equally hard from the bottom. (Par. 170, p. 1375.)

IN ORDER TO MAINTAIN RAPID PACE WORKMEN SHOULD BE ABLE FREQUENTLY TO SEE IF THEY ARE FALLING BEHIND.

"In fixing the times for the tasks, and the piecework rates in jobs of this class, the job should be subdivided into a number of divisions, and a separate time and price assigned to each division rather than to assign a single time and price for the whole job. This for several reasons, the most important of which is that the average workman, in order to maintain a rapid pace, should be given the opportunity of measuring his performance against the task set him at frequent intervals. Many men are incapable of looking very far ahead, but if they see a definite opportunity of earning so many cents by working hard for so many minutes, they will avail themselves of it. (Par. 189, p. 1380.)

WORKMEN CAN DO TWO OR THREE TIMES AS MUCH WORK AS IN THE PAST.

"Second. As a result of this change of feeling, such an increase in their determination and physical activity, and such an improvement in the conditions under which the work is done, will result in many cases in their turning out from two to three times as much work as they have done in the past. (Par. 291, p. 1411.)

SOME MEN WILL BE UNABLE TO KEEP UP PACE UNDER SYSTEM; THESE MUST GO.

"Second. After the men acquiesce in the new order of things and are willing to do their part toward cheapening production, it will take time for them to change from their old easy-going ways to a higher rate of speed and to learn to stay steadily at their work, think ahead, and make every minute count. A certain percentage of them, with the best of intentions, will fail in this and find that they have no place in the new organization, while still others, and among them some of the best work-

ers, who are, however, either stupid or stubborn, can never be made to see that the new system is as good as the old; and these, too, must drop out. (Par. 293, p. 1412.)

SPEED GRADUALLY ACCELERATED—WORKMEN AT FIRST RESENT INTERFERENCE.

"In reaching the final high rate of speed which shall be steadily maintained the broad fact should be realized that the men must pass through several distinct phases, rising from one plane of efficiency to another until the final level is reached. First they must be taught to work under an improved system of daywork. Each man must learn how to give up his own particular way of doing things, adapt his methods to the many new standards, and grow accustomed to receiving and obeying directions covering details large and small which in the past have been left to his individual judgment. At first the workmen can see nothing in all this but red tape and useless and impertinent interference, and time must be allowed them to recover from their irritation, not only at this but at every stage in their upward march. (Par. 295, p. 1413.)

WHAT IS MEANT BY HIGH WAGES.

"By high wages he means wages which are high only with relation to the average of the class to which the man belongs and which are paid only to those who do much more or better work than the average of their class. He would not for an instant advocate the use of a high-priced tradesman to do the work which could be done by a trained laborer or a low-priced man. (Par. 37, p. 1347.)

USING HELPERS TO DO MECHANICS' WORK COMMENDED.

"As a rule, the fewer the men employed by the contractor and the smaller the variety of the work the greater will be the success under the contract system, the reason for this being that the contractor, under the spur of financial necessity, makes personally so close a study of the quickest time in which the work can be done that soldiering on the part of his men becomes difficult, and the best of them teach laborers or low-priced helpers to do the work formerly done by mechanics. (Par. 67, p. 1352.)

"The objection to the contract system are that the machine tools used by the contractor are apt to deteriorate rapidly, his chief interest being to get a large output, whether the tools are properly cared for or not, and that through the ignorance and inexperience of the contractor in handling men, his employees are frequently unjustly treated. (Par. 68, p. 1352.)

"These disadvantages are, however, more than counterbalanced by the comparative absence of soldiering on the part of the men. (Par. 69, p. 1352.)

FUNCTIONAL FOREMANSHIP RESULTS IN CHEAP WORKMEN, AND MEN DESIRED OF SMALL CALIBER AND ATTAINMENTS.

"The full possibilities of functional foremanship, however, will not have been realized until almost all of the machines in the shop are run by men who are of smaller caliber and attainments and who are, therefore, cheaper than those required under the old system. The adoption of standard tools, appliances, and methods throughout the shop, the planning done in the planning room and the detailed instructions sent them from this department, added to the direct help received from the four executive bosses, permit the use of comparatively cheap men even on complicated work. Of the men in the machine shop of the Bethlehem Steel Co. engaged in running the roughing machines, and who were working under the bonus system when the writer left them, about 95 per cent were handy men trained up from laborers; and on the finishing machines working on bonus about 25 per cent were handy men. (Par. 247, p. 1395.)

"DISPLACING SKILLED LABOR WITH UNSKILLED.

"It is true, for instance, that the planning room and functional foremanship render it possible for an intelligent laborer or helper in time to do much of the work now done by a machinist. Is not this a good thing for the laborer and helper? He is given a higher class of work, which tends to develop him and gives him better wages. In the sympathy for the machinist the case of the laborer is overlooked. (Par. 319, p. 1421.)

"CHANGING FROM ONE BONUS SYSTEM TO ANOTHER AS SYSTEM DEVELOPS.

"Mr. Gantt's system is especially useful during the difficult and delicate period of transition from the slow pace of ordinary daywork to the high speed which is the leading characteristic of good management. During this period of transition in the past a time was always reached when a sudden long leap was taken from improved daywork to some form of piecework; and in making this jump many good men inevitably fell and were lost from the procession. Mr. Gantt's system bridges over this difficult stretch and enables the workman to go smoothly and with gradually accelerating speed from the slower pace of improved daywork to the high speed of the new system. (Par. 172, p. 1376.)

"No workman can be expected to do a piece of work the first time as fast as he will later. It should also be recognized that it takes a certain time for men who have worked at the ordinary slow rate of speed to change to high speed. Mr. Gantt's plan can be adapted to meet both of these conditions by allowing the workman to take a longer time to do the job at first and yet earn his bonus; and later compelling him to finish the job in the quickest time in order to get the premium. (Par. 174, p. 1377.)

"ALL FOUR SYSTEMS OF PAYING FOR WORK CAN BE USED IN LARGE PLANTS.

"It is clear, then, that in carrying out the task idea after the required knowledge has been obtained through a study of 'unit times,' each of the four systems, 'day work,' 'straight piecework,' 'task work with a bonus,' and 'differential piecework,' has its especial field of usefulness, and that in every large establishment doing a variety of work all four of these plans can and should be used at the same time. Three of these systems were in use at the Bethlehem Steel Co. when the writer left there, and the fourth would have soon been started if he had remained. (Par. 177, p. 1378.)

"EXAMPLE OF HOW DIFFERENTIAL RATE SYSTEM WORKS.

"The first case in which a differential rate was applied during the year 1884 furnishes a good illustration of what can be accomplished by it. A standard steel forging, many thousands of which are used each year, had for several years been turned at the rate of from four to five per day under the ordinary system of piecework, 50 cents per piece being the price paid for the work. After analyzing the job and determining the shortest time required to do each of the elementary operations of which it was composed, and then summing up the total, the writer became convinced that it was possible to turn 10 pieces a day. To finish the forgings at this rate, however, the machinists were obliged to work at their maximum pace from morning to night, and the lathes were run as fast as the tools would allow and under a heavy feed. (Ordinary tempered tools 1 inch by 1½ inches, made of carbon tool steel, were used for this work.) (Par. 180, p. 1379.)

"It will be appreciated that this was a big day's work, both for men and machines, when it is understood that it involved removing with a single 16-inch lathe having two saddles an average of more than 800 pounds of steel chips in 10 hours. In place of the 50-cent rate that they had been paid before they were given 35 cents per piece when they turned them at the speed of 10 per day, and when they produced less than 10 they received only 25 cents per piece. (Par. 181, p. 1379.)

HOW HIGH TASKS SHOULD BE SET AT THE START.

"As the writer has said several times, the difference between the best speed of a first-class man and the actual speed of the average man is very great. One of the most difficult pieces of work which must be faced by the man who is to set the daily tasks is to decide just how hard it is wise for him to make the task. Shall it be fixed for a first-class man; and if not, then at what point between the first class and the average? (Par. 382, p. 1441.)

"One fact is clear, it should always be well above the performance of the average man, since men will invariably do better if a bonus is offered them than they have done without this incentive. (Par. 383, p. 1441.)

"The writer has in almost all cases solved this part of the problem by fixing a task which required a first-class man to do his best and then offering a good round premium. When this high standard is set it takes longer to raise men up to it. But it is surprising, after all, how rapidly they develop. (Par. 384, p. 1441.)

EACH SHOP EXISTS, FIRST, LAST, AND ALL THE TIME, TO PAY DIVIDENDS TO OWNERS.

"On the other hand, this policy of promoting men and finding them new positions has its limits. No worse mistake can be made than that of allowing an establishment to be looked upon as a training school to be used mainly for the education of many of its employees. All employees should bear in mind that each shop exists, first, last, and all the time, for the purpose of paying dividends to its owners. They should have patience and never lose sight of this fact. And no man should expect promotion until he has trained his successor to take his place. (Par. 312, p. 1419.)

COLLOQUY BETWEEN MR. TAYLOR AND DISSATISFIED CUSTOMER.

"Mr. TAYLOR. I think that Mr. Rankin has also overlooked another important factor, and that is the question of time. If Mr. Hawkins expects large results in six months or a year in a very large works he is looking for the impossible. If he expects to convert union men to a higher rate of production, coupled with high wages, in six months or a year he is expecting next to an impossibility. But if he is patient enough to wait for two or three years he can go among almost any set of workmen in this country and not find the trouble which he did in Massachusetts.

"Mr. HAWKINS. I have waited six years now.

"Mr. TAYLOR. Have you tried the incisive plan of centering on one man instead of going at the whole shooting match at once? I think failure is due to a lack of patient persistence on the part of the employers and then to a lack of centering right onto a single man. No workman can long resist the help and persuasion of five foremen over him. He will either do the work as he is told to or leave."

MR. TAYLOR AND GEN. CROZIER REGARD IT AS AN IMPOSSIBILITY FOR A MACHINIST TO WORK TOO FAST.

9. The methods here described in connection with the use of the stop watch are very mild; they are like merely laying a whip on a horse's back instead of hitting him with it. However, Mr. Taylor advocates the time study should be made on a fast man while he is working fast.

Since the Chief of Ordnance can see nothing objectionable in Mr. Taylor's exposition of the Taylor system, and since he regards it as an impossibility for a machinist to work too fast (see par 13. of letter of September 6 here under consideration) we may expect the worst, ultimately.

A time study is not necessary where an employer is satisfied with a reasonable day's work. When the employer begins to inquire into how an employee spends every minute of the day by means of such minute surveillance as is contemplated by the Taylor system, he is beginning to approach the frame of mind attributed to the "economic man" of political economy, and loses sight of the larger view, that industry exists primarily for the purpose of supplying the wants of man, and not for the purpose of furnishing a lifetime task that taxes the human frame to its utmost capacity. Mr. Taylor's system is devised exclusively from the point of view and for the benefit of the employer; the workman is merely a production devise to be used to its utmost capacity like a machine. One of our dangers lies in the fact that such a system should have appealed to the ordnance office as desirable and deserving of emulation. No one looking at industry from the workman's point of view would have ever considered using such a system.

10. The methods of determining the premiums to be paid here described are in accordance with Mr. Taylor's system. This method is milder than the scheme which is advocated when the shop system has developed to a more advanced stage. (See hearings, p. 1210.) While it is stated that no unpleasant exertion is admitted in fixing the time, I am informed that men have been discharged at the Watertown Arsenal for failing to meet their task. However, whether the men are overworked at present or not, they do not want this system with its menacing possibilities.

11. Practically all employers who introduce piece or premium work pay a liberal wage to begin with in order to overcome the opposition of the workman to these systems. These first rates are practically always reduced when the system becomes established. The Chief of Ordnance has not yet begun to displace machinists with common laborers at a lower rating, as is intimated on page 1141 of hearings, and as advocated by Mr. Taylor, nor has he as yet endeavored to apply the full possibilities of the features of the system so far evolved.

In their collective judgment, workmen do not want to be continually tempted to overexert themselves, but individually they will succumb to the temptation of a premium or bonus if held out to them long enough, even though they know they are doing themselves an injury in the long run.

We have laws against the sale of opium cigarettes to minors, and regulations for the sale of liquor in order to protect people against their weaknesses. Our working people endeavor to protect themselves through their unions against their own penny wisdom induced by these high-speed premium systems, and from the avarice of the employer who does not concern himself about what becomes of them after they are worn out, but only considers their present value.

These premiums are not considered by the employees as being worth the disadvantages of the system.

AS TO THE ALLEGED ECONOMIES OF TAYLORISM.

12. Many alleged economies attributed to this system have been due to the use of high-speed cutting tools instead of the common tool steel formerly used. Also no expense seems to have been spared in providing appliances, special tools, and equipment in the endeavor to have the new system show up favorably, while under the old system great economy was practiced in providing this equipment. It is quite possible to go into almost any shop where laxness in management has prevailed and by a determination to effect economies do so without the aid of any system. At the Watertown Arsenal on some of the jobs upon which the time was reduced supposedly by means of the system, much of this reduction was caused by a change to the use of high-speed tool steel. It does not require the Taylor system to suggest the use of tool steel or a liberal supply of reamers, drills, taps, and other tool-room equipment with which much time can be saved in production. It is claimed by the employees that before the system was introduced it was difficult to get the proper and necessary tools with which to do the work, due to a mistaken notion of economy on the part of the management, but as soon as the system began all tools were secured whereby economies in production could be made. All this saving, due to a change of attitude toward providing necessary tools, is unjustly attributed to the Taylor system.

13. The stimulus contemplated by the Taylor system not alone tries to stimulate the exertions of workmen by offering rewards, but further stimulates workmen by a system of gradual selection of the most proficient workmen and the elimination of those who are unable to meet the increasing tasks set, and by other ever present disadvantages which invariably attend failure on the part of a workman to measure up to requirement, such as fines or its equivalent for various shortcomings, the earnest inquiries of four bosses as to why the workman failed to complete his task (since the bosses lose their premiums when the workman fails to meet his task, they are likely to depart from the scientific bent of mind suggested by the terms "time study" and "scientific management" and resort to harsh treatment), and the fear of being eliminated or discharged for not working fast enough. Mr. Taylor advocates that a workman should be discharged every now and then in order to serve as a warning to the rest not to slacken their pace. (See Shop Management, par. 166.)

The only limit to tasks which appears to be recognized by the Taylor system is the endurance of the workman and the ability of the management to enforce their wishes. As long as a workman meets his task it seems to be no concern of theirs how it affects him. In his book Shop Management (par. 128) Mr. Taylor states that men who drink could not keep up to tasks set. A task that is so great that the difference in endurance of men who drink and others who do not (other things being equal) renders the man who drinks unable to cope with the situation is too great, even though a workman does not pine away noticeably from month to month. He can not last much over 20 years at such work.

14. The process here described as reprehensible is Taylor-system method. This can readily be ascertained by reading the reference heretofore given. (Exhibit A, pp. 4 to 9, inclusive.) The rest of the paragraph explains conditions as they are supposed to exist at the Watertown Arsenal, but makes no promise as to what the intentions are for the future. The conditions now existing at the arsenal we do not understand to be final.

ONLY ONE MAN OUT OF FIVE COULD KEEP UP.

15. From the way Mr. Taylor worked the pig-iron carrier (see par. 125, Shop Management), making the task so hard that only one out of five, or even a smaller percentage, could do the work, it does not seem plausible that he concerned himself about the degree of their happiness under this load or whether they thrived under those conditions. That they did the work was probably all that concerned the expert.

The illustration about what is meant by first-class men and first-class horses was made by Mr. Taylor, it appears, as a sort of an apology for the more drastic methods advocated in his earlier writings, but the illustration is not true to his practices. In his practices with the pig-iron handlers he apparently not only selected men who were physically built for that kind of work, but he instituted a competition among the select ones with a view to retain only the best. He eliminates those who are unable to meet the task as certainly as those who are able to but who refuse.

Workmen do not desire to be tested, classified, and assigned to arduous tasks by employers, like so many horses or cattle, and then worked to their full capacity.

The Taylor-system scheme does not provide that the workman shall have any voice in all this arrangement. The employer does it all. If it were possible to enforce this system in its entirety upon workmen, they would get no relief until their condition would appeal to some humanitarian society like the S. P. C. A.

As to the solicitude of an employer to find a place for a second-class man at which he could measure up first class, that would depend upon the condition of the labor market. If workmen were plentiful, it would be easier to discharge second-class men and try out new ones than to find a place that would be appropriate for men incapable of meeting the larger tasks.

16. The rates of pay for machinists employed at the Watertown Arsenal are less than is paid machinists at the Boston Navy Yard, which is only 7 miles away. If the premium system had not been introduced at the arsenal, the day rates of pay would probably have been advanced to meet advances in pay in the vicinity.

Piecework and premium systems have a tendency to hold the day rates stationary, and if any increases in wages are expected by the workmen they must be made through their piecework or premium earnings.

ARSENAL WAGES UNDER TAYLORISM AVERAGE NO HIGHER THAN AT NAVY YARD, WHERE SYSTEM IS NOT IN USE.

The earnings of the machinists at the Watertown Arsenal, including the premium, are about the same as the wages paid machinists at the Boston Navy Yard, in the same vicinity.

Of course, wages are supposed to be regulated according to the law, but in the application of the law to the character of work and other conditions of employment in private employ, which has a bearing on wages, there is room for a wide range of interpretation. When the men employed in Government shops are working daywork this interpretation must be liberal, and when the premium system is in vogue a less liberal stand is taken by the management.

To revert back to the daywork system at the Watertown Arsenal would not bring the production back to where it was when the Taylor system was started, because since the introduction of the Taylor system high-speed steel has been used more extensively, more equipment has been secured, and many other beneficial but harmless changes have been made which reduce costs of work. Introducing an efficiency system may be likened in many respects to a religious revival. While the efficiency engineer is there a great deal of virtue in eliminating waste is developed, even though most of his enthusiastic supporters or victims chafe under the stress of his regulations, part of which they shed when he leaves; but it is not all lost.

The piecework system in machine shops is practically just as objectionable as the premium system, although the time study is eliminated. A great deal of stress is laid by scientific-management advocates upon the dissatisfaction caused by reductions in piece rates and the advantages of the time study in fixing a price once for all time. The advantage is practically all on the management's side, however. Under the time-study method the rate is fixed at what the piecework rate would be after a number of cuts had taken place; while under the piecework rates the employee would be getting the benefit of the more liberal times and compensation while the cutting of piece rates was in progress. It is generally acknowledged that men always work harder under piecework than under daywork; and yet the shop manager feels aggrieved if he has not secured all the productivity possible out of the workman, and casts about for a method, such as the time study, whereby he can more easily work his will.

17, 18, 19. Regardless of whether or not the specific complaints enumerated and to which reply is made are well founded, the fact remains that the employees are opposed to the Taylor system because of its possibilities. In paragraph 20 it is surmised by the Chief of Ordnance that the petitions were signed by many without the signers knowing what the specific complaints enumerated were, only knowing that they were opposed to the Taylor system; so that a satisfactory answer to these specific complaints does not overcome the opposition to the Taylor system.

It must be noted that the alleged facts upon which the rebuttal is based were collected by those who are endeavoring to show that the system is not as yet working any hardship and are contradictory of the alleged facts stated by the employees. The true status of affairs could be ascertained only by an investigation of all the facts having a bearing on the case by some impartial tribunal.

ON GOOD BEHAVIOR TO START OFF WITH.

It must be remembered that at a time when the Taylor system is on trial for its life, so to speak, great care would ordinarily be taken not to make it oppressive by unduly pressing the advantages that it places in the hands of the employer, and which he can use to drive the employee to abnormal exertions, or refrain from so doing if he chooses. The employees realize the dangers of this system and may have been under the impression that the abolition of the system hinged upon whether or not it had been pushed at the Watertown Arsenal to the extent of being oppressive, and that they were in duty bound to put their finger on the exact cause of the difficulty. Even had they not placed the blame where it belonged, they are no more mistaken than many a man has been who has gone to the dentist with a toothache. The fact that the dentist may prove that the particular tooth indicated is absolutely sound does not prove that the man hasn't got a toothache.

In the replies to these complaints, however, the Chief of Ordnance gives expression to views that would justify the misgivings of the employees as to the future. Some of them are as follows:

(*a*) In replies to complaints Nos. 1, 7, and 8, under section 17, the idea is set forth that a higher priced man should not be used for any given job that a cheaper man can perform. This is in line with the teachings of Mr. Taylor that his system will so simplify the work that helpers or laborers will be able to do the work upon which it was formerly necessary to employ a skilled mechanic.

(*b*) In reply to complaint No. 13, under section 17, the belief is expressed that it is practically impossible in the general case to overwork a machinist. In the face of such a presumption coupled with the firm conviction that practically all workingmen are loafers unless they are forced by surveillance or measured tasks to work hard, very little sympathy or satisfaction could be expected by a machinist who would complain of being overworked.

The strain of work does not always bear most heavily on the muscles. The strained attention incident to running a machine that is run at its full capacity; the anxiety about making the time set; the effect of a man's efforts on his efficiency which affects his wages and the retention of his job; the vexations incident to faulty tools, waiting for cranes, helpers, and tools, which interfere with the making of the premium, are all elements that tax the human frame. One man with whom I conferred at Watertown suffered from a nervous breakdown due to these vexations of the Taylor system. It required a two months' furlough with absolute rest before he was able again to resume his duties.

20. The reasons for statements being made by the employees that were favorable to the Taylor system was doubtless due to a feeling of intimidation. They knew what sort of replies their inquisitors desired. As soon as they were assured that they would be protected against discrimination, their replies "commenced to take on a uniform tone of opposition to the system."

UNION OPPOSES UNREASONABLE SPEEDING UP OF WORKMEN.

21. There has been no form of coercion used, to my knowledge, to secure these signatures, with perhaps the possible exception of the esteem in which a workman who was afraid to indicate his opposition would be held by his fellows. The union has no power to compel a workman to either sign a petition or join the union. The Government does not recognize a union shop, and the existence of the union and all acts in accordance with its teachings or wishes are of a purely voluntary nature, actuated by the desire of the workmen for mutual protection.

The accusation of the employer that the union stands for "limitation of output" should be changed to read "the union teaches that there should be a limit to the exertions required of a workman."

While the unions are accused of opposing improvements in the benefits of which they were to have no share, and which would entail untold hardships upon their members during the period of transition, even though the next generation would be benefited, the employers have opposed the shortening of the hours of labor, the safeguarding of life and limb, the prevention of child labor, and the paying of wages that would lift the family out of poverty and want.

Had the promoters of our great epoch-making inventions been as interested in benefiting their immediate generation as they were in augmenting their personal fortunes there would have been fewer victims to oppose them.

If labor had been strong enough to enforce its wishes, it would not have met the doom of invention and enterprise; but in each case a

way would have had to be found whereby inventions would have redounded to the benefit of the workers concerned. As it was, labor was defeated, due to its economic dependence; the drastic method of making progress through their suffering was continued; the immediate promoters and future generations were benefited; and labor has been blamed for its opposition ever since, because it was not able to force a method of making progress that would have eliminated privation for the wage earner.

22. The opposition of the employees at the Watertown Arsenal to the Taylor system would by no means disappear, even though they knew to a certainty that they would lose the amount of the premiums earned. They would rather go back to straight day work than to work under the system with the premium. It is, however, believed that the present day rates at that arsenal are lower than they would be if the Taylor system were not in operation, since it is generally expected in shops operating under piece-rate systems, at least, that the employees will make up their low day-wage rate by their earnings.

It is quite evident that no change in the rule of the department for setting wages would have to be made, as is claimed, in order to give the machinists at the arsenal an increase in their day rate, because the machinists at the Boston Navy Yard, which is in the same vicinity, are receiving a wage rate that is about as high as the day rate plus the premiums earned by the machinists at the arsenal. The Navy Department operates under the same rules as to wages that the War Department observes, but they have no Taylor system installed.

FOUR COMMITTEES OF CONGRESS REPORTED AGAINST TIME STUDY.

In the Sixty-second Congress there were favorably reported out from the Committee on Labor of the House and the Committee on Education and Labor of the Senate bills which had for their aim the prohibiting of the use of the time study of workmen and the premium system of pay in the Government service. These bills were intended to prevent the drastic methods provided for in the Taylor system.

There were no hearings held on these bills, due to the fact that these two committees of Congress had available all the information necessary to reach a conclusion, as a result of the investigation of the subject of so-called scientific management by the special committee of the House created for that purpose.

The introduction of these bills was due to the unwillingness of the War Department to be influenced in its determination to install the Taylor system by the recommendations and views contained in the report of the special committee, which was composed of Congressmen William B. Wilson, William C. Redfield, and John Q. Tilson, and it appeared that the War Department would not modify its course unless compelled to do so by legislation.

Organized labor throughout the United States has indicated in no uncertain terms its attitude on the Taylor system and kindred systems. This can be seen by the resolutions relating thereto passed upon at the last few conventions of the American Federation of Labor.

Labor has a right to say how hard it wants to be worked and to what degree of stimulus it is willing to be subjected.

The justice of its position does not stand or fall according to the degree of oppression that has become manifest in a few shops now operating under the Taylor system. The possibilities for oppression in the way this and similar systems of shop management are built up, the mental attitude of its advocates toward the labor problem, and the lack of safeguards for the workman against its drastic possibilities are among the principal reasons for the opposition of labor.

I am appending hereto a copy of the testimony I gave before the Commission on Industrial Relations on April 15, 1914, which contains a statement of the chief reasons for the opposition of labor to the methods which have become identified with the term "scientific management."

Very respectfully,

N. P. ALIFAS,
President District No. 44,
International Association of Machinists.

MR. ALIFAS, FORMER ARSENAL EMPLOYEE, MADE A REMARKABLE SHOWING BEFORE INDUSTRIAL RELATIONS COMMISSION.

I desire next to insert the testimony of Mr. N. P. Alifas before the Commission on Industrial Relations, on April 15, 1914, while the commission had under consideration the subject of "scientific management" in general. This testimony was considered by those who heard it as especially clear-cut and to the point.

Mr. Alifas's remarks speak for themselves. Being himself a machinist, and having been an employee at the Rock Island Arsenal at the time the Ordnance Department began the installation there of a portion of the Taylor system, he was able to speak from first-hand knowledge, and he showed a remarkable ability to present the attitude of the arsenal and navy-yard employees, making a marked impression on the members of the Industrial Relations Commission.

The workingmen of the Nation are to be congratulated on having so able a representative in Washington, and one who, to my own knowledge, is patient, painstaking, and gentlemanly persistent in his efforts to represent in Washington the views of his people.

STATEMENT OF MR. N. P. ALIFAS BEFORE THE COMMISSION ON INDUSTRIAL RELATIONS.

"Mr. THOMPSON. Will you give us your name, residence, and occupation?

"Mr. ALIFAS. N. P. Alifas.

"Mr. THOMPSON. And your residence.

"Mr. ALIFAS. 120 Maryland Avenue NE., in the city of Washington, D. C.

"Mr. THOMPSON. And what is your occupation?

"Mr. ALIFAS. I am the president of District No. 44, International Association of Machinists. District No. 44 comprises the machinists employed in the Government service.

"Mr. THOMPSON. Everywhere in this country?

"Mr. ALIFAS. Yes; it comprises the machinists of the arsenals and navy yards and the Government departments here at Washington, such as the Government Printing Office, the Bureau of Engraving and Printing, the Lighthouse Service, and the employees on the Canal Zone.

"Mr. THOMPSON. How long have you been in that position?

"Mr. ALIFAS. Since December 1, 1911.

"Mr. THOMPSON. In that time you have come into contact with so-called scientific management, or so-called efficiency systems?

"Mr. ALIFAS. I have.

"Mr. THOMPSON. What is your general attitude toward scientific management, and what are the reasons therefor?

"Mr. ALIFAS. Do you wish me to give you a general statement of our objections to it and why we object to the different things?

"Mr. THOMPSON. I wish you would briefly state it, if you will.

"Mr. ALIFAS. Our objections are these: We object to the system of scientific management as a whole on account of the way it is built up; and we also have specific objections against certain features of it to which we would object even though they were segregated and were acted upon apart from the system as a whole. Our principal objections to the system are its possibilities and the sort of limitations that are placed upon the possibilities of the system. The principal features of the system that we object to are the time study—the stop-watch time study, the premium system, the system advocated by certain of the scientific engineers, of hiring cheaper men to do the character of work that has been formerly done by highly skilled men. We object to the very severe disciplinary system that goes with it.

"It must be understood that any complicated system in order to work, in order to make everything come just right, has to have a very severe system of discipline in order to make it do that.

"We object to the elimination feature of it.

"While labor does not object to improvements, to good management, we think that before any very drastic changes should be brought about some provision should be made for those who are going to be inconvenienced by such changes.

"Those are just some of the objections. I can explain in detail or a little more specifically why we object to these different items that I have brought out.

"Mr. THOMPSON. I should like to hear that. Take the first in order, the possibilities of the system. Why do you object to those?

"Mr. ALIFAS. I do not know that the possibilities of the system ought to come first in order, because the explanation of some of these other questions might perhaps be necessary in order to explain the possibilities, but I will go on with that.

"Mr. THOMPSON. I simply took that first because you stated it first. Start with the one that will unfold, in your opinion, naturally.

OBJECT IS, OF COURSE, TO INCREASE OUTPUT OF INDIVIDUAL WORKMAN.

"Mr. ALIFAS. I could just briefly touch on the possibilities, in order that you might understand the others, also.

"The question of paying men bonuses is, of course, a method of endeavoring to get them to do more work—to do as much as possible—and all the expedients that are explained in Mr. Taylor's work principally are in the direction of increasing the output of the individual workman and offering him as many stimulants to increase the output as it is possible to get him to stand for, or as circumstances will permit.

"Now, take piecework for an example. That, of course, is not a part of the scientific system, but it is more strenuous than day work, that the machinists whom I represent in particular are now working under. We think that the system of day work is sufficiently severe and furnishes sufficient inducements to induce the average employee to work as hard as he ought to be compelled to work, and if you give him any more stimulants than that, that he eventually is going to overwork and shorten the years of his life, probably by 10 or 15 or even more than that.

"The premium system is still more intense than the piecework system, and I should like to explain the difference. I do not believe that has been brought out here. That is, it has not, to my way of looking at it. We will take the way the premium is arranged at the Watertown Arsenal, in regard to which I have some information. We will say that the time study has indicated that 100 pieces can be made in 36 minutes. As a premium or as a time within which premiums shall be given, they will set, say, an hour, which is 40 per cent in addition to the lowest possible time, and they will give one-half of the man's rate per minute for every minute that he saves under the hour.

"Mr. EMERSON. Might I interrupt, Mr. Chairman, to ask whether it would not be better to define the terms 'premium' and 'bonus'? The witness is testifying about the 'bonus system' and calling it a 'premium system.'

"Mr. ALIFAS. I am talking about the premium system.

"Mr. EMERSON. Not as we know it.

"Mr. ALIFAS. I am talking about the premium system.

"Commissioner WEINSTOCK. Do you use 'premium' and 'bonus' as synonymous?.

"Mr. ALIFAS. No, sir; I know very well what I am talking about.

"The ACTING CHAIRMAN. Is this the Taylor system?

"Mr. ALIFAS. It is the Taylor system.

"The ACTING CHAIRMAN. Mr. Taylor and his men have been talking about his system as a task and bonus system.

"Mr. ALIFAS. Yes.

"The ACTING CHAIRMAN. Is it a task and bonus system, or are you really describing the premium system?

"Mr. ALIFAS. It is the task system with a premium.

"Mr. EMERSON. With a bonus.

"Mr. ALIFAS. With a premium. [Laughter.]

"Mr. BARTH. Mr. Chairman, I installed that system. What is the use of listening to everybody else and not giving me a chance? I am all right.

"The ACTING CHAIRMAN. I think we will hear the witness.

"Mr. BARTH. I think that is mighty funny.

"Commissioner O'CONNELL. Let Mr. Alifas go along in his own way. He knows what he is talking about.

"The ACTING CHAIRMAN (Commissioner Delano). I think we will have to let him go along. Evidently you have not been here, Mr. Alifas, all the time. Mr. Taylor and his men have been careful not to use the word 'premium' in describing their system, but they use the words 'differential piecework' and 'task-and-bonus system' in describing their methods.

"Mr. EMERSON. That is the reason that I asked this witness if he would not kindly define those terms for us—for the benefit of the commission.

"Mr. E. S. THOMPSON. May I answer that one point now—since you asked me that question?

"The ACTING CHAIRMAN (Commissioner Delano). I do not think we should interrupt the witness now.

"Mr. THOMPSON. I will ask this witness to define what he means by these terms. That will simplify the thing, so far as he is concerned.

"The ACTING CHAIRMAN (Commissioner Delano). If you will define what you mean by 'premium' as you are using it, we would like to have you do that. You may not be using it in the same sense in which others are using it.

THE PREMIUM SYSTEM AT THE WATERTOWN ARSENAL.

"Mr. ALIFAS. I mean at the Watertown Arsenal they call this a premium—the money they make in the plan that they have inaugurated there. I was endeavoring to describe that plan. If they made 100 pieces in 36 minutes and they were allowed an hour to make those pieces, the plan is that for every minute that is saved within the hour the workman shall be paid for a half a minute. Under the piece system, if a man has been given a task that he would take an hour to do, he will be paid, say, 5 cents a piece, and for every piece he makes more than that he will be paid 5 cents a piece. If an employee under this system that is in vogue at the arsenal should complete that particular job in 36 minutes, he would get more for that same amount of work than he would if he worked an hour on it. If he worked an hour on this particular piece—if he was getting 30 cents an hour, I mean 30 cents for the 100 pieces—he would get 30 cents; but if he completed that within 36 minutes he would get 30 cents plus one-half of the amount of money he would save by shortening the time 24 minutes, which amounts to about 40 cents for the 100 pieces. Consequently it is to the man's interest to increase the price that he gets for the particular amount of work that he is doing. Now, in that it is more intense than the piecework system is.

"Another way of stimulating men, which, I understand, is to follow this particular plan, which I have called the premium system—it may be different from what these other gentlemen claim is the premium system, but that is what we call it at the arsenal—is a differential rate system with a bonus. Whenever they have finally discovered how much a man can do of a certain amount of work they place that at as high a limit as they think they can get a man to work and still make it. Suppose that they should discover that a man, by very strenuous efforts, could make 10 of these given pieces in a day, they would say, 'If you can make 10 of these in a day, we will give you 35 cents apiece. If you do not come up to 10, if you only make 9¾'—or whatever the tolerance will be—'we will give you only 25 cents.'

"The question of only a very few minutes of speeding up during the day might mean the difference between getting $2.50 a day or $3.50 a day. If a man misses that $3.50 a day by only 10 minutes, he would regret that very much, and he would be willing to speed himself up considerably harder in order to make that. That is an added stimulant added onto the man.

SYSTEM PROVIDES FOR ELIMINATION OF MEN WHO CAN NOT KEEP UP.

"Then you can stimulate him still further. These systems provide for a system of eliminating men, and eliminating the least efficient of them, and in view of the fact of their supposed increased productions, so they do not need as many men to do the same amount of work they have been doing, it is possible to discharge quite a few men every once in a while, as the system becomes perfected and they can get along without them. While they are discharging these men, they might as well turn it into an advantage, and say: 'We will keep the best of the men, and those who can not keep up, of course, will have to go.' That is natural. They will say: 'If you men do not make these premiums or bonuses that we are offering to you, if you will not work hard enough to get them, we will eliminate you.' That is an added stimulant, especially at a time when there is very little work in the country, and the men will work still harder.

"A foreman might not be disposed to press that point as hard if he is working himself under a salary as if he were under a bonus or premium for doing that sort of thing. Mr. Taylor's system especially, and I think most of the other scientific systems, provide that a foreman shall be paid a bonus in proportion to the number of his men who are making bonuses. Consequently that gives him an incentive to speed up his men in order to force them to make bonuses. There are two ways of doing it. You could give a foreman a premium or bonus for the number of men who were making bonuses or premiums, or you could regulate the size of his premium or bonus in accordance with the amount of premium or bonus his men were making. This last particularly, of course, would be more stimulating to him.

"We feel that there is altogether too much stimulus connected with that. You might say, 'Oh, they would not do that. Our employers are too tender hearted to be willing to enforce such an inhuman system of oppressing people.' I would feel very much disposed to give them credit for their very best intentions. However, we have to be guided somewhat by what they say they will do. Mr. Taylor, in his presentation of this subject before the American Society of Mechanical Engineers in June, 1903, gave an outline of his system. It was at least just as harrowing as what I have just related, in our opinion. He not only advised them to do that, but he showed where he had done that, to prove that it was possible to do it.

WHY WORKINGMEN ARE JUSTIFIED IN TAKING NOTICE.

"In presenting a subject of that kind, in the way that Mr. Taylor did, since he had had enough experience with employers to know what would appeal to them, I presume he wrote this paper in such a way as to appeal to the average employer. If that sort of language is what is going to appeal to the average employer, I think that the working people might put up a good, strong resistance to any program that is going to work out in that fashion.

"Mr. THOMPSON. Have you that language here?

"Mr. ALIFAS. Yes, sir. In regard to keeping the cheap men, I will read a paragraph to illustrate that point from 'Shop management,' page 1347, paragraph 37:

"By 'high wages' he means wages which are high only as relating to the average of the class to which the man belongs, and which are paid only to those who do much more or better work than the average of his class. I would not, for illustration, advocate the use of a high-priced tradesman to do the work which could be done by a trade laborer or low-priced man.

"In explanation of that, he figures that by systematizing the shop and taking advantage of all the modern improvements that he has incorporated in his system, it is going to so simplify the work that it is not going to be necessary to have the skill of the mechanic who formerly had to do it, but that he can dispense with him and use a laborer or a skilled man who gets much less pay, and that the increase that he would be giving the employee would not be an increase to the mechanic who was displaced, but would be an increase of a certain per cent to the laborer, and an increase in the laborer's wages would not amount to probably as much as the mechanic got who formerly did that class of work.

"Mr. THOMPSON. Referring to that last paragraph which you read, what objection, if any, could be made to a simplification of the work in a shop so that the element of skill was reduced and more men of the kind who labor and work as you have suggested could perform tasks?

"Mr. ALIFAS. There could be no objection raised to it, except it would be the objection that whenever the employer improves things he keeps all the advantage of the improvement himself.

"Mr. THOMPSON. That would be the objection?

"Mr. ALIFAS. That would be the objection. We have no objection to simplifying things. In fact, if we could make everything by automatic machinery, and nobody would have

to do anything, it would be perfectly satisfactory, provided the man who invented that did not keep all the advantage himself and let the rest of the world starve to death.

"Now, paragraph 247 illustrates the effort which will be made toward cheaper workmen:

"The full possibilities of functional foremanship, however, will not have been realized until almost all the machines in the shop are run by men who are of smaller caliber and attainments, and are therefore cheaper than those that were required under the old systems. The adoption of standard tools, appliances, and methods throughout the shop, the planning done in the planning room, and detailed instructions sent them from this department, added to the direct help received from the four executive bosses, permit the use of comparatively cheap men even on complicated work.

"Now, he will not be able to do that. It appears in certain shops that they have not reached this highly desired state of affairs where they can get along without the high-priced man, but that is due to their inability to make the system do what they thought it would; but it does not prevent them from taking advantage of every situation which will enable them to do that.

MEN WHO FINALLY REMAIN FOR THE FINALS ARE TOPNOTCHERS.

"In regard to the speed, I believe that has been read here to the commission, paragraph 125 of 'Shop management,' which relates to the pig-iron handlers at Midvale.

"When the writer left the steel works the Bethlehem steel workers were the finest body of picked workers that the writer had ever seen, altogether. They were all practically first-class men; the work they were called upon to do was such that only first-class men could do it; the tasks were purposely made so severe that only one out of five, or perhaps even a smaller percentage than this, could keep up.

Now, with regard to that, as I remember it, there were about 400 men in that gang, and only about 140 or 144 of them were finally retained. If labor conditions had been very bad in that district from the workers' point of view, they naturally would have attained very high speed. Mr. Taylor the other day illustrated what he meant by first-class men, by comparing them to horses—not comparing the workingmen to horses, but in the sense that he would take a large horse to do heavy work.

"In introducing scientific management I do not suppose that the man who hired them would hire a weakling to carry pig iron, but in the first place he would naturally select men who he thought would be capable of doing the work, and men would offer themselves for that service who thought they would be able to perform the duties. Now, after trying such men as that, who ordinarily would appear to be capable of doing it, only about one out of five were able to do the work assigned to them. The others would either quit or go to other work, or they would be discharged for their inability to do the work.

"Now, that looks pretty severe to us. I think one reason why the employees who were contemplating to have to work under this system in the Government service, one reason why they were fearful of the system was due to the inability of those over them to see anything drastic about that book of Mr. Taylor's. Even after pointing out these things to them, it seemed like they were unable to see that that would cause anybody any hardship.

"Now, we have a pretty fair conception of what we consider hardships, and if those are not hardships, we do not know what hardships are.

"Mr. THOMPSON. What, if any, increase in pay do you know that these men got—do you?

"Mr. ALIFAS. Yes.

"Mr. THOMPSON. What is the additional output—if you know?

"Mr. ALIFAS. I think it is shown in the book, that instead of carrying about 13 tons of pig iron a day they carried about 48 tons of pig iron a day, and instead of receiving $1.15 for that they got $1.85. It was stated, I believe, that some men would work in their gardens in the evening under the old way of working. However, there is some question as to whether, after a day's work, carrying 48 tons of pig iron, they would be able to do that or not.

"Now, another limitation——

"Mr. THOMPSON. In that particular case they carried about 300 per cent more?

Mr. ALIFAS. Yes.

"Mr. THOMPSON. Three hundred per cent more pig iron and got a little over 50 per cent more wages?

"Mr. ALIFAS. Yes; something like that.

"Commissioner WEINSTOCK. How do you make it 300 per cent increase from 12 to 48?

"Mr. THOMPSON. From 12½ to 48.

"Mr. ALIFAS. From 12½ to 48. That would be about 3 to 1.

SCIENTIFIC MANAGEMENT WILL NEXT WANT TO TELL A WORKMAN HOW MUCH OR HOW LITTLE HE MUST EAT.

"Mr. ALIFAS. Now, another limitation that I wish to call the attention of this commission to is the question of what a man is able to do. It appears that these gentlemen have figured out to a nicety just how long rest periods men must have during the day in order to be able to carry a certain load. That is, if he rests less, he carries less; and if he rests more, he also carries less. That is, by experimenting they have discovered just exactly how much a man can do. That resolves itself down to a very pertinent suspicion, that if they had their way about it they might start to find out how much it was necessary for a man to eat in order to maintain his strength, regardless of whether his appetite was satisfied or not, and then base his wages on what it was necessary for him to earn in order to sustain life. That is a bare possibility; at least, it falls in line with scientific methods of doing things.

"Mr. THOMPSON. Are they not really doing that now?

"Commissioner WEINSTOCK. That is done under the minimum-wage law to determine the cost of living.

"Mr. ALIFAS. Yes; they determine how much it costs to sustain life.

"Commissioner WEINSTOCK. The State does that?

"Mr. ALIFAS. Yes; how much it costs to sustain life, and they determine that you must at least get that.

"Mr. THOMPSON. That is, so many calories of strength.

"Mr. ALIFAS. Yes. Now, we object to being reduced to a scientific formula, and we do not want to have the world run on that kind of basis at all. We would a good deal rather have the world run on the basis that everybody should enjoy some of the things in it, and if the people of the United States do not want to spend all their time working they have a right to say so, even though the scientific engineers claim that they can do five times as much as they are doing now. If they don't want to do it, why should they be compelled to do it?

"Mr. THOMPSON. Just one point: Assuming by the introduction of scientific management in regard to these men they reduce the efforts of the men, cut out waste motions and false motions, and teach the men to do the work easier, and thereby to accomplish more work in a given number of hours; your objection just made would not apply to that condition, would it?

"Mr. ALIFAS. No, sir; it would not.

"Mr. THOMPSON. So far as it did that, you would agree to that system?

NO OBJECTION TO ELIMINATION OF UNNECESSARY MOVEMENTS.

"Mr. ALIFAS. I would agree to anything that cut out unnecessary work on the part of people, provided, of course, that we were not put to too great an inconvenience. That is, I would not care to burn down this entire city with the assurance that I would have a better one 50 years from now, because we might have to live in a tent in the meantime. But improvements are a good thing, if you do not have to suffer too much inconvenience in getting them. Of course, the man who is starting these improvements can stand to see the workmen suffer considerable inconvenience in order that he might get the benefit of it.

"Mr. THOMPSON. Forgetting for the moment the language of Mr. Taylor, which perhaps is very unfortunate in that book, and perhaps elsewhere, and simply taking this fact into consideration, that by advising these men how to carry pig iron they are able to increase the man's output from 12½ tons to 48 tons a day, and without any more exertion on his part, could there be any objection to that?

"Mr. ALIFAS. No; I do not think so, except as I have already stated, that the people who are inconvenienced by improvements should get sufficient benefits out of them; otherwise the improvement should be postponed until some solution is found by which they can get the benefit distributed.

"Mr. THOMPSON. In other words, you would not have any objection to the saving of the waste motion and waste time, but if there is a saving, you think the workmen should share more proportionately in it?

"Mr. ALIFAS. Yes.

"Mr. THOMPSON. Now, taking up your time-watch study, you said that you and labor objected to scientific management on that account. What have you to say in that regard?

"Mr. ALIFAS. Yes. In the first place, I think that it is humiliating to have a man hold a stop watch on us. We have been, through the papers on scientific management, accused of soldiering repeatedly, and while, of course, we are not really blamed for it, the manufacturer is blamed for it because he does not take the necessary measures to prevent us from soldiering; that, however, is a blame that would be taken in very good part by him, but it is humiliating to have a man stand over you with a stop watch, when it is well recognized that the reason he is doing it is because he suspects that if he does not do it and tries to get your task as a whole you would cheat him. That is, you would give him to understand that it took you longer to do the work than it did actually take.

"I read an account not long ago of where a man had been in some foreign country, and one of the spectacles that amazed him very much was to see a farmer out in his field plowing, and he had his wife hitched up to the plow in connection with an

ox. Now, even under scientific management, if that task had been fixed so that it was not hurting her any and that she was not overworked, yet I imagine that under such circumstances our American wives would feel somewhat humiliated at being in such a situation; so that even though it does not hurt you any, it is possible to have a thing humiliate you.

"Mr. THOMPSON. And you think the average American wife would object to that yoking?

"Mr. ALIFAS. I think so. Another reason why we have objected to time study has been on account of the attitude of the employer to get the very most out of us that is possible, and oftentimes the only defense that the workingman has had has been in the ignorance of the employer as to exactly how much he could do. Just as soon as an employer found out how much he could do, the employer would insist that the employee should do a larger day's work than it was possible for him to do and keep up, and the only defense he has had has been the same defense that a great many business houses and big corporations have when the public proposes to find out what their earnings are, to say if they can not get an increase in rates, or something like that, like our railroads are doing, to endeavor to force the facts and figures with a view to pretending that they are not earning as much as they really are.

"There seems to be a disposition on the part of people, when determining what anybody else should have, that they make it a little bit less than it ought to be. That is one reason.

"Mr. THOMPSON. What cases do you know of in scientific management where that has been actually the case?

"Mr. ALIFAS. Well, according to the testimony of the gentlemen here, it seems that piecework, when first established, is susceptible of being cut several times until it finally reaches a point where it is impossible to reduce it any more, but with the stop-watch practice that last time after the job has been cut is the time that has been discovered in the first place, so that labor does not get the advantage of having had an easier time while the cutting was going on.

"In that way they find out the least possible time that should be taken in the first place.

"Mr. THOMPSON. Assuming, Mr. Alifas, that the time study is a normal time study, would there be any objection to making that time the task time?

"Mr. ALIFAS. Well, in assuming that you would have to assume that the people who have the final determining of it are going to determine right, and that is just where we differ.

"Mr. THOMPSON. Assuming that they did determine right, what objection could there be to it?

"Mr. ALIFAS. Assuming that they gave you the right task? I do not know as you could find any objection to it if you assume that, but under the present circumstances I do not see that any assumption of that kind could be made, due to the fact that it is all determined at the present time by the employer.

"Mr. THOMPSON. For instance, if a study of a task which took several hours, say, five hours, involved quite a few different processes, it might be necessary to make a study of those processes to see wherein motions could be eliminated, and waste effort, and finally, on reaching the completion of the whole task, they would say that a certain time was normal. Suppose it was the right time, and nobody could reasonably object to it, could anybody reasonably object, then, to the methods of examining into any of the processes to arrive at the same total, say five hours?

"Mr. ALIFAS. That has something to do with the mental attitude that would induce a man to think that he should make a time study.

"Mr. THOMPSON. Let us assume that it was understood on both sides that the desire was simply to arrive at the whole task or process, and that it took five hours and required several processes—that it was simply a desire to arrive at a normal time for the whole task; could there be any reasonable objection then?

"Mr. ALIFAS. Well, there is no objection where there is no objection, of course; we all know that.

"Mr. THOMPSON. Could there be any objection in that kind of case, where it was understood?

THE TAYLOR SYSTEM IN THE HOME.

"Mr. ALIFAS. Well, the objection is this, that when a man thinks it is necessary for him to find out what a workman is doing every minute of the day, he has got an attitude of mind that is going to be hard to please as to the work to be done; and when a man takes that attitude, it is necessary for the workingman to guard himself. I think it is like a husband starting out from the house in the morning and he would decide to dole out for his wife to use that day so much pepper and so much salt and so many potatoes, etc.; whereas before she had been able to use about what she thought was necessary, she would begin to think he was getting altogether too closefisted in his management, and that is what we think when the employer begins to inquire what we did with that last 15 seconds; it is time to oppose it.

"Mr. THOMPSON. Are you a married man?

"Mr. ALIFAS. Yes; and I don't do that.

"Commissioner O'CONNELL. The scientific management is on the other end.

"Mr. THOMPSON. I do not think that illustration, while very interesting, meets the idea I have. What I want to bring out—what I want to prove—is that if the employer and employee meet for the purpose of ascertaining in a perfectly friendly way as to what time should be consumed in an operation—where the employee understands that there is no desire to question his good will, even, much less his honesty—this thing would evaporate, the thing you speak of?

"Mr. ALIFAS. I would say, assuming the very favorable premises you have stated, that there could be no objection.

"Mr. THOMPSON. Is it not a fact that in piece-price factories the determination of the piece prices, like in clothing factories and glove factories and other places, there is a time test made, not only at the instance of the employer, but often, and most often, at the instance of the employee, particularly in all these establishments where the manufacturer sets the price first, then the employee demands a time test of the operation, so that he may prove to the employer that the price he has set for the operation is not fair? In that case the employee insisting upon the time study could not object to it, could he?

"Mr. ALIFAS. No; he could not.

"Mr. THOMPSON. Then, therefore, the objection of the employee to the time study is to what he thinks is back of it; he thinks there is some question of his honesty or faithfulness of work, and he objects to it?

PIECEWORK, FOR INSTANCE, IS PREFERABLE TO SOMETHING WORSE.

"Mr. ALIFAS. Allow me to make an explanation there. The employee might ask that a certain thing be done which he really objects to in itself; that is, that it is better than something else. I have heard of people who asked to be allowed to go to the penitentiary instead of being hung, but that is not to say that he prefers the penitentiary instead of being free. A man might prefer a time study to an unjust condition imposed upon him by an employer, but that is not to say that he would be in favor of that time study.

"Mr. THOMPSON. Then you think, if I understand you correctly, that where an employer sets a price on an operation and the employee asks for a time study, it is similar to a man who is condemned to be hung asking for a term in the penitentiary?

"Mr. ALIFAS. In the sense that it is a lighter punishment, so to speak.

"Commissioner GARRETSON. It is the lesser of two evils?

"Mr. ALIFAS. It is the lesser of two evils. What we object to is piecework.

"Mr. THOMPSON. Would you say that is the attitude of the employees in connection with time studies in different trades—the clothing trade, for instance?

"Mr. ALIFAS. I would not presume to speak for the clothing trades. I am speaking for the machinists' trade, which trade objects to piecework and to the necessary paraphernalia for carrying the piecework system into operation.

"Mr. THOMPSON. If I should tell you that in the clothing trade the employees ask for that time study and accept it as part of their machinery for arriving at prices, and it is not looked upon with any disfavor whatever, that would eliminate at least one group of workers, would it not?

"Mr. ALIFAS. Yes, sir; assuming your premises, it would.

"Mr. THOMPSON. But as a result of your testimony, it is what is back of the time study that you object to?

"Mr. ALIFAS. That is it.

"Mr. THOMPSON. The motive?

"Mr. ALIFAS. That is it—the motive.

"Mr. THOMPSON. The implication?

"Mr. ALIFAS. The motive behind it; and that brings out another point I would like to just touch on before I forget it. That is the suggestion that has been made here that employers should confide in employees what they propose to do. In accordance with this system, I see that it would be very much to the disadvantage of the employer to confide any such thing to the employee, if he proposes to do to him what these writings indicate. He would, in effect, tell a good machinist who is working in the shop, getting $4 a day, "I want to time you on this job, and I want to find out if you can do two or three times as much work as you are doing now, and then I propose to make you do it. That is, I am going to pay you enough so you will not quit here and go somewhere else, but I am going to make you do it by penalties, if I can not find somebody else that is

cheaper than you are who can do that; and if I can, I will take him." That is, in effect, what he would have to tell the employee if he proposed to follow out this system, as we understand it.

"Mr. THOMPSON. Then, in your opinion, under the ordinary rules of business, the scientific system of management, while designed to lessen effort and eliminate waste, is really a method by which the employer can exploit labor?

BECAUSE A THING IS SCIENTIFIC IS NO EVIDENCE THAT IT IS HUMANE.

"Mr. ALIFAS. That is the idea exactly. Simply because a thing is scientific does not make it good; that is, you may discover a scientific way of doing almost anything, such, for instance, as swindling the public. They have that down to a science, I understand, in New York in certain places, where they inveigle the credulous into certain schemes and then trim them. They might reduce that to scientific methods of doing it, and yet it would not be a good thing simply because it was scientific. It depends on the purpose for which you expect to use any given knowledge whether it is good or not.

"Mr. THOMPSON. If the introduction of a scientific system of management was simply for the purpose of eliminating waste, false motion, and the like, and labor was to share fairly and fully in the saving thereby, there could be no objection reasonably to such a system, could there?

"Mr. ALIFAS. No.

"Mr. THOMPSON. If the chairman, please, that is all.

"The ACTING CHAIRMAN. Mr. O'Connell?

"Commissioner O'CONNELL. Nothing at this time, Mr. Chairman.

"The ACTING CHAIRMAN. Mr. Garretson?

"Commissioner GARRETSON. Mr. Alifas, do you and the average man whom you represent believe man was created wholly for the purpose of creating wealth for others?

"Mr. ALIFAS. No, sir. Man was created, we think, for the purpose of enjoying life to some extent.

"Commissioner GARRETSON. As you understand scientific management from the presentation from which you read, it would act as an amendment to the ordinary catechism which gives man another purpose in life?

"Mr. ALIFAS. It would seem like it.

"Commissioner GARRETSON. Does the perusal of the writings on the subject with which you are conversant convey the idea to the average laboring man that this form of management is a boon to labor, an unquestioned good?

"Mr. ALIFAS. I have endeavored to find that out first hand. About three years ago I went to Philadelphia for the purpose of interviewing some of the employees who were working in three plants of that city where it was alleged they had introduced scientific management. Those plants were the Midvale Steel Plant, the Link Belt Co., and the Tabor Manufacturing Co. I interviewed all the employees that were working there or that had worked there that I could find and that I could see. I only found one man who liked the system, who would not rather work under the ordinary daywork at the regular daywork wages.

"Commissioner GARRETSON. He did not like the real thing any better than he liked the public statement, then, in regard to what to do?

"Mr. ALIFAS. Apparently not.

"Commissioner GARRETSON. In regard to the rules that exist in trade agreements, is it not true that a large number of those rules, covering both wage or condition of service, are not a fair example of what either side, employer or employee, in making up the trade agreement, desires, but are compromise measures?

"Mr. ALIFAS. Yes, sir. The employee, as a rule, would make—I will state that in another way, and come right to the point: Each side would make it more favorable to itself if it could.

"Commissioner GARRETSON. It is the result of mutual concessions?

"Mr. ALIFAS. Yes, sir.

"Commissioner GARRETSON. Is not that true of every trade agreement with which you are familiar?

"Mr. ALIFAS. Yes; it is.

"Commissioner GARRETSON. That is all, Mr. Chairman.

"The ACTING CHAIRMAN. Mr. Weinstock?

"Commissioner WEINSTOCK. Mr. Chairman, I regard Mr. Alifas as one of the most intelligent and one of the best informed men from the labor side on this question of scientific management.

"Mr. ALIFAS. Thank you, Mr. Weinstock.

"Commissioner WEINSTOCK. There are a number of questions, Mr. Chairman, in connection with scientific management, concerning which my mind is undetermined. I have not been able to get conclusive evidence to reach an opinion of my own that I can depend on. I want to take advantage of this opportunity of questioning Mr. Alifas, and therefore I will submit to him quite a number of questions; and I want to ask the indulgence of the commission to permit me to take not only my own time but to take advantage of the absence of my fellow employer representative on the board, Mr. Ballard, and use his time also.

"The ACTING CHAIRMAN. You may have my time, too.

"Commissioner LENNON. And you may have my time, too.

MR. ALIFAS AGREES THAT THE MOST VALUABLE ASSET THAT THE STATE HAS IS ITS MEN.

"Commissioner WEINSTOCK. Mr. Alifas, to begin, do you agree with me that the most valuable asset the State has is its men?

"Mr. ALIFAS. Yes, sir.

"Commissioner WEINSTOCK. Do you also agree with me that the most valuable asset man has, the most valuable asset that you have, the most valuable asset that I have, is our efficiency?

"Mr. ALIFAS. Yes, sir.

"Commissioner WEINSTOCK. Rob us of our efficiency and we become burdens upon the State.

"Mr. ALIFAS. In all directions, I would say. Our efficiency not only to produce something that somebody else helps to divide for us and give us our little share, but also our efficiency in getting more of the things that we are already producing, instead of trying to produce more, and to get results from the Government we are under.

"Commissioner WEINSTOCK. Therefore, really the most valuable asset the State has is the efficiency of its men and its women?

"Mr. ALIFAS. Yes, sir.

"Commissioner WEINSTOCK. Anything that will increase that efficiency without injury is in the nature of a blessing, is it not?

"Mr. ALIFAS. Yes, sir.

"Commissioner WEINSTOCK. Anything that will diminish that efficiency is in the nature of an evil?

"Mr. ALIFAS. Yes, sir. I want to modify both of those answers to this extent—that anything that would increase efficiency without detriment to the individual is a blessing and anything that would decrease efficiency for the benefit of the overworked individual would also be a blessing. I think there are some people who are working too hard at the present time.

"Commissioner WEINSTOCK. I also think you will agree with me, Mr. Alifas, that all employers are not fair and are not equitable and are not just. Do you?

"Mr. ALIFAS. Yes; I do.

"Commissioner WEINSTOCK. That there are employers who are unfair and inequitable and unjust?

"Mr. ALIFAS. Yes.

"Commissioner WEINSTOCK. And that it is the purpose of organized labor, as I stated, to protect themselves against that kind of employers?

"Mr. ALIFAS. Yes, sir.

"Commissioner WEINSTOCK. Is that right?

"Mr. ALIFAS. Yes, sir.

"Commissioner WEINSTOCK. In other words, if all employers were just and fair and equitable and did the square thing, there would be no need for labor unions, would there?

"Mr. ALIFAS. No, sir. I will also add there that the good employer at the present time is handicapped in giving his employees good conditions, due to the unjust competition of the unfair employer.

"Commissioner WEINSTOCK. The unfair employer sets the pace?

"Mr. ALIFAS. Yes, sir.

"Commissioner WEINSTOCK. And the fair employer must either follow that pace or get out of the game?

"Mr. ALIFAS. That is correct.

"Commissioner WEINSTOCK. I take it from that that you will also agree with me that all workers are not fair and just?

"Mr. ALIFAS. Yes, sir.

"Commissioner WEINSTOCK. That is, all workers do not give a fair day's work for a fair day's pay?

"Mr. ALIFAS. I will modify that to the extent that as a rule a man is performing a task that is worth what he gets for it, because the employer would not hire him at all if he was not worth as much as he is getting; so he can not possibly cheat the employer by any means to any great extent—that is, with reasonable supervision. The average employer would find out if he was not worth what he was getting. He might cheat the employer to a certain extent by not giving the employer a just return on his investment.

"Commissioner WEINSTOCK. You do not think, then, it is possible for a man to do the least that he can and to hold his job without the employer dismissing him?

"Mr. ALIFAS. Ordinarily I think that the employer would find out a man like that. I will state that our experience in daywork has led us to the conclusion that daywork furnishes a man sufficient incentive to make him do a good day's work. He may not invent new methods of doing it, but he does a good day's work with the implements he has at hand, and that the fear of discharge, the desire to stay in the same locality, where he may own a home, and the natural fondness he might feel toward a good employer would induce him to turn out a good day's work.

"Of course, these systems carry along with them, supposedly, a lot of new improvements that have been made in shop management; and wherever shops which they have invaded have been run under the old systems which have been in existence for 15 or 20 years they find a lot of antiquated methods, and if they abolish those antiquated methods, together with their stimulus for the workman, that will increase the productivity; and all that productivity is charged to the system, whereas under the old method of doing work they could have secured perhaps three-fourths of that increase without putting any added stimulus on the workman.

"Commissioner WEINSTOCK. If you were earning, for example, say $4 a day, would you be content to remain at $4 a day for the rest of your days, or would you want to increase the amount of your earnings if you could legitimately and honorably do so without injury to yourself?

"Mr. ALIFAS. Oh, every man wants to increase his earnings.

UNDER TAYLORISM THE TASK AND WAGE ARE NOT FIXED BY MUTUAL AGREEMENT.

"Commissioner WEINSTOCK. If I was to come to you—if you were my worker and I was your employer—and I should say, 'Mr. Alifas, you are getting $4 a day, and that is all you are worth with your present output; that is the maximum. If the output can not be increased, you have reached your highest point. Now, I want to see if there is not some way by which you can earn more than $4 a day and I can also increase my profits. I am not coming to you as a philanthropist, and I am not coming to you out of benevolence. I am coming to you for our mutual good, and I want to see if I can not, for your good and mine, increase your efficiency so that you can earn more money and I may earn more money. I will exercise my brain, or such brains as I can spare, and cooperate with you for our common benefit.' Suppose I should come to you and say that; would you object to that?

"Mr. ALIFAS. I would not object to it if I had some voice in the thing.

"Commissioner WEINSTOCK. If you had a voice?

"Mr. ALIFAS. And you should not insist upon getting all the benefits of it and eliminating me, possibly.

"Commissioner WEINSTOCK. Exactly. Now, if I should come to you and invite your cooperation and give you an equal voice with myself, you would look upon it as an advantage?

"Mr. ALIFAS. Yes; without a doubt.

"Commissioner WEINSTOCK. Your objection—and when I say 'your objection' I assume that you are here representing organized labor, and are not speaking only for yourself——

"Mr. ALIFAS. I have talked with a great many employees, and while they may not have expressed their objections in the same terms that I have, I feel that their objections are, either consciously or unconsciously, mine.

"Commissioner WEINSTOCK. Then I take it that the objection to this so-called scientific management is not the fact that it can increase productivity, but the fact that it is put upon the worker without his cooperation and without giving him a voice in the matter?

"Mr. ALIFAS. Yes. It is the purpose for which they propose to use it.

"Commissioner WEINSTOCK. If that objection was removed——

"Mr. ALIFAS. But I will say this, that the system has been built up with that in view. Now, it is a good deal like building a structure of any kind, you might say building a guillotine. It is proposed to use that for the purpose of decapitating people, and you would not expect to have that used for a church organ or something of that sort. [Laughter.] It is constructed for some given purpose.

"Commissioner WEINSTOCK. Very well, then; you have not any objection to the system, then, I take it, but you have objection to the manner in which it is applied?

"Mr. ALIFAS. I would arrange the system a little bit differently.

"Commissioner WEINSTOCK. Go ahead and tell us just exactly how you would arrange it so it would be fair and equitable to both sides.

REPEATS THERE IS NO OBJECTION TO ELIMINATION OF WASTE.

"Mr. ALIFAS. I will say this, that if we should agree to any one of the features of the system it is so built up that the next logical step in the system is something else that we think is to our disadvantage. Of course, we may be mistaken. Our opponents have credited us with a great deal of ignorance on this subject, but it looks to us, at least, as if it was built up in such a way that the next logical step would be something that would finally be to our disadvantage. I do not think we would have any objection to a shop or an industry, say, rearranging their machinery in such a way that there would be no unnecessary time lost in distributing the work, or properly routing the work. There would be no objection to that. There would not be any objection to ascertaining and insisting on it, in a general way, that workmen should use the proper speed and feed for work.

"Now, I will say right here that the very elaborate explanation that Mr. Barth gave yesterday of his method of ascertaining the proper speed and feed could not be figured out by the workman as he figures it out; but the workman is accustomed to looking at a lathe, say, for instance, and knowing what kind of a tool he has got, he can figure out by his experience, he knows it intuitively, about how fast that machine should run and still keep that tool sharp until he gets to the end of the cut. If he has any number of pieces to make he may experiment, and he does experiment. He will throw on a little heavier feed and faster speed until he gets the proper feed and speed, and it does not take him much longer to ascertain that than it does for a man with an elaborate set of figures to sit down and figure it out. It might be likened to analyzing the air a man breathes. I take it that some scientist, if he was like efficiency engineers, might wonder how people were able to breathe before they knew what the air was composed of. It is just like this, ascertaining what amount of speed and feed it is necessary to use, it is necessary to observe the point of contact of the tool with the steel, and in order to find out what will stand the machinist will put on a little more feed or speed, and if it will not stand it, he will throw it down again. We get the proper relation established from experience and experimenting.

"Commissioner WEINSTOCK. Now, you heard Mr. Thompson explain to us the method that prevails in the clothing industry. He explained that the worker has an equal voice with the employer in determining the prices, and consequently in the clothing trade the men take the initiative and ask that the system be introduced. Therefore, it is evident that in the clothing industry the objection that you have against the system has been removed.

"Mr. ALIFAS. Yes.

"Commissioner WEINSTOCK. That if the worker has an equal voice with the employer and the employer is not supreme?

"Commissioner WEINSTOCK. He is put upon a basis of absolute equality. It is a case of real copartnership between the employer and the employee, and it has worked out in such a degree to the interest of the worker that he now desires it. Therefore would not the whole problem be solved if we transplanted the conditions that now prevail in the clothing industry into all other industries?

"Mr. ALIFAS. I will say that that depends upon the character of the work. The clothing industry is such that it lends itself to duplication. There is very little variation in it. But in a machine shop there is a great deal of variation. Mr. Taylor told you that in ascertaining the variation in the speed of the machine there were 12 variables.

"Commissioner WEINSTOCK. Yes.

GREATER SPEED IS POSSIBLE ON SOME METAL THAN ON OTHER.

"Mr. ALIFAS. One of those variables is the hardness of the metal, which varies a great deal, and it is impossible for you to know until you try the metal oftentimes what its hardness is. I presume he guesses at the hardness of the metal, and then he figures out how much speed that will take. It is something like the way they weigh hogs in Kansas—they put a rock at one end of the beam and a hog on the other end, and then they guess at the weight of the rock. He guesses at the hardness of the steel and then figures out how fast the machine should run. It is just as accurate to guess at the speed in the first place, or to experiment.

"But to come back to the clothing industry and other industries, the conditions in the machine shop are so variable that there are no two things alike, you might say, there are so many variables. There are 12 variables in the cutting of steel, and that is only a part of the variations which are possible, and all that causes so much dissatisfaction where a premium or a bonus or a piece system is used.

"For instance, if a man has a certain job to do, and if he has got a certain amount of time to do it, he goes to the tool room to get his tools. Now, tools are used over and over again by different workmen, and they may be worn. They may not be 100 per cent efficient. The workman's time is likely to be on the

basis that everything will be fairly satisfactory, and he finds that he can not get a proper tool. He loses premium while he is working with a poor tool through no fault of his. Then he may be waiting for a crane, and he loses premium through that process. The steel may be hard, and he loses premium through that. We are told that if it is proven to the management that there are any obstacles that they had not foreseen they will be adjusted, but I believe it was Mr. Townsend who wrote an article in the American Magazine—I may be wrong about that, but I am pretty sure that it was Mr. Townsend—in which he said this. He said that if you gave men allowances every time they came around and apparently proved that they had troubles you would never get a job done in proper time, and that he had to shut down on the allowances altogether in order to compel men to overcome obstacles that he thought they ought to overcome by themselves.

"In the machine shop the conditions are so variable that we feel that the workmen should not be compelled to stand all the variations. It is just like an insurance company. People may insure—they insure their houses——

"Commissioner WEINSTOCK. I have caught your point. It is not necessary to give that illustration.

"Mr. ALIFAS. I just wanted to illustrate it.

"Commissioner WEINSTOCK. I want to digress for a moment and put Mr. William C. Thompson on the witness stand for a moment or two.

"Mr. Thompson, I take it that you are more or less familiar with the conditions that prevail in the woman's garment industry?

"Mr. THOMPSON. I am less familiar with it, but in New York, for instance, repetition is not the rule.

"Commissioner WEINSTOCK. How many changes in prices are there in the clothing industry in New York?

"Mr. THOMPSON. One firm had 6,800 different styles in a year. That would make 6,800 different prices in a year.

"Commissioner WEINSTOCK. That was in one firm?

"Mr. THOMPSON. Yes; and there are 1,000 firms.

"Commissioner WEINSTOCK. All right. Does the same condition prevail in the woman's garment industry that prevails in the men's clothing industry, of both sides having a voice in fixing the prices?

"Mr. THOMPSON. They do in the clothing industry under the protocol; both sides have a voice. But that is because of the complicated nature of the work. A standard has not been arrived at.

"In the cloak, skirt, and waist industry, also, women's garments—that appears to be the name—they have spent $40,000, both the unions and the firms, in trying to arrive at some standard or yardstick by which to measure the values. That report has just been completed. I doubt very much that it is the final word in that trade, because I know that they have had great difficulty up to very lately in being sure that they are right, but they have at least got an approximation toward some standard which can be worked out.

"Commissioner WEINSTOCK. In both those cases, both sides have an equal voice?

"Mr. THOMPSON. Yes; in that case.

"Commissioner WEINSTOCK. And prices are adjudicated by general action?

"Mr. THOMPSON. By general action.

"Commissioner WEINSTOCK. Do you know of any machine shop where there would be 6,800 changes in a season, Mr. Alifas?

"Mr. THOMPSON. I was speaking of a year.

"Commissioner WEINSTOCK. That was in one firm, there were 6,800 variations?

"Mr. THOMPSON. Yes.

"Commissioner WEINSTOCK. How many firms are there?

"Mr. THOMPSON. There are 1,000 firms.

"Commissioner WEINSTOCK. Is that the average number in one firm?

"Mr. THOMPSON. No, sir.

"Commissioner WEINSTOCK. That is the maximum?

"Mr. THOMPSON. That is the big pumpkin of the show.

"Commissioner WEINSTOCK. Is the machine-shop business more variable than that?

"Mr. ALIFAS. I have not figured out the variations. Among those garments there are several thousand pieces—of those styles—that do not vary among themselves.

"Mr. THOMPSON. The great reason for that is that the women of the land, fortunately or unfortunately, demand something that no other woman has got.

"Commissioner WEINSTOCK. They want exclusiveness?

"Mr. THOMPSON. Yes; that is the great problem.

"Commissioner GARRETSON. They even want that in regard to men; they want a man that nobody else has got.

"Mr. THOMPSON. I am not so sure about that last.

"Commissioner O'CONNELL. The question of a change goes to the extreme of whether a buttonhole is up and down or straight across.

CLOTHING INDUSTRY SOMEWHAT DIFFERENT.

"Mr. ALIFAS. So far as sewing a seam is concerned, there is not very much difference in the thread or in the hardness of the material, so that you can figure out how long it will take to sew a seam of any given length with a certain number of stitches to an inch. Most of that would reduce itself, then, to some such problem as that. In the machine shop you might take a piece like that, that size [indicating], and they might desire to change the diameter and you could not tell how long it would take to run a cut across that, because you do not know how hard it is. If it was very hard, it would take longer.

"Commissioner WEINSTOCK. But somebody has got to determine that, sooner or later?

"Mr. ALIFAS. Our point is that you can determine it after it is done. The workman is a mechanic, and he endeavors to do the best he can with it.

"Commissioner WEINSTOCK. Very well. Let us ignore the method that is pursued in determining the value. The fact is that somebody under the system does determine the value?

"Mr. ALIFAS. Yes.

"Commissioner WEINSTOCK. All right. At that point do you not meet the situation by giving labor an equal voice with the employer when the moment of determination arrives?

"Mr. ALIFAS. Yes.

"Commissioner WEINSTOCK. So that there are doubtless difficulties and problems, just as Mr. Thompson has pointed out there are in the woman's garment industry; but they are being met; they are being solved; but it is a progressive science, and will never be absolutely solved, because conditions are changing all the time.

"Now, if it can be done in an industry so complex, so variable as is the woman's garment industry, it certainly ought to be possible to do it in the machine industry, which, I take it, is far less complex. Therefore, summing up, I gather as the result of my questioning you, that the solution of the problem lies in giving labor a joint voice with the employer in determining values?

"Mr. ALIFAS. All those details can be determined by conference and agreement and arbitration, I think. There are some things we would not submit to arbitration, however.

"Commissioner WEINSTOCK. Those are outside of this particular question. That makes it clear to me, Mr. Alifas, that labor, being given a voice with the employer, under those conditions, anything that will develop the worker—and he will not permit himself to be developed unfairly, he will not permit himself to be exploited——

"Mr. ALIFAS. No.

"Commissioner WEINSTOCK (continuing). Anything under those conditions that develops the worker, increases efficiency, and increases his earning power is a very great blessing to the worker, to his employer, and to society?

"Mr. ALIFAS. Yes.

"Commissioner WEINSTOCK. I am through.

"Mr. ALIFAS. I can say in that connection that there are certain things we would not arbitrate, because even if they were arbitrated and were settled by conference with the employer, at the moment they got them established and he could get along very nicely without us, he could terminate the collective bargaining arrangement.

"We could not get away from it; that is, he would have his plans all laid, and he would perhaps engage in collective bargaining while he was establishing these relations, but when he got his plans worked out he could get along without it; and there are matters, such as the time study, which we think is one of them, and the premium system is another, which we feel that we could not afford to allow to be introduced under any conditions if we could prevent it.

"Commissioner WEINSTOCK. Then, taking the Watertown situation as an illustration, I am, then, to understand this to be your attitude: You ask that labor be given an equal voice with capital in fixing the rates?

"Mr. ALIFAS. In fixing the amount that is a proper day's work?

"Commissioner WEINSTOCK. Yes. In other words, I gather now, from what you have said in the last few minutes, that you do not want to consider the Taylor system or the systems that correspond with the Taylor system under any circumstances; and yet you ask the Government to give you a voice in wage fixing. What do you propose to concede to the Government in consideration of their giving you a voice in the fixing of wages? You have no right to come into court and ask everything and

give nothing. What do you propose to give in exchange for that?

"Mr. ALIFAS. If an employee insists upon getting more wages than the employer is willing to give, he goes on a strike or he does other things that are equally bad.

"That is the alternative. If the employer does not see fit to do somewhere near what labor wants, those are the alternatives the employer has to contend with, and in exchange for that on these particular questions he ought to be willing to arbitrate the thing.

"In regard to such things as the premium system, that is a very radical change in the method of paying the machinist compared with what he has been accustomed to doing for a good many years, and he believes that he has discovered in the task system, other than the day system, the stimulus might be too much, and he can not afford to bargain too much in regard to it, any more than a man who is susceptible to alcoholism could afford to compromise on the matter.

"Commissioner WEINSTOCK. What you have stated in the last sentence has put me up in the air as to where we are at. I understood this: That the objection you had to the so-called Taylor system was the fact that it was arbitrary, that labor had no voice in determining the conditions or bonus or premium or whatever it was, and that if the same conditions could be established that prevailed in the clothing industry there would be no objections to it. Then you turn around and say, 'I would not have it under any circumstances.' I can not reconcile it.

"Mr. ALIFAS. On that particular thing I believe you are assuming that we had ideal conditions, and on that basis could afford to compromise, but, now, here is some one thing that the laboring people do not want to do, and if they do not want to do a certain thing the people of the United States have a right to say that they do not want to do it, even if some people could prove to them that they would be financially ahead by it. In regard to such a matter, how can you compromise on a matter that you do not want to do at all? There is no halfway measure between a daywork system and the premium system. We do not want to operate on a basis of pay that is variable—like the premium system—because we think that the daywork furnishes stimulus enough. If we do not want any more stimulus than that, how are we going to compromise on it?

"Commissioner WEINSTOCK. We are told by representatives on the other side that there are tens of thousands of workingmen in the United States, union and nonunion, who are working under this system and who do not have to do it if they do not want to. They can quit, and the proof that they are willing to do it is that they do not quit—the fact that they do it.

"Mr. ALIFAS. The fact that they continue to do it is evidence that they do want to do it?

"Commissioner WEINSTOCK. Surely.

LABOR IS NOT VOLUNTARY, BUT COMPULSORY, BECAUSE ALL SELF-RESPECTING MEN MUST LABOR IN ORDER TO LIVE.

"Mr. ALIFAS. At the Watertown Arsenal they are working on the premium system, and a very large percentage of them are utterly opposed to it.

"Commissioner WEINSTOCK. That is a mere matter of opinion; that is not a fact. It is demonstrated, because on the opposite side it is said that they are satisfied.

"Mr. ALIFAS. Who says they are satisfied?

"Commissioner WEINSTOCK. Gen. Crozier, who was here, made that statement, that he has had no complaint.

"Mr. ALIFAS. Suppose I was working at the arsenal and Gen. Crozier said that I was satisfied and I said I was not; who would you believe?

"Commissioner WEINSTOCK. If you were working there, I would take your word, of course.

"Mr. ALIFAS. The employees down there are the ones that I have been talking to on this proposition, and I have understood from the employees who have gathered the information, and also judging by the large petition that was sent to Gen. Crozier, that they do not want the system, and they had a petition signed by 300 people that was sent to the Chief of Ordnance last September, asking him to abolish the system; they didn't want it. That, to me, is evidence that they do not want it, no matter what anybody else might say; somebody else is not authorized to speak for them; they can speak for themselves.

"Commissioner WEINSTOCK. It is very evident, then, that there is a very pronounced conflict of opinion.

"Mr. ALIFAS. I have asked at least half of the machinists collectively at the Watertown Arsenal, just offhand at a meeting at which I endeavored to get at their true sentiment on this—if they would rather give up the premium system as it existed there and not get the premium and to go back to daywork; and they said they would.

"Commissioner WEINSTOCK. How many have you asked?

"Mr. ALIFAS. At that particular time I asked about 75.

"Commissioner WEINSTOCK. How many are employed there?

"Mr. ALIFAS. Well, there might not have been over 60 at that meeting.

"Commissioner WEINSTOCK. How many are employed there?

"Mr. ALIFAS. There are, I think, about 130 machinists.

"A VOICE. I would like to make a statement as an employee of the Watertown Arsenal.

"The ACTING CHAIRMAN (Commissioner Delano). I do not think we can have that. We will call you at some other time.

"Mr. ALIFAS. I will say offhand 130 machinists.

"Commissioner WEINSTOCK. And you say there were 60 present at the meeting?

"Mr. ALIFAS. Yes.

"Commissioner WEINSTOCK. Was their opinion unanimous?

"Mr. ALIFAS. Yes; there was not a single man that would not rather give up the premium and go back to daywork.

"Commissioner O'CONNELL. You were at the Watertown Arsenal just recently, during the investigation?

"Mr. ALIFAS. Yes.

"Commissioner O'CONNELL. How recently?

"Mr. ALIFAS. Last week.

"Commissioner O'CONNELL. This talk you had with the men was as recent as last week?

"Mr. ALIFAS. Yes. May I say another thing in regard to this yardstick that you spoke of some time ago? The idea, as I understood it, was that the customer had a right to demand that the persons he bought cloth of should use the yardstick to measure it off.

"Commissioner WEINSTOCK. And not use his eye.

"Mr. ALIFAS. And not use his eye. I do not think that illustration is exactly applicable to this question of time study. This system would put the rights of the employer in this way, that the customer, who is the employer, buying the labor from the laboring man, has a right to go to the laboring man and say, 'Now, you propose to sell me 6 cents worth of cloth; now, I am going to investigate your books and see how much cloth you can sell for 6 cents, and then I will say that that is the amount I want.' That is a little bit different than a customer asking his purchase to be measured. The employer under these systems proposes to see how much the employee is able to sell him, how much he is able to do. Now, we are not asking the employer to open up his books and tell us how much he is able to pay, and then proceed to make him pay that; and we do not want him to try to find out the very maximum that we are able to do, and then try to make us do it; it is a fair bargain to say, 'Such an amount of work for a day's work is all we want to do, and if you are satisfied to accept that as a day's work for so much it is a bargain.' A man should not have to work at his top speed if he does not want to. If he wants to take life a little bit easier and make a little less money, that is his business.

"The ACTING CHAIRMAN (Commissioner Delano). I think that is all, Mr. Alifas. We are much obliged to you."

ALLEGED HOSTILITY OF ARSENAL WORKERS TO ANTITAYLOR SYSTEM AMENDMENT IS WORTHY OF CLOSE EXAMINATION.

I next insert a letter, under date of February 27, 1915, which points out the questionable nature of the opposition to the clauses prohibiting time study and the premium and bonus system.

INTERNATIONAL ASSOCIATION OF MACHINISTS,
Washington, D. C., February 27, 1915.

Hon. CLYDE H. TAVENNER,
House of Representatives, Washington, D. C.

DEAR SIR: 1. The letter read by Senator WEEKS, which appears in the CONGRESSIONAL RECORD of February 23, 1915, was written by Mr. Minor Chipman, an efficiency engineer, and does not represent the views of the employees whom he claims to represent. He secured the right to represent them with the understanding that he would help them throw out the Taylor system and support the Deitrick bill or like measures.

2. The letter read by Senator LODGE, found in the CONGRESSIONAL RECORD of February 23, 1915, represents the views of the employees of the Watertown Arsenal. It was signed by the same committee that authorized Mr. Chipman to assist in fighting the Taylor system.

3. Senator PENROSE has received a large petition from employees of the Frankford Arsenal favoring the clause in the naval bill which is identical with the clause in the Army bill. The petition had 350 signatures. The Deitrick amendment was also indorsed at a mass meeting of Frankford Arsenal employees on February 15, 1915. This action was taken after the petition was sent to the Senate from certain employees in opposition to the clause prohibiting the time study and premium system in the Government service. This latter petition was secured by the officers and foremen and was not voluntarily signed.

4. The letter presented by a committee of three girls and two men employees at the Frankford Arsenal, which is found in the CONGRES-

SIONAL RECORD of February 22, 1915, and read by Senator OLIVER against the clause in the Army bill is so grammatical and well written that it suggests the likelihood that it was written by the management. It contains more inside information than most employees are in possession of.

Respectfully,

N. P. ALIFAS,
President District No. 44, I. A. of M.

MR. CHIPMAN NOT AUTHORIZED TO REPRESENT ARSENAL EMPLOYEES AS BEING IN FAVOR OF TAYLOR SYSTEM.

To further bear out the contention of Mr. Alifas that Mr. Minor Chipman had no authority to represent the Watertown Arsenal employees as being opposed to the pending legislation, I insert a letter signed by the chairman of the general committee representing the Watertown Arsenal employees, which is intended to show that Mr. Chipman should pursue such a course as was decided upon by the representatives of labor. This understanding was reached and agreed to by Mr. Chipman at a meeting preceding the mass meeting referred to in the letter which follows. There were present at this meeting with the general committee Mr. W. O. Thompson, counsel for the Industrial Commission; Mr. John R. O'Leary, Mr. Minor Chipman, Mr. N. P. Alifas, and others.

23 CHARLES STREET, AUBURNDALE, MASS.,
November 30, 1914.

Mr. N. P. ALIFAS,
President District 44, I. A. of M.,
Naval Lodge Building, Washington, D. C.

DEAR SIR: Mass meeting assembled at Malta Building, Cambridge, Mass., Saturday evening, November 28, 1914, Mr. M. W. Bowen presiding, Mr. Minor Chipman principal speaker of the evening, with others.

Motion made by Mr. Howeitt, of machinists' union, and seconded, that Mr. Chipman appear as counsel for Watertown Arsenal employees at Washington, as amended by Mr. Cooney, of molders' union, that the national and other representatives of the different trades unions work in conjunction with Mr. Chipman and pursue whatever course as may be desired by said representatives pertaining to the Deitrick bill and other congressional legislation.

I may say that Mr. Chipman will be in Washington December 7 and 8.

Respectfully, yours,

MAURICE W. BOWEN,
Chairman of Representative Committee.

NOTE.—After reading these remarks, kindly pass them on to some friend whom you think would be likely to find interest in them.

Civil-Service Employees and Civil Service.

EXTENSION OF REMARKS
OF
HON. JAMES A. HAMILL,
OF NEW JERSEY,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. HAMILL. Mr. Speaker, I desire to have printed in the RECORD the following statement regarding the civil service and civil-service employees. I am satisfied that a consideration of these facts will convince any reasonable-minded person of the justice of my bill entitled "A bill to provide for the retirement of employees in the civil service."

The statement is as follows:

A large number of people throughout the United States have an erroneous conception of the Government employee in general and the civil service in particular. Many believe that a Government employee has a sinecure with little, if any, work, and a handsome salary. A smaller number of our people, either through ignorance or prejudice, display evidences of antagonism or, to say the least, ill will or unfriendly feeling. The flickering spoils system, a relic of early mismanagement in Government affairs, is largely responsible for this animus on the part of a few who would set promiscuous job giving as a reward for more or less clean political activity above efficient, high standard service.

There are very few drones in the large family of Government employees, and wherever found they should be speedily eliminated. An overwhelming majority are alert, intelligent, hard-working people, with an education above the average, possessing an esprit de corps that urges them to perform their duties well and expeditiously, and that gives to them a demeanor and character that ranks them with the genteel and patriotic element. It is a fact that in all communities where their duties have stationed them they hold their place among their peers, and are examples of integrity and of mental and moral accomplishment.

Never before in the history of our country has the complicated machinery of the Government been excelled or equaled. Each employee is a cog in one of the thousands of wheels that revolve, and there must not be a slip.

Starting with the President and has Cabinet, each member of which is a chief engineer in his special department, the Government machinery reaches out into every State and Territory, every city and hamlet, and everywhere stand loyal servants, trusted Government employees, watchful for the interests of the country, bending every energy in the faithful performance of their duties; and these are just as truly patriotic as the bravest of soldiers, though their branch of the public service may not have in it the martial glory that is found in the military branch. But in the civil service discipline is enforced just as vigorously as in the military; rules and regulations must be strictly lived up to—efficiency, honesty, industry, are the watchwords.

So far as salary is concerned, the remuneration awarded to the Government employee in the civil-service branch is practically the same as that which prevailed many years ago. The salary list of this branch of the Government service has not been revised in 40 years, although the cost of living has increased, speaking very conservatively, at least 40 per cent.

The rules that govern in this branch are intended to safeguard and protect the respective departments. Each employee must qualify from a physical, mental, and moral standpoint; he must demonstrate that his education is fully commensurate with the employment he is seeking to obtain; and in addition to a thorough examination there must be produced a record of character reaching back for 10 to 20 years.

Retirement legislation that would compare favorably with that governing the Army and Navy is needed for the civil branch, especially in view of the fact that officers and privates in the military branch are housed, fed, clothed, given free medical and hospital care, and at retirement are pensioned so that they may, in their old age and enfeebled condition, still live in a manner befitting their education. And in the making of such needed legislation due consideration should be given to the generous treatment heretofore accorded by our Government to half-civilized peoples on foreign shores the munificence shown in bettering the conditions of the oppressed; the freeing from persecution of the Filipino and the Cuban; the expenditure of enormous sums of money in bringing about sanitary conditions where disease and corruption had for ages its stronghold, purifying the atmosphere in the very haunts of pestilence, reeking in filth and venom. Such accomplishments by our Government were performed with no thought of territorial aggrandizement or gain, but simply for the good that would accrue to millions of unfortunate human beings, performed modestly and without glamor or glitter, and these efforts crowned by providing means for educating the former victims of such untoward conditions in hygiene, civilization, mental and moral development, where all was darkness before. Is it any wonder that the entire civilized world marvels at these stupendous achievements? The United States has demonstrated that the flag stands for all that is good, no matter what the expense. The poor, the lowly, the unfortunate, the oppressed, it matters not in what clime their lot may be, look with longing and hope to the Stars and Stripes, our flag, the greatest emblem to-day of peace on earth and good will to men, a thing of beauty dedicated to God for His service.

Thus it is that our great men who are at the helm of the ship of state are naturally coming to seriously consider a bettering of the conditions of the masses at home; and it is small wonder that, in keeping with this unbounded philanthropy our country has practiced, our lawmakers are awake to conditions in our own home Government machinery, and that they are preparing to enact in a consistent and expeditious manner some legislation that will give hope and succor to many who have grown old and feeble in the faithful discharge of their duties to the Government, and who, on account of the excessive increase of cost in living in the last 20 years, many of them raising large families, have not been able to set aside anything for old age because their remuneration has not ben advanced in proportion to that increased cost of living.

European Governments have long ago enacted retirement measures, and in these countries the young man whose ambition is to become a Government employee can attend preparatory schools that fit him for the service, and he knows that when he has grown old in the service or when he has reached the age limit or perhaps before his vitality has been impaired he may retire, still in comparative vigor, able to devote himself to literature or the arts or to some pursuit which appeals to his inclinations, and may be still useful to the world, provided, of course, that he has complied with the time limit governing retirement.

And so we say, God speed the movement, and may it be granted to the aged and tired American Government employee to see the dawning of his deliverance from anxiety about existence in his old age. He can thus, without fear or worry, make room for younger material to fill the ranks, and with such young and vigorous manhood the service shall be made more expeditious and effective. With honest, unprejudiced feeling, let all say, God speed this beneficent legislation.

SUPERANNUATION.

Undoubtedly no question dealing with the personnel of the civil service has been so seriously considered as that relating to superannuation. The problem was encountered and dealt with in the Army and Navy over 50 years ago. It is now critically present and awaiting solution in the civil department of the Government. Superannuation is an unavoidable contingency which must be met by application of modern ideas and strictly business principles. The periodic and automatic elimination of those impaired by age or infirmity and the introduction of the younger and more vigorous, to the end that the Government may realize the maximum of public service at the minimum of cost, demand alike the interests of the employees and the Government in seeking remedial legislation.

HAMILL BILL.

Our association unanimously indorsed the provisions of H. R. 5139, introduced on May 15, 1913, by Representative JAMES A. HAMILL, of New Jersey. Briefly stated, the Hamill bill provides that the Government shall retire its superannuated employees at the cost of the Government.

EFFICIENCY.

The possible extent of the efficiency that is attainable by any of the departments is rigidly restricted by the lack of a retirement system. Unless some provision be made for the retirement of superannuated civil employees, the Government can never hope to secure the most efficient and satisfactory service. A large percentage, by reason of the provision for old age, would remain in and make the service their career, becoming expert in their particular line of work, to the distinct advantage of the Government. It would result in the infusion of new blood into the service and would stimulate the younger clerks now in the service to even more faithful and more energetic endeavor. It would be an inducement for them not only to remain in the service, but to deport themselves in such a manner as to do nothing to forfeit so valuable a provision. Until this is done department officials will, in most cases, continue to bear the burden of an inefficient force rather than place themselves on record as removing or reducing a public servant who has become incapacitated while in the faithful performance of duty.

ECONOMY.

There is abundant proof that the Government, in effect, though indirectly, has for many years throughout its service maintained a pension system without retirement, and if it should establish a pension system with retirement there is good reason to believe that in the long run it

would not only suffer no pecuniary loss, but, on the contrary, would reap a substantial gain in the increased efficiency and improved morale of the service. It would likely result in a positive financial saving by creating opportunity for the employment of younger persons, who are able to do two or three times as much work for the salaries paid. While humanitarian reasons may have suggested the advisability, and in fact the duty, of providing a system of retirement, it is now being recognized quite generally that the conditions are such as to more than justify it from a strictly economical point of view. Not only Governments, but an ever-increasing number of private corporations, have provided a retirement system for their employees. This has been instituted as a reward for long and faithful service and has proven a splendid investment, and has brought adequate return in the shape of greater efficiency. Indeed, the adoption of a provision retiring employees of the civil service has become so usual, so a matter of course, that America is the only important civilized Government which does not recognize this as a national duty, both to the employee and to the Government and people.

HUMANITARIAN.

Noble and humanitarian in character, the weapons of a just cause. Nothing paternal, just as has been written by a famous author, "That the race of mankind would perish did they cease to aid each other." In taking such action we should only be following the world-wide tread of national Governments and large business interests, whether we find warrant for such action in humanitarian principles or consideration of a sound business policy, or both combined. Very few of the employees are able to accumulate much, if anything. Others are obliged to support large families and can not save any money. It is those who can not retire and live upon their savings, for savings they have none. When old-age disability does come to them they must either be carried as a burden on the Government pay rolls or thrown out in the world with no suitable provision for their last days. A law that will permit them to live their declining years in peace and contentment, without fear of being thrown on the charity of the world, would, indeed, be founded upon the basis of common humanity. In passing, we have fresh upon our memories a few cases worthy of mention. Frank E. Kimbal was in the service as a letter carrier for 37 years. "He was advanced in age, but did his best. It was pitiable, indeed, at times to watch him trying to keep up his end with a forced smile that deceived no one. He continued work, however, up to almost the last minute of his life, and practically died in harness." Daniel Fitzgerald, clerk and carrier for 25 years, became afflicted with epilepsy, was finally discharged and forced to seek his living as best he could. He is still living in Denver. There have been others, and there are more to follow in their wake.

NONCONTRIBUTORY.

The purely monetary rewards and opportunities of the Government service never will be so great as those offered in the business and professional world elsewhere, and if the Government service is to be maintained upon a high and increasing level of proficiency it must meet the compensations from other quarters by some compensating features that will attract the best talent to its service and retain it. As bearing directly upon the question whether the employees should provide the means for their retirement, the following statement is quoted from the report of a bureau officer:

"I strongly advocate a plan for the compulsory retirement of employees when they have reached a certain age (to be determined by proper authority), or when, because of physical or mental disability, they become unfit for service before attaining the age limit. Coincident with retirement for superannuation there should be provided a pension representing an adequate percentage of the salary of employees at the time of retirement. This pension should be given outright by the Government without an assessment levied against the salary of active employees. Owing to small salaries paid in civil service, the exaction of even a small percentage of the income for a pension fund would work hardship in many cases."

NONPARTISAN.

Congressman HAMILL, author of the Hamill bill, has been quoted as follows:

"As a Democrat I am bound by the traditions of my party to uphold genuine civil service. Grover Cleveland was the great apostle of civil service and I will oppose any attempt to dig at the walls of such a system or to make a breach in it or to weaken it. Not long ago I opposed a proposition to remove fourth-class postmasters from the protection of the civil service, even though a Republican President had covered them under civil service by an Executive order. This is not a question of partisanship but of American patriotism, and in such a case my partisanship will never interfere with my plain duty as an American representative. The great present problem that confronts us is that of granting a pension to our civil-service employees. The future of the Government, as far as the efficiency of our departments is concerned, rests solely on this question."

Cabinet officers in the past have recommended that remedial legislation be enacted to relieve the departments of superannuated employees. Some of the leaders of both houses of Congress, and no less a person that ex-President Taft, also President Wilson, have expressed themselves as being in favor of some system of retirement which would solve the question of superannuation in the civil service of the Government.

Every consideration of humanity, economy, and efficiency that is conceivably related to the question calls for the enactment of an equitable retirement system.

HAMILL BILL—TO PROVIDE FOR THE RETIREMENT OF EMPLOYEES IN THE CIVIL SERVICE.

Be it enacted, etc., That beginning with the 1st day of July next following the passage of this act all employees in the classified civil service shall be eligible for retirement as hereinafter provided.

SEC. 2. That any employee in the classified civil service who has served the United States for 30 years or more shall, upon his or her request, be retired from the service on an annuity of 50 per cent of his or her annual salary based upon the average annual salary, pay, or compensation he or she may have received for the 5 years next preceding retirement. Any employee in the classified civil service who has served the United States for a period of from 25 to 30 years shall, upon his or her request, be retired from the service on an annuity of 45 per cent of his or her annual salary based upon the average annual salary, pay, or compensation he or she may have received for the 5 years next preceding retirement. Any employee in the classified civil service who has served the United States for a period of from 20 to 25 years shall, upon his or her request, be retired from the service on an annuity of 40 per cent of his or her annual salary based upon the average annual salary, pay, or compensation he or she may have received for the 5 years next preceding retirement.

SEC. 3. That no employee provided for in this act shall be retained in the service after arriving at the age of 70 years.

SEC. 4. That the payments provided for in this act shall be paid quarterly throughout the life of the employee.

SEC. 5. That any employee to whom this act applies who has served the United States for not less than 5 years, and who, by reason of accident or illness not due to vicious habits and without fault or delinquency on his or her part, has become disabled, shall be retired from the service on certificate from the head of the department or independent office in which he or she is employed to the Secretary of the Treasury, setting forth such disabilities, and on the approval of the Secretary of the Treasury he or she shall receive an annuity, payable quarterly, of 30 per cent of his or her annual salary, based upon his or her average annual salary, pay, or compensation for the 5 years next preceding his or her retirement, for from 5 to 10 years of service; 40 per cent for from 10 to 20 years of service; 50 per cent for from 21 years and over.

SEC. 6. That for the purposes of this act the period of service shall be computed from original employment, whether as a classified or unclassified employee, and shall include periods of service at different times, and service in one or more departments, branches, or independent offices of the Government, the Signal Corps prior to July 1, 1891, and the general service in or under the War Department prior to May 6, 1896.

SEC. 7. That the Secretary of the Treasury is hereby authorized and directed to pay, out of any moneys in the Treasury not otherwise appropriated, a sum sufficient to carry out the purposes of this act.

SEC. 8. That the Secretary of the Treasury is hereby authorized to perform or cause to be performed any and all acts and to make such rules and regulations as may be necessary and proper for the purpose of carrying the provisions of this act into full force and effect.

Immigration.

SPEECH

OF

HON. GEORGE M. YOUNG,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 4, 1915.

The House had under consideration the veto message of the President on the act (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States.

Mr. YOUNG of North Dakota. Mr. Speaker, it has frequently been claimed of late that there will be a very large immigration following the close of the European war. Is there anything substantial upon which to base such a prediction? Soldiers are being killed so rapidly, many with American bullets, it would seem that men will be in great demand in Europe to rebuild railroads, restore wrecked buildings, and reclaim abandoned farms. The god of war will take a heavy toll in human lives. The mailed fist of militarism will sweep away the savings of the survivors, and the fight for bare existence will make impossible the accumulation of sufficient savings to cover the cost of passage across the seas.

In the five minutes so courteously yielded to me by the gentleman from Massachusetts [Mr. GARDNER] I desire to call the attention of the membership of this House to a large number of letters and petitions received from my constituents upon the subject of an embargo upon the exportation of arms and munitions of war. More than 1,500 citizens of my district have signed petitions urging that this Congress adopt joint resolution No. 377, to prohibit the exportation of munitions of war. These petitioners are dreadfully in earnest. They all feel that our Government should prevent its citizens from sending bombs, guns, and bullets to be used in killing their kinsmen across the sea. Many of these loyal citizens of our country who have signed these petitions have brothers and cousins whose lives are being sacrificed by the products of American gun factories. Imagine, if you can, the distress of mind and heart of these good citizens of our country when they read such dispatches as this. Here, in the Washington Post, is a dispatch, with large headlines, reading:

BIG ORDER FOR SHELLS—BRITISH AND FRENCH BUY MILLIONS FROM BETHLEHEM PLANT—SHRAPNEL IS SENT TO CANADA.

BETHLEHEM, PA., *January 30.*

Orders given by the British Government to the Bethlehem Steel Co. are said to require the manufacture of millions of shells. Hundreds of thousands have already been made. The shells are of various sizes, the smallest 3 inches.

All the shrapnel is loaded with leaden bullets half an inch in diameter.

Notice the death-dealing character of these terrible explosives.

The shell is supposed to explode over the enemy, the leaden bullets raining down on him.

And observe the secrecy. If it is a legitimate industry why shroud it with mystery?

The shrapnel is shipped to Canada. Company's officials refuse to say where it is shipped from the Dominion. The fact that the calibers are of various sizes leads to the belief that some of it goes to the French as well as to the British. That which is sent to Vancouver undoubtedly goes to the Russian Army.

Millions of the bullets are made every day at this one plant. I do not know how many other concerns are engaged in this shameful business which, while legal, should be condemned from every standpoint of ethics and humanity. The newspaper dispatch continues:

The company has invented and perfected its own machinery for the production of bullets. It resembles machinery that cuts nails. An eccentric operates a cutter, through which pass leaden bands, which comes in enormous rolls. Millions of the bullets are made daily.

Some estimate of the enormous quantities of bullets required can be made from the fact that a 3-inch shell contains 240 of them, and a 5-inch shell about 500.

Big guns are also being sold.

The company has all but completed its first order for fieldpieces. The lot consists of 220 18-pounders. These guns are about 7 feet in length.

And the business is evidently profitable. Here is another dispatch under date of February 4, with headlines:

BETHLEHEM STEEL UP—GAINS NEARLY 3 POINTS.

* * * * * * *

Rumor attributed the selling of Canadian Pacific and some other favorites to the foreign account, but international brokers reported little liquidation for Europe. United States Steel and the coppers were sympathetically affected, the one notable exception being Bethlehem Steel, which was the most active feature of the morning session, with a rise of almost 3 points, which it maintained despite another authoritative denial of the rumor that the stock is soon to be placed on a dividend basis.

Mr. Speaker, if Congress fails to take action upon this most important matter, I hope the administration will at least not approve of the making of any more loans by New York bankers to foreign countries with which to finance the sales of war materials, and that in the future such loans, to facilitate and increase such sales, will be discouraged. It is well known that such loans to foreign countries are never made without the consent of the Department of State.

I realize the heavy responsibility of the President and Secretary of State and their difficulties in dealing with a most serious situation, and I speak not in a spirit of criticism, but in order that the views of the great number of constituents who have written to and petitioned me may be reflected and brought to the attention of those who have the responsibility of action.

In addition to the largely signed petitions which have been referred to, I have received from my district over 500 personal letters, begging, yes, imploring Congress to save their kinsmen from being killed by cannon, bombs, rifles, and ammunition of American manufacture. The enlightened public opinion of a nation sooner or later is written into its statute law. The public opinion of the civilized nations sooner or later becomes international law. It is the belief of an ever increasing number of thoughtful men throughout the Nation that the sale of munitions of war to belligerent nations can not be defended upon ethical grounds, and that our Nation should now take a stand which will help bring about and eventually become the recognized law of nations.

The Late Representative Bremner.

MEMORIAL ADDRESS

OF

HON. JAMES A. HAMILL,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, January 24, 1915.

The House had under consideration House resolution 711, as follows:

"*Resolved*, That the business of the House be now suspended that opportunity may be given for tributes to the memory of Hon. ROBERT G. BREMNER, late a Member of this House from the State of New Jersey.

"*Resolved*, That as a particular mark of respect to the memory of the deceased and in recognition of his distinguished public career the House, at the conclusion of these exercises, shall stand adjourned.

"*Resolved*, That the Clerk communicate these resolutions to the Senate.

"*Resolved*, That the Clerk send a copy of these resolutions to the family of the deceased."

Mr. HAMILL. Mr. Speaker, we have come here to-day in compliance with a commendable and well-observed rule of this House to remember our departed colleague, ROBERT GUNN BREMNER. Amidst the many cares and duties of our busy daily life we have paused for a while to hold these few simple ceremonies in order that the motto, "Gone, but not forgotten," may not be a mere empty form of words, but that it may possess a living, definite, and emphatic meaning.

Our absent colleague has gone away never again to return. He has left us in the heyday of his young manhood and before his ambitions were realized or his hopes were fulfilled. He has gone into the silent land. He has succumbed to the onslaught of death, the conqueror.

How resistless is the mighty and destroying angel, death. What mortal power for a moment can impede his approach? Who can defy his dread summons to join the countless host whose home lies beyond the portals of the grave? Can power, however extensive; can wealth, however boundless, or learning, however marvelous, ward off or withstand him? No! The king, whose mere nod commands obeisance from millions of subjects, will in turn one day yield obeisance to a monarch more absolute; the conqueror, whose might is invincible, will eventually perish at the approach of a conqueror unseen; the opulent one, whose uncounted wealth can purchase every pleasure in life, can not with all his treasures buy immunity from death. And science, with all its wonderful discoveries and developments, can compound no elixir that will prolong human existence a moment beyond its allotted span. Every hour of bounding life urges us on to death, and the whole world without exception sweeps on to its gigantic burial—

The boast of heraldry, the pomp of pow'r,
And all that beauty, all that wealth e'er gave,
Await alike the inevitable hour.
The paths of glory lead but to the grave.

Death is indeed inevitably certain in its occurrence, but the time when it will arrive is uncertain and unheralded. We can tell in advance the regular revolution of the seasons or the alternate coming of night and day; we can determine the time when trees and grasses will grow and wither, when roses will bloom and fade, but human eye can not pierce nor can human reason remove the veil that shrouds and conceals the coming of death:

Leaves have their time to fade,
And flowers to wither at the north wind's breath,
But thou hast all seasons for thine own, O Death.

These thoughts teem upon our minds during this quiet and suggestive hour as we commemorate him who in life was numbered among us.

We tender our deepest condolences to his stricken family and linger a few moments to reflect upon his busy and useful life.

ROBERT GUNN BREMNER was born on December 17, 1873, in the little village of Keiss, in Caithness, the most northern county of Scotland. His father was a seaman and ship carpenter by trade. The small peaceful village, however, afforded few opportunities for prosperity, and to advance the fortunes of the family the father sailed for America and finally settled on a farm in Canada. Life on the farm was hard and Robert early became inured to hard labor, but it was possible by dint of unremitting industry to give him the advantages of an education. During his earlier years he attended the local schools. This education was supplemented by a course in the higher educational institutions where he equipped himself to follow the profession of school-teacher. He was always an eager and hungry student. He read every book that was available, and feverishly panted for that broader knowledge which he afterwards possessed in so marked a degree. This passion for books and knowledge never abated.

He abandoned the profession of school-teaching and took up the trade of electrician. In this new field he met with small success. He was not a man to succeed in trade or a mechanical business. He knew nothing about driving sharp bargains, or if he did he never put it into practice, and as a result he soon abandoned this avocation.

Finally he drifted into journalism and it was in this profession that he achieved distinction and success. He served as a representative of different papers in the city of Paterson, N. J., and in 1902 took charge of the Passaic Herald. His reputation as a journalist is identified with the growth and prosperity of that newspaper, in the upbuilding of which he took such a conspicuous part. He made it one of the ablest papers in the State. He had a hard struggle at first, but by pluck, energy, and determination made his newspaper adventure a splendid success.

We who were admitted to his warm friendship knew him as a most lovable man, and all who came within the scope of his influence entertained for him the deepest affection. His face was itself a fair type of his nature which was essentially of the sunshine character. All of us admired his brilliant intellect and all of us knew his warm unselfish heart. He held high place in public esteem and in the affection of his legion of friends. Had his life been spared he would undoubtedly have taken a commanding position in the deliberations of this House.

It is unnecessary for me to recount the heroic struggle which he made against the remorseless disease which eventually consumed his life. The country watched his brave fight with eager interest and felt a severe pang when his eyelids closed in death. His struggle to regain health ceased only when he lapsed into unconsciousness from which he passed into death. As he himself

expressed it in memorable words, "The question is not whether I am going to get well, but rather if I am going to live up to ideals for dying gamely, which are just as helpful to the race as living bravely."

He of all men made unselfishness the rule of his daily life, and there has never been a more self-sacrificing character or a more self-abnegating spirit or one who had more watchful regard for the comfort and interest of others than ROBERT GUNN BREMNER. He remained throughout all his life a brave, honorable, Christian gentleman, a loyal friend, and a lover of his fellow men.

On that dark February 5, 1914, when the soul of ROBERT BREMNER fled from the busy scenes of earth to seek its Maker and its God, the curtain fell on a human life brimful of the most inspiring instances of noble and unselfish effort, a life which will always continue to exert a deep and inspiring impression.

All must to their cold graves;
But the actions of the just
Smell sweet and blossom in the dust.

How the Sugar Trust Robs the Sugar-Beet Farmers.

EXTENSION OF REMARKS

OF

HON. EDWARD KEATING,

OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. KEATING. Mr. Speaker, my distinguished friend from Michigan [Mr. FORDNEY] was in a very bad humor when he addressed the House the other day on his favorite theme—the need of a tariff on sugar. I think it was Henry Grattan who once said, "Some men's talents are so limited that they can not be severe without being unparliamentary." I will not apply the brilliant Irishman's rebuke to the gentleman from Michigan, for I have no desire to drag the discussion of so important a subject to the level of a personal controversy.

I will continue to have regard for the amenities which should prevail between gentlemen, however much the Member from Michigan may depart from accepted standards.

The remarks which aroused the ire of the gentleman from Michigan were delivered by me in the House on February 26. My distinguished friend replied on March 3 at a time when the business of the House was so congested that it was quite impossible for me to secure the floor to make proper rejoinder.

I shall not attempt to review the gentleman's remarks sentence by sentence and paragraph by paragraph, as that would be an unwarranted trespass on the patience of my colleagues; but I will undertake to point out a few of the more glaring inaccuracies in which the gentleman indulged.

Reference to the report of the gentleman's remarks in the RECORD of March 4 will reveal the fact that at the very outset of his speech the following colloquy occurred:

Mr. FORDNEY. The gentleman from Colorado said that four out of seven beet-sugar factories in his State had closed their doors and were not operating at the present time.

The reason given by the gentleman from Colorado [Mr. KEATING] for the closing of the doors of those four factories was that the machinery was antiquated and not up to date, and therefore those factories were at a disadvantage with other factories in his State with more modern machinery and more favorably located for the production and manufacture of sugar.

Mr. KEATING. Mr. Speaker, will the gentleman yield just a moment?

Mr. FORDNEY. Yes, sir.

Mr. KEATING. I am sure the gentleman has no desire to misquote me.

Mr. FORDNEY. Oh, not at all; not under any circumstances.

Mr. KEATING. If the gentleman will refer to my remarks in the RECORD, he will find that I said that the real reason those factories were closed was because the companies which controlled them refused to pay the farmers a sufficient price for their beets.

Mr. FORDNEY. No; I beg to differ with the gentleman. That was not your statement. Your statement was that the trust-controlled factories would not pay the farmers a reasonable price for their beets.

Mr. KEATING. Yes; and I reiterate that.

Mr. FORDNEY. Well, then, let me call your attention to the fact, my friend, that you are in error, because the Sugar Trust has no interest in the four factories in question that closed down, and the only factories operating in your State are the ones in which the Sugar Trust holds stock—the Great Western Sugar Co.

A little farther on in the gentleman's speech the following interruption is recorded:

Mr. KEATING. Does the gentleman contend that those factories, the ones controlled by the Sugar Trust, have dealt more generously with the farmers of Colorado than the others?

Mr. FORDNEY. The others, since 1913, could not deal at all with your farmers, because of your tariff legislation, and have closed their doors. And the only factories dealing with the farmers in your district are the ones in which the Sugar Trust is interested. [Applause.] That is correct, is it not?

Mr. KEATING. No; that is absolutely incorrect. The gentleman is mistaken.

NO FOUNDATION IN FACT.

Now, Mr. Speaker, I want to call your attention to the emphasis which the distinguished gentleman from Michigan lays on the statement that the only sugar factories in my district which are dealing with the farmers are the ones in which the Sugar Trust is interested. That assertion won a good deal of applause on the Republican side of the House, and the gentleman from Michigan seemed to regard it as a "clincher."

But the fact is, Mr. Speaker, that it hasn't the slightest foundation in fact.

As I have stated before, there are seven sugar factories in my district. During the last season three operated at capacity and four remained closed.

Of these seven factories three are owned by the American Beet Sugar Co. They are located at Rocky Ford, Lamar, and Las Animas. The American Beet Sugar Co. operated its Rocky Ford factory, and refused to operate its Las Animas and Lamar factories.

The Holly Sugar Co. owns the factories at Holly and Swink, and during the last season operated the Swink factory and refused to operate the Holly factory.

The National Sugar Manufacturing Co. owns the sugar factory at Sugar City, Colo. This was operated during the last season.

The San Luis Valley Beet Sugar Co. owns the factory at Monte Vista, Colo. This factory did not operate during the last season because, as the company publicly announced, the farmers could not be induced to raise a sufficient acreage of beets.

So far as the ownership of these companies is concerned, Mr. Speaker, I do not believe that anyone, except it be the distinguished gentleman from Michigan, contends that the Sugar Trust owns any stock in any of them.

Later on I will submit a table prepared by the Hardwick committee which reveals the Sugar Trust's holdings in various beet-sugar factories. An examination of this table will show that at one time the trust did have an interest in the American Beet Sugar Co., but that it disposed of its stock some time prior to 1911.

There is nothing in the Hardwick report or in any court record with which I am familiar which shows that the trust had a stock interest at any time in either the Holly Co. or the National Sugar Co.

So you see, Mr. Speaker, when the distinguished gentleman from Michigan asserted "the only factories dealing with the farmers in your district are the ones in which the Sugar Trust is interested," he either did not know what he was talking about or he was attempting to deceive the membership of this House. He is at liberty to take whichever horn of this dilemma appeals to him. I will not make a choice for him.

HOW THE TRUST CONTROLS.

And now, Mr. Speaker, permit me to say a few words concerning the control of the beet-sugar industry by the American Sugar Refining Co., commonly known as the Sugar Trust.

I have repeatedly stated on the floor of this House that the Sugar Trust dominated the beet-sugar industry, and in my feeble way I have endeavored to sustain that statement with what seemed to me most convincing testimony.

When I have said that the Sugar Trust dominated the beet-sugar industry I did not mean that the trust owned a majority of the stock in every beet-sugar company in this country. What I meant, and what has been clearly demonstrated through court proceedings and investigations conducted by committees of this House, was that the Sugar Trust had secured stock control of a sufficient number of beet-sugar companies to enable it to dominate the industry.

Through this control the trust was enabled to fix the price which the farmers received for their beets and to prevent genuine competition in the sale of sugar to consumers.

The gentleman from Michigan [Mr. FORDNEY] would like to have you believe that a "war to the knife" is being waged between the Sugar Trust and the owners of the beet-sugar factories. As I have frequently stated, this is a purely mythical war—a "fake fight," as the sporting editors would phrase it.

There was a time when we had independent beet-sugar factories in this country. That was prior to 1901, when the beet-sugar industry was in its infancy. In those days the Sugar Trust felt that the industry was a mushroom growth and could be easily destroyed.

Havemeyer and his associates soon discovered their error, however, and determined to secure control of the industry and, by controlling it, limit its development and wring from it enormous dividends.

If the gentleman from Michigan, or any other gentleman who is interested, will go to the Department of Justice he will have

placed in his hands several volumes of testimony taken in the case of the United States against the American Sugar Refining Co., and in these volumes he will find the story of how the beet-sugar industry was "sold out" to the Sugar Trust. If any Member wishes to secure the facts in more condensed form, he can secure a copy of the report of the special committee appointed by this House in the Sixty-second Congress, and which was charged with the task of investigating the American Sugar Refining Co. Mr. HARDWICK, of Georgia, was chairman of that committee, and on February 17, 1912, he submitted a report in which he tells briefly and clearly how the trust gobbled up the beet-sugar industry.

HARDWICK'S REPORT.

I quote from Mr. HARDWICK'S report as follows:

In the summer of 1901 the American Sugar Refining Co. and its allies undertook an aggressive campaign against the beet-sugar companies, who were then 31 in number, separate and independent concerns, competitors of each other and of the American and its allies. This war seems to have been hottest in the territory supplied by the Missouri River points. According to one of its participants—Mr. Oxnard—the American lowered the price of sugar to 3½ cents overnight—October 1 or October 2, 1901—at a time when the beet-sugar people had large contracts already made to deliver sugar "at the market."

Finally concluding that beet sugar "had come to stay," the American rapidly and completely reversed its policy. In the fall of 1901, after a preliminary inspection of the field had been made for Mr. Havemeyer by Mr. Willett, of Willett & Gray, Mr. Havemeyer, for the American, dealing with Thomas R. Cutler, who represented the Utah Sugar Co., acquired a one-half interest in the latter concern, which was one of the first established (though under a different corporate name) of the beet-sugar enterprises. One of the American's then officials, Mr. Lowell M. Palmer, says the American dealt first with the Mormons in Utah, because he felt "that the Mormon Church in a measure controlled its people, and that we (the American) would be more liable to get sugar beets." This was the beginning of a comprehensive campaign of beet-sugar acquisitions by the American.

On September 18, 1901, the capital stock of the American Co. was increased from seventy-five to ninety millions of dollars, and this money was used to purchase for the American extensive beet-sugar interests.

The minutes of the directors of that company (p. 43) of December 2, 1902, contain this significant entry:

"On motion, Messrs. Havemeyer, Thomas, Palmer, and Donner were appointed a committee to take charge of the purchase and management of beet-sugar companies."

The minutes of both the board of directors and of the executive committee of the American teem with the record of specific transactions in which the American from month to month and from year to year acquired interest in its beet-sugar competitors.

Finally, by 1909, the American had acquired large interests in 11 of the beet-sugar companies, operating 32 factories, and producing about 64 per cent of the beet sugar of the country, as follows: Four companies, operating 11 factories in Michigan, Iowa, and Ohio, and producing about 50 per cent of the beet sugar of those States; 3 companies, operating 11 factories in the States of Colorado, Montana, and Nebraska, and producing 67 per cent of the beet sugar of those States; 3 companies, which operate 10 factories in the States of Utah, Idaho, and Oregon, and produce all of the beet sugar of those States; 2 companies, operating 3 factories in the State of California, and producing 46 per cent of the beet sugar of that State.

From 1909 to the present time the situation has not been greatly altered, as will be observed from the following tables furnished your committee by the American under date of October 11, 1911:

American Sugar Refining Co.

Names of companies.	Beet-sugar investments.				Book value of present holdings, Oct. 1, 1911, after depreciation for sales and dividends.		
	Par value.	Original cost.	Common shares.	Preferred shares.	Common shares.	Preferred shares.	Total book value.

Lewiston Sugar Co	1,000,000	371,030	do	Lewiston, Utah.
Alameda Sugar Co	745,825	371,250	California	Alameda, Cal.
Spreckels Sugar Co	5,000,000	2,500,000	do	Spreckels, Cal. Watsonville, Cal.

[1] Common. [2] Preferred.

The above table differs in book valuation from the preceding table.

Of these 11 companies, the American owns 41 per cent of the capital stock, according to the following table furnished your committee by the American on June 13, 1911:

The American Sugar Refining Co.'s interests in beet-sugar companies, May 23, 1911.

Names of companies.	Kind of stock.	Par value of shares.	Capital stock.		Per cent owned.	Production, campaign 1910-11.	American Sugar Refining Co.'s interest per stock holdings.
			Total issue.	Owned by American Sugar Refining Co.			
						Pounds.	*Pounds.*
Alameda Sugar Co.	Common	$25.00	$745,825	$371,250	+49	12,482,400	6,116,375
Spreckels Sugar Co.	do	100.00	5,000,000	2,500,000	50	68,452,800	34,226,400
Utah-Idaho Sugar Co.	Preferred	10.00	9,449,090	4,650,500	+49	70,965,800	34,773,242
	Common	10.00	1,470				
Amalgamated Sugar Co.	Preferred	100.00	2,551,400	1,275,700	50	25,801,300	12,900,650
Lewiston Sugar Co.	Common	10.00	606,430	225,000	+37	10,619,300	3,929,141
Great Western Sugar Co., including Billings Sugar Co. and Scottsbluff...	do	100.00	10,544,000	2,735,500	26	191,810,803	63,297,564
	Preferred	100.00	13,630,000	5,159,200	38		
Michigan Sugar Co.	Common	100.00	7,471,107	2,607,400	35	123,130,991	51,715,016
	Preferred	100.00	3,703,500	2,043,800	55		
Iowa Sugar Co.	Common	100.00	550,000	416,500	+75	7,486,330	5,614,747
Carver County Sugar Co.	do	100.00	600,000	483,700	+80	5,003,696	4,002,957
Menominee River Sugar Co.	do	10.00	825,000	300,000	+36	6,135,588	2,208,812
Continental Sugar Co.	do	100.00	1,200,000	415,440	−35	24,160,176	8,456,062
			56,883,617	23,183,990	−41	546,049,181	227,240,967

The production of these 11 beet companies, in which the American is so largely interested, was, according to the above table, 546,049,181 pounds, which, reduced to tons (long), would be 243,750 tons. These figures were for the season of 1910–11, and it appears from the testimony of Mr. Truman Palmer (hearings, p. 2627), secretary of the Beet Sugar Association, that the total production of all the beet-sugar companies of the United States for the season of 1910–11 was 445,000 tons. It will therefore be seen that the beet companies in which the American is so largely interested produced during that season almost 54 per cent of all the beet sugar of the United States.

CONCEALED TRUST AFFILIATIONS.

Up to the time that the report of the Hardwick committee was given to the public, the champions of the sugar interests in and out of Congress indignantly denied that there was any alliance between the Sugar Trust and the beet-sugar industry.

When the Ways and Means Committee of this House was framing the so-called Payne-Aldrich tariff bill in November of 1908 a great number of witnesses appeared on behalf of the beet-sugar interests. My distinguished friend from Michigan [Mr. FORDNEY] was a member of that committee and took a conspicuous part in examining the witnesses and in urging a high protective tariff on sugar. Among the witnesses was Mr. F. R. Hathaway, who said he represented the Michigan Sugar Co., of Detroit, Mich. On page 3307 of the hearings we find that Mr. Hathaway testified as follows:

Mr. UNDERWOOD. What is the name of the company you represent?
Mr. HATHAWAY. The Michigan Sugar Co.
Mr. UNDERWOOD. That has six factories?
Mr. HATHAWAY. Yes.
Mr. UNDERWOOD. Some in Michigan and some in Colorado?
Mr. HATHAWAY. No, sir; all in Michigan.
Mr. UNDERWOOD. Has that company any connection whatever with the American Sugar Refining Co.?
Mr. HATHAWAY. No, sir.
Mr. UNDERWOOD. Is there any agreement between the refining companies—the companies that refine cane sugar and beet-sugar refineries—as to the maintenance of prices?
Mr. HATHAWAY. No, sir.
Mr. UNDERWOOD. It is an open competition and a free market?
Mr. HATHAWAY. Yes, sir.

Now, Mr. Speaker, if you will turn to the table which I have just quoted from the report of the Hardwick committee you will find how much truth there was in Mr. Hathaway's statements. That table shows that the Sugar Trust owned 55 per cent of the preferred stock of the Michigan Sugar Co. and 35 per cent of the common stock. Of course Mr. Hathaway was familar with that fact when he was answering Mr. UNDERWOOD's questions, but he preferred to conceal the truth in order to strengthen his plea for a tariff on sugar.

CRUSHING OUT "INDEPENDENTS."

From time to time since the trust became the dominant figure in the beet-sugar industry attempts have been made to establish genuinely "independent" factories, but the promoters were either destroyed financially or compelled to make terms with the trust. Here again the court records furnish ample evidence of the workings of the trust, and I refer the Members of this House who are interested to the testimony in the case of the United States against the American Sugar Refining Co. and others in the United States District Court for the Southern District of New York. As I said before, this evidence may be secured at the Department of Justice.

So much, Mr. Speaker, for the effort of the gentleman from Michigan to show that only those Colorado beet-sugar companies, which are actually owned by the Sugar Trust, have been able to operate since the Underwood tariff bill went into effect. I must confess that I am a little amazed at the audacity of the gentleman; and yet I presume that when one has a desperate case, one must resort to desperate methods. This is the only theory on which I can explain the gentleman's course, as I take it for granted that he is not entirely ignorant concerning the ownership of the various beet-sugar factories of the country or of the methods of those who operate them.

TREATMENT OF THE FARMER.

And now, Mr. Speaker, I want to get back to the point which I think the gentleman from Michigan is most anxious to avoid—the treatment of the farmer by the beet-sugar factories. During my remarks on February 26 I stated:

The farmers in my district are prepared to supply ample beets for every one of the seven factories in my district, but they insist that they shall share in the benefits which flow from the high price of sugar.

In the "good old days," when the high protectionists had control of Congress and the gentleman from Michigan was writing sugar schedules for tariff bills, we heard a great deal about the benefits which the farmer derived from a tariff on sugar. We were assured that a tariff was desired because it would enable the factory owner to pay the farmer a high price for his beets, and in support of this theory the sugar-beet farmer was brought to Washington, individually and in platoons, and paraded before the members of the Ways and Means Committee.

In this way the sugar-beet farmer was made the principal prop for the sugar tariff.

It must be very disconcerting to the gentleman from Michigan to have this prop abruptly removed and to have the farmer and the American public made acquainted with the plain, naked truth—that the tariff on sugar is imposed for the sole purpose of increasing the profits of the seaboard refiner and his ally, the owner of the beet-sugar factory.

There was a time when the farmer imagined that he did secure some of the benefits from the sugar tariff, but he has had his eyes opened. He knows that the beet-sugar industry is "protected" to a greater extent to-day than ever before in its history. This because the European war has paralyzed the sugar industry in Germany, France, Austria, and Russia. He knows that beet sugar is selling for from 5¾ to 6¼ cents a pound, and he knows that he only receives about 2 cents a pound for the sugar content of his beets. The factory takes the difference between 2 cents and 5¾ cents and 6¼ cents, and the farmer knows that this unreasonable profit has enabled many of the factories during the last year to earn dividends of more than 100 per cent on the capital invested.

Naturally, the farmer does not think this is a square deal, and he has protested. I do not believe it is a square deal, and I have protested. And because I have protested I have drawn down on myself the anger of the distinguished gentleman from Michigan.

THE "FARMER'S FRIEND."

For many years he has posed in this House as the friend of the sugar-beet farmer, but apparently that friendship is not strong enough to induce him to demand a square deal for the farmer. He can become righteously indignant when some one suggests the curtailment of the profits of the manufacturer of sugar, but he seems utterly indifferent to the fate of the producer of sugar beets.

I do not know how the farmers in the gentleman's district may feel about his course.

That the farmers in my district understand the situation is evidenced by the following article from the Bent County Democrat of February 5, 1915:

WANT TO GROW BEETS.

"One Who Wants to Grow Beets" sends in the communication which follows:

A report has been in circulation at Las Animas that the Holly & Swink Sugar Co. are considering paying $6 per ton flat for sugar beets for the coming season. If such is the case, the farmers will surely load the different factories in the valley with all they can handle. The farmer wants to grow beets, or anything else for that matter, that will bring him the most money. Wheat is sure to be profitable for the next year, and farmers around Las Animas are figuring on putting in quite an acreage of spring wheat. They did not expect the war prices of wheat in the fall and did not get in as large a number of acres as they would have put in had they then known what they can see now. But still they would like to grow beets. There is only one reason for the factories in the valley remaining idle and that is that the farmer is not paid enough for beets. Sugar will be high as well as wheat. Although the speculator and middle man in wheat profit most, the farmer will come in for his share of the high price, but this so far is not the case with sugar beets, unless the sugar companies are willing to share with the farmer.

BEET GROWERS' VIEWS.

As a further evidence of the temper of the beet growers in my district, I desire to submit the following article from the Bent County Democrat of Friday, February 12, 1915:

BEET GROWERS' MEETING.

There was a large attendance of growers at the meeting Monday afternoon in commercial club rooms, and the talk by O. H. Baxter, secretary of the Otero County association, on the cost of raising beets and selling the product on the markets was listened to with close attention. He first stated the growers in Otero County, with few exceptions, were standing out for $6 a ton, and if all the growers of the valley were of the same mind and determination they would surely get the price asked. Mr. Baxter said the sugar company gave out the statement they had paid the farmers $1,500,000, harvested 201,600 tons of beets from 17,000 acres, and manufactured 500,000 bags of sugar. If this statement were correct, then they paid $7.44 a ton, but as they paid only about $5.30 a ton the actual amount paid the growers was $1,068,480. The best authority gives the cost of growing and marketing an acre of beets at $70.40. So if we multiply the 17,000 acres by $70.40 we have $1,196,800 as the cost to the farmer to get $1,068,480, which the sugar company paid him, or an actual loss of $128,320. For the 500,000 bags of sugar the company received $2,625,000, for the pulp $53,428, and for the sirup $110,880, or a total of $2,789,308 the company received from 17,000 acres of beets. To manufacture these acres of beets into sugar cost $604,800. Now, add this sum to the $1,068,480 paid the farmer and we have a total cost of $1,673,280. Subtract this sum from the amount the company received and we have a total profit for the company of $1,116,028.

W. S. Ellenberger, of McClave, was an interested listener, and at its conclusion made the growers a talk that gave them new life and hope. He said this was the time for the farmer to stand firm and strong for his rights and demands; that the war in Europe would keep the price of sugar and wheat up for several years, and now was the time to stand together. He thought the growers should create an executive committee with full power to make contract with the sugar company, and that growers should turn their acreage over to this committee. As it now is the company makes the contract and sets the price and deals individually with hundreds of growers. An executive committee could meet the sugar officials, discuss all questions in a business way, and the results, he thought, would be better for all.

His remarks were received with applause, and immediately the faces of the auditors brightened. Steps were immediately taken, and an active campaign will now be started to pool all unsigned acreage. And one man remarked that next year when this executive committee, with 17,000 acres of beets in their control, asked the sugar company what price per ton they would pay, the growers might rest assured they would receive a satisfactory price.

You will notice, Mr. Speaker, that in both these articles the farmers of my district insist that they are prepared to furnish all the beets that the sugar factories can handle, and that all they ask in return is that the sugar factories give them an opportunity to share the high prices which sugar is now commanding in the markets of the world.

Surely, Mr. Speaker, even the distinguished gentleman from Michigan can not object to so fair a proposition as that.

DOES THE CONSUMER BENEFIT?

In season and out of season the distinguished gentleman from Michigan, and other advocates of the tariff on sugar, insist that the consumer does not receive the benefit from a reduction of the tariff. In the course of my remarks on February 26, I stated that during my campaign in Colorado in the fall of 1912 the retail price of sugar was from 12 to 14 pounds for a dollar, and that after the Underwood bill became a law the same stores sold from 20 to 22 pounds of sugar for a dollar. The gentleman from Michigan flatly contradicts that statement, but as usual, he is wide of the mark and endeavors to befuddle the Members of the House by printing misleading figures.

Wherever I went during the campaign of 1912 I advocated free sugar, and as a rule asked the women in the audience to tell me how many pounds of sugar they received for a dollar. I found that in the large cities the ordinary grocer gave 14 pounds for a dollar, but occasionally big concerns offered as high as 17 pounds as a "leader." In the mountain towns the price was 12 pounds for a dollar. After the Underwood bill went into effect, the grocers in the large cities sold from 20 to 22 pounds for a dollar, and in the mountain towns from 16 to 18 pounds.

By reference to the files of the Rocky Mountain News of Denver, I find that the John Thompson Grocery Co., of Denver, advertised granulated sugar at retail, as follows:

July, 1912, 100 pounds for	$5.70
July, 1913, 100 pounds for	5.10
July, 1914, 100 pounds for	4.55

In two years there was a decrease in the price paid by the actual consumer of $1.15 a hundred. The country had a Republican sugar schedule in July, 1912, and a Democratic sugar schedule in July, 1914.

War was declared in Europe in the latter part of July, 1914; the European sugar industry was paralyzed, and of course prices mounted toward the skies. But so long as normal conditions prevailed, the consumer received the full benefit of the reduction in the tariff.

I will not attempt to make further reply to the gentleman at this time. He will undoubtedly return to the charge in the Sixty-fourth Congress, because the Sugar Trust has no intention of abandoning its fight for a sugar tariff; but I hope when we hear from him again he will be in better humor, and that he will not make the mistake of substituting abuse for argument.

The Late Representative Martin.

MEMORIAL ADDRESS

OF

HON. JAMES A. HAMILL,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, February 14, 1915.

The House had under consideration House resolution 735, as follows:

"*Resolved*, That the business of the House be now suspended that opportunity may be given for tributes to the memory of Hon. LEWIS J. MARTIN, late a Member of this House from the State of New Jersey.

"*Resolved*, That as a particular mark of respect to the memory of the deceased and in recognition of his distinguished public career the House, at the conclusion of these exercises, shall stand adjourned.

"*Resolved*, That the Clerk communicate these resolutions to the Senate.

"*Resolved*, That the Clerk send a copy of these resolutions to the family of the deceased."

Mr. HAMILL. Mr. Speaker, our gathering to-day is overcast with gloom and sadness. We are here to lament the loss of our beloved colleague, LEWIS J. MARTIN, who has passed forever beyond the scene of life's labors and now lies wrapped in that dreamless sleep which knows no earthly waking.

He was in the fullness of energy and usefulness when the compelling finger of death beckoned him to the land which lies beyond the grave.

It is fitting that we, his colleagues, should gather in this hall to pay a fervent tribute to his cherished memory. We realize how unavailingly we sigh for the touch of a vanished hand and the sound of a voice that is still forever, and we seek such poor consolation as we can derive from placing on record the estimate we entertain of his character and services.

LEWIS J. MARTIN belonged to that type which we fondly term "a man of the people." To the American mind this phrase is richly significant. It denotes a self-reliant man of courage, energy, and perseverance who, by native ability and application, has carved his way to high and respected station among his fellow men. In a marked degree these qualities were exemplified in the earnest and industrious life of LEWIS J. MARTIN.

His early education was obtained in the public schools of the village of Deckertown and these studies were supplemented by a course at the Newton Collegiate Institute. On the completion of this latter course he devoted himself to the study of the law, and was admitted to the bar of New Jersey in 1867.

His habits were industrious and his disposition was genial, and as a consequence he rapidly gained the respect and favor of his neighbors. The people of Sussex County evinced their high regard for his ability by repeatedly electing him to important public positions.

Upon the death of his father, in 1869, he was chosen county clerk of Sussex County, and during this period he also held the office of town clerk of Newton. Several years later he was chosen to represent his county in the New Jersey House of Assembly, and this position he occupied for several terms. Afterwards he for many years held the office of judge of the county of Sussex. In 1897 he was elected to the upper house of the New Jersey Legislature as a senator from Sussex County.

There was a mutual confidence and cordiality between him and his constituents, with a great number of whom he enjoyed personal and intimate acquaintance. I enjoyed the privilege of his friendship before he came to Congress and our relations grew warmer and more cordial after he came to this House. I found him always the same generous and kindly hearted gentleman. He had a magnetic openness of manner which easily attracted friends and invited men to salute him in terms of easy familiarity, but in purpose he was sincere and ardent, and as he pursued his path through life he strove always to scatter seeds of kindness, to bring a smile to the face of sorrow, and to create happiness and hope among those where formerly there had been but misery and dejection.

It is to be most deeply regretted that his career in this House terminated almost before it had fairly begun.

On May 5, 1913, while returning to his duties at the Capitol, death came upon him with the swiftness of an eagle's flight and less than its pity. To-day he lies at rest among the people whom he loved and served and who in return were loving and loyal to him. By them his memory will ever be kept green and the recollection of his splendid qualities of mind and heart will ever be enshrined in their memories. And we, his colleagues, even amid the changing conditions of this busy place, will affectionately remember him always.

Our Navy—The Constructive and Progressive Record Made During the First Two Years of the Administration of President Wilson and Secretary Daniels—A Summary of Achievements.

EXTENSION OF REMARKS

OF

HON. JOHN H. SMALL,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 3, 1915.

Mr. SMALL. Mr. Speaker, the record of the Sixty-third Congress has justified the traditional Democratic record of faith in a strong Navy. The Democratic Party has consistently opposed great standing armies and every proposition looking to the substitution of militarism. When the Democratic Party returned to power for the first time after the war, in 1884, the foundation for the new Navy, which has grown to be our national pride, was laid by Hon. William C. Whitney, Secretary of the Navy, and in the second Cleveland administration the same jealous care for the Navy was shown under that other illustrious Secretary of the Navy, Hon. Hilary A. Herbert. Steady progress has been made in increasing the Navy in years that intervened between the last Democratic Secretary and the present incumbent of that great office. But the record of constructive progress made by the Navy since the inauguration of Woodrow Wilson is greater than that made by any previous Congress during the history of the Republic.

Mr. Speaker, it seems fitting at the close of a session of Congress marked by unusual interest in, and discussion of, our means of national defense, in general and naval affairs in particular, that there should be made a fair and dispassionate review of the work accomplished by the Navy Department in the last two years looking toward increased efficiency in the United States Navy. It is right to assume, of course, that all taking part in the numerous hearings, speeches, and criticism on this subject, favorable or unfavorable, calm or heated, hurried or deliberate, have been animated by genuine patriotism and a sincere desire to arrive at the truth, with a view to benefiting this important arm of defense. Patriotism and good intent are not doubted, but it is thought that, after the excitement of controversy, the heat of argument, and the haste of action (the last made necessary by the approaching end of the session), a calm survey of the work accomplished may lead to fairness in judgment and a true knowledge of the condition of the service and its needs.

In furtherance of this thought I feel that I can not do better than to present somewhat categorically the various tasks accomplished since March 4, 1913.

The number of enlisted men actually enrolled, ready for instant service, has been increased by 5,670, making it possible to commission, ready for immediate active service at sea, 12 submarines, 6 light cruisers, 5 destroyers, 5 gunboats, 1 battleship, 1 armored cruiser, and 3 monitors, the last named serving as submarine tenders, increasing the total number of commissioned vessels by 33. These additional numbers have been gained, not by increasing through legislation the total complement of the enlisted personnel, but by filling the complement already allowed.

During the preceding four years the Navy was never recruited to its full strength. Under such conditions it would not have been possible for the fleet to expand and meet the demands for exceptional and protracted service levied against it during the last two years, which have been unusually severe in their demands upon the Navy Department. It had already reached the stage where men and, consequently, ships were unavailable for unusual duty without withdrawing them from their assigned positions with the fleets, and in numerous instances improper organization and the assignment of vessels ill suited to their purposes detracted from the efficiency of the fleet. It was not until the fresh impulse of recruiting had become effective that the Navy could assign a suitable vessel as flagship of the torpedo flotilla, the *Birmingham*, a 25-knot cruiser, being selected for that duty. Previously the old *Dixie*, a vessel converted to the uses of a repair and depot ship, with a speed of 12 knots, was called upon to act as flag and repair ship to 20 or more destroyers, with an average maximum speed of 29 knots, and generally the commander of the flotilla could count upon arriving at his destination from one to three days later, according to the distance, than the swift craft under his command. I cite this instance, Mr. Speaker, as a singular and striking evidence of the handicap under which the Navy labored, due to a shortage of men at a time when, under the laws, it would have been proper to enlist more. Obviously, the right sort of men could not be had under the conditions then prevailing, and it required some sort of encouragement and some additional attraction to convince the young men of our country that the Navy was a career worthy of their devotion. I have already referred to the fact that the enlisted strength of the service has been increased by 5,670 men, and I might add here, in view of what has been said, that there can be no reasonable doubt their enlistment has been due solely to the more certain opportunity they now have for advancement and the encouragement and assistance that are lent them by the Navy to make the most of their chances. Increased enlistments were the immediate result of a statement issued by the Secretary of the Navy in the early months of his term that such would be his policy while in office, and that we have in the service more men who are capable of measuring up to the high standards which the service properly exacts of all who aspire to high rank is illustrated by the ability of five young men to qualify for admission to the Naval Academy, of 12 to pass the grueling tests required of an ensign, and 13 to qualify for commissions in the Pay Corps.

The new policy has succeeded in gaining for the Navy a finer and more ambitious class of recruits, young men of the highest attainments and good character; it has permitted the establishment of a higher standard for admission, excluding as never before the mental, physical, and moral derelict, and it keeps the Navy recruited to the maximum strength permitted by law, so that for the first time in many years a waiting list for applicants has been introduced. It has had the further effect of increasing reenlistments by about 12 per cent, retaining in the service that many more men who have become experienced through four years of training and actual experience and obviated the necessity of training in their stead new and raw recruits. It has effected also, in conjunction with certain changes in the regulations, a most gratifying decrease—17 per cent—in the number of desertions as compared with the records for the two preceding years, and the fault of overstaying leave by enlisted men, formerly such a prevalent offense against discipline, is now practically eliminated. At his hearings before the House Committee on Naval Affairs in January, 1914, the Secretary of the Navy outlined a change in the method of punishment for desertion then in contemplation, which has since been put into effect under General Order No. 110 and certain changes in the Naval Regulations which went into effect at the same time. As a result of these changes, if a man tires of the service, means by which he can obtain his discharge honorably are facilitated; and a large percentage of those men who leave the service without permission and subsequently surrender to naval authority are either placed on probation, where by good conduct they can earn an honorable discharge, or are summarily discharged with a bad-conduct discharge, instead of being imprisoned. This plan was put into operation after correspondence with nearly every admiral and captain in the Navy, most of whom made suggestions as to the best method of ameliorating and improving the conditions attending the punishments of military offenses, and in the short time that the plan has been in operation the number of naval prisoners has

been greatly reduced; in May, 1914, the total number of naval prisoners was 1,835, and the number on December 12, 1914, was 1,076. Since October 1 there have been placed on probation 110 general court-martial prisoners who would otherwise have been sent to a naval prison. Of course the system has not been in operation long enough to say absolutely that it has justified its adoption, but it has already abolished two prisons entirely. In commenting upon the order which went into effect October 1, 1914, the Secretary of the Navy, in the course of his remarks before the Naval Committee of the House, made the following statement:

I did not promulgate the order until it could reach every ship, so that it would go into effect everywhere simutaneously. I believe it is going to work very well. When a man first goes away without leave and comes back, we put him on probation and fine him a certain amount of money, which he works off on half pay. This pay is returned to him if he does well and receives an honorable discharge on the termination of his enlistment. The second time we say, "You get out of the Navy; you can not stay in the Navy; you are not fit for it." In other words, on first offense he receives a punishment which, in case he behaves himself thereafter during his enlistment, amounts to nothing more than a warning. His treatment thereafter is all in his own hands. If he commits a serious military offense, but not one involving moral turpitude nor contempt of authority, he is not imprisoned, but is summarily discharged.

We drew a tentative order and sent it to every captain and admiral, and said, "We are thinking about putting it in operation, and we would like to have your views or any suggestions as to changes." We took a referendum of the commanding officers of the Navy, and I think about 75 per cent of them approved it with various suggestions. We adopted a good many of those suggestions. The Judge Advocate General and the Chief of the Bureau of Navigation, who have chiefly to do with these matters, were very confident of its wisdom, and so far it has worked well. The fear that we had of a large loss of men immediately after it went into operation has not materialized. On the contrary, it is, I think, very popular.

"Desertion" is punished now as heretofore. The difference is that if a man who has been absent over leave, even for prolonged periods, surrenders to the naval authorities, he is given the benefit of the doubt on his first offense and is not tried for desertion, provided there is sufficient time remaining on his current enlistment for him to work through his probationary period. Formerly men who were absent over 10 days, even though they surrendered, were usually tried for desertion, but now we give them the benefit of the doubt.

Our whole disciplinary system is based on the theory of modern penology, namely, to permit a man to earn his rehabilitation by his own efforts. Therefore under our present plan men guilty of the least serious offenses, for which they were formerly imprisoned, are placed on probation, and by future conduct they earn back even the pay which they were sentenced to lose. Those whose offenses are more serious and who consequently merit imprisonment, but who are less than 21 years of age, are given the benefit of their youth and sent to a disciplinary barracks through which they can earn their restoration to duty without the stigma of wearing prison clothes or performing hard labor. Those of this class who are more than 21 are sent to naval prisons, but if their entire service is such as to warrant the belief that they have performed and will in the future perform faithful service, they also are sent to a disciplinary barracks after one-third of their period of confinement, and, if conduct merits, are restored to duty after two-thirds of their period of confinement.

Since October 1 there have been between 50 and 75 men imprisoned, but many who would otherwise have been imprisoned have been put on probation.

One of the many changes made by the present Secretary of the Navy, having in view increased comfort and attractiveness of ship life, was that providing facilities on board ship for the purchase of money orders. This is a great convenience for the men, enabling them, as it does, to send remittances to their friends and families with the same ease as is done on shore.

In the designs of all new battleships, including the *Texas* and the *New York*, suitable reading rooms have been provided for the accommodation and the comfort of the crew, and for use as reception rooms for their relatives and friends.

If any further proof were wanted of the deep interest taken in the welfare of the personnel of the Navy by the present Secretary, it is to be found in the order, issued in less than a year after he entered office, providing for the instruction of enlisted men, petty officers, and warrant officers, with a view to supplying deficiencies in academic education, and also to provide systematic means by which all enlisted men and warrant officers may receive the assistance and encouragement in technical branches which may be necessary to fit them for promotion in the Navy or which will better prepare them for civil trades at the end of their period of service afloat.

Of the Russian soldiers von Woyrsch, "the silent general," now fighting in Poland, recently said:

They are brave and tough. What's the matter with them? They lack school education. * * * That is why you Americans would make unbeatable soldiers—because your standard of public-school education is high.

Recent reports from the fleet indicate that under the operation of that order, prescribing a school period on board ship for men who have not yet completed two years' service in the Navy, 40 per cent of the total force afloat, or 15,600 men, are under instruction in academic branches, while 3,960 more, who do not come under the compulsory clause, are taking the course voluntarily; 1,560 are taking a correspondence course; 356 are preparing for warrant rank; and 85 are studying for entrance to the Naval Academy; about 50 per cent of the enlisted force, or 25,200 men, are being instructed in professional and technical subjects.

A recent tabulation showed that the greatest influence in enlistments was the desire to see the world and travel, 876 men giving this as their reason for joining the Navy. In view of this fact, it was predicted that enlistments would materially increase between then and the approaching cruise of the battleship fleet to the Mediterranean, which was ordered by the Secretary in conformity with the representations of the department that enlisted men would have a chance to visit foreign shores as circumstances permitted. The next highest number of answers was the recommendation of relatives or friends in the Navy, 748 giving that as their reason. The latter figures are very gratifying and show that the men in the service as a whole are contented and are willing to voluntarily recommend the Navy to their friends at home; 515 men joined with the desire to learn a trade; 481 to better themselves. Of the entire 5,381 only 318 stated they were out of work. The Navy is no place for the shiftless.

It will be noted a total of 996 entered either to learn a trade or better themselves. All had the same end in view—advancement. In the words of Secretary Daniels:

A man comes into the Navy very often poorly prepared in education, and he goes to the school a short six months, where he gets very good training. If he is ambitious to be in the Pay Corps or to be an ensign or to go to Annapolis, he needs to have the training to go on, and he has plenty of time to take it. We have a plan now, which we have already inaugurated in part, to relieve the men of their own laundering, which takes a great deal of time, and to put a laundry on the ships. A laundry is in use on the *Texas*, and it works very well. That will give a man more time for study. As soon as he learns more of arithmetic, geography, and grammar he is better able to learn more of mathematics, so that he can take these higher examinations.

This year, to the several technical schools maintained by the Navy, have been added one at Newport for the training of the Hospital Corps and one in Washington for newly appointed pay officers. The educational system thus briefly referred to has, in the opinion of those who have closely observed its working, fully demonstrated its effectiveness in raising the standard of knowledge of the enlisted personnel, and has gained its object of increasing the efficiency of the naval service in general.

What has thus far been said relates to school work for the bluejackets and marines. For the officers, the Naval Academy at Annapolis and the War College at Newport have increased their usefulness in extending the courses until now they rank with the very best schools of their kind in the world. The high standards which have always distinguished our Naval Academy among the universities of America have been retained as heretofore, but much progress has been made in the expansion and larger usefulness of the Naval War College at Newport. Although the United States was first among the naval nations of the world in establishing a naval war college for the study of the higher sciences peculiar to the art of naval warfare, it neglected during ensuing years to pursue the advantage it had attained, and of recent years other nations, recognizing the potential value of such an institution, eclipsed our own by applying to it the attention and study merited by its importance. When the Secretary of the Navy visited the Naval War College for the first time, in June, 1913, he found a class of less than 10 officers studying the courses, and his remark to the president of the War College was to the effect that if he were president of the college and had but 10 pupils he should advertise for more. The following statement of the Secretary of the Navy, made during the course of his hearings before the House Committee on Naval Affairs this year, is worthy, as evidence of the great progress made in this regard, of repetition in such place as this:

When I first went to the War College in July of 1913 I found less than 10 officers taking the courses. I said to the president of the War College, "If I were the president of a college and had but 10 pupils, I would advertise for more."

I have not issued an order to the effect that no officer shall be promoted to the grade of rear admiral unless he had been to the War College, but every officer has to put on his record a statement as to whether he has taken the War College courses. We now have an average of not less than 30 officers taking the courses at the War College. The summer before last, when the fleet was at Newport, I directed that five officers from every battleship should be at the college at the same time, and while the fleet was there we had about 100 officers studying to fit themselves for higher commands. Not only that, but we have inaugurated a correspondence course, so that practically all officers who have not been to the college, as well as those who have graduated, are in constant touch with the faculty and cognizant of all that is being done. The officers who have taken the course are assisting those officers on shipboard who have not, in such a way that they can take better advantage of the correspondence course. The War College has been strengthened and helped in every way, and to-day there are 450 officers in direct touch with its work.

It may be proper for me to insert here also the following, which is an opinion expressed by the president of the War College in forwarding to the Secretary his remarks to the class

of officers at the completion of a year's study during last December:

I am writing this letter because I feel you are entitled to much of the credit for the very satisfactory results which we have been able to achieve.

Embodied in the two naval appropriation bills which this Congress has adopted are several pieces of legislation which bear upon the personnel of the Navy, and a passing word concerning them before I proceed to treat of other phases of the Naval Establishment may be pertinent here. Provision has been made, Mr. Speaker, for the restoration of the grades of admiral and vice admiral in our Navy. We have passed a law which places the naval militias of the various States that receive Federal aid under the immediate direction of the President when emergency may require, and we have at this session passed the most far-reaching piece of personnel legislation in establishing a naval reserve that has been enacted in a decade. At the present time, in recognition of the invaluable services and great skill he displayed in handling a most delicate international situation, Admiral Dewey enjoys, by virtue of a special act of Congress, the rank of Admiral of the Navy. Since the year 1891 no other American naval officer has been elevated above the rank of rear admiral. Many years ago, shortly after the War between the States, the Congress enacted a law which conferred the rank of admiral and vice admiral upon Farragut and Porter. Upon the death of Farragut, Porter succeeded to his position; but when Porter died, in accordance with the provisions of the law, his rank died with him. In the time that has elapsed our Navy has grown a hundredfold and our participation in international affairs is a matter of daily occurrence. In almost every instance where we have combined our efforts with those of other nations through our naval agencies we have been subordinated in rank, and therefore in position, through want of grades befitting the dignity and conspicuous part played in the dealings of the world by this great Nation. As a simple matter of organization and in recognition of the numerous responsibilities which rest upon the commander of a modern fleet officers vested with this command are deserving of a rank commensurate with the importance of their duties; and the law we have enacted providing the rank of admiral for the commanders in chief of our Atlantic, Pacific, and Asiatic Fleets and that of vice admiral for the officer second in command are sure to redound to the benefit of our naval service and to obtain for us our proper position in such international events with which our Navy may become identified in the future.

The bill provides also for a new position in the Navy, to be known as the chief of operations, who, under the direction of the Secretary of the Navy, will be in charge of the operations of the fleet and preparation of plans for its use in war. This new position, it is believed, will coordinate and develop more perfectly the work of the War College, the General Board, the Office of Naval Intelligence, and the carrying out of maneuvers by the fleet. The wisest men in the Navy believe this provision will make the organization as perfect as it is possible to make any organization and will centralize in the Navy Department all the utilities which go to make for the preparation for war.

The adoption into the bill of that part providing for the position of chief of operations may be said to be due in great measure to the result of the hearing of Secretary Daniels before the Naval Committee relating to the status of the General Board, in which it transpired that the reports of that board, until the present Secretary came into office, had never been made public. In the course of that hearing Mr. ROBERTS said:

I recall very well sitting here when Secretary Moody came before us and placed before us the plan adopted by the General Board, which, he stated at that time, was to be regarded as a naval secret. Some years we never did see it. I will be frank to say that in the 14 or 15 years I have been on the committee I have never seen the complete report of the General Board until your report last year and this year. What we have had is the building program, just enumerating the units and classes. That has been given to us a number of times, and that is why I am so interested to know how much importance we can attach to this report of the General Board, now that we have it.

Mr. BUTLER, another member of the committee, in the course of the discussion, voiced his sentiments as follows:

Permit me to say, Mr. Secretary, that I have sat on this side of the table in this committee for 18 years, and I have been in the dark for 18 years, and I have come to a point in my life where I do not want fine phrases, but I want plain language, and I want honest instruction.

In reply to a question of a member of the committee, asking in what particular the Secretary found a continuity of the policy of Secretaries, Secretary Daniels replied:

I did not find any fixed policy, though I found former Secretaries had generally followed in construction the view of the General Board. The American people vote as to what party shall be in power, and no policy can be unchangeable. Nothing is unchangeable that grows.

Again:

Ought there not to be—

Said a member—

in the interests of the people some competent brain to deal with such a vital question as the continuing policy of national defense?

Yes—

Said Secretary Daniels—

and we have. We have a competent brain in the White House, a competent brain in the Secretary of War, and we have the competent brains of admirals and captains in the Navy, in the General Board, in the Naval War College, in the bureau chiefs, and in the Council of Aids. You have able men on the Committee on Naval Affairs, and if it should be the case that there are not competent men in these offices and in Congress, it is the people who are sovereign; and if you ever get a board or a commission in this country which can determine the naval policy independent of Congress, you will have an autocracy and militarism that is dangerous. I think the policy of national defense is not determined by the Secretaries; it is determined by Congress, and that it is a very good thing for Congress to have the varying and fluctuating views, so that it may have all the light it can get, and then for it to fix the policy.

As throwing light upon the views of the Secretary regarding the relations between Congress and boards and commissions in general, it may be pertinent to quote here Secretary Daniels's remarks before the committee:

We have, in the organization of our country, a Commander in Chief of the Army and Navy. It is the duty of the executive departments of the Government, under the direction of the Commander in Chief, to present to the Congress their recommendations as to what shall be done. It is the Congress that must settle the whole program. You can never get in this country a commission or a board that could take from Congress the real power that inheres in Congress. I have no sympathy with the program in favor of trying to substitute somebody else to determine the policy that Congress must determine.

Now, in the Navy Department we have an organization based upon experience, and it gives to the Secretary every bit of the information about naval affairs in this country and the world. That comes to me in regular reports. We have organizations through which I give to the Commander in Chief the results of the expert opinion of the Navy.

We have a joint board, composed of Army and Navy officers, who discuss all sorts of problems, and my own judgment is that you do not want any commission made up partly executive and partly legislative. Whenever you have a commission composed of the chairmen of the Committees on Naval Affairs and the chairmen of the Committees on Military Affairs, the Secretary of War, and the Secretary of the Navy, and mix up the executive and legislative, you have taken a wrong step. You do not want that. You want recommendations from the executive department, and we have given them to you. You must determine whether you will take them up or improve them or otherwise. Our Government is established upon the principle that the legislative, executive, and judicial branches are separate branches.

Since the inception of our Union a standing army of huge dimensions has been held in abhorrence by a peace-loving people. In its stead we have had organized the various State militias, and through the valuable service rendered by patriotic men who devote their time and energies to the efficiency of their organizations the Nation has lived through a series of conflicts and emerged triumphant at the conclusion of hostilities. As early as 1807 Jefferson said:

I think it will be necessary to erect our seafaring men into a naval militia and subject them to tours of duty in whatever port they may be.

A naval militia has existed through all the years down to the present, and during the conflict with Spain it responded with alacrity to the summons of the President. Within the last year the strength of the militia has grown considerably, and on July 1 last there were enrolled 596 officers and 7,132 men, constituting a reserve that with the helpful legislation we enacted should be capable of rendering immediate and valuable service to the Federal Government in an emergency. But times change and so do the customs of our people, and during the very period in which we were expanding the naval forces of the Nation, and the service was becoming more complex through the introduction and usage of so many marvelous inventions of the age of electricity and steel, our American merchant marine suffered a woeful decadence and the number of our seafaring people who to-day are capable of taking their place upon a man-of-war is lamentably small. The expense of maintaining in active commission all vessels of value in hostilities is such that no nation can bear the burden, and it is the practice of all navies to relegate to the reserve such vessels as have been supplanted on the first line by improved and stronger craft. To insure a prompt and proper manning of such reserve vessels as are on the roster of the United States Navy would require several thousand experienced man-of-war's men.

The number necessary is to be found scattered through the cities and the hills and the plains where men who have given an enlistment or two to the colors have repaired to settle down to civil life. It is known that their patriotism can be relied upon when needed. During the War with Spain they returned in droves, and a year ago, when trouble threatened with Mexico, so many applications were received that enlistments had to be suspended temporarily. It would, however, have required considerable time effectively to distribute and organize this reserve among the various ships on which they would be needed; and modern war, like Father Time and the tides of the ocean, wait upon the pleasure of no man and no nation.

These men would be needed immediately, and can be obtained in the required time only through effective organization. Such an organization we have authorized in the formation of a naval reserve to be composed exclusively of honorably discharged man-of-war's men who have served not less than four years in active service. Naval authorities agree that this is one of the most far-reaching and probably the best piece of legislation enacted by the present Congress in its legislation touching upon the Navy. We have the ships, but to man them it is necessary to have the men, and this measure will insure to the Navy a force trained to obedience and the requirements of a man-of-war's men, ready to answer the call of duty within a time that will make their service as valuable as it is cheerful. In return for the services required of the men constituting the reserve, the act provides that they shall receive certain compensations, varying according to the length of service which each reservist has rendered in active duty. We have here authorized something for which the enlisted personnel has craved for years—a graduated retirement which will make worth while their remaining in the Navy for 12 or 16 years instead of 4 or 8, as is now the prevailing rule. At the present time our Navy is composed two-thirds of men in their first enlistment. Only one-third are seasoned, and the naval reserve act, it is believed, will reverse the order and insure to the service more than 50 per cent of veterans and less than 50 per cent of recruits. If such proves the case, it will be economical not only in the matter of efficiency but financially as well, for the considerable expense which is involved in the training of a man for the Navy should be reduced by half, according to the larger percentage of men continuing in active service.

Until the second session of the Sixty-third Congress signified its interest in the spiritual welfare of the men of the Navy by authorizing an increase in the corps of chaplains there had been no additions to the corps since 1846, when the Navy numbered but 12,000 men. During the years which elapsed the Navy grew in the number of its men and in ships, particularly during the last 16 years, but no action whatsoever was taken to provide more chaplains in proportion to the increase of men in the service; and last spring, when there was a possibility that men from all our battleships might see active service, the number of chaplains with the fleet, though every available one had been ordered to duty, was utterly inadequate. When it is recalled that two-thirds of the enlisted personnel of the Navy are men in their first enlistment, and that first enlisted men are, as a rule, youths in their teens, for the first time removed from the bosoms of their families, it becomes incumbent upon the Government to provide suitable spiritual guidance and counsel, and the increase allowed by last year's bill, which authorized the appointment of 1 chaplain to every 1,250 men, will enable the department to assign in the future a chaplain to every battleship and practically double the corps.

One of the first official acts of the Secretary of the Navy was to emphasize the necessity of adequate sea service in every one of the various grades through which officers of the line progress. Most officers of the Navy are keen to command ships at sea and jealous of their ability to render the service afloat for which they entered the Navy, for the business of a naval officer is on the sea. In some few instances, however, land service had been excessive, affording to some choice billets ashore at the expense of others who suffered a loss of some portion of the duty ashore to which they were reasonably entitled. The order issued, while affecting but few, was in the best interests of the service. That Congress itself, or at least the Senate, was this month in the same frame of mind as the Secretary when he issued his order in March, 1913, was strikingly evidenced by a resolution which was incorporated in the naval appropriation bill by the Senate Committee on Naval Affairs, making sea service requisite not only for officers of the line but for officers of the staff, including medical and pay officers as well. The order already issued, however, insures to the country the proper proportion of sea service by the officers of the Navy whose business is at sea, and will quicken their interest in sea duty as the chief function of their profession.

On the 3d of February, 1899, Hon. John D. Long, Secretary of the Navy in McKinley's administration, "after mature deliberation," as he said, issued General Order No. 508, forbidding officers or commandants "to allow any malt or other intoxicating liquor to be sold to, or issued to, enlisted men, either on board ship or within the limits of navy yards, naval stations, or marine barracks, except in the medical department." On July 1 last year an order, No. 99, went into effect in these words: "The use or introduction for drinking purposes of alcoholic liquors on board any naval vessel or within any navy yard or station is strictly prohibited."

The action of the Secretary of the Navy was the culmination of a series of official acts designed to eliminate the evils of alcoholism in the Navy. It is known that Secretary of the Navy Branch, whom North Carolina is proud to regard as one of her most gifted sons, wrote, on May 25, 1829, to Dr. William P. C. Barton, surgeon, United States Navy:

I inclose copy of a resolution of the House of Representatives of the 25th February, 1829, instructing the Secretary of the Navy "to require three of the medical officers of the Navy, whom he shall designate, to report to him their opinions, separately, whether it is necessary or expedient that 'distilled spirits' should constitute a part of the rations allowed to midshipmen."

In compliance with this resolution I have designated you as one of the medical officers, and request your opinion as early as may be convenient that I may transmit a report on the subject at the next session of Congress.

It seems, Mr. Speaker, that North Carolinians who served in the Cabinet of the President are destined to hold the portfolio of the Secretary of the Navy. North Carolina has had five Cabinet officers—Branch, Graham, Dobbin, who is responsible for the Perry expedition which opened Japan to the commerce of the world, Badger, and the present Secretary of the Navy, Hon. Josephus Daniels—and all were destined to preside over the administration of naval matters.

"Secretary Daniels's order," to quote ex-Secretary Long, "is the natural sequence of my own prohibiting liquors for enlisted men in the Navy," and this former Secretary added:

It is more than likely that foreign vessels will be led by this example to consider and imitate it, so that the drink evil in foreign navies may be put in process of elimination as well as our own.

Within a few weeks after that prophecy not one but several foreign countries caught step and fell into line, some of them going so far as to prohibit the use of liquor in both army and navy. Of the new and far-reaching order in Russia, the most sweeping of all, Capt. N. A. McCully, of the United States Navy, naval attaché at Petrograd, writes:

Further acquaintance with Russia's antiliquor law convinces me that it is one of the best things that ever happened in Russia. I have not met one single Russian who is not very much in favor of it.

Lord Kitchener, upon being appointed Secretary of State for War, issued this message to the soldiers of the expeditionary force:

Your duty can not be done unless your health is sound. So keep constantly on your guard against any excesses. In this new experience you may find temptation in both wine and women. You must entirely resist both temptations.

A cable from Panama, dated November 14 last, conveys the information that Col. Goethals had on that day issued an order placing all persons engaged in canal transportation on a strict temperance basis. The order provides that all persons employed on the canal who have marine licenses must abstain absolutely from liquor. This includes pilots taking ships through the canal, the captains of tugboats, mates, and others.

The Surgeon General of the Army, Dr. Gorgas, whose sanitation work on the Isthmus gave him world-wide fame, in his annual report says that the rate of alcoholism in the Army was lower in the last fiscal year than since 1870, and he makes the observation that "this improvement strengthens the contention of those who disapprove the restoration of the canteen," and adds:

It is believed that the Army will be well rid of any system of supplying alcoholic drinks. There really appears to be no more reason why they should be sold on Government reservations to soldiers than there appears to be any reason for the regulation issue of grog of former days.

One reason for the decrease of alcoholism in the Army, according to Dr. Gorgas, is—

the effect produced by the act of Congress stopping the pay of officers and enlisted men when incapacitated for duty on account of sickness due to drug addiction, alcoholism, or other misconduct.

Similar legislation was recommended last year for the Navy and Marine Corps, and the experience of the Army is an unanswerable argument for applying the same law to this branch of the service.

In announcing the order that ended the wine mess, as it was called, the present Secretary made the following statement:

There should not be on shipboard, with reference to intoxicants, one rule for officers and another and a different rule for the enlisted personnel. I believe experience has demonstrated that a uniform rule should prevail in the Navy for all who enlist in the service, from the highest rank to the youngest enlisted man or officer who comes into the service, and that the abolition of the wine mess will be justified.

Already many who did not welcome the new order are its strong advocates.

In connection with the new and better habits in all navies, it may be well to call attention to the statement of Emperor William of Germany, who, speaking some years ago to naval cadets at Murwick, recounted that when he was a cadet "It passed for extraordinary cleverness in the youth for him to imbibe a large

quantity of alcohol and bear it. I, as a young officer, had occasion to see such examples, but never myself to participate." He went on to point out that such conduct "suits the Thirty Years' War, but not now," because "the service in my navy has reached such a height of strenuousness as you can hardly surpass," and he added:

The next war and the next sea battle demand sound nerves of you. Nerves will decide. These become undermined through alcohol, and from youth up by the use of alcohol endangered.

You will later have opportunity to see the target ships and the action of the modern projectiles upon the ships, and therefrom you can picture the conditions during battle. You will see horrible destruction when you are upon these.

Here it calls, "Steady nerves and a cool head."

That nation which consumes the least quantity of alcohol wins; and that you should be, my gentlemen. And through you an example should be given the crews.

And in consequence of this I expect of you that even now at the naval academy and on board ship in all comradeship and friendliness in no way disturbed among yourselves you take heed thereto and provide that the indulgence in alcohol be not counted as belonging to your privileges.

In his speech at Gibraltar in 1904 Sir Charles Beresford, C. B., gave utterance to a sentiment that finds more and more approval, just as Emperor William's address to the German youths entering the navy is accepted as necessary for the best efficiency of naval officers. Lord Beresford, as he now is, said at that time:

When I was a young man I was an athlete. I used to box a great deal, ride steeplechases and races, play football, and go through a number of competitive sports and pastimes. When I put myself into training, which was a continual occurrence, I never drank any wine, spirits, or beer at all, for the simple reason that I felt I could get fit quicker without taking any stimulants. Now, I am an older man and have a position of great responsibility, often entailing quick thought and determination and instant decision. I drink no wine, spirits, and beer, not because they do me harm, not because I think it wrong to drink, but simply because I am more ready for any work imposed upon me, day or night; always fresh, cheery, and in good temper.

The order No. 99 was not issued by the Secretary until, at his request, the Surgeon General had made a report showing its wisdom. Not only has the order been approved by other nations, but the medical authorities of the world have given approval. In closing an editorial approving the action of the Navy, the Journal of the American Medical Association used these words:

The development of scientific methods, and the use of instruments of precision in warfare have made alcohol absolutely detrimental to the modern naval man. Sea fights in the past were won by brute hardihood and physical endurance, which could, perhaps, be stimulated, temporarily at least, by large doses of alcohol. The modern warship is a floating laboratory of delicate and accurate machines. The gun pointer who directs a 14-inch rifle on the modern man-of-war needs not only personal courage, but also absolute steadiness of nerve, clearness of vision, and fine muscular coordination. All these things modern physiology has shown to be impaired by even small amounts of alcohol. The engineer who superintends the machinery at the heart of the modern battleship, the man at the wheel who directs its course, and the captain or the executive officer on the bridge, as well as the most humble member of the crew, need at all times to be in a condition of maximum physical and mental efficiency. Intoxication in the naval officer to-day might easily be as disastrous as cowardice and treason. Surg. Gen. Braisted's recommendations and Secretary Daniels's order are simply in line with our growing knowledge. The Nation needs on its battleships to-day the most capable, clear-headed, cool-brained, and steady-handed men, and these men are not found among habitual or occasional users of alcohol in any form. Entirely aside from moral or sentimental reason, and considered simply as a scientific regulation in the interest of efficiency, this order will recommend itself to the vast majority of the American people.

Referring to the subject of temperance, Admiral Jellicoe, commander in chief of the British North Sea Fleet, said:

Any officer holding a command which carries with it any measure of responsibility for the defense of the Empire must recognize, as I do, the value of temperance in promoting fighting efficiency. In the navy there are three qualities upon which efficiency mainly depends. They are discipline, straight shooting, and endurance, and temperance unquestionably tends greatly to the promotion of these qualities.

Another measure for the betterment of the "man behind the gun" taken by the department is the recent letter of Secretary Daniels to all commanding officers, written with a view to awakening interest and activity in the proper teaching of the personnel with regard to the nature and dangers of venereal diseases, and to ask the hearty cooperation of every officer and man to see, so far as his influence and example go, that every associate and shipmate does not become the victim of any of these diseases through ignorance or the lack of moral support in all that makes for a clean and moral life. At the same time the Secretary is on record as favoring a law which would deprive men of their pay during the time they are incapacitated by such diseases, contracted through failure to heed the repeated warnings and instructions given them. In the course of this letter the Secretary said:

The spectacle of an officer or hospital steward calling up boys in their teens as they are going on leave and handing over these "preventive packets" is abhorrent to me. It is equivalent to the Government advising these boys that it is right and proper for them to indulge in an evil which perverts their morals. I would not permit a youth in whom I was interested to enlist in a service that would thus give virtual approval to disobeying the teachings of his parents and the dictates of the highest moral code. You may say that the ideal raised is too high and we need not expect young men to live up to the ideal of continence. If so, I can not agree. It is a duty we can not shirk to point to the true ideal, to chastity, to a single standard of morals for men and women. If, unhappily, experience has taught us that too few resist temptation, that in no wise lessens our responsibility to seek to guide the youth to whom we owe a solemn duty. We need not hope to induce young men to become strong in will power, firm in resisting temptation, if we say to them: "Go in the way of sin. We have no admonition to you to refrain from evil. All that we have to say to you is to be careful not to contract disease." Such admonitions to boys in their teens would make me, as Secretary of the Navy, an apologist for looseness of morals. I could not look a boy in the Navy straight in the face while I appealed to him to lead a clean life if I were approving the policy and the use of a measure of this kind.

In regard to the personnel in general, it can be truly said that in no organization in the country is there a better and more perfect understanding, a finer sense of mutual respect between those who direct and those who obey, than that governing the relations between the officers and men of our Navy.

Turning now from the personnel to the material, we find that the record of the past two years is one of which we may well be proud. Economy has been the watchword, and no dollar has been spent merely because authority for its expenditure was authorized by Congress. In filing his first report during the fall of 1913, the Secretary of the Navy was able to state to the President that already as huge a sum as $2,000,000 had been saved the Government because of insistence by the Navy Department upon competition on all contracts. Of this sum as much as $600,000 was saved on contracts for one ship alone, the dreadnaught *Arizona*. Strict adherence to this commendable policy during the ensuing year resulted in savings almost as great, which I shall mention later, and in unexpended balances totaling over $2,000,000, of which $1,800,000 was reappropriated at the present session of Congress for the construction of submarines and air craft. It has not affected in the slightest, this policy of "economy ashore for expenditure afloat," necessary and important improvement of our shore stations. A former Secretary of the Navy has seen fit, and justly so, to condemn in the most absolute terms unnecessary expenditures for shore stations. During no other similar period have greater reductions been made in the appropriations for shore stations than during the last two years. In the four years of the Taft administration Congress authorized the expenditure of $21,928,572 on shore stations, of which about $13,500,000 were authorized during the first two years and more than $8,000,000 during the last two years. In the two naval appropriation bills that have been passed by the present Congress, Mr. Speaker, the total sum authorized by us for expenditure on naval shore stations totals but $3,920,880. We authorized about $2,300,000 a year ago, and under the bill just adopted, which carries a larger sum than any other naval appropriation bill, only $1,500,000 can be applied to this purpose. We have not stinted the Navy in our appropriations, for they have been large and liberal; but the money has gone to the Navy, to new ships, and the amounts in our bills for increase of the Navy exceed by $30,000,000 similar expenditures authorized during the last two years of the Taft administration. Necessary growth ashore has been authorized and all projects under way have been continued and the moneys applied to purposes which will greatly improve our Navy's readiness for war and establish and expand the sources from which the necessary munitions of war are to be obtained.

The output of the Navy Powder Factory has already been increased by about 1,100,000 pounds annually, and when the extension of the works, authorized at the last session of the present Congress at the request of the department, is completed, the output will be increased by another million pounds. In other words, the capacity of the factory will be increased from 2,791,636 pounds to 4,900,000 pounds per year.

The manufacture of torpedoes has been started at the Washington Navy Yard, providing a third source from which this necessary engine of war may be obtained, and the output of the Newport factory has been practically doubled. Thanks to an appropriation voted at the last session its capacity will be materially increased and the time and cost of manufacture reduced. For every 100 torpedoes which the department had on hand in March, 1913, 96 more are in the course of manufacture. Within a few months the supply of torpedoes will, therefore, be almost doubled.

The department has also begun the manufacture of mines, and within a short while it will have 31 mines for every 9 mines it had two years ago, increasing the supply of mines about 244 per cent. In addition to this a particular type of contact mine has been adopted.

The Boston and Philadelphia Navy Yards have been equipped to build large auxiliary craft, the Portsmouth (N. H.) Yard has begun construction work on submarines, and the scope of con-

struction work at Mare Island, Cal., Charleston, S. C., and Norfolk, Va., has been extended to include destroyers. The equipment of these three yards to build quickly men-of-war adds materially to the readiness of the Navy to respond to an emergency. Until a year ago none of our navy yards were prepared to build ships except New York and Mare Island.

In radio the advance has been exceptionally great. Radio has been successfully installed on submarines. More than 75 ships, which either had no radio or whose equipment was obsolete and worn-out, have been supplied with modern equipment. Three entirely new stations have been added to the chain: Balboa (Canal Zone), Great Lakes, Ill., and Tutuila, Samoa.

The naval act of 1914 provides that no part of the money appropriated shall be used "to procure through purchase or contract any vessels, armament, articles, or materials which the navy yards, gun factories, or other industrial plants operated by the Navy Department are equipped to supply, unless such Government plants are operated approximately at their full capacity for not less than one regular shift each working day." Three exceptions are made—the first, "except when contract costs are less than costs in Government plants"; second, "except when Government plants are unable to complete the work within the time required"; and, third, "except in cases of emergency."

This injunction of the law that nothing should be bought in the markets which could be made by the Navy itself has been observed with a conscientious scruple in letter and in spirit, which has resulted often, not only in large savings, but in widening the Navy's avenues of manufacture. The law has yielded profits. Contrary to popular idea the Navy Department in what it manufactures does so, from a superdreadnaught to a gallon of paint or a pound of powder, cheaper than the same can be purchased. This is particularly true of the most expensive instruments of war, but is equally true of gasoline engines, electrical supplies, engines for dreadnaughts, shrapnel, clothing for marines and sailors, accouterments, and a multitude of other articles required for the fleet and shore stations.

The last Congress made an appropriation, upon the recommendation of the department, for the enlargement of the powder factory. Before the Government began to manufacture smokeless powder it paid 80 cents a pound for it. Government competition, coupled with better methods (but chiefly the fact that the Government demonstrated the exact cost of producing it), have brought down the price at which the department purchases this powder to 53 cents. The department is now manufacturing it at Indian Head at a cost of 36 cents a pound, and when the enlarged plant is completed may be able to still further reduce the cost of production. If the department had bought what it manufactured last year, the powder bill would have been $397,536.16 more than it was. In addition to effecting this saving by manufacture, the department reworked 1,013,940 pounds, at 11.9 cents per pound, and this method insures the use of much powder every year that would otherwise be useless, and has encouraged the department to undertake the manufacture of such other necessary munitions as mines and to embark upon the construction of vessels of war and auxiliaries to an extent never before essayed.

Upon the recommendation of the department Congress made an appropriation for enlarging the torpedo works at Newport, R. I. In the two years that the present torpedo works have been in full operation the cost of manufacture of each torpedo has been reduced from $4,200 to $3,200. These torpedoes, if bought at the only private torpedo plant in the country, would cost $5,000. The enlargement of the torpedo works will not necessarily cause the Navy Department to manufacture all its torpedoes, but ability to make a large proportion of the number needed will result in securing better prices from manufacturers. This is true of all other munitions of war. Ability to make them secures reduction in cost. This experience has justified the recommendation of the department and the act of Congress.

Every Secretary of the Navy has been confronted with the problem of securing the most efficient management of the navy yards. Inasmuch as it is both a military and industrial problem, there have been widely differing opinions as to the methods of securing the best results in the industrial department and at the same time preserving the necessary military authority. The House Committee on Naval Affairs visited most of the yards last year, and during the hearings of the Secretary of the Navy the question of economic management was fully discussed. The committee was promised recommendations on navy-yard management in the Secretary's report at the third session of Congress. As a result of long consideration, it has been decided not to formulate any hard and fast plan; but, in pursuance of the act of Congress permitting the Secretary to designate engineer and construction officers, as well as line officers, to navy-yard management, a plan has been put in operation at the New York yard—which is the largest construction as well as repair yard in the Navy—by which an admiral is to be commandant, in charge of all military matters, and an engineer officer is to be the industrial manager of the yard. At the Charleston Navy Yard an engineer officer has been named as commandant, and construction officers have been assigned as industrial managers of the navy yards at Portsmouth, N. H.; Norfolk, Va.; and New Orleans, La. Within a short time construction or engineer officers will be utilized at such other yards as may promise the best results. It is believed the introduction of industrial managers has already justified the wisdom of the experiment; and when the system has been in operation a sufficient length of time to be benefited by the continued superintendence of the same officers, a system characteristic of similar private concerns, but impracticable under the old order in the Navy, it is almost certain that most of the difficulties and much of the expense involved in the maintenance of so many and so extensive naval stations will have been solved.

No account of the Navy Department's work would be complete without a statement of the saving in cost of construction and maintenance, a saving effected by close scrutiny of contracts, most careful supervision of work of all kinds, and ceaseless efforts to economize wherever and whenever it could be done without impairing efficiency.

POWDER.

Through the increased output of the factory at Indianhead, Md., the difference in the cost of manufacture and the purchase price, the Government has been saved $150,000. As the plant will now continue to manufacture the increased amount annually, or even a still greater amount, this saving continues indefinitely.

The cost of manufacture has been reduced by 2.7 cents per pound.

PROJECTILES.

As against the prices paid for the last previous purchases, the Government was saved on the contract of January, 1914 (contracts to American firms), $1,077,210.

The price of 14-inch armor-piercing shells was reduced from $500 and $490 to $315 and $320 and $334.

The price of 12-inch, from $272 to $165.

The price of 5-inch common projectiles, from $13.30 to $8.56 and $8.72.

The price of 4-inch common, from $9.75 to $5.46.

On a contract of a year later, January, 1915, after the outbreak of the European war, with competition removed, a higher price was exacted, but even at the higher rates a saving, as compared with the previous figures of the preceding administration, was effected amounting to $287,000.

This time prices amounted to: Fourteen-inch, $415, $420, and $425; 5-inch, $12; 4-inch, $9.50 and $9.80.

ARMOR.

The last ship for which armor was awarded by the preceding administration was the *Pennsylvania*. It cost as follows:

Class A1	$454
Class A2	518
Class B	496
Class C	548

Precisely the same prices were asked for the first contracts to be let by the present administration. All bids were rejected, and the following prices obtained:

Class A1	$440
Class A2	504
Class B	471
Class C	448

Effecting a saving on armor for the *Arizona* of $114,646.

A year later still better prices were obtained on the armor for the three dreadnaughts authorized at the last session of Congress, as follows:

Class A1	$425
Class A2	486
Class B	466
Class C	376

As compared with the prices paid for *Pennsylvania* armor, a saving of $738,642 was effected under this contract.

Total savings on armor to date, $1,110,084.

TORPEDOES.

The cost of torpedoes manufactured at the Government factory, Newport, R. I., has been reduced from $4,202.11 each to $3,245.72 each. Through a reduction in the cost of torpedoes a total saving of $326,700 has been effected.

GUNS AND GUN FORGINGS.

Since March 4, 1913, the saving in contracts for guns and gun forgings, based upon the difference between the former prices and the current prices, has amounted to $280,425.33.

MINES.

In manufacturing mines at a Government station, in lieu of purchasing them, a saving of $178,750 has been effected.

ENGINEERING.

The Bureau of Steam Engineering is to-day maintaining a much larger fleet in active commission and in reserve than in 1910 on an appropriation of about $1,100,000 less. The reductions in appropriations have been gradual since 1910, and the efficient maintenance of the fleet is a splendid tribute to the efficiency of this department, the reductions being made during a period in which the fleet was enlarged, a reserve fleet organized, aeronautics introduced, radio developed, and the pay of navy-yard employees increased.

CONSTRUCTION AND REPAIR.

As evidence of the efficient administration of this bureau, attention is invited to the reduction of $680,000 in the appropriation for next year, which has been recommended because of the unexpended balances from last year's appropriation, the department maintaining a much larger fleet and superintending considerably more construction work than in any previous year.

TRANSPORTATION.

As a result of careful scrutiny of transportation expenses and better methods in routing parties of men between the various naval stations, a saving of $176,643.56 has been effected by the Bureau of Navigation during the last fiscal year.

The effect of this economical administration of the Navy Department was to enable the Secretary to submit estimates for 1916 over $2,000,000 less than the appropriations for 1915 and still provide for a larger building program than Congress has authorized during recent years.

The economies effected and the securing of real competition wherever possible by the Navy Department has enabled Congress to largely increase the sums available for fighting craft without large increase of the naval appropriation bill. The following statement shows how the building program has steadily increased:

Statement of the totals of the appropriations carried by the naval acts from 1900 to 1914, showing separately the amounts for "Increase of the Navy" and showing the number and types of vessels authorized by those acts.

Year.	Appropriation.	Amount for increase, Navy.	Tonnage, exclusive of submarines.	Building program.
1900....	$65,140,916.67	$17,140,699.00	100,036	2 first-class battleships; 3 armored cruisers; 3 protected cruisers; 7 submarines.
1901....	78,101,791.00	25,400,000.00	.....	No new construction.
1902....	78,856,363.13	22,703,010.00	63,630	2 first-class battleships; 2 armored cruisers; 2 gun boats; 2 tugs.
1903....	81,876,791.43	25,925,632.00	77,600	5 first-class battleships; 2 training ships.
1904....	97,505,140.94	32,176,860.00	82,930	1 first-class battleship; 2 armored cruisers; 3 scout cruisers; 2 colliers; 2 tugs; 4 submarines.
1905....	100,336,679.94	42,255,833.00	32,000	2 first-class battleships.
1906....	102,091,670.27	33,475,829.00	22,100	1 first-class battleship; 3 torpedo-boat destroyers; 8 submarines.
1907....	98,958,507.50	23,713,915.00	21,400	1 first-class battleship; 2 torpedo-boat destroyers.
1908....	122,663,885.47	30,307,962.00	123,480	2 first-class battleships; 5 colliers; 10 torpedo-boat destroyers; 8 submarines.
1909....	136,935,199.05	38,819,595.00	75,085	2 first-class battleships; 1 collier; 8 destroyers (3 subsurface); 4 submarines.
1910....	131,350,854.38	33,770,346.00	96,452	2 first-class battleships; 2 colliers; 6 torpedo-boat destroyers; 4 submarines.
1911....	126,478,338.24	26,0055,47.67	106,797	2 first-class battleships; 2 colliers; 1 river gunboat; 1 gunboat; 2 tugs; 4 submarines; 1 submarine tender; 8 torpedo-boat destroyers.
1912....	123,225,007.76	20,569,373.48	77,440	1 battleship, first line; 2 fuel ships; 6 destroyers; 1 destroyer tender; 8 submarines; 1 submarine tender.
1913....	140,800,643.52	35,325,695.00	56,530	1 battleship; 1 transport; 1 supply ship; 6 destroyers; 4 submarines.
1914....	144,868,716.61	41,091,734.00	102,660	3 battleships; 6 destroyers; 8 (or more) submarines.
1915....	147,461,864.88	[1] 46,853,801.00	89,660	2 battleships; 6 destroyers; 16 submarines; 2 sea-going submarines; 1 oiler.

[1] Includes $1,800,000 saved on shore expenditures, reappropriated for aeronautic and submarines.

With $500,000 less than the previous bill carried, eliminating the Mississippi and Idaho transaction, the last session of this Congress directed that over $1,000,000 more should go to increase of the Navy, and the bill we have just enacted authorizes $11,528,106 more for increase of the Navy than was authorized in the last year of the preceding administration. The total appropriation for increase in ships and air craft of the Navy authorized by the Sixty-third Congress is $86,145,535, to which should be added $1,800,000 of money saved the Government by the economical administration of naval affairs and reappropriated by Congress for the development of aviation and the construction of submarines, making a total of $87,945,535, which is $32,050,466 above the amount authorized by the Sixty-second Congress for the same purposes. We have authorized in the two naval appropriation bills an entire division of five dreadnaughts, which will be the most formidable vessels afloat and will each cost in the neighborhood of $15,000,000, and three seakeeping submarines of a type, speed, and radius of action greater than that of any submersible of any other country, according to the best advices available. Twelve torpedo-boat destroyers, costing about $900,000 each; 23 submarines, costing about $500,000 each; and a fuel ship, to cost about $1,000,000, complete the greatest naval program ever authorized by any Congress since the organization of the Navy.

We have been the first to recognize by distinctive appropriation the importance of air craft in future warfare. Until this year whatever money was available for the development of aviation was parceled among several different appropriations, and frequently the entire work was impeded because one appropriation was exhausted, even though adequate funds remained in another and were unavailable for expenditure. With the larger appropriation concentrated in one fund, and the progress already accomplished at the School of Aeronautics at Pensacola, and the good results which we hope to come from the advisory committee on aeronautics authorized in this bill, which will cooperate with the work of the Army and Navy Aviation Corps, the country may be justified in expecting that their military forces will keep the pace maintained by those of other nations in the development of the science of flight, which is the fruit of American genius.

The question was raised by uninformed persons that because of the Mexican situation and other disturbances in countries to the south of us ships of the Navy had not been given their usual practices. Secretary Daniels made a full statement, as follows:

The routine of the regular maneuvers and drills of the fleet has been to a degree interfered with during the present year owing to unusual conditions which demanded and exacted unusual service from the fleet, and to which the fleet responded with an alacrity and readiness which amply justifies the faith of the country that there exists no more efficient institution than the United States Navy. The emergency experience of a year of stress and strain has been of far greater value than the old routine, because it has demonstrated the readiness of the Navy in every department, afloat and ashore, to meet an urgent call, its flexibility in adjusting itself to an entirely new and unexpected situation, and its remarkable efficiency in handling every problem presented to it. The few drills which had been missed or postponed during the Mexican trouble were more than counterbalanced by the experience gained in the mobilization of the Atlantic Fleet and the occupation of Vera Cruz. No one believes more earnestly in the value of practice and drill than I, but it is absurd to say that because a few maneuvers could not be held at the same time this year that they were held last year the whole fleet has deteriorated to the danger point of actual inefficiency. The declaration of Admiral Badger as he made his brilliant "get-away" from Hampton Roads last April is as true to-day as it was then: "I do not know what we will be called upon to do, but we are ready." This is the spirit of the officers and men of the American Navy.

The rendezvous and departure of the fleet at the time Admiral Badger was ordered to Mexican waters last April demonstrated the all-round efficiency of the Navy—the splendid condition of the ships, the carefully prearranged availability of coal and supplies in huge quantities, the instant readiness of officers and men. All these things spelled in capital letters the word "preparedness"; and efficiency, from the first order to assemble the ships to the transfer of Vera Cruz to the Army, was characteristic of every act. The department, in all its branches, moved like well-oiled machinery, every part coordinating. Three varying instances may be taken, each illustrative of different phases of the activity. One battleship took on 1,800 tons of coal, provisions for a thousand men for six weeks, huge quantities of various supplies, rounded up officers and men ashore on leave, and was tugging at her anchor waiting only the signal to proceed, inside of 12 hours. At the Newport Training Station, just 15 minutes elapsed after orders arrived before 1,000 men were in complete readiness to embark. The department desiring immediately to charter a large merchant steamer as an auxiliary for the men-of-war, the Bureau of Supplies and Accounts reported in less than 60 minutes that a great Ward liner had been secured at Vera Cruz and 90 minutes later Admiral Fletcher was notified that this vessel was at his disposal. In spite of all alarmists, the Navy could repeat these brilliant performances to-morrow.

The best preparation for war on the sea is the constant exercising and maneuvering of fighting vessels in divisions and fleets, and particularly is this true in exercising these groups of vessels in the manner which careful study and constant practice has shown can best develop their offensive and defensive qualities, in order to have them ready to meet in the most advantageous manner the most probable conditions under which the enemy will act.

It must, however, be conceded that the best school and preparation for war is war itself, and it was almost under this condition that our fleet acted during its stay off Vera Cruz during the past summer. There it was for the first time that our fleet landed since 1865 its

largest body of armed men, and these ships' battalions were under fire and secured possession of the city, but only after considerable loss in killed and wounded. This experience and that which followed of erecting and holding defenses to protect the city from outside attack, of governing a population unfriendly, to say the least, to themselves, maintaining law and order, and providing for the sanitation of the men landed, as well as for the entire population, were all matters of professional education which rarely in peace times fall to the lot of officers and men. It is unquestionably true that the practical knowledge and experience gained by officers and men on the ships at Vera Cruz during this period was of more advantage to the Navy and our country than could have possibly been gained had the ships been denied this experience and confined their summer work to the usual drills and exercises, as heretofore. At Vera Cruz they had the actual tests to which the peace exercises were only the prelude—the landing under fire, the fighting in the streets, the firing from the ships, the erection of defenses and holding them against a possible superior force, the control and governing of a large body of natives, the sanitation of a city, and the collection of revenue.

The stay ot the fleet off Vera Cruz, however, did not prevent the further preparation of the ships for battle, as each week one or more divisions could, and generally did, get underway and spend such time at divisional or fleet drills of vessels and torpedo exercises as the commander in chief deemed advisable. The records of the department show that the drills of vessels while in Mexico included, besides division exercises and tactical maneuvers, torpedo-proving practice and subcaliber drill in preparation for target practice. In view of these facts little, if any, truth can be properly found in the claim made by some that our fleet suffered in efficiency as a result of its stay off Vera Cruz. Any shortcoming due to interference with the exercising of the fleet as a whole by the duty at Vera Cruz was many times advantageously overcome by the great and beneficial experience gained by the officers and men in the actual conditions undergone by the preparation for the fighting ashore and the subsequent duties of the control of a captured city—experiences which come only in conflict and for which no one can justly claim peaceful drills are equally as instructive.

The opinion of the commander in chief as to the value of the mobilization of the fleet of 70 ships at Vera Cruz from the standpoint of experience and training is shown by the following quotation from the annual report of Rear Admiral Badger under date of August 23, 1914:

"The necessity during the past 18 months for maintaining detachments of capital ships in Mexican waters and in the Caribbean has somewhat interfered with the most efficient development of the fleet along the lines of preparation to meet successfully a hostile fleet of similar power. On the other hand, the rapid mobilization of the whole fleet on the east coast of Mexico in April and May, when more than 70 ships, including auxiliaries, were in close touch with the commander in chief, was an experience of great value and was an evidence of effective organization."

For many years officers have written and talked about the formation of advance-base material and the practice of exercising landing parties of seamen and marines in the use of this important adjunct to naval warfare. All have recognized the importance of advance bases, and our plans for campaigns have provided for such as an important integral factor in the successful beginning of a campaign as well as the prime necessity for holding and maintaining the base throughout the period of hostilities carried on in its vicinity or along its line of march.

Due to the growing importance and necessity of advance bases in connection with any campaign our Navy might be engaged in hereafter and to the insistence of officers on this point, Congress has allowed for them in its appropriations, and for several years past material has been collected and the quota of guns, ammunition, etc., added to, and officers and men assigned to duty at the home stations (Philadelphia and San Francisco yards) at which the advance-base material had been collected, yet, notwithstanding all the written articles, lectures delivered, and plans of campaigns worked out, extending over many years, regarding the value and necessity of advance bases and drills, with the material necessary for establishing them, not a single time was the Navy exercised in their use of the advance-base material under conditions approaching those to be expected in war time until the present year. There had been plenty of talk, plenty of reasons given showing the needs, and the material had been collected, but there the work virtually stopped until, in January last, Admiral Badger, commander in chief of the Atlantic Fleet, acting under my instructions, carried out a proper and comprehensive exercise of transporting two regiments of marines, with all their war material, including the advance-base material, to Culebra Island, there made a landing and fortified the island as an advance base for the use of the fleet. Guns of different calibers were landed, transported up high hills, and mounted in commanding positions, the harbor and approaches mined, batteries placed, signal stations erected; in fact, everything was done which would have been required had actual hostilities been in progress. To further carry out the operations under war conditions, the fleet attacked the advance base, dragged for the mines, landed battalions of seamen, and made sham attacks—all the features that would be probably encountered in war time were tried and threshed out. The professional advantages thus gained by the officers and men were inestimable, and this was the first time that the practice had ever been carried out, though by no means the first opportunity afforded the Navy to have done so.

Three months after this landing of seamen and marines and advance-base drilling at Culebra, the same fleet and same men were called upon to land at Vera Cruz, Mexico, under really hostile conditions, and the excellent manner in which the work at that port was accomplished can in all probability be claimed as largely due to the experience and practice had at Culebra in January last. The landing at Culebra was the prelude of that at Vera Cruz. The taking of Vera Cruz was the repetition, under fire, of the landing at Culebra. In retrospect of Vera Cruz, I confess to a feeling of intense satisfaction that I went further than any of my predecessors in actually putting into practice the long-contemplated and long-delayed advance-base experiments.

I quote herewith an extract from the report of the commander in chief, Admiral Badger, giving his opinion of the beneficial results of the advance-base exercises at Culebra:

"The commander in chief believes that the joint exercises were of great benefit to the advance base expedition. Opportunity was given for exercise in the control of gun fire, both day and night, mine control, mine defense, operation of searchlights, exercise of signal parties, and tests of lines of communication; also exercise of the mobile regiment, including the landing gun batteries. Incidentally the experience gained by the fleet during these exercises was of considerable value, especially with respect to mine sweeping and landing the regiment. The destroyers received valuable experience in piloting and deserve much credit for able handling in the restricted waters about Culebra.

* * * * * * *

"Finally, the commander in chief desires to express his appreciation of the excellent work of the advance base brigade as a whole. In particular, commendation is due for their thoroughness of preparation, for the successful establishment of the base in the time allowed, in spite of serious difficulties encountered, and for the excellent disposition of the various features of the defense. The discipline and spirit of the brigade was admirable. The experience gained will be of the greatest value in the development of methods and material, and it is recommended that opportunity be given as often as possible for work of this kind, to include carrying out target practices. Incidentally the construction work done by the brigade this winter in the establishment of gun placements, roads, trenches, etc., will greatly facilitate the reestablishment of the base at Culebra, either as a peace exercise or for war service."

The work of the Atlantic Fleet, as regards great gun and torpedo practice, maneuvers, and exercises, is divided among several different periods throughout the year. Beginning about the 3d or 4th of January, after a Christmas leave period for all vessels, the fleet starts for Guantanamo Bay, Cuba, for the winter drill period, which lasts ordinarily until about the end of March. The program for this period includes war games, search problems, fleet and division battle exercises, full-power runs, standardization runs, torpedo-defense practice, torpedo practice, camping, small-arm practice, and general exercises with destroyers and submarines.

Immediately following this comes the annual spring target practice, which is held on the southern drill grounds beginning about the end of March and ending about the end of April.

Some time during May the fleet is again assembled at Newport or Provincetown for the summer drill period, and is engaged on the scheduled work for this period during the months of June, July, and August. This period includes war games, tactical exercises, fleet maneuvers with destroyers and submarines, preparation for autumn target practice, and, whenever practicable, joint maneuvers with the Army.

Following the summer period comes the first autumn target practice during the month of September; then comes the docking period, which is followed by a second autumn target practice.

Following the second autumn practice it is the custom to send the fleet by divisions for short cruise, at the end of which, about December 15, the vessels are sent to their home yards for Christmas leave and to prepare for the next year's work.

The various forms of target practice include elementary gun practice, elementary torpedo practice, night torpedo-defense practice, division battle practice, day individual battle practice, and battle torpedo practice. These various forms of practice are divided among the three target-practice periods, ships firing during their regular periods whenever practicable. Whenever it happens that a vessel is unable to fire during the regular period, because of necessary repairs or detached service, the practice missed is held at the next target-practice period, or, if possible, at odd times as soon as available.

In February, 1913, it became necessary to assign a part of the fleet to duty on the coast of Mexico, and vessels have been kept there since that time in such numbers and of such types as was demanded by this Government's interests.

In detailing vessels to this duty it has been the department's policy to assign battleships in groups of four and to have the various divisions alternate as far as practicable. By this means the detached service was distributed among all the vessels of the fleet as nearly equally as possible, and it was provided that while away from the fleet they would be in division units and organized for division drills and exercises. Except for about a month following the landing at Vera Cruz, vessels on duty in Mexico put to sea at frequent intervals for drills and maneuvers. It was the policy to maintain a "week-in-and-week-out" program, and the reports of the commander in chief and the division commanders indicate that this policy was generally carried out.

On April 14, 1914, the commander in chief of the Atlantic Fleet was ordered to proceed to Mexico, and all available vessels in the Atlantic were ordered to assemble in those waters under his command. The commander in chief arrived with the battleship fleet, the destroyer flotilla, and auxiliaries on April 22. By May 1 the following vessels had been assembled under the immediate command and supervision of the commander in chief:

Battleships: *New York, Arkansas, Florida, Utah, North Dakota, Michigan, South Carolina, Louisiana, Connecticut, Vermont, Minnesota, New Hampshire, New Jersey, Georgia, Virginia, Nebraska, Mississippi* (aviation ship).

Torpedo flotilla: *Birmingham* (tender), *Dixie* (tender), *Balch, Burrows, Drayton, Fanning, Henley, Patterson, Paulding, Reid, Trippe, Jenkins, Jouett, Monaghan, Terry, Warrington, Preston, Sterrett, Walke, Flusser, Ammen, Beale, Cassin, Cummings, Jarvis.*

Auxiliaries: *Celtic* (supply ship), *Hancock* (transport), *Prairie* (transport), *Solace* (hospital ship), *San Francisco* (mine layer), *Vestal* (repair ship), *Lebanon* (ammunition ship), *Yankton* (tender), *Cyclops* (collier), *Jason* (collier), *Nereus* (collier), *Orion* (collier), *Patapsco* (tug), *Patuxent* (tug), *Ontario* (tug), *Sonoma* (tug).

Cruisers and gunboats: *Montana, Chester, Des Moines, Tacoma, Salem, Dolphin, Nashville, Eagle.*

Chartered merchant vessels: *Esperanza, Mexico, Tampico, Morro Castle.*

The fleet organization of these 70 vessels consisted of the main battleship fleet of four divisions, the special-service squadron of two battleships, and the gunboats and cruisers under command of Admiral Winslow, who had arrived on the *New York*, the Atlantic torpedo flotilla, and a train made up of supply ships, repair ship, hospital ship, transports with advanced base brigade of marines, mine-laying vessel, ammunition ship, aviation ship, tugs, and tenders.

At the same time the Pacific Fleet was mobilized on the west coast of Mexico, where Rear Admiral Howard had under his immediate supervision 28 vessels, as follows:

Cruisers and gunboats: *California, South Dakota, West Virginia, Maryland, Raleigh, Denver, New Orleans, Chattanooga, Albany, Cleveland, Annapolis, Yorktown.*

Torpedo flotilla: *Cheyenne* (tender), *Iris* (tender), *Hopkins, Hull, Lawrence, Paul Jones, Perry, Preble, Stewart, Truxtun, Whipple.*

Auxiliaries: *Glacier* (supply ship), *Jupiter* (collier), *Justin* (collier), *Naushan* (collier), *Saturn* (collier).

Autumn maneuvers, 1914: During the period from about September 1 to October 15, as the vessels returning from Mexico became available they were docked and assembled under the new commander in chief,

Rear Admiral Fletcher, for fleet exercises and autumn target practice, and were kept together on the southern drill grounds off the Virginia Capes engaged in various fleet maneuvers and exercises until December 4. This period included two target practices.

Summarizing, the following facts appear:

First. All battleships in active commission have held the customary elementary target practice in the customary manner since July 1, 1911, and the Mexican situation has not interfered with this practice.

Second. In elementary torpedo practice only 1 battleship failed to hold it in the year ending June 30, 1914, and only 4 (2 of which were in Mexican waters) failed to hold it during the current year; while 10 battleships failed to hold it in 1913 and 5 in 1912—evidently since the beginning of the Mexican trouble this practice (elementary torpedo) has been held more thoroughly than prior thereto.

Third. In division target practice 3 ships failed to carry it out in the year ending June 30, 1912, 4 in 1913, 8 in 1914, and 4 during the current half year. Of these vessels failing to hold this practice, 2 only appear to have done so because of duty in Mexican waters in the year ending June 30, 1914, and the same during the current half year.

Fourth. In torpedo-defense practice 1 battleship failed to hold it for the year ending June 30, 1912, 3 in 1913, 7 in 1914. Of these 7 only 2 failed to hold it, due to service in Mexican and Haitian waters, the remaining 5 missing the practice, apparently, because of overhaul at navy yards.

Fifth. In battle torpedo practice 2 battleships failed to hold it during the year ending June 30, 1912, 4 in 1913, and 5 in 1914. Of these 5 only 1 was due to duty in Mexican and Haitian waters. The battle torpedo practice for the current year has not yet been held.

On the whole but very little interference with the carrying out of target practices with guns and torpedoes has been caused by the battleships being in Mexican waters, though such practices may not have been held on the schedule times desired, as before the Mexican conditions arose. The fact remains that the practices have been held anyway, with but few exceptions.

It has not been customary to hold target practices by ships in commission in reserve, and hence no account is taken of them.

To the periods of drills and maneuvers should be added the voyage of the fleet in the fall of 1913 to European waters, during which excellent opportunity was afforded for drilling and exercising the divisions of ships, as well as affording our officers and men the benefits of visits to foreign ports, the inspection of foreign ships, and association with foreign officers and crews, all of which is not only professionally instructive but tends to improve and increase the interest of our men in their love for the service in which they are engaged. The newspaper L'Eclaireur, of Nice, voiced the unanimous good opinion which obtained abroad when it said:

"Now that the fine American naval division is leaving us, we should like to place on record our admiration for the remarkably good behavior of the crews, not only on board their ships, where discipline is strict, but ashore. Altogether they behaved like gentlemen.

"Their bearing was irreproachable; their manners showed good education, and frequently rose above mere banal politeness. They taught us Frenchmen, who pay no heed to 'The Marseillaise,' a lesson when they stood rigidly at attention during the rendition of 'The Star-Spangled Banner.'

"Secretary Daniels, when he ordered the cruise, did more than he foresaw. He intended to educate the crews, but he also educated us by showing us such splendid ships and men."

Our fleet is to-day more numerous, better organized, of heavier tonnage and greater strength, more completely manned, and more intelligently served than ever before. The present Congress has contributed most generously and with wise discrimination to the steady, normal, and healthy expansion. I would remind the House that our modern Navy had its inception during the administration of Grover Cleveland while Hon. William C. Whitney was Secretary of the Navy. It was he who issued that drastic but sagacious order in which he said thereafter no dollar should be expended upon a wooden vessel. The foundations he laid were developed toward the completed structure by his successor during the second Cleveland term, Hon. Hilary A. Herbert, who, in commenting upon some of the strong language used in the discussion of naval affairs, recently said in a letter to Secretary Daniels:

I followed in the newspapers with deep interest the hearings before the Committee on Naval Affairs, and now have to thank you for an official copy, an examination of which has much impressed me with the knowledge you have acquired of naval affairs and the readiness with which you have been able to use it as occasion has demanded.

Your explanation of what the President meant by saying that the administration was not "nervous or excited" and your elucidation of the present status of the Navy and the program of the department were capital. The old maxim "Festina lente" never was more applicable than it is to our naval program now. But the horror of the war in Europe has swept many well-meaning people off of their feet, and there are even those who see political advantage in an attack on the Navy Department, because you have not asked for larger appropriations, but in my opinion you can afford to stand pat where you are. First, because sound public sentiment in this country demands that politics be kept out of naval as well as of foreign affairs; and, secondly, because now is precisely the time when we should keep cool and study carefully the lessons that are being taught by the war in Europe.

Let me reminisce a little. Thirty years ago the first Cleveland administration found that a modest but efficient beginning of a new Navy had been made under Arthur. The Democratic Naval Committee of the House at the session of 1885–86 reported a bill for quite a number of new ships. Tom Reed, the opposition leader, under the rules of the House, for a time successfully obstructed its passage. The bill was tacked on to an appropriation bill, points of order evaded, and it passed.

Mr. Reed later thought better of the matter, and never again, either under Cleveland or his successor, Harrison, was there any partisan opposition to naval appropriations. When I became Secretary of the Navy one of the first to congratulate me and tell me that he had written to President Cleveland urging my appointment was Nelson Dingley, of Maine, and during my administration of the department Senators Chandler and Hale and other Republicans of the Senate Naval Committee cooperated with the Secretary of the Navy as heartily as did the Democrats in the House committee. And there was no politics in naval affairs under McKinley or Roosevelt or Taft. Nor was there any in the discussions of the first bill under your administration, and beyond all doubt the orderly progress of the Navy for the last 18 months, as the hearings and your reports prior to the hearings clearly show, has been quite as rapid under you as it was under any of your predecessors. Under none of them was the Navy any better prepared for immediate war with a great power than now. All this the public will fully understand.

If the Navy is not to be made the football of politics, then should the Congress decide at this short session, just because there is a great war in Europe, on an extensive program of construction? We have already before us several lessons from this war about the efficiency of submarines, of contact mines, of fast fighting ships, of swift commerce destroyers, of long-range guns, and we have learned also something about aeroplanes and Zeppelins, but we do not know yet the relative values of all these or what are to be the decisive factors in the great naval war that is now on and that, before it is ended, will try out to the utmost every implement of destruction that human ingenuity has been able to devise.

If Congress now appropriates, no matter how many millions, it must specify the amounts for each item, the department must begin work upon each and all, and it may be that before the program is fairly entered upon it will become clear that grave mistakes have been made and much money is being wasted.

Twelve months hence we shall know better how much we should expend for naval construction and what to spend it for. Congressman GARDNER, in introducing his "searchlight" resolution, said he was convinced that the German cause was "unholy and a menace to the principles of democracy," and further expressed his belief that "the God of battles will visit defeat upon the Germans." If Mr. GARDNER is right in his opinion and his prophecy proves correct, German menace to our democratic institutions will be removed, and that important fact will be up for consideration in future appropriations. On the other hand, if Germany should win, even though her success should be a vast menace to America, no one can for a moment believe that, exhausted as the winner in this great war will be when it is over, our country would be in danger of immediate attack from that quarter.

I have no doubt of the wisdom of your construction program.

The country has again chosen a Democratic Congress. A Democrat resides in the White House and a Democrat is charged with the administration of the affairs of the Navy. With what satisfaction can we point to the zeal with which our naval problems have been studied and give assurance to the people of the land that the vital interests of their naval service are as safely intrusted in the hands of the present authorities as in the days when our Navy was regenerated under Whitney and Herbert! It may with truth be said that no advance nearly so great in personnel, material, or efficiency of the Navy has been made in many years as in the two years since the inauguration of Woodrow Wilson.

Education, Farm Demonstration, and Rural Credits.

I want to see the demonstration work brought to the farm and home of every farmer by competent and efficient men. This requires money investment, which I am sure can be made available through rural credits. It is necessary for our State, like many others, to increase its income in order to maintain its splendid internal improvements and other necessary expenditures for the various institutions of the State. I know of no better way to produce this income than the greater development of the thousands of acres of land not now producing to their utmost and of improving those other lands which are lying idle for need of attention and the expenditure of money.

EXTENSION OF REMARKS

OF

HON. J. CHARLES LINTHICUM,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. LINTHICUM. Mr. Speaker, I am deeply interested in the welfare of the agricultural work in our country. I feel that the success of our Nation largely depends upon the prosperity of the farmers. When we recognize the fact that the farmers added to the wealth of the land during the past year some nine billions of dollars, we can not but feel that the encouragement of this class of our citizenship is highly important.

SPEAK FROM EXPERIENCE.

I was raised in the country but, like thousands of other farm boys, drifted to the city in my early life, there to earn a living among the toiling masses and to carve out my career amid keen competition and never-ending toil. My father was a farmer—a progressive farmer; one who believed in constant enrichment of the soil, seed selection, scientific cultivation, farm machinery, drainage, and the application of ready cash to obtain the best and most economical results. To educate his eight boys and two girls was his great endeavor, and also that of my mother. To this end every wise economy was practiced and every available means employed.

Each boy in turn, when not in school, became a worker and later the assistant manager of the farm, and helped father conduct his large truck and berry farm with the numerous men and women necessary to its full development and efficiency.

Each was shown the bounds of the farm, taught the soil of the various fields—to what they were best adapted. Each in turn wrote the farm diary and kept the time book telling what had been done, who had worked, and what had been accomplished. This diary gave the yields from the various fields and by comparison with the record of previous years the best results could be ascertained; this not alone determined the best crops to plant but the best place to plant them and the most successful way to cultivate, and various other results only obtainable by such comparison.

When one is raised upon the farm and leaves it he is most likely some day to return to the soil. Such was my case. Ten years ago I, too, secured a farm in my native county of Anne Arundel, and adjoining the old home place, where I have since spent my summers with great pleasure and comfort and continued my farm work.

I mention these things, Mr. Speaker, both as a tribute to my father and mother as well as to show that I speak of farming not alone from the book but as one who in early life has had considerable practical experience. I have known the farmer in prosperity and in adversity, in sunshine and shadow. Though I have lived in the city for some years and have represented those of my adopted home for the past 10 years, I have never allowed my intense interest to cease in the occupation of farming, which my forefathers practiced as far back as I can trace.

FARM PROSPERITY.

To my mind, there are three things essential to enlarge the prosperity of our farming class:

First. The best possible school system, which should embrace vocational education.

Second. The constant application of farm demonstration and experimental work upon the farm and in the home.

Third. Rural credit or farm loans, to better enable the farmer to secure necessary capital at reasonable interest.

EDUCATIONAL SYSTEM.

That the States are now endowed with splendid educational systems is manifest to all. That through the cooperation of the educational officials of the various States and those of the National Government teaching is yearly becoming more efficient and more adaptable to the various people of the different sections. I feel that to properly educate the children we should endeavor to ascertain the occupation best suited to the respective pupils and to educate them along that line so that their work may become not drudgery but a pleasure. If the pupil be inclined toward the farm, he or she should be educated in such a way that their occupation may become a most agreeable and remunerative one. There are so many things in nature which we miss unless, when a pupil, our attention is called to them. I therefore believe that if we would have the children remain upon the farms it is necessary to incorporate in our school curriculum those subjects which will make them better acquainted with the products of the soil and those methods by which we may expect the best results. Nothing can be more interesting than the study of nature, and nothing more profitable to the tiller of the soil.

The National Government is endeavoring to encourage rural and industrial education—education in the home—education in civics and the principles of citizenship, by large appropriations expended by the Secretary of the Interior. The Government is endeavoring to encourage home and school gardening along practical lines in order that the pupil may receive that training which will function in the after life of the child.

I would like to see my own State adopt a plan for extending this work of the Federal Government by appointing rural school supervisors for every county in the State, whose duty it will be to keep in close touch with the teacher and also the people of the respective communities of the several schools, acquainting himself with the specific needs of every community and carrying this information to the teacher and giving her such aid and encouragement as will connect the work of the school directly with community life, thus making the school an important community center. Until this is accomplished our school system, as splendid as it is, will not be performing its full function as an important branch of the State Government.

FARM DEMONSTRATION WORK.

Farm demonstration work, which I have named as being one of the requisites necessary to make farming profitable and more enjoyable, is now being undertaken by the National Government and the States jointly, as also is demonstration to the women of the home in home economics and suggestions for greater comfort with less labor. Men are engaged, not alone in my State but in many States of the Union, in demonstrating to the farmer directly upon his farm the best methods to obtain the highest results. That we should undertake farm demonstration and home economics and comforts with a vim and energy never before displayed is quite evident to all. We have but to inquire into the vast increase of population in our country to see that there are many more millions of people to be fed, housed, and clothed than there were some years ago. When we read of a million or more immigrants who have come into our country each year for several years past, aside from the natural growth of our population, we must realize that these people must be fed, clothed, and educated, and their offspring, for ensuing years. To do this it is not only necessary to place under cultivation more acres of land, but it is necessary to get greater production from the acres now under cultivation and to show the women how to lighten their laborious work in the home.

I do not know what the average efficiency of the farms of other States may be, but when I say that my State, many parts of which are as fine as any section of the country, is producing only as a general average 48 per cent of what it should produce, we can readily understand that there is abundant room for farm demonstration and experimental work.

It is not my intention to go into the question of demonstration and experimental work to any great extent, because I believe the American people are aware of the fact that farming can be made easier and more profitable by scientific work rather than the old methods. What is the use of cultivating 100 acres when 50 acres can be made to give the same results with less labor?

Congress has appropriated for demonstration and experimental work during the past session about a million dollars, and with such an appropriation we should accomplish a vast amount of work during the present year. Scientific discoveries of the Department of Agriculture and the State agricultural colleges will be carried directly to the farmers. The system to be applied has been in force among the countries of Europe for many years and the results have been most wonderful. It is conservatively estimated by men who know the benefit of such work that the production of the farm can be made to double during the next 10 years. We can readily see what a great advantage this will be in the welfare of the country and in the prosperity and success of our farmers.

WASTE LANDS.

There are many acres of our State not cultivated to the extent they should be. Often from inexperience and lack of knowledge, and just as frequently from need of a little capital with which to carry on the work more progressively, there are thousands of acres in Maryland not under cultivation at all which if properly tilled would produce in abundance. Much of this land not now cultivated and not susceptible to cultivation is along the many rivers of our State. They are lowlands and by the expenditure of funds for drainage would become more productive perhaps than much of the best land now under culitvation. Not only are these marshlands not cultivated, but they are a menace to the public health. They represent soil gathered from the hills and valleys throughout their region. They are rich and fertile and should be made, under the farm demonstration work and under the drainage system suggested by the Government, to yield in abundance. I note that some of the marshlands along the Patapsco River have been brought under cultivation and the yield is very large. That many of these thousands of acres of land throughout our Commonwealth can, with the expenditure of a little money and proper cultivation, be made a source of splendid income is beyond doubt.

Now, Mr. Speaker, what I have said in reference to educational and demonstration work at this time I have said on several occasions before, but the theme upon which I desire to lay especial stress is rural credits.

RURAL CREDITS.

The term "rural credits" is generally used to designate any system of financial machinery whereby funds are furnished to meet the peculiar and special needs of the farmers upon such terms and at such a rate of interest as not to prove burdensome. Rural or farm credit is divided into two classes—long-term or land credit, which is briefly defined as "credit to meet the capital requirements of the farmer," and short-term or personal credit, which is briefly defined as "credit to meet the current or annually recurring needs of the farmer."

The Democratic Party, recognizing the necessity for rural credits, made it one of the planks in their Baltimore platform, which reads as follows:

> Of equal importance with the question of currency is the question of rural credits or agricultural finance. Therefore we recommend that an investigation of agricultural credit societies in foreign countries be made, so that it may be ascertained whether a system of rural credits may be devised suitable to conditions in the United States; and we also favor legislation permitting national banks to loan a reasonable proportion of the funds on real estate security.

As evidence that rural credit is highly necessary to the full prosperity of our land is the fact that in 1913 the farmers' indebtedness aggregated $6,000,000,000, upon which interest

charged amounted to $510,000,000. The cost of this money to the farmer, including commission, renewal charges, and interest, aggregated 8½ per cent, while in Germany and France the farmers obtain their money under a rural credit system at 4½ per cent. We have about 100,000,000 people in this country, so we behold that for every man, woman, and child there is a farm interest charge of over $5; as the consumer must carry the burden, the farm interest charge becomes of importance to all the people.

In Maryland we have about 49,000 farms, and of those owned in whole or in part by the parties operating them over 36 per cent are mortgaged, and statistics show that, including commissions, renewal charges, and so forth, this money costs the farmers of Maryland 8 per cent. It is quite evident, therefore, that something should be done in order to make money more available to the farmers of the country at a cheaper rate of interest.

We have allowed the industry of our farmers to lag behind the other activities of the country in its development, the very industry that is perhaps the most fundamental to the life of the Nation, because it is that industry which provides food for the people. The farmer, as has been well said, does not stand upon the same footing with the forester and the miner in the market of credit. He is a servant to the seasons, and nature determines how long he must wait for his crops, and will not be hurried in her processes. He may give his note, but the season of its maturity depends upon the season when his crops mature, and the security he has to offer is of a character not known in the broker's office and not as it should be on the counter of his native bank.

FARMERS DISCRIMINATED AGAINST.

Truly has it been said that the act of 1864 which established our banking system previous to the Federal reserve act provided for a commercial system. It was never intended to be and was not capable of being made to meet the needs of the farmer. It discriminated against him by prohibiting loans on real estate security. The effect was to place a ban on real estate as a basis of credit. This being the farmer's chief asset, the system absolutely discriminated against him in its operation.

The result has been that the farmer has been obliged to depend upon the factor, the merchant, and the money lender to obtain what accommodations he required and to make the best financial arrangements that he could, with the further result that high prices were charged him, enormous profits were made at his expense and burdensome interest charges and exactions were put upon him, and with the result, further, that his earnings were largely consumed in that way. His net returns were small, and with no prospect of growing larger.

Discouragement faced every young man growing up on the farm; hard work and the most meager remuneration were in store for him. It was impossible to improve rural conditions; there was no money with which to do it. No wonder occupying owners decreased in number and tenants increased, and a steady flow set in to the cites and towns. The greatest and most important industry of the country, the one upon which we all depend for our food, clothing, and shelter, was not merely neglected and left unprovided for, as far as our financial system was concerned, but was given a severe blow and discriminated against.

Strange to say, this has been continued all these years until the good year 1913 and until the passage of that great measure, to my mind unsurpassed in importance and benefits to the country by any law put on the statute books since the War between the States—the Federal reserve act.

FEDERAL RESERVE ACT.

The Federal reserve act provides for loans whereby the farmer may borrow from the bank for a term of years; but the truth of the situation is that the banks do not want to lend to the farmer. The banks depend for their profit upon the constant investment of their money. If all their money was loaned out in long-time loans, it would not be possible to pay running expenses and the proper dividends. The banking system as now established is evidently for the commercial, business, and financial interests of the land. While I say it is the best system ever adopted in this country and the finest piece of constructive legislation passed within the last 50 years, the fact still remains that even with the changes made in this system it does not serve the interest of the farmer, and the consequence is that not alone is it impossible for him to obtain money, but when he does obtain it it costs him a much larger rate of interest than it does the other pursuits of life.

The President of the United States recognized this fact and said in the newspapers that a rural-credit system should have gone hand in hand with the reform of our banking and currency legislation if we had been ready to act wisely and with full knowledge of what we were about. He stated a distinctive system should be provided for the farmers, and that he regarded such legislation as our next great task and duty. Europe has adopted farmers' credits throughout nearly every country, and to that it owes much of its prosperity and wealth to-day. It is the duty of Congress to so provide for agriculture in this country that the American farmer will continue self-reliant and productive and not to permit the burden of intolerable economic conditions force him to the last extremity before he is provided for through a financial system adequate to his needs.

FARM MONEY NECESSARY.

We have the splendid school system and the farm demonstration and experimental work has been provided by the necessary legislation and appropriations. What we now need and must have is a rural credit system granting the farmers loans for long or short periods, so that they may be invested in the proper development of the broad acres of the country along scientific and approved lines. Many farmers are supplied with funds or they are easily available, but the farmer whose land most needs development is the fellow to whom money is not available. It is this man we must look after, and through a rural credit system bring about the cooperation of the money lender and the borrower, thus forming a system mutually beneficial to both. Many men of money are to-day placing their funds in the savings institutions of the great cities, which in turn invest the larger portion in big corporations, whose interests are beyond the State, thus draining the rural sections of their capital. If we had a rural credit system, much of this money would go into its depositories and be invested in the development of the farms of the community, thus not alone improving the farm upon which it is expended but the neighborhood as well. We can not accomplish the great results attainable until we provide the farmers a financial system, just as we enacted the Federal reserve act for the commercial interests.

I believe that when the system is provided and the farmer can obtain the money for development and expansion we shall see an unprecedent improvement all over the country, and in order to compel an immediate provision for rural credits I shall vote against the agricultural conference report, which eliminates its establishment and provides a commission.

NEEDS OF MARYLAND.

I want to see the fertile and uncultivated acres of my State improved and occupied; the thousands of acres of lowlands drained and producing abundantly, as they are capable of doing. I want to see the demonstration work brought to the farm and home of every farmer by competent and efficient men. This requires money investment which I am sure can be made available through rural credits. It is necesasry for our State, like many others, to increase its income in order to maintain its splendid internal improvements and other necessary expenditures for the various institutions of the State. I know of no better way to produce this income than the greater development of the thousands of acres of land not now producing to their utmost and of improving those other lands which are lying idle for need of attention and the expenditure of money.

States, like individuals, have advanced in improvements and comforts. Better roads, State care of insane, larger and more commodious hospitals, better and more comprehensive school systems, sanitary and health regulations, and many other things which people demand. To meet the expenses of all these modern conveniences not only must our cities continue to expand and improve but every available acre should be brought under cultivation and greater efficiency procured. I believe with the enactment of a rural credit system and the constant application of farm and home demonstration and experimental work this can all be accomplished with hardship to none.

Munitions of War.

EXTENSION OF REMARKS

OF

HON. GEORGE M. YOUNG,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. YOUNG of North Dakota. Mr. Speaker, I desire to call particular attention to the highly commendable conduct of Mr. Charles R. Bryson, president of the Electric Steel Co., of Pittsburgh, who has for reasons of humanity refused to accept a $4,000,000 order for shells to be furnished to a foreign Government. Two other American concerns have recently turned down fat orders for war materials for the same reasons. And now comes John Stevenson, jr., Sharon, Pa., president of the

Driggs-Seabury Ordnance Corporation, who states that his company has turned down orders for millions of dollars' worth of munitions during the past four months. He says, according to press reports:

Agents of the Russian, French, and British Governments have for months past been trying to get the Driggs-Seabury Corporation to manufacture shells for them, but just as persistently as they have come the orders have been rejected. Our corporation will take no part in the bloody business. I am opposed to war on principle. The last time we made shells was eight years ago. I have since joined Andrew Carnegie's peace society, and have been an active member ever since.

It is far better to make things that are useful for mankind than it is to make things that destroy mankind. I would rather—far rather—that the Driggs-Seabury Ordnance Corporation never again make any article that might be used to destroy life. I am hopeful that this unholy and uncivilized struggle now going on in Europe will come to a speedy end.

Bloody business it is, indeed! Some manufacturers, with the excuse of giving work to the army of unemployed, have been reaping a rich harvest from war orders. Louis Noltimier, a leading Democrat of Valley City, N. Dak., makes an earnest appeal in a petition signed by himself and others:

The United States is practically the only highly civilized neutral Nation that is reaping blood-money profit from the sale of arms and ammunition to the countries at war. Neutral European nations, viz, Italy, Holland, Switzerland, Denmark, Norway, and Sweden, have laid embargos on the exportation of arms and ammunition, including copper and gasoline. This great Christian Republic of ours is allowing its factories to run at full speed to supply the warring nations with weapons. Every ounce thus shipped wounds to the quick Americans whose kin it is intended to destroy. We consider it national hypocrisy to pray for peace on Sunday and during the remaining days of the week make a profit from the sale of weapons whereby the frightful slaughter is prolonged. It appears to us as a crime against civilization, and we beg to have it discontinued.

Water Powers on Navigable Streams.

SPEECH

OF

HON. RAYMOND B. STEVENS,

OF NEW HAMPSHIRE,

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 24, 1914.

The House in Committe of the Whole House on the state of the Union had under consideration the bill (H. R. 16053) to amend an act entitled "An act to regulate the construction of dams across navigable waters," approved June 21, 1906, as amended by the act approved June 23, 1910.

Mr. STEVENS of New Hampshire. Mr. Chairman, power is the life of modern civilization. Unfortunately nearly every source of power in this country has been already turned over to private capital and to private ownership. We are largely dependent for our power upon coal, gas, oil, or water power. Nearly all our coal has become private property, nearly all our oil has become private property, nearly all our gas has become private property, and the greater part of our water power, both developed and undeveloped, has become private property, and the great benefit to the community of such natural sources of power accrue mainly to the owners thereof and not to the general public, because with any limited natural resource what fixes the price the public must pay is the demand and need for it, and not the cost of production.

We have left in this country some undeveloped water powers that are still in the control of the Federal Government. We have those which are located upon the public domain that have not yet been given away, and we have those which are located upon the navigable streams; and the question is what we shall do with those water-power rights that are still within our control, and that question is before Congress to-day, both as regards the water powers of navigable streams and those water powers located upon the public domain. We have the Adamson bill, dealing with the water powers upon navigable streams, and we have the Ferris bill, dealing with the water powers upon the public domain. I believe that the policy of the Government in dealing with these undeveloped water powers should be absolutely the same. There is no reason why a water power upon a navigable stream should be turned over to private capital without any compensation to the Government any more than there is why the water power upon a public domain should be turned over to private control without compensation. [Applause.] Furthermore, I believe under the recent decision of the Supreme Court in the Chandler-Dunbar case the Federal Government has the same full control and ownership, if it sees fit to exercise it, over the water powers upon navigable streams as it has over those in the public domain. It makes no difference what the source of the Federal control is, whether it comes from ownership or title to the land, or whether it comes through the power of the Federal Government over navigation. That makes no difference. If we have full control over the water power upon a navigable stream, we should exercise it in the same way and under the same general policy that we do over that which we own directly. The question is, Does the bill before the House as finally amended properly protect the public interest?

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. STEVENS of New Hampshire. Yes.

Mr. MADDEN. If I understood the gentleman correctly, he said that the water controlled by the Government where navigation is possible to be controlled under similar conditions to that exercised where we own the water on the public domain. Does the gentleman remember the fact that the House a day or two ago voted to authorize the use of water upon the public domain without any expense to the people who use it?

Mr. STEVENS of New Hampshire. No; I do not, for water-power purposes; and I do not think the gentleman from Illinois does, either.

Mr. MADDEN. Not for water-power purposes, but for the development of the land.

Mr. STEVENS of New Hampshire. Mr. Chairman, the question of the use of water for water power as against that used for irrigation is an entirely different matter, and I do not propose to be drawn into a discussion of reclamation or irrigation. I am talking about water power, and I say that the water power upon the navigable streams should be developed in the same way as the water power on a public domain, as far as the general public policy is concerned, and that we have the power to do it.

As I started to say, the question is, Does the bill in the final amended shape properly protect the public interests, and I think it is perfectly clear that it does not. This bill was drafted by men who believe that the Federal Government has no ownership or right in the water power on navigable streams. The gentleman from Alabama [Mr. UNDERWOOD] made a very able speech in favor of this bill, and he stated his position, which I believe to be the position of the chairman of the committee, in these words:

I believe that the beneficial use of a stream belongs to the riparian owners, subject to the laws of the State in which it is located, and that the Federal Government has no right to impose any charge or tax for the enjoyment thereof.

Mr. Chairman, that is not the opinion of the Supreme Court of the United States. The Supreme Court has decided otherwise. It has decided that there is no private ownership in the use of water power in the riparian owner, that the Federal Government has the right to put in any dams in aid of navigation, and that all water power developed by that dam belongs to it, and that it does not have to pay any private owner one cent for water-power rights. The Supreme Court held that the Government in that case took nothing away from the private owner which he had a right to. So, under this decision of the Supreme Court, we undoubtedly have a right to impose upon those men who develop a water power upon a navigable stream such terms and conditions for the public interests that we see fit, including an annual charge, rent, or whatever you may see fit to call it, for the use of the franchise.

I know there are many men here who differ with me upon this constitutional question, but I will guarantee that every man who differs with me upon the constitutional question of whether it can be imposed also differs with me upon the question of whether it ought to be done, and it is a very difficult thing to convince a man that it is a constitutional thing to do a thing that he does not want to do or believe in doing. Let me say to the men of this House who believe as a matter of public policy that the Government should get some revenue from these water powers that in my opinion, and in the opinion of very many able lawyers, backed up by the decision of the Supreme Court, we have the right to do so. This bill does not provide for the possibility of any revenue to the public for the use for 50 years of an irrevocable charter to develop water powers upon navigable streams. Neither is the public protected by the provisions of this bill that the rates and charges for power shall be subject to local commissions. There is no full protection to the public in that provision for two reasons. In the first place, the greater majority of these water powers will be developed and used for private manufacturing purposes and not for public-utility corporations. Mr. UNDERWOOD, in his speech advocating that the water power was a monopoly and should be regulated, said that he believed in regulation, and went on to say that these water powers would be used to run the factories and to run aluminum plants and to manufacture fertilizers. Every power used for private manufacturing purposes is without any regulation by the Federal Government, without any regulation by the State government, and they pay not one cent to the National Government for the use of this

franchise. The bill should be amended to conform to the Ferris bill or the public-lands bill and provide that an annual charge or rental should be paid by every power company which develops power under the provisions of this act. The gentleman says you can not get any private capital if you put in any such provision. I deny that statement.

The gentleman from Connecticut who spoke here this morning referred you to a much-needed development in his own State, the Windsor Locks, and said this bill was necessary in order to develop that project, and yet two years ago the Windsor Locks people, which was owned and controlled by the Stone-Webster people, made an agreement with Secretary of War Stimson by which they agreed to accept a bill, a charter, to develop this particular power, and in that bill was a provision for compensation to the Federal Government for the use of that power, and in that bill were better protections to navigation than are provided in this bill, and in that bill was a stricter requirement about compensation the Government should pay if it took it over than in this bill, so it is clear enough on the facts that there are some projects at least that could be developed in this country immediately even if this bill contains a provision for compensation to the Government. Now, not only does this bill fail to provide for any revenue for the public, but there are other important defects in the bill. A charter granted under this bill is said to last for 50 years, but as a matter of fact it is not true. The charter does not terminate at the end of 50 years. At the end of 50 years, unless the Government takes it over or should they manage to get some new legislation from Congress, the original grantees continue indefinitely to hold the charter under all the original conditions. The bill should be so amended that at the end of 50 years the franchise terminates absolutely, and at that time the Government should have the right to make a new lease under new conditions with the old grantees or any new grantees it sees fit, or it should have the right to take the property over on the payment of its proper legitimate value.

Mr. HUMPHREYS of Mississippi. Will the gentleman yield for a question?

Mr. STEVENS of New Hampshire. Yes.

Mr. HUMPHREYS of Mississippi. Is it not a fact that all of these companies that are created for 20 or 30 years provide a sinking fund out of the receipts for the payment of the buildings, for buildings and appurtenance work?

Mr. STEVENS of New Hampshire. Well, I think those that are well managed do.

Mr. HUMPHREYS of Mississippi. As a matter of fact, the public has paid for everything they put up before the 30 or 50 year lease has expired.

Mr. STEVENS of New Hampshire. Well, I do not know whether under the provisions of this bill corporations would have a sinking fund and depreciation charge large enough to cover the full cost of the plant. Probably they would not, since under the bill they are certain to receive back from the Government or any other grantee the replacement value.

Mr. HUMPHREYS of Mississippi. That occurs to me as an important fact, whether they will or not. Now, I have understood in actual practice that before they can finance one of these enterprises they must arrange for a sinking fund sufficient to pay for the investment in machinery and in appurtenance work, and so forth, in order to get their bonds floated.

Mr. STEVENS of New Hampshire. Of course, before they can float their bonds and securities they have to show that they have a net income large enough not only to pay a reasonable dividend, but to provide for the depreciation of the plant and have a surplus for contingencies. I do not think it would be necessary under this bill that they should have a fund large enough to pay for the original cost of the plant.

Mr. HUMPHREYS of Mississippi. I did not mean under the bill, but I mean under the practical operation of these enterprises. Is it the opinion of the gentleman that they would have to lay aside a sufficient sinking fund to pay for all that would be left, and also that the Government should be required to purchase at the end of the time?

Mr. STEVENS of New Hampshire. I think the gentleman will find that these successful well-managed projects which have been developed heretofore have actually done that—not only paid a dividend but have accumulated a surplus and sinking fund to cover depreciation.

Mr. HUMPHREYS of Mississippi. Will the gentleman just yield a second longer? I understand the argument is frequently made that if we take the property at the expiration of the time without compensation that the practical result of it will be this: That the people who use the facilities up to the time the lease terminates will pay more in order that the company might provide a sinking fund, while the Government, thus getting this property for nothing, will be able to sell power subsequently at a less rate, so we pay more now in order that those who come after us may pay less. It occurs to me there is force in that contention.

Mr. STEVENS of Minnesota. Will the gentleman yield at that point?

Mr. STEVENS of New Hampshire. Let me answer the gentleman.

Mr. STEVENS of Minnesota. Before the gentleman answers that I would like to ask the gentleman this: Has the gentleman read the testimony before the National Waterways Commission that was before our committee in the consideration of the bill on that point, that it is not good practice now among the best companies to amortize in the way stated by the gentleman from Mississippi, and that it is not done?

Mr. STEVENS of New Hampshire. Well, it does not make any difference whether that is done or not about the old projects under this bill. They are sure to receive the physical value of the plant back at the end of the 50 years, and of course they would not have any sinking fund to cover that.

Mr. FESS. Will the gentleman yield?

Mr. STEVENS of New Hampshire. Yes.

Mr. FESS. As I understand the gentleman, his idea is at the end of the 50 years the Government should not be compelled to take over if it chooses to select to continue the contract and not upon the same terms.

Mr. STEVENS of New Hampshire. It should have the right to make new terms and conditions. What conditions will exist 50 years from now no man can foresee.

Mr. FESS. In other words, there may be new developments in other lines which you can not see now that would make it entirely different in the requirements?

Mr. STEVENS of New Hampshire. Yes. And I would like to point out further that regulation by public-utility corporations is not a protection to the public. That is, it does not follow that the rates will be held down to a fair return on the fair value of the property, and it is not true in all instances, by any means, that any tax charge put upon these corporations would be transferred to the consumers. In those parts of the country where there is a big demand for power, where there are large manufacturing plants, in big cities, the possible water-power development will not supply the whole demand. We shall still have to rely, as we do now, very largely upon coal and other sources for power and light. And where you have several different sources of power supplying the same market, regulation will only mean that the business will be fixed at the point where the one that it costs the most to produce can live. You certainly can not have different rates in the same community for the same service, and if you must rely on two different sources of power the rate must be high enough to allow the most expensive one to live. Now, that is a matter not only of theory, but it is a matter of fact. In New England, where there is a big demand for water power, it is coal that fixes the price of water-power development, and the engineers and promoters that are back of any scheme to produce water power figure to a cent what it will cost to produce power by coal. As we are a long way from the coal field, the price of coal is high. The margin between the cost of production by coal and the cost of production by water power is capitalized, every cent of it, and you will not find any water power in New England or in any other part of the country where those conditions prevail that does not have to-day as much watered stock as it has bonds. That is the usual method of financing these corporations. Therefore there is no danger that you would put upon the public the cost, the added expense, of an annual charge or an annual rent under those conditions.

Mr. LINDBERGH. Will the gentleman permit a question?

Mr. STEVENS of New Hampshire. I will.

Mr. LINDBERGH. Would that be true in all localities?

Mr. STEVENS of New Hampshire. It would not. In localities like some of the western localities, like Montana, for instance, where there is a great deal of undeveloped water power, and where it is thinly settled, that would not be true at all.

Mr. LINDBERGH. One more question, please. If the principal is to revert to the Government at the end of a certain period, will it not be necessary, in determining the reasonable cost of the service, to take that into consideration and make the present consumers pay more? I simply ask that as a question.

Mr. STEVENS of New Hampshire. No.

Mr. LINDBERGH. If the original principal is to be wiped out at the end of, say, 50 years, necessarily some time during that 50 years it will have to be returned to the parties making the investment?

Mr. STEVENS of New Hampshire. If the Government takes it over at the end of 50 years, they should pay the owners a

fair value of the property. I am not contending for forfeiture to the Government.

Now, there is another serious objection to this bill, and that is as to the conditions under which the Government may take it over at the end of 50 years. In section 10 it provides that the United States may take it over upon giving certain notice, and that it shall pay for all the transmission plant, and also "all other property the value and usefulness of which would be destroyed or seriously impaired by such termination." Now, I consider that a very dangerous phrase. The only property which the Government should be compelled to take over is the dam, the power plant, and the transmission lines, and if the same corporation developing the power also used it itself in manufacturing plants or in public utility corporations, the Government under this bill would have to take over all the property which used the power. That would mean that the Government in some instances would have to take over manufacturing business, public utilities, and all kinds of business. That section should be stricken from the bill.

What should the Government pay to these people at the end of 50 years? I believe they should pay the physical value—the replacement value—of the plant, minus the depreciation; and for all land acquired, all easements, and all rights of way they should not pay sums in excess of the original cost to the grantees.

This bill will compel the Federal Government to pay for the unearned increment—the increased value—of all land, all easements, all rights of way, all property which it has acquired in connection with the business. In many States power corporations have the right by eminent domain to flow lands. They have the right of eminent domain, and by grant of franchise have easements, rights of way for the transmission lines; and this bill proposes to give the private companies all the unearned increment that may have accrued at the end of 50 years. I believe if they got back the actual cost to them of right of way and flowage rights to land that it would be just and fair to them and just and fair to the public.

Mr. KENT. Will the gentleman yield?

Mr. STEVENS of New Hampshire. Yes, sir.

Mr. KENT. I wish to ask the gentleman if he understands that in the cost charged consumers there is ordinarily put in a cost for amortization? I have always understood that these power companies put in a cost of amortization in canceling their indebtedness at certain times.

Mr. STEVENS of New Hampshire. I have known some that did. The gentleman from Minnesota [Mr. STEVENS] says that at present, however, that is not the policy of a great many of them.

Mr. KENT. I will ask the gentleman, if they do that, do they not charge the public twice?

Mr. STEVENS of New Hampshire. They certainly charge the public twice under those conditions.

The only interest of the Federal Government—the only interest of the general public—which this bill really pretends to protect is navigation. The gentlemen who drew the bill, the gentlemen who have defended the bill, are men who believe the Federal Government has no right to demand any compensation. They are men who believe that the riparian owners own the water power, subject to State laws and the Federal power over navigation.

Navigation is the only interest which this bill, in my opinion, will protect; and yet the rights of navigation are not fully protected under this bill. Under the present dam law any grantee of a franchise from the Government must put in such locks and aids to navigation as the Secretary of War or Congress may decide are necessary at any time. In this bill the company is only bound to put in those locks and aids to navigation which the Secretary of War shall decide are necessary before the project is begun, and that is good for 50 years. So that if it is necessary at any time during the life of this charter to enlarge or improve the aids to navigation, the Federal Government must do it at its own expense.

Mr. Chairman, this controversy over the water powers on navigable streams has been going on for some 8 or 10 years. President Roosevelt vetoed bill after bill, special bills, on the ground that the terms and conditions did not properly protect the public interest. President Taft continued that same policy. We have here a general dam act which is supposed to settle this question, and, unfortunately, it does not maintain the standard set by Mr. Roosevelt or Mr. Taft. We propose in this bill to turn over for 50 years, beyond the power of Congress itself to repeal or alter or amend, the use of the water powers upon the navigable streams of this country without the possibility of one cent of revenue or compensation to the people of the country, only upon the condition that they shall put in such locks as the Secretary of War shall deem necessary to-day, and the further condition that the local State commissions shall regulate the charges when that power is used in public-utility corporations alone.

As one interested in conservation, I regret exceedingly that this bill in this shape is urged upon this House. Furthermore, as a Democrat, I sincerely regret that this is the bill that is put forth here as the embodiment of Democratic ideas on the subject of conservation, because, say what you will, this bill surrenders the interests of the public in the water powers on the navigable streams of this country under such terms and under such conditions as the water-power people want and have asked for. [Applause.]

The CHAIRMAN. The time of the gentleman from New Hampshire has expired.

Mr. STEVENS of New Hampshire. Let me say, then, in closing—will the gentleman from Georgia give me a moment?

Mr. ADAMSON. I regret that all the time is allotted.

Mr. STEVENS of New Hampshire. Will the gentleman from Minnesota give me a moment?

Mr. STEVENS of Minnesota. I will yield one minute to the gentleman.

The CHAIRMAN. The gentleman from New Hampshire is recognized for one minute.

Mr. STEVENS of New Hampshire. There were just two hearings had before the committee and only two people appeared. Not a single person appeared before that committee in behalf of the interests of the people; not a single thing was said before that committee in favor of the interests of the people of the country. It is a water-power bill, wanted by water-power people, and urged and written by the people who believe that the Government has no water-power rights to conserve in the navigable streams, who believe that the water powers in those streams belong to the private owners in the States. I believe that the water powers belong to all the people of the country and should be developed for the public benefit and not solely the profit of private capital.

Closing of Cypress Creek Gap.

EXTENSION OF REMARKS

OF

HON. WILLIAM S. GOODWIN,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 19, 1915.

Mr. GOODWIN of Arkansas. Mr. Speaker, I desire to submit herewith a copy of the testimony given by Judge Harry E. Cook, of Lake Village, Ark., county judge of Chicot County, and Mr. C. Warfield, of Readland, president of the levee board in that county, before the Committee on Rivers and Harbors of the House.

The gentlemen are from my district, and they are well qualified to speak concerning the levee conditions in Arkansas from intimate personal knowledge of the facts. The testimony was not printed by the committee.

MISSISSIPPI RIVER LEVEES IN DESHA COUNTY, ARK.

COMMITTEE ON RIVERS AND HARBORS,
HOUSE OF REPRESENTATIVES,
Saturday, December 12, 1914.

The committee this day met, Hon. S. M. SPARKMAN (chairman) presiding.

The CHAIRMAN. Gentlemen of the committee, we are to hear first this afternoon from some gentlemen whom Mr. GOODWIN desires to introduce regarding improvements in Arkansas.

Mr. GOODWIN. Mr. Chairman, I will first present to the committee Judge Harry E. Cook, present judge of Chicot County, and then Mr. C. Warfield, of Readland.

The CHAIRMAN. We will be glad to hear Judge Cook.

STATEMENT OF JUDGE HARRY E. COOK, OF LAKE VILLAGE, ARK.

Mr. COOK. Mr. Chairman and gentlemen of the committee, I beg to assure you that I will not occupy more than 15 minutes of your time.

I understand Mr. GOODWIN has already presented the matter in which we are interested to the committee, but that he thought I might be able to give the committee a little more detailed information, since I am more familiar with the details of some phases of the proposition than he is. I wish the members of the committee to understand that the project for which we are speaking has been favorably reported by the Mississippi River Commission. They have said it should be completed as rapidly as possible, but that they did not have the appropriation with which to complete it. We think it is an urgent matter, and what we are seeking is an appropriation in order that the project may be completed as soon as possible. The Mississippi River Commission reported in favor of the project and its completion in their reports of 1912 and 1914. You will understand that there is a continuing line of levees in

the levee system on the Mississippi side of the river. On our side near the Arkansas River there is no levee for part of the distance on account of the high banks, and that leaves a gap on the north bank of the Arkansas River.

When you reach the south bank of the Arkansas River you still have a high bank for part of the way. The town of Arkansas City is located 18 miles below the mouth of the Arkansas River on the Mississippi River. The records show that when the Mississippi reaches a stage of 50 feet on the Arkansas side the water backs up the Arkansas River and the other rivers in that vicinity, in Desha and Chicot Counties, and the backwater floods the lands in those two counties, both north and south of the Arkansas River. Then they began building a levee at the mouth of the Arkansas River, and also built one at the mouth of Boggy Bayou. Then they built a levee along the south side of the Arkansas River for several miles, coming within 2½ miles of Cypress Creek. Then they brought the Arkansas River levee down. That was in 1912. At that time they brought it down to station 953. During the present year they have continued the construction until now there is a gap of about 2½ miles left open. When the water rises to the 50-foot stage at Arkansas City it backs up the Arkansas River and runs through this gap and comes down through there and submerges these two counties. In 1912 our levee broke, and there followed the most disastrous flood during that year.

That levee was rebuilt, but in 1913, with all our levees holding, Arkansas City had 1 foot more water by reason of this spillway than in 1912, with the levees breaking. In the town where I live, Lake Village, we had 6 inches less water. In the southern end of the county they had 9 inches less water.

We do not ask that the entire distance of this gap be closed, but we do ask that it be brought from the present station 973 to the high bank of Cypress Creek, and you will find that this is advocated in the report of the Mississippi River Commission. They advocate that Desha and Chicot Counties prepare their drainage district and close up the matter. With a gap left open of only about 200 yards wide we believe that the natural streams in our county will carry that water along pretty well so that only the extremely low lands will be submerged. It will not flow over the highly cultivated lands, as it did in 1913.

We think that the engineers' report which we have from the Vicksburg office will show that the approximate cost of that work would be $210,000. But the contracts that have been let in the last three months show that they have been let at less than 50 per cent of the contracts of two years ago. Some have been let as low as a third of what it cost to build levees under normal conditions.

The CHAIRMAN. How much are you asking for?

Mr. COOK. We will be satisfied with $125,000.

The CHAIRMAN. That is under the jurisdiction of the Mississippi River Commission?

Mr. COOK. Yes, sir; they are to do the work.

The CHAIRMAN. We are making a lump-sum appropriation for them to do their work, leaving it to their discretion as to what work should be done.

Mr. COOK. We look upon this as an emergency proposition, and I think I can demonstrate to the members of the committee why the Congress should make an appropriation for this project.

Mr. EDWARDS. We appropriate a lump sum for all the work up and down the Mississippi River, and leave it to the Mississippi River Commission to determine, in its discretion, where the money shall be spent. However, I am sure we will be glad to hear you, although it looks to me as if your argument ought to be presented to the Mississippi River Commission.

Mr. COOK. It probably will be presented to the Mississippi River Commission.

The War Department records of 1913 will show that the Government expended there for food and supplies for the purpose of taking care of the people something like $600,000. As soon as you have another flood the same thing is going to occur again, whereas, if this gap were closed, you would not have to spend that money to take care of those people.

Mr. EDWARDS. Has this ever been presented to the Mississippi River Commission?

Mr. COOK. I do not know.

Mr. EDWARDS. It appears to be a very meritorious proposition, but it seems to me it is a question whether this committee will undertake to take it out of the hands of the Mississippi River Commission.

Mr. COOK. We do not ask that. All we ask is that this committee will appropriate an amount sufficient to enable the commission to go ahead and finish the work as quickly as possible. The members of the commission say that they have not the money with which to do it.

Mr. EDWARDS. They have the funds with which to do it if they think it ought to be done and think it is necessary.

Mr. COOK. Under the present situation all our mail routes are disarranged. It is now necessary to carry the mail 14 miles out of the way because of this condition, and that would be saved if this gap were closed as we suggest. In 1912 you spent millions of dollars around there, and practically the same thing resulted in 1913.

The CHAIRMAN. One of the reasons why we do not interfere in these cases with the Mississippi River Commission is because the commission is pursuing a certain line of policy. That line of policy includes the securing of local contributions; by inquiring among the people they ascertain how much they can put up in a given case, after which they determine how much money the Government ought to put into that particular project. That is one reason why we do not like to take such matters out of the jurisdiction of the commission.

Mr. COOK. We do not ask that. We thought if this committee would give the commission the sinews of war they could then go ahead and finish the work, rushing it through.

All this property which is now submerged is now paying a 4 per cent levee tax, a tax of 4 per cent on every dollar's worth we have. But if we are going to be submerged right along we will soon not have any property left on which to pay the tax.

Mr. HUMPHREYS. The people living around the Yazoo River and in that district are troubled every year in very much the same way from the water that backs up into the Yazoo River.

Mr. COOK. We are not asking that this be closed entirely. We are asking that a 200-yard gap be left open there, feeling that we can take care of that water with our natural streams. Of course, we expect to dig a drainage canal.

Mr. HUMPHREYS. How far up the Arkansas River has the Mississippi River Commission already built its levees?

Mr. COOK. About 20 miles.

Mr. HUMPHREYS. Who builds the Arkansas River levees?

Mr. COOK. The Mississippi River Commission and the local boards together.

Mr. HUMPHREYS. How far up does that extend?

Mr. COOK. It comes down.

Mr. HUMPHREYS. Where does it come from?

Mr. COOK. It starts at Red Fork and comes south, and comes within about 2¾ miles of joining the levee extending down.

That is our situation. If you can help us we will appreciate it.

STATEMENT OF MR. C. WARFIELD.

The CHAIRMAN. What reasons do the Mississippi River Commission assign for not doing that work?

Mr. WARFIELD. They claim they have not the funds with which to do it. They recommend that it be done, but for some reason their funds have not been able to reach that particular spot and bring the levee down to where it should be.

The CHAIRMAN. They work above and below?

Mr. WARFIELD. They work above and below; yes, sir; and this 2-mile stretch, it seems, is left open on account of lack of funds, although they have levees on both sides of the river.

The CHAIRMAN. I am under the impression that we will furnish at this session of Congress a reasonable amount of funds to carry on that work. We do not know how much there will be in the bill for the Mississippi River Commission to expend, but I have no doubt there will be something in the bill, and I expect that in due time, when they reach that place, they will spend some money on it.

Mr. WARFIELD. This, of course, is more expensive work than the enlargement work, and we feel that this ought to be done first and that there should be enough funds in the hands of the commission to extend this levee down to the banks of that creek and then proceed with the enlargement work as a part of their project. If the funds were available we feel sure they would do it. The Chief of Engineers approved the project and said the work ought to be finished.

Mr. GOODWIN. We have had this matter before the Mississippi River Commission, and they always claim lack of funds.

The CHAIRMAN. I suppose they mean they did not regard this particular work as of as much importance as some other work. In 1912 they had three or four million dollars and, I think, the next year they had five or six millions. In the last bill they had a little over $3,000,000.

Mr. WARFIELD. We will thank you for anything you can do for us. We feel that this is an emergency proposition and that the work ought to be done without delay.

Mr. GOODWIN. I am obliged to you, Mr. Chairman and gentlemen of the committee, for your courtesy in giving us this hearing.

Pipe Line from Oklahoma to the Gulf.

EXTENSION OF REMARKS

OF

HON. CHARLES D. CARTER,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. CARTER. Mr. Speaker, under leave to print I desire to have published in the DAILY CONGRESSIONAL RECORD house concurrent resolution No. 17, by Hunter and Sykes.

House concurrent resolution memorializing the Congress of the United States to appropriate $10,000,000 to build a pipe line from Oklahoma to the Gulf.

(By Lewis Hunter, of Comanche, and Sykes, of Tulsa.)

Whereas the construction and operation of a pipe line from Oklahoma to the Gulf of Mexico is feasible and borne out by the following facts:

First. That Oklahoma is the greatest high grade oil producing area in existence and is without available marketing and transporting facilities;

That the monopolistic tendency of the Standard Oil Co. to control the pipe lines and production has paralyzed the independent producers;

That the said Standard Oil Co., through their pipe lines and monopoly, have from the first discovery of oil in Oklahoma wielded such powerful influence that it has obstructed, prevented, and discouraged every attempt or semblance of competition;

That the independent oil producers and royalty owners must depend upon the interstate pipe line of the Standard Oil Co. to carry their oil products to the markets of the world, which places them entirely at the mercy of the czar method of fixing the price of their product;

That it would relieve the Indian wards of the Government, who are robbed under the present system for lack of adequate market for their royalties;

That under the present system the pipe-line companies are crushing the life out of the independent producers in the face of a world-wide increased demand for both crude and refined oil;

That the Government is a large consumer both of crude and refined oil, and with a pipe line, under present congested conditions, would be able to lay up a supply for any emergency that might arise, thereby extending relief to 65 per cent of the oil producers of Oklahoma who are unable to operate their properties during present period;

That the investigation made within the last year by the Secretary of the Interior and the Secretary of the Navy bear voluminous evidence of the titanic oil fields of Oklahoma: Be it

Resolved by the House of Representatives of the State of Oklahoma (the senate concurring), That the Congress of the United States be, and the same is hereby, earnestly memorialized and requested to make an appropriation of $10,000,000 for the building of an oil pipe line to the Gulf of Mexico: *Provided*, That the money appropriated for this purpose shall be repaid in 10 annual payments from a tax levied on each barrel of oil transported through said pipe line; be it further

Resolved, That a copy of these resolutions be forwarded at once to the Speaker of the House of Representatives, the President of the Senate, our Representatives in Congress, the Secretary of the Interior, and the Secretary of the United States Navy asking their indorsement.

Adopted by the house of representatives February 26, 1915.

A. MCCRORY,
Speaker of the House of Representatives.

Adopted by the senate March 3, 1915.

M. E. TRAPP,
President of the Senate.

Retirement Pension for Civil-Service Employees.

EXTENSION OF REMARKS

OF

HON. JAMES A. HAMILL,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. HAMILL. Mr. Speaker, for a number of years I have advocated in this House a plan to provide a retirement pension for civil-service employees. I have favored the straight pension, whereby the entire cost of pension is borne by the Government, as opposed to a contributory plan, according to which the cost of the pension is divided between the Government and the employee. I believe the straight-pension plan is the more advantageous of the two, both from the standpoint of the Government and that of the employee.

I wish to insert in the RECORD a memorandum on the subject of retirement pensions in accordance with the provisions of my bill. This memorandum has been prepared for the National Association of Civil Service Employees by Mr. Miles M. Dawson, a learned and well-recognized authority on the subject.

The memorandum is as follows:

The association contends that retirement pensions should be granted outright—i. e., without requiring civil-service employees to contribute the whole or any part of the cost of providing the same by deductions from their salaries or otherwise—in support of which, through their counsel and actuary, they present their statement and argument, as follows:

I.—IT IS MOST DESIRABLE THAT PROVISION BE MADE FOR RETIREMENT AND FOR SUPPORT OF SUPERANNUATED EMPLOYEES.

That it is desirable to make provision for the retirement of employees in the civil service and for pensions to support them when superannuated is clear upon the following grounds:

1. THE PUBLIC INTEREST IS THUS BEST SERVED.

The best service will be secured by the introduction of a proper retirement pension system through securing thereby a better class of applicants for civil-service appointments, through a larger number of the best appointees resisting financial inducements to quit the service, and through the much stronger inducement to render satisfactory service in that dismissal will involve not merely cessation of salary but also loss of pension.

That such may confidently be expected to result is shown by the unanimous testimony of all experts upon the subject and of all who have had experience with persons working under such a system; and it is also borne out by the facts in countries which have adopted such a system, as is well known to all students of the subject.

In our own country the experience and practice of large corporations which have adopted pension plans also bear witness to this; and public systems of providing pensions for superannuated fire department, police department, and school employees are everywhere appreciated, and every step taken or proposed is toward, not their abandonment, but their perfection.

2. IT RESULTS ALSO IN THE MOST ECONOMICAL SERVICE.

The best is always likely to be the most economical. If the improvements in quantity and quality of service amount to from 2 per cent to 4 per cent (depending somewhat upon when one enters the service) of the salaries of all employees or 7½ per cent of the salaries only of employees who persist in the service until retirement age or prior death, they will more than offset the cost of pensions even on a very liberal scale.

There will also be great savings by disencumbering the service of the load of elderly, ailing employees who are now the subject of much complaint by heads of departments and whose service, often deteriorated in quality, is always more and more defective in quantity as old age overcomes them.

3. IT IS DEMANDED BY DICTATES OF COMMON HUMANITY, RECOGNIZED THE WORLD OVER.

The claims of employees who have grown old and infirm in the service to support during their declining years are unescapably recognized by every man with a conscience and a heart, be he acting as an individual or as officer of a government or corporation. The man who would turn a domestic servant out to die in the poorhouse after a lifetime of faithful service would be justly condemned. That this applies in business also is every day more and more recognized by individuals, firms, and corporations either by just taking care of them by means of light employment or gifts or by a pension system.

In the Governments of the world this obligation has also come to be generally acquiesced in. Our own Government is almost the only one in a civilized country which has not done so openly by providing pensions. Our failure to do so hitherto has been due chiefly to the following reasons:

1. The rapid growth of our civil service, especially in recent years, has somewhat obscured the need for pensions, because the proportion of old to young employees has by the vast number of new appointments been low.

2. The system of partisan appointments as a reward for political service for a long time caused them to be looked upon as lucrative "jobs," without much regard for fitness or value of service, and often only as stepping-stones to other political preferment; i. e., temporary employment.

3. The legislative and administrative functions have been so separated that not always have the administrative responsibilities rested upon Congressmen so as to create a true and keen sense of duty in this matter, as witnesses their strong disposition, both creditable and natural, to make special provision on occasion for old and faithful congressional employees whom they know and love while neglecting the duty of making suitable general provision for employees in the civil service whom they usually do not know.

4. The awkward, largely ineffectual, and always costly and inadvisable subterfuge to which the chiefs of all administrative departments perforce resort—viz, retaining on the pay roll the superannuated employees until actually so feeble as to be unable to come to work at all—has veiled and obscured the necessity for retirement pensions. It is not too much to say that if Congress were to-day to require the dismissal of every civil-service employee over the age of 65 on July 1, 1914, the distress occasioned by this inhuman but for the service salutary and businesslike proceeding would permeate the entire country and every Member of the House and Senate would hasten the passage of an act granting proper and reasonable service pensions.

Indeed, whenever now the head of any department is hard-hearted enough to attempt this in a small way, it is well known that he is besieged by Congressmen and Senators seeking to protect the friends of voters residing in their districts, and not infrequently their own friends for whose appointments they were sponsors.

5. It is distinctly discreditable that the greatest popular Government of the world should be behind others in a matter of justice to the plain people while so ready to pension for naval and military service, Presidents' widows, and others.

All the great civilized countries of Europe provide pensions for civil-service employees; among the great nations of the world we are alone in neglecting it.

It may be argued that salaries and wages are better here; but so also are both cost of living and standard of living.

Moreover, that salaried employees will, in the nature of things, both save on the average and in the aggregate less than the self-employed, and also invest it less safely and wisely, is perfectly well known and is borne out by human experience everywhere.

There are certain to be many such who reach senile incapacity in no condition financially to provide for themselves and for those who may still be dependent on them. The question is squarely before Members of Congress: Shall these old and faithful servants of the American people be supported by the people of the United States in honor, or shall they be supported by the same people as supernumerary burdens upon the civil service, for reason shows and experience proves that they will be supported by us, and that not in almshouses?

To that question there can ultimately be but one possible answer: Provision will be made by the people of the United States for the honorable retirement upon moderate pensions of old and faithful civil-service employees.

II.—THE PURPOSES TO BE SERVED BY A CIVIL-SERVICE RETIREMENT PENSION PLAN.

1. TO SECURE BETTER SERVICE.

It is confidently expected that to grant retirement pensions will cause a better class, on the whole, to enter the civil service, will encourage the better of them to resist offers of larger salaries outside, and will cause more and better service both by increasing their satisfaction with the employment and by making dismissal mean not merely cessation of salary but also loss of pension. Such is the road to increased efficiency.

2.—TO ECONOMIZE IN THE COST OF THE SERVICE.

Unquestionably there is yet a strong tendency for the civil service to attract chiefly those men who would earn smaller incomes in other employments, though there has been much improvement in this regard, and such are also often dropped from the service.

That retirement pensions will be granted is a strong inducement to precisely those prudent, capable men in every community who would prefer to render acceptable public service for moderate pay rather than engage in business or a profession for a considerably larger emolument. This is not mere theory, but that it has taken place in every country where pensions are granted is attested by those who know the facts.

Such is true economy.

3.—TO SECURE GREATER PERSISTENCE IN THE SERVICE.

It is obvious that it is bad, from the standpoints both of efficiency and of economy, to train a man in the civil service only to lose his services as soon as he really knows his business. This can never be entirely avoided, as the Government will not often compete, of course, with private employers for the services of particular persons; but it can be avoided to a very large extent if the reward of long and faithful service be a retirement pension, for in such case all who definitely prefer public service will remain.

4.—TO RELIEVE THE SERVICE OF EMPLOYEES WHOLLY OR LARGELY INCAPACITATED BY OLD AGE.

That this is a desideratum requires no argument.

Any so-called retirement or pension plan which fails to accomplish these ends can not be deemed satisfactory.

III.—WOULD A PLAN OF VOLUNTARY SAVINGS TO PURCHASE OLD-AGE ANNUITIES ANSWER THE REQUIREMENTS?

Obviously not, because while a few more would perhaps be induced to save, precisely those for whose relief a pension is most needed, they who for one reason or another will be unable to save, will yet remain unprovided for.

There is also nothing in such a system to answer any one of the four requirements:

1. There would not be better service. No casual relation can be traced between such a system and any one of those things which have been enumerated as making for efficiency.

2. There would be nothing in this to cause men to be willing to accept lower emoluments than they could secure elsewhere, therefore nothing to promote economy.

3. So far would it be from encouraging persistency that employees would be likely to quit the service in order to get the privilege of withdrawing their savings.

4. It would not in the least relieve the burden of incapacitated employees upon the service. It would not do so in any case until those who would now start saving had reached old age with an ample provision; it would not then do so as to others for whom the same humanitarian considerations would hold berths; and in such case those who had saved would also hang on as now.

A purely voluntary system is not proposed by anybody. These considerations are therefore presented chiefly because of their applicability to other methods which are proposed.

IV.—A SYSTEM OF VOLUNTARY SAVINGS, SUBSIDIZED BY THE GOVERNMENT, WOULD NOT ANSWER THE REQUIREMENTS.

Suggestion of such a system has been made at different times. It has also been tried several times in other countries as well as our

own, in pension systems set up by corporations (where it has worked best, but usually far from well) or in public systems intended to avoid a general pension system.

Its failure to solve these problems or, indeed, any of them is notorious.

The most outstanding corporation example on this continent was the pension fund set up by the Grand Trunk Railway Co. of Canada—abandoned for straight-out service pensions after many years' trial of it.

The most significant governmental example was the subsidized workmen's old-age annuity law of 1900 of Belgium, already acknowledged to be an utter failure and about to be abandoned.

Partial success has been achieved by its use in encouraging self-provision, but it always fails in comprehensiveness and certainty and does little or nothing in any case to subserve the four purposes set forth in point 2 of this brief.

V.—A Compulsory Savings or Contribution Plan Would also Not Answer the Requirements.

The proposal has been somewhat insistently urged upon Congress that what should be done is to compel civil-service employees to save a sufficient portion of their salaries and invest it in a fund in the custody of the Government, to provide for their own retirement at a fixed age.

Would this conduce to better service?

A prior reasoning and experience alike say "no." It leads to general and persistent dissatisfaction and greatly impairs the esprit du corps.

Would it tend to economy?

It not only would not attract men who might command larger emoluments elsewhere, but would actually repel them, while on the other hand not in the least discouraging men who could only command smaller emoluments elsewhere.

Would it lead to increased efficiency?

On the contrary, so far as good men remaining in the service goes, it would in two ways operate to cause them to withdraw, viz:

1. Through their resentment at the offer of this stone in answer to their cry for bread—this drain upon their incomes as a sardonic response to their petition for pensions.

2. Through the temptation to withdraw accumulations of savings, after they were made, which they could only do by retiring from the service.

It should be remembered that savings are often, even usually, trenched upon because of dire necessity, such as sickness or death in the family; that is, because of some duty which all men deem superior to selfish, prudential considerations. The man who reaches old age in poverty is not infrequently he who has best fulfilled his duties to his family or the community and sacrificed himself in doing so.

Would this relieve the service now?

Obviously, like all other plans based upon savings, it would not. The employees who are now superannuated, not having been required to contribute such sums to make provision for their old age, would not be entitled to pensions now payable out of such fund.

Moreover, those who will be superannuated soon, can not have saved enough.

Therefore relief to the service, as to the civil-service employees, would be delayed for an entire generation.

Because of these things it is generally conceded that a compulsory contributory plan, standing by itself, would not answer.

VI.—Compulsory Contribution, Supplemented by Complementary Provisions for Existing Employees, is also not a Solution.

The plan most insistently urged as a substitute for service pensions in the last Congress was compulsory deductions from salaries of certain percentages, according to present age for existing employees and age upon admission to the service for new employees, such deductions being sufficient, it was computed, to furnish certain annuities for life, beginning at a given age fixed for retirement.

Then, as the contribution required to purchase this income would, for those who are now approaching the retirement age, be utterly prohibitory, it was proposed that the Government under certain circumstances supplement the annuity paid for by their contributions, at a lower amount, so as to supply a certain minimum pension.

This supplementary subsidy would be largest for those who paid in least before retiring and smallest, indeed nothing at all, for those who paid in most; for the idea was that after a generation elapses each would be supplying his own pension.

What chance is there that this would fulfill the requirements?

Would it conduce to better service?

Undoubtedly it would create widespread dissatisfaction among civil-service employees; the mere proposal of it has caused great consternation among them, and with good reason, for under it the Government would give:

Most to those who would contribute nothing; i. e., those who would at once be retired.

Much to those who would contribute little; i. e., those who would soon be retired.

Little to those who would contribute much; i. e., those who would not soon be retired.

Nothing to those who would contribute most; i. e., who would not retire before their own contributions would supply the prescribed incomes.

It would surely repel instead of attract men who could command larger emoluments elsewhere.

It would offer no inducement for such to continue in the service, but would operate against permanency of their employment by giving them their savings only in case they resign, and offering them nothing whatever as a reward for long and faithful service.

It would relieve the service now by rendering possible the retirements which ought to be made; but that single advantage, it is clear, is due to the Government's gifts and not to the employee's savings; i. e., to the incident and not to the principle of the plan.

If attempted, this system will demoralize the force in many ways; and experience shows that there will be repeated and insistent demands for increases in salaries to meet those costs and also for the substitution of service pensions.

VII.—Compulsory Savings, with Such Supplement to Provide for Present Employees and with a Subsidy Toward All Other Pensions, Also a Poor and Incomplete Solution.

Attempts have been made to solve these problems by a device of the following type, viz:

Compulsory contributions by employees.

Contributions of a like or a proportionate amount by the employer.

These combined estimated to be sufficient to provide a certain income to all employees put on hereafter, who reach a certain age while in the service.

For those now in the service the employer to contribute also enough to make their incomes, upon retirement, the same as if they had been contributing from the outset.

This or something akin to it has been the best form which the contributory-pension idea has taken, as has been abundantly shown by experience.

It is doubtful that it improves the service; though, if the employer contributes regularly a large proportion, it may be that in some cases such operates to offset the resentment and dissatisfaction.

It would hardly attract men who could command more elsewhere very much, and therefore economy would not be greatly fostered, for economy consists chiefly in getting better men for the money.

It will, or might, make for persistency and therefore efficiency; this would depend upon whether the inducement due to the employer's contributions is strong enough.

In some cases the need to withdraw will undoubtedly outweigh all other considerations.

Experience has shown that under such plans there is constant pressure to have the accumulation of the employer's contributions paid also in each of the following cases:

1. The death of the employee.
2. The disability of the employee.
3. The voluntary retirement of the employee before the retirement age, after a certain minimum number of years of service.

It is difficult to resist these demands; each can be supported by persuasive arguments. To grant any of them—much more, all—greatly lessens the income which the contributions will supply the superannuated employees; and to grant the last mentioned may greatly militate against permanency, and therefore against efficiency, by offering a prize for resigning.

Altogether, it is not too much to say that the virtues of this best of all the contributory plans consist of those features which are non-contributory, i. e., of the portions of the incomes supplied superannuated employees, as service pensions, freely contributed by the employer.

VIII.—The Contributory Idea is Fundamentally a Misfit and Not Adapted to Secure the Desired Ends.

Fundamentally this provision should be, and will be, a special reward for long and faithful service.

If openly given as such, it forms a strong special inducement to the best men to enter the service and remain in it. This is also not counterbalanced by any other way of getting all or part of this provision without rendering long and faithful service.

Experience everywhere is that it is effective.

It is also an economical way to do it. In general it will not call for an outlay of more than one-half as much by the employer as it would be necessary to deduct from his employees' salaries, were it all provided that way. For, on the straight-pension plan, the employer need only contribute enough to provide for those who actually survive the retirement age in his service—rarely one-half of those who survive or one-quarter of those who enter his service. On the other hand, employees' contributions must be computed as if all would survive in the service, and the accumulations in respect of those who do not must be returned.

If the employer contribute in such a contributory scheme as much as his employees, the chances are that he is assessing himself quite as much as out-and-out-service pension would cost him, and he will reap no such advantages from it in improved service, greater economy, and greater persistency of employment.

Theoretically his contributions in such a scheme would not be so large, but practically the payment of the accumulation of his contributions also will certainly be demanded in event of death, disability, or retirement after a few years. In such case—and that is the universal experience—it would be cheaper for him to give the pensions outright and have this money go only to old and faithful employees.

Moreover, all contributory plans, however qualified, involve frequent and insistent demands for higher salaries; service-pension plans certainly do not do so, but instead have a marked tendency to cause the best men to come in and stay in at lower salaries than they might command elsewhere. This is peculiarly the case when the employment is reliable and steady promotion likely as in the public service.

There are also the following decided disadvantages:

1. The Government must accept the responsibility for the safe-keeping and investment of the funds.

2. If it does not guarantee a certain rate of interest, the amount of the income to be purchased will vary, (a) with the accumulation up to retirement age, (b) with its earnings after the retirement age.

3. If it does guarantee the rate, it is likely to be a low rate, and even then it is likely to lose money on its guaranty.

4. Not even a guaranteed rate of interest can make the pension bear a fixed relation to the term of service and the salary just before retirement, which is necessary in order that a scheme be readily intelligible and attractive.

5. The incomes so secured will be reduced very materially by the fact that contributions may be withdrawn before reaching the retirement age.

6. They will be yet further very materially reduced by the fact that even when the income has been entered upon the amount of the accumulation not yet paid out in income must be returned in event of death.

7. In many cases the entire purpose will be defeated by the employee insisting upon taking the capital accumulated instead of the life income.

8. If changes in scales of pensions should be desirable, how are they to be made as regards past contributions, which will pay for just what they do pay for?

These disadvantages, as well as many others, attend all systems of contributory pensions based on the savings idea.

Their presence affords a lucrative field for actuarial and other expert advice, whereas a straight-out service pension plan calls only for a little, not complex or costly, service at the outset in arriving at probable ultimate costs, and especially at probable outlay for a number of years, both of which can be computed pretty closely if the requisite data can be had.

Notwithstanding that the contributory plans have supplied them many and frequent opportunities for earning fees, the greatest actuaries who have had wide experience in this work are, without notable exception, of the opinion that even the best-conceived contributory plans are not well suited to most conditions, and least of all to Government employments.

This association has a communication from the British actuary, who is recognized as the most expert upon this subject, Mr. Henry

William Manly, ex-president of the Institute of Actuaries, copies of which will be supplied this committee.

In the current number (January, 1914) of the Journal of the institute he gives in an article upon a compulsory contributory scheme proposed in New South Wales, which he condemns, the following illuminating and practical statement:

"Now, the service of the State has a certain attraction on account of its permanence and security and the dignity attached to the appointment; but it also wants to attract the best talent and best business ability, which can always command its value, and it has to pay for it. At what price can it secure such men? We are now speaking of the salaried class. There is always some relation between salary without pension and salary plus a satisfactory pension; and it is the writer's opinion, derived from a long acquaintance with and study of the question, that the difference in the salaries generally is as much as 10 per cent; it may be less at the young ages, say about 5 per cent, and greater in the case of the high salaries, probably from 15 to 20 per cent, and more.

"Assuming that all enter from 18 to 20 years of age and retire, on the average, at 62, or previous incapacity, a noncontributory pension of one-sixtieth of average of last three years' salary for every year of service, the pension not to exceed two-thirds of such average, would cost 7½ per cent of salaries reckoning interest at 3½ per cent, or 6½ per cent of salaries reckoning interest at 4 per cent. Say the average salary without pension would be £200 a year; how much less would a State employee be willing to take if he had such a pension guaranteed to him for faithful service?"

Mr. Manly makes it that he should be willing to accept from £10 to £15 per annum less, and continues:

"But taking the salaried service throughout, we believe that the cost of salaries and pension together would not be more than for salaries without pension; and the State would have a contented, able, and efficient staff, without any extra cost to itself. There is a view, we believe a mistaken one, that the men would appreciate the pension more if they were made to contribute to its cost. We never came across anyone who did not fully appreciate the value of a noncontributory pension. But suppose the State required that the employee should contribute toward the cost; then the whole case assumes a different appearance. As the State actually takes from the employee money which belongs to him, an agreement will have to be made by which the money deducted will have to be returned on resignation, dismissal, or death, and if the pension payments do not amount to such deductions the difference will have to be returned, otherwise the State will be charged with robbery. Again, since the employee has to make a contribution out of his salary, he will require to have the salary he would otherwise be content with increased by the amount of contribution he will have to make."

IX.—A COMPULSORY-ASSESSMENT PLAN WOULD ALSO NOT ANSWER THE REQUIREMENTS.

If, instead of requiring contributions on the basis of the income to be furnished after retirement being purchased by the accumulations of the employees' own contributions, whether or not the same are supplemented by accumulations of the employer's contributions, the pensions were provided for by compulsory contributions assessed against the employees as needed to supply pensions currently payable, the requirements would be better answered in some particulars.

For instance, no question would perhaps arise about return of an employee's contributions in event of his death or his disability or his voluntary retirement before the fixed age for retirement if it were understood that they were mere assessments and were paid out immediately upon their receipt.

In like manner presumably no strong demand would be made that the amount contributed over and above the amount received in pensions be returned in event of death after the retirement age.

These things would render it unnecessary to collect a dollar more than the amounts actually payable to the old and faithful employees who survive the retirement age during the remainder of their lifetime. It would reduce the deductions from salaries at least one-half—the amount can be approximately arrived at if the necessary data can be had—and if employees out of their salaries really ought to supply the rewards to their superannuated comrades for old and faithful service, or any part of them, they would surely prefer to do it this way.

This is not mere assertion on the part of the subscriber hereto. The instances in this country of provision by labor unions for their aged comrades are of that character; and, as regards one of the oldest and strongest of them, when consulting him about possible extensions of their plan, its representatives required that only such a plan be considered.

The association of civil-service employees which preceded this, more than 10 years ago, also in consultation with him professionally, through its representatives made it clear that, if a contributory plan was unavoidable, one which did not call for large accumulations and which would extract as little as possible from the meager incomes of civil-service employees would be preferred.

The same general position was taken by virtually all the trade-unionists of France in opposition to the compulsory-savings old-age annuity law enacted in 1910; precisely what was the nature of this opposition was described to the subscriber hereto by their leaders while he was in Europe on an investigation in behalf of the United States Bureau of Labor.

Therefore, while by no means intending to express the willingness of this association or its members—they have voted against all contributory plans by an immense majority—that contribution be demanded of them, the subscriber hereto expresses his opinion that this would be the least objectionable form, especially if the Government contribute at least half, precisely because it would cost least.

Such a plan, by reason of resentment at the enforced contribution, would not make for the good of the service. It would not be economical, for it would not attract to the service those who could command higher salaries elsewhere. It would make for permanency and it would relieve the service now.

X.—STRAIGHT-OUT SERVICE PENSIONS COMPLETELY ANSWER ALL REQUIREMENTS.

Straight-out service pensions are deemed the best and cheapest by virtually all experts upon the subject.

Experience approves their verdict; for while contributory plans are often and, indeed, customarily, abandoned for service pensions, no case of the contrary can be cited.

Among those who have so abandoned contributory for noncontributory plans are, as has been stated, the Government of Great Britain and the Grand Trunk Railway Co. of Canada, both after a thorough trial of the former.

In the United States nearly all large employers who have done anything about it have granted service pensions outright. Among these may be mentioned the United States Steel Corporation, International Harvester Co., Pennsylvania Railway Co., New York Central Railroad Co., Chicago & North Western Railway Co., Southern Pacific Railroad Co., Westinghouse Airbrake Co., and American (Bell) Telephone & Telegraph Co.

Perhaps a hundred more substantial companies and firms could be added to this list. Almost the only contributory plans are to be found in the special cases of—

Banks and trust companies—pensions largely for employees with big salaries;

Public schools—an assessment system, greatly resented, though deductions are most moderate.

The plan of out-and-out service pensions is cheaper in the long run, as has been shown, because it involves the payment of no money to any person except an employee retired as superannuated.

It is also cheaper because it tends to make employees contented with their salaries, whereas the contributory plans produce precisely the opposite sentiment.

It is also preferable because it does not involve the accumulation of large funds in the hands of the Government or of trustees—always a peril.

Likewise, because it imposes no peculiar responsibility upon the Government, as for custody and safe investment or for guaranty of earnings.

It also avoids the complicated and difficult problem of maintaining the sufficiency and solvency of such a fund, a problem which in all contributory systems calls for—though it does not often receive—the skilled attention of actuaries. Thus, the plight of insolvent funds—a steady accompaniment of all public contributory schemes in this country so far—and the alternative of costly expert attention are both avoided. A moderate expenditure to investigate costs at the outset is almost all that will be required, as regards such service, under a service-pension plan.

But most important of all is that such a plan completely fulfills all requirements.

It makes for good service. The employees are always pleased with it; not necessarily humbly grateful, for it is not a cure for everything, but appreciative and with better esprit du corps.

It conduces to economy.

Such is attained only by attracting men to the service who are worth more elsewhere than they will receive in the civil service. A good pension system will do this.

It greatly increases persistency in the service, and thus also efficiency.

Its influence is constantly to hold good men and to cause them to make themselves sure of the pension by giving full and efficient service. There is no greater waste than to train good men and then let them get away.

It will fairly and without discrimination relieve the service now.

For under service pensions only will the employees now beyond, and the employees now approaching, the retirement age be retired on pension, without giving them anything which other employees in the service will not in turn, under like conditions, be entitled to receive.

Wherefore, it is submitted, a plan of providing reasonable service pensions for civil-service employees upon examination, at the expense of the Public Treasury, is clearly from every standpoint indicated as the prudent, economical, wise, and humane thing for the Congress of the United States to adopt and put into effect without delay.

Respectfully submitted.

MILES M. DAWSON,
Counselor at Law, Consulting Actuary.

No. 141 BROADWAY, NEW YORK, *February 19, 1914.*

Hon. Edwin A. Merritt, Jr., Late a Representative from the State of New York.

MEMORIAL ADDRESS
OF
HON. JOHN J. FITZGERALD,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Sunday, February 7, 1915.

The House had under consideration House resolution 725, as follows:

"*Resolved*, That the business of the House be now suspended that an opportunity may be given for tributes to the memory of the Hon. SERENO E. PAYNE, late a Member of the House of Representatives from the State of New York, and to the memory of the Hon. EDWIN A. MERRITT, Jr., late a Member of the House of Representatives from the State of New York.

"*Resolved*, That as a further mark of respect to the memory of the deceased, and in recognition of their eminent abilities as distinguished public servants, the House, at the conclusion of these memorial proceedings, shall stand adjourned.

"*Resolved*, That the Clerk communicate these resolutions to the Senate.

"*Resolved*, That the Clerk be instructed to send a copy of these resolutions to the families of the deceased."

The resolution was agreed to.

Mr. FITZGERALD. Mr. Speaker, death lays a heavy toll upon the House of Representatives. It exempts no group from its levy. We have just paid merited tribute to the memory of the late Sereno E. Payne. For more than a quarter of a century he had served in the House with distinction. We now commemorate the services of another Member from the State of New York who has been called from this life. His service in the House was too brief to enable him to attain commanding place in it. Protracted ill health prevented the advancement otherwise possible even in his shortened career. Few who knew him, however, were not convinced that, had EDWIN A.

MERRITT, Jr., been spared for long service in this body, he would have won the confidence of the House by his industry and sagacity, his wide knowledge, and by virtue of his peculiar capacity for constructive work in a legislative body. He was hardly known to the Members of the House. The confidence of his friends in the brilliancy of his career was based upon an intimate knowledge of his work in the Legislature of the State of New York.

Gifted with a powerful physique, his was a commanding figure. Highly educated and widely read, his logical and retentive mind was stored with a mass of useful information which he commanded with facility. Possessed of the peculiar gifts which adapt some men preeminently for a parliamentary career, his great talents had been utilized in the preparation of many important laws which to-day are of inestimable benefit to the State of New York.

With his training, experience, knowledge, and adaptability he would unquestionably have been a valued and influential Member of the House had he lived sufficiently long to have had full opportunity to display in this new field his wonderful gifts. Inscrutable, indeed, however, are the ways of Divine Providence. His predecessor, the late George R. Maltby, had had an equally brilliant career in the Legislature of the State of New York. Like Mr. MERRITT he had been the leader of his party and then speaker of the assembly. He had also served in the senate for a number of years, while Mr. MERRITT's service had been confined to the assembly. After a brief service here, during which he had demonstrated his value to the House, he was unexpectedly called to another life. The brevity of the service of these two men from the same district, after their useful careers in the State legislature, is a unique coincidence.

Either one of them would have achieved distinction had his service been sufficiently extended.

Those who knew Mr. MERRITT admired him sincerely. He had a most attractive personality and, despite his unusual gifts, was modest and attracted and attached men to him.

For many years I enjoyed his acquaintance. Familiar with his activity in the field he quit to take up the duties of this body, I was one of those who believed that he would speedily impress his personality upon the House.

In his death the country has lost a capable and a useful public servant, his family and friends one who will long be mourned for his many good and lovable qualities.

Naval Appropriation Bill.

SPEECH

OF

HON. MICHAEL K. REILLY,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 29, 1915.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 20975) making appropriations for the naval service for the fiscal year ending June 30, 1916, and for other purposes.

Mr. REILLY of Wisconsin. Mr. Chairman, I am not a military nor a naval expert. My only excuse in asking for time in this debate, when there are so many older and abler men who desire to discuss this question, is the fact that in the judgment of many people our Army and Navy problems are the most important and vital questions that our people have to consider to-day.

The question as to whether or not we are to continue to appropriate the huge sums for our Army and Navy that we have been appropriating, and thereby become one of the great military powers of the world, is a question of vital importance to Americans living and unborn.

During the last 17 years Congress has appropriated more than three and a half billion dollars for our Army and our Navy.

The total agricultural wealth of our Nation is estimated at only about $40,000,000,000, yet in less than one-quarter of a century the representatives of the people have voted for war an amount equal to almost one-eleventh of the total agricultural wealth of our country.

In 1897, the last year of the Cleveland administration, our Army appropriations amounted to $23,000,000 and our Navy appropriations to $33,000,000, and in 1913, the last year of President Taft's administration, 16 years later, the Army bill carried an appropriation of $90,000,000 and the Navy bill $144,000,000.

In those 16 years, from spending the sum total of $56,000,000 a year for Army and Navy we have jumped to an expenditure of about $235,000,000 a year, an increase of more than 400 per cent.

For the 17 years ending in 1897 our appropriations for the Army and Navy amounted to about $800,000,000, or about $400,000,000 for running each line of the service, while in the 17 years since 1897 our appropriations for Army and Navy have increased to about $3,500,000,000.

The fact is that our appropriations for war have increased to such an extent that to-day more than 60 per cent of all of the expenditures of the Government outside of the Post Office Department are appropriated for the upkeep of our Navy and our Army and for pensions.

Think of it! A Nation dedicated to peace, with no desire for war or conquest, is permitting its representatives to appropriate more than one-half of its revenues for war and the results of war; and still we are told that we are unprepared for war and that much larger appropriations must be made if we are to avoid war.

When will the end come, may I ask? When will we have squandered enough of the people's money to have reached that stage when the jingoist and the alarmist will think that we can safely rest on past expenditures for our public defense?

It does seem, Mr. Chairman, that it would be a godsend to this country if we could get back to the good old days when American ideals and our territorial isolation were considered our greatest protection from foreign foes.

The gentleman from Alabama [Mr. HOBSON], who has just addressed this House, has indulged in his annual effort to terrorize the American people into the belief that our country stands in the shadow of a war with Japan.

Ever since the distinguished gentleman from Alabama first came to Congress, several years ago, and prior to his entrance into congressional life, he has been the victim of what might be termed "the Japanese nightmare," and has been working overtime in an attempt to impress the American people with the belief that this country is in need of a larger Army and a larger Navy in order to repel his imaginary foreign foe.

Of course, all men are entitled to their opinions upon all subjects; but as I view the situation, Mr. Chairman, all this talk about our country being attacked by Japan or any other country is not even respectable nonsense. The so-called Japanese peril is a pure figment of imagination and has not a single fact upon which to stand.

Japan at the present time is trying to work out her own destiny in her own way, and there is absolutely no evidence that the Japanese people have any desire to make trouble for this country. Japan's financial and economic problems, together with her distance, 4,000 miles from our shores, would make it absolutely impossible for her to give this country any trouble in the way of sending against our shores an invading host, even if her people were so disposed to act toward our country.

The gentleman from Alabama is not satisfied with two dreadnaughts a year as an addition to our Navy; he would have an increase of four or five dreadnaughts a year, with the accompanying quota of auxiliary cruisers, submarines, destroyers, transports, and so forth. If this specially appointed guardian of our national defense could have his way, our naval appropriation would carry $300,000,000 a year instead of about $140,000,000. But the gentleman from Alabama has a rival on the floor of this House who bids fair to divide with him the honors and laurels of his position.

For years the gentleman from Alabama has stood alone the sole and valiant champion of militarism in our country, but recently his distinguished colleague, the gentleman from Massachusetts [Mr. GARDNER], has jumped into the arena and achieved much fame as a jingoist, terrorizer, and exploiter of an undefended country. The gentleman from Massachusetts has recently awakened to the fact that his country is terribly unprepared for war. He has been in Congress for many years, representing the great Commonwealth of Massachusetts, "asleep at the switch," it would seem, all these years, but suddenly, it appears, awakens and announces to the world that, upon investigation, he finds that his country is terribly unprepared for war, and it is the duty of Congress to appropriate not for the construction of 4 or 5 dreadnaughts a year, but for 20 or 30 dreadnaughts at once, and to provide a standing Army of a half a million men.

This eloquent and new-found champion of militarism does not even stop to count the cost of his extraordinary plans. It matters little to him what his program might cost the taxpaying public, whether the sum be a half a billion or a billion of dollars extra a year; sufficient is, that he has become obsessed with

the idea that Germany and England, now locked in the greatest war that the world has ever known, will, when they get free from each other, attack this country, and we must be prepared for that attack, no matter what the cost may be.

The gentleman from Massachusetts [Mr. GARDNER], in his fear of a German or an English invasion of our country, is just as much of a rainbow chaser, in my judgment, as the gentleman from Alabama [Mr. HOBSON] in his ravings about a Japanese invasion of our country.

Why should the German people desire to invade our country or come over here and fight their own blood? Germany has always been our friend; and I do not believe that the idea of attacking our country has ever entered the minds of a German citizen, official, or ruler of the German people. We have among our citizens millions and millions of the sons and daughters of Germany and their descendants, and they constitute, in my judgment, as patriotic an element of our citizenship as we have; and in case of war between the United States and the fatherland I am satisfied that the sons and daughters of Germany who have found a home in this country would rally to a man under the Stars and Stripes and resist with their lives the efforts of an army from the fatherland to invade our country.

England will never attack us, partly because she would be fighting her own kin and partly because she knows that such an attack on our country would result to her in the loss of Canada. Canada's unprotected frontier and proximity to the United States will always serve as a protection for this country from a war with Great Britain.

We hear a great deal nowadays about the need of an adequate Army and an adequate Navy, but there seems to be a lack of definiteness on the part of the users of these terms as to just what is meant by an adequate Army and an adequate Navy. Adequate for what purpose? Adequate for defensive purposes or for offense? I am in favor of an adequate Army and an adequate Navy for this country, but my army and my navy are for defense.

It is submitted that no country needs as large an army or navy for defensive purposes as for offensive purposes.

Germany supposed that she had an adequate navy for defensive purposes before this war, and it would appear that in this judgment she was correct, but if she would desire a navy for offensive purposes in order to gain and retain control of the seas she would have required a navy larger than those of England, France, and Russia combined. If we are to have an adequate Navy, must it be a Navy large enough to match the Navies of England, Germany, Russia, France, and Italy combined, or must it be a Navy large enough to match the Navies of England, Germany, and France combined? When will we know when we have squandered enough of the people's money to have an adequate Navy?

Mr. Chairman, I submit that we have to-day an adequate Navy for this country, and it is no surprise that we have an adequate Navy for defensive purposes, for the reason that in the past 20 years or more we have spent $500,000,000 more for Navy preparations than any other country in the world with the exception of Great Britain.

There are some advocates of a larger Navy on the floor of this House who do not hesitate to say that our Navy is inferior to that of Germany; yet the fact remains that our country has appropriated $500,000,000 more in the past 16 years than has Germany for her Navy. There are some advocates of a larger Navy who contend that our Navy is inferior to the Navy of France, and yet during the past 17 years we have spent over $700,000,000 more on our Navy than France has on hers.

A year ago when the naval appropriation bill was before the House Judge WITHERSPOON, of Mississippi, demonstrated to my complete satisfaction—and I believe to the complete satisfaction of most Members of this House—that from the standpoint of destructive force and gun power our Navy was superior to that of Germany, and second only to the Navy of Great Britain. A year ago, it is true, the German Navy was superior to our Navy from the standpoint of tonnage, but as a result of the sale or destruction in the present war of some 45 German ships, our Navy to-day is superior to the Navy of Germany, not only from the standpoint of gun power and destructive force, but also from the tonnage standpoint, and our Navy stands to-day the second strongest Navy in the world, England's Navy alone being stronger. I say that our Navy stands second in the world from the standpoint of tonnage, destructive force, and gun power, but from the standpoint of the men behind the guns our Navy is more than the equal of any other navy in the world.

It would seem that while we were building 12 and 13 inch guns Germany was building 11 and 12 inch guns, and that while we were building 13 and 14 inch guns Germany was building 12 and 13 inch guns. In other words, we have preceded Germany in building large-caliber guns, and that is why a year ago, with less tonnage than the German Navy, our Navy had a greater destructive force.

It is said that as an explanation of this the Germans point out that they built smaller bore guns because of the foggy conditions of the Baltic and the North Seas, where their naval battles would undoubtedly be fought, and where the range of contest would be much shorter than in other waters where there are no fogs, and in such conditions smaller bore guns would be just as efficient as larger bore guns.

It was also stated that a large majority of the German vessels of war have been constructed with such small coal bunkers that they could not venture on a long foreign voyage. This is an indication of the belief that the German Navy was constructed for naval battles near home, and a rather conclusive argument that the German Navy was constructed solely for defensive purposes.

A great many persons are of the belief that Germany, France, and other European countries are the only nations that have placed upon the backs of their subjects the heavy taxes of militarism.

I was astonished upon investigation to learn that during the past 17 years the United States has spent about three and a half billion dollars in preparing for war, and that during that same period she has spent $500,000,000 more for Navy purposes than Germany has spent, and $700,000,000 more than France.

Since 1910 we have appropriated $120,000,000 more for our Navy than has Germany and $200,000,000 more than France has appropriated for her navy, and yet the advocates of a bigger navy declare that both Germany and France have better navies than we have.

It would seem that instead of introducing a resolution for the purpose of investigating our unpreparedness for war the distinguished gentleman from Massachusetts [Mr. GARDNER] would have introduced a resolution for the purpose of investigating what has become of the immense sums spent by our country for Navy purposes in the past 17 years.

Mr. HOBSON. Will the gentleman yield?

Mr. REILLY of Wisconsin. I will.

Mr. HOBSON. I believe that years ago if we had had a commission for national defense we would not have had all of these expenditures.

Mr. REILLY of Wisconsin. Well, if the commission had been made up of the character of men who have been testifying before your committee, we would have spent a great deal more money than we have expended.

Mr. HOBSON. The gentleman understands that the gentlemen comprising this commission would be Members of the House and Senate.

Mr. REILLY of Wisconsin. Such a composition might be all right, but we would want to leave off that commission those men who dream of wars and battles on land and sea by night and by day, and men who are directly or indirectly interested in the commercial or official phases of war.

Mr. PADGETT. Will the gentleman yield?

Mr. REILLY of Wisconsin. I will.

Mr. PADGETT. You were talking about the differences in expenditures. I think I can give the gentleman a statement that will clarify the situation and relieve his mind. Just, for instance, in one year we have paid our men in the Navy $44,300,000; Germany, having a conscript system, paid $11,400,000, a difference of $33,000,000 in favor of the United States as against Germany on the pay of men alone. For provisions the United States paid $8,600,000; Germany paid $900,000; for clothing the United States paid $1,400,000; Germany paid $140,000. In other words, we have paid ten times as much on that item. Now, if you will run that through the number of years of which you have been speaking, you will get that solution.

Now, then, in the year 1913 the United States appropriated for new construction $35,315,000 and Germany appropriated $53,568,000, so that you will see that we put our money up for men and Germany puts hers in ships.

Mr. BUTLER. Ours are volunteers?

Mr. PADGETT. Yes; it is not hard to understand the difference in expenditures.

Mr. REILLY of Wisconsin. I thank the chairman of the committee for the information that he has given to the House, and I presume, according to his statement, that if we were to have attempted to have a Navy the size of England's it would cost us a great deal more than England's Navy because of the pay we grant to our men and officers.

Mr. PADGETT. Certainly; and everything else. Everything here is on a higher price level than in Germany.

Mr. REILLY of Wisconsin. The distinguished gentleman, chairman of the committee, has given us another reason why this country should never enter upon a career of competition with the European countries in the matter of military and naval policies, and why the programs of the gentleman from Massachusetts [Mr. GARDNER] and the gentleman from Alabama [Mr. HOBSON] would absolutely bankrupt this country.

Not only have our appropriations for the Navy been excessive as compared with those of other countries, but we find upon investigation that our appropriations for the Army have also been excessive.

We have to-day a standing Army of about a hundred thousand men. The Army appropriation bill carried this year more than $100,000,000, making the cost to this country of each man in the Army $1,000 annually.

Germany had a standing army of 700,000 men when the war broke out, and the cost of that army never exceeded $250,000,000.

If we were to maintain a standing Army the size of Germany, as some of our ex-Chiefs of Staff would have us do, or as the gentleman from Massachusetts believes we ought to do, it would cost us all the way from five to seven hundred millions of dollars a year to do it.

Some one has said that the military systems of Europe have put a soldier on every workingman's back. The new apostles of militarism in this country would put two soldiers on every American laboring man's back.

There are reasons why England, Germany, Russia, and France should possess large armies and navies. Their geographical location, racial conditions, and commercial conflicts all tend to bring about a situation that demands armies and navies, while, on the other hand, our geographical situation and our cosmopolitan population, made up of representatives of every race in the world, render unnecessary large armies and navies in order that we may be protected from foreign invasion.

Mr. Chairman, there is no doubt at all that war is the greatest scourge that has ever afflicted the human race. War is morally wrong and utterly destructive of the highest ideals and humanizing influence of every civilization. When Gen. Sherman stated that war was "hell," he shocked a great many good people; but there can be no doubt at all that if the great Federal commander was permitted to return to earth and view the results of the present European conflict, and see war-torn and blood-soaked Europe in a modern war, he would agree that his characterization of war was entirely too mild and that a new word should be coined to describe the horrors of a modern war.

Mr. Chairman, in the decade prior to the commencement of the present European contest there was more peace talk and more organized efforts in behalf of an international peace propaganda and more distinguished citizens of all the countries of Europe at work on the great problem of international peace than at any other time in the history of the world. Yet during that same period—a period practically of profound peace in Europe and America—there was more money spent for battleships and fortifications in preparation for war than at any other like period in the history of the world.

During that decade two international peace conferences had been held, and the rulers of every nation on earth had vied with each other in paying fulsome tribute to the dove of international peace, but after each conference and before the echoes of the eloquent tributes to international peace had died away, each nation participating in such conferences provided for larger armies, for more guns and ammunition, for more battleships and fortifications.

A third international peace conference was finally called, the delegates to which, from the great powers of the earth, were about to assemble when the six great European countries, whose rulers had been outspoken advocates of international peace, were suddenly plunged into the greatest war the world has ever known, a contest that has developed into the most sorrowful tragedy in all history.

I do not care to enter upon a discussion as to the causes of the European war; suffice for me to know that ordinary experience and common sense ought to have told the people and rulers of Europe that the inevitable result of the European policy of arming to the teeth, so to speak, must be a great and disastrous war. Hundreds of millions and billions of dollars had been spent in organizing invincible armies and building up-to-date navies, and that the military leaders of these countries should not be averse to a trial of strength of their respective engines of war is not unusual and was to be expected.

That the diplomacy of Europe could have avoided the present unfortunate struggles if their respective countries had not been so well prepared for war no student of recent events can doubt.

In one sense the present European war is a result of the pernicious doctrine furnished to the world by the advocates of large armies and large navies, to wit, "The way to keep the peace is to prepare for war"; in other words, if we are to have a peace it must be an armed peace. This doctrine that has so well suited the purposes of military men and war contractors of all countries has been responsible to a large extent for the extraordinary preparations for war in this country and in foreign countries during a time of profound peace.

These advocates of larger armies and larger navies desire peace, of course; but the peace that they would have is an armed peace, because any other kind of a peace would not open opportunities for military men or yield profits to those interested in the possibility of larger armies and larger navies.

Mr. Chairman, there are at work to-day in this country agencies manufacturing sentiment, with the view of making possible each year larger appropriations for our Army and our Navy. The Navy and Army experts in and out of service and their cousins and relatives are all busily at work trying to impress the American people with the danger from foreign foes.

The Army contractors, the battleship builders, the manufacturers of all kinds of munitions of war are deeply interested in the continuation of the large Army and Navy appropriations that have come out of our Congresses in the past 17 years, and I have no doubt at all but that there are a great many good citizens, men who have no sons in the Army or Navy, men who have no Navy or Army connections themselves or who have no financial interests in the building of battleships or cruisers, who are sincerely of the opinion that our country is in great danger from foreign foes, and that we must have a larger Navy and a greater standing Army if even to secure which our Army and Navy appropriations must be increased to $500,000,000 a year. These men are honestly deluded by the Hobsons and Gardners in Congress and their prototypes in Army and Navy life, men who think of war, and who dream of battleships, and some of them who find it quite profitable to have the people accept the doctrine that an armed peace is the only peace that our country can have.

These forces, Mr. Chairman, operating particularly in this country since the Spanish War, have succeeded in their efforts, and have brought this country to that point when we are one of the great military countries of the world, when our people are beginning to feel the tax of an Army and armaments.

Mr. Chairman, there has been an effort in this debate to characterize every Member on the floor of this House who is opposed to the two-battleship proposition of this bill as a no-Navy man and a no-Army man. Such a charge is untrue and unjust. I am opposed to the ordering of two battleships at this time; I am not opposed to an adequate Navy for defensive purposes. I do not believe that we are warranted at this time in ordering the expenditure of thirty or forty millions of dollars of the people's money in the construction of two battleships that the lesson of the present war may teach us are worthless in naval warfare of the future.

We have to-day, without the laying of another keel for a battleship, an adequate Navy, and more than an adequate Navy for defensive purposes. In fact, since the development of the submarine and its wonderful accomplishments in the present war, it would seem that battleships and dreadnaughts are to play a minor part in the naval warfare of the future.

In the Baltic Sea and the North Sea are anchored and harbored three of the largest navies in the world. In the northern part of the Baltic lies at anchor the Russian fleet. In the southern part of that same sea is safely harbored the German fleet. The German fleet is three times the size of the Russian fleet, yet the Russian fleet is protected from the German fleet by mines and submarines. Out in the North Sea lies the greatest navy in the world, and a few hundred miles away is the Germany Navy, many times smaller than the English Navy, yet the German seaports and harbors are absolutely protected from the destructive force of England's greatest dreadnaughts by mines and submarines.

I recognize, Mr. Chairman, that naval officers will be slow to admit that their floating palaces, their battleships, cruisers, and dreadnaughts, are things of the past; but whether they admit it or not, the recent contest in the North Sea between the forces of Germany and England, wherein the English admiral in command of one of the strongest and largest vessels afloat ordered a retreat, not because he was afraid of the German ships that he was chasing, but because he feared the Germany submarines.

There can be no question at all, Mr. Chairman, but that our coast line from Maine to Florida and from Washington to California can be protected with a hundred submarines, so that it would be absolutely impossible for a foreign vessel to land on our shores. But submarines do not cost enough of money to satisfy those patriots who have been spending large sums of

money in the propaganda for a larger Navy and larger Army. You can build 30 or 40 submarines for what it will cost to construct a single dreadnought, and that is the one reason why a systematic effort has been made and is being made to discredit the work of the submarine.

If the present war teaches any one lesson it is that the submarine is becoming an important factor in naval warfare; that as a destroyer of hugh battleships and of ships of commerce it has no equal, and that the navy of the future will be more a navy of aeroplanes and submarines and fast cruisers than of battleships and dreadnaughts.

Mr. Chairman, some one has said that if we are to maintain the Monroe doctrine we must have control of the seas. In answer to such a statement it is sufficient to observe that when we first promulgated the Monroe doctrine we did not have ships enough to be entitled to call them a navy. There was never a time in our history when we needed a large navy and a large army less than at the present time. The European countries that some alarmists think might some day attack us are now engaged in a long and desperate struggle that will make it impossible for them to carry on any wars of foreign conquest for at least a quarter of a century.

Our great advantage as a nation, Mr. Chairman, lies in our isolation from the rest of the world, with our wonderful natural resources, in our unbounded wealth whereby we are able to support ourselves without receiving shipments of food or clothing from the world, not only for months but for years and for all time. A war of aggression toward this country by any European nation would punish those countries more than it would punish our country. In recent years the world has become a large family, as the present war has demonstrated, and it will not be possible for one nation to inflict injury on another nation without injuring itself for some time.

It is true we have no large standing Army. We do not need one. The history of our country from Bunker Hill down to Santiago plainly demonstrates that the American volunteer soldier is equal to every emergency.

Along down the line of American history he has won imperishable glory upon all the battle fields of the Republic.

While we have not a large standing Army, it is true, we have an Army of 16,000,000 of free men following the arts of peace who will rise as a man in defense of their country and their country's flag against any foreign foe about to invade our shores.

All our country has to do, Mr. Chairman, is to be true to its ideals—to its history—and we will be left alone to work out our problem, the greatest problem ever given a people to solve, the problem of the self-government of man.

Mr. Chairman, our country has no fear from foreign foes. If we have any foes the foes are internal ones.

The problems that we will have to solve—the social and industrial problems, problems regarding the equitable distribution of the fruits of labor, the problem of labor and capital—are not the problems that can be solved with glistening bayonets and battleships.

Mr. Chairman, if the hundreds of millions of dollars that have been spent in the past 10 years by our Government on our Navy and our Army had been spent in trying to better some of our social and industrial problems and to conquer some of the enemies that are gnawing at the vitals of our national life, our country would be better off to-day.

Mr. Chairman, I can not vote for this bill; I can not consistently vote for two battleships at this time.

In the first place, the construction of two battleships at this time is a reckless waste of money, because before the said battleships can have any possible use in foreign wars they will have become obsolete and will be used for target practice.

Again, it would seem that this is the time when our country, which has been talking so much for peace and which has done so much for international peace, should take the lead—the emphatic lead—in stopping the building of large and useless armaments.

We are not involved in the European conflict, and I hope we will not become involved in it. Then why not let our country declare a naval holiday for our country alone as an example to the military-ridden countries of the world? In the long-looked-for time prayed for by saints and sages, the hope of humanity, when swords are to be converted into plowshares and spears into pruning hooks, our country, that has always been the hope of suffering humanity for all the world, serving as a pillar of cloud by day and a pillar of light by night, should take the lead in this great movement for the disarmament of the nations of the world.

Life, Character, and Public Service of the Late Hon. Forrest D. Goodwin.

MEMORIAL ADDRESS

OF

HON. DANIEL J. McGILLICUDDY,

OF MAINE,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, February 1, 1915,

On House resolution 741, as follows:

"*Resolved*, That the business of the House be now suspended in order that opportunity may be given for tributes to the memory of Hon. FORREST GOODWIN, late a Member of this House from the State of Maine.

"*Resolved*, That as a particular mark of respect to the memory of the deceased and in recognition of his distinguished public career the House at the conclusion of these exercises stand adjourned.

"*Resolved*, That the Clerk communicate these resolutions to the Senate.

"*Resolved*, That the Clerk send a copy of these resolutions to the widow of the deceased."

Mr. McGILLICUDDY. Mr. Speaker, to pay a richly deserved tribute to the life, character, and public services of our deceased friend and colleague, the Hon. FORREST GOODWIN, is the solemn duty of this hour.

Death is always sad, but in the case of our friend it was unusually and impressively pathetic.

He had just achieved what was probably one of the highest ambitions of his life, the opportunity to serve his country, and particularly the people of his district, where he was beloved and admired, in the Halls of the American Congress.

Some of the most distinguished sons of his native State had represented that district in Congress, and it was undoubtedly his worthy and commendable ambition to emulate their illustrious careers on the floor of this House.

Let me say that in my judgment few men come to this Congress better equipped to discharge its high and important duties than FORREST GOODWIN.

He brought to the task talents of a high order, a matured mind stored with valuable information and disciplined not only in intellectual pursuits but in the stern school of practical experience.

A brilliant future lay before him. But, alas, he sat in this historic Chamber but little more than a month when the angel of death beckoned him away. A sad and impressive lesson to us all of the uncertainty of these worldly ambitions and careers.

The story of his life is typical of the average ambitious New England boy and man.

He was born in a small Maine town, of parents poor in this world's goods, but self-reliant, independent, self-sustaining, hard-working people who feared God, loved their neighbors, and did no man injustice—the best possible school out of which to graduate a real man.

Under these conditions he was reared and upon his young mind were impressed lessons of economy, thrift, self-reliance, prudence, and foresight. And in his young heart was impressed the greatest of all human lessons—the lesson of sympathy for his fellow man. In the well-disposed mind these lessons early learned in the school of adversity are not forgotten in the later days of comfort, plenty, and prosperity.

FORREST GOODWIN was preeminently a successful man, and his success was achieved under conditions that reflect upon him the highest type of credit.

He had neither wealth, social influence, nor political power to aid him until he won them by his own efforts.

But he had an honest heart and a clear, right-thinking mind. To these God-given qualities he added industry, thrift, fidelity, and a determination to win.

Undoubtedly his greatest success was in the chosen profession of his life—the law.

Notwithstanding his great promise of success in the field of politics and statesmanship upon which he had just entered, I am not sure but it would have been his choice to rest his reputation in the field of his chosen profession. It was here that he spent the best years of his life and gave all that was in him.

He had all the qualities of an eminently successful lawyer. He had a keen, analytical mind that absorbed legal principles and applied them to given facts in a case with surprising accuracy and effect.

His eloquence and logic as an advocate before a jury were irresistible.

On questions of law before the court his opinions were always received with the profoundest consideration and respect.

But, to my mind, one of the greatest elements of his success in the law was that he possessed the confidence both of the jury and the court. They trusted him not only as a lawyer but as a man; and when a man has won the trust of his fellow men, and not abused it, he has laid the surest foundation for true and lasting success.

Such a man was FORREST GOODWIN. His people, who knew him best, loved and trusted him; and he, in turn, loved and trusted them.

His charming personality, warm and sympathetic nature, won for him innumerable friends.

He was a delightful companion, a broad-minded and cultured gentleman.

He never forgot the comfort and happiness of others, and to contribute to them was his own greatest joy.

But our friend and colleague has gone. His death was, indeed, untimely and all too soon. But in this hour of tribute to his memory his friends have this consoling thought—his name and fame are now secure. By every standard that measures the worth of men he stands eminently among the foremost sons of his native State. In this thought in closing I am reminded of Tennyson's tender and consoling lines to his friend:

Sleep till the end, true soul and sweet!
Nothing comes to thee new or strange.
Sleep full of rest from head to feet;
Lie still, dry dust, secure of change.

A Bureau for Farm Women.

EXTENSION OF REMARKS
OF
HON. EDWARD KEATING,
OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES.

Thursday, March 4, 1915.

Mr. KEATING. Mr. Speaker, on January 27, 1915, I introduced a bill "To provide for the establishment, operation, and management of a bureau to be known as the Farm Women's Bureau in the Department of Agriculture."

This measure was drafted at the suggestion of some of the officials of the American Branch of the International Congress of Farm Women, an organization which is doing a splendid work among the women on the farms of this country.

The following is a copy of my bill:

Be it enacted, etc., That the short title of this act shall be the "Farm Women's Bureau act."

SEC. 2. That there is hereby created in the Agricultural Department of the United States a bureau to be known as the Farm Women's Bureau.

SEC. 3 That this bureau shall conduct investigations of problems relating to the rural homes of the United States, and to that end may cooperate with the various departments of the State and Federal Governments, State agricultural colleges, and organizations of farm women engaged in research work.

SEC. 4. That this bureau shall be an advisory center of rural home work, to which the agricultural colleges, experiment stations, etc., may turn in the development of their county and local work.

SEC. 5. That this bureau may call upon the Bureau of Public Health Service and the Hygienic Laboratory for any assistance in planning the sanitation and hygiene of rural homes and for information concerning care of infants, nursing, and other subjects related to the activities of said bureau; and said Bureau of Public Health and said Hygienic Laboratory are hereby authorized to render such assistance and information.

SEC. 6. That this bureau shall assist in the organization of farm women into clubs of 10 or more, for the purpose of studying the problems of the farm, and to this end advantage may be taken of the publications prepared by the Federal and State Governments, lecture programs, laboratory demonstrations, lantern slides, etc., and of the personal help of the county and State agents.

SEC. 7. That this bureau cooperate with the Bureau of Education in working toward the consolidation of rural schools, the formation of social centers in rural districts, and with the extension departments of the various agricultural colleges in the establishment of circulating libraries and promoting courses for home study by farm women.

SEC. 8. That this bureau investigate and endeavor to solve the problem of female help on the farm.

SEC. 9. That this bureau prepare data for the use of farm women, informing them where and how to procure bulletins giving the result of the Agricultural Department's investigations in regard to balanced rations, scientific preparation of food, comparative cost of food, and farm home economy.

SEC. 10. That this bureau investigate labor-saving devices and new inventions for the home, and it is hereby authorized to build a model farm home, either at the experimental farm at Arlington or any place the Secretary of Agriculture may direct, where labor-saving devices may be tested.

SEC. 11. That the Secretary of Agriculture is hereby directed to appoint as the head of this bureau a woman who has the requisite educational qualifications, and who has had at least 10 years' practical experience as a home maker on the farm. The Secretary of Agriculture may appoint, subject to the provisions of the civil-service law, such other employees for said bureau as Congress may from time to time provide.

SEC. 12. That there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, available until expended, the sum of $200,000 to enable the Secretary of Agriculture to make such investigations, to collect such data, and to use such methods and means as he may deem necessary to carry out the provisions of this act.

MRS. HARBERT'S LETTER.

The president of the American branch of the International Congress of Farm Women is a Colorado woman and a resident of my congressional district—Mrs. Bell van Dorn Harbert, of Manzanola, Colo. Mrs. Harbert is a splendid representative of American womanhood. She has had years of experience as a home maker on the farm and is well qualified to speak for "the woman of the country."

I have asked Mrs. Harbert to prepare a statement in support of the bill which I introduced, and she has been good enough to comply; and with the permission of the House I will insert it in the RECORD, as follows:

MANZANOLA, COLO., *February 27, 1915.*

Hon. EDWARD KEATING,
Member House of Representatives, United States,
Washington, D. C.

MY DEAR SIR: The bill for creating a farm women's bureau in the Department of Agriculture represents the best thought and unselfish devotion of practical women who know both the poetry and prose of country life, and who realize the immense importance of the farm woman as an economic factor in the world's great work.

Agriculture is the basis of all wealth, and upon this truth the department was established; since then the Government has worked shoulder to shoulder with the farmer, always taking the initiative and bearing the expense of introducing new and valuable aids to his work.

Experts have been sent to every foreign country to examine and collect the promising products of the soil. Experiment stations have been established in all parts of the country to test their commercial value; but in this very commendable effort for greater yields and more scientific cultivation of the soil the important science of rural home making has been almost entirely overlooked, and the brave little woman has been left to struggle alone.

STRIKING CONTRASTS.

Millions have been spent to "make two blades of grass grow in the place of one," while practically nothing has been done to make one step in the home take the place of two.

The whole trend of modern education has been along the lines of making a living rather than how to live. Everything in rural life has been so commercialized that one might think it better business to raise fine stock than mere boys and girls, and better to own a big barn than a good home with modern conveniences; the amount of money spent to successfully combat diseases among cattle and hogs compared with the amount used to prevent the appalling loss of infant life from preventable diseases is unthinkable.

The health in the cities has been so safeguarded by medical science and by the strict enforcement of sanitary regulations that it has been stated by good authority that the percentage of defective children and of death from preventable diseases are greater in rural districts than in the city. If this be true it is time that the farmer's wife, upon whose shoulders falls the burden of responsibility of looking after the health and habits of the children, should have help.

We are therefore asking for the establishing of a farm women's bureau in the Department of Agriculture in order that the needs of the rural home shall be more fully considered.

I have been asked, "Why the farm women's bureau, when the whole Department of Agriculture should be considering the needs of the rural home." My answer is I know it should, but it never has. For instance, the agricultural appropriation for the fiscal year 1915 approximated $26,000,000. Of this amount the program of work for the Agricultural Department shows the following which might be classed as legislation for the benefit of the farm home. The office of farm management is to spend $3,320 for farm home studies.

The Bureau of Chemistry will spend $1,500 for studies in bread making.

The Office of Experiment Stations expects to spend $31,260 for investigating the relative utility and economy of agricultural products for food.

The office of markets and rural organizations expects to spend $12,700 for investigating rural social and educational activities.

This makes a total of $58,780 for the rural home.

In comparison with the above amounts the Forestry Service alone will spend $8,000,000, and of this amount $2,000,000 will be spent for purchasing land for watersheds. This shows that money is forthcoming when the need is apparent.

SMITH-LEVER BILL.

The amount of money made available by the Smith-Lever bill for the spread of scientific knowledge in the rural districts is a great step forward, and the manner in which it is spent is of vital interest to every farm woman in America, for upon her shoulders will fall the working out of the practical part of any plan for rural progress. If she is not in sympathy with the movement it will stop where it began, therefore through a farm women's bureau in the Department of Agriculture she should be taken into the "councils of the most high."

The farm woman has forever been the burden bearer of the human race and has been as silent as the force of gravity in her work of feeding and clothing the nations. She has been too busy doing the things that her hands found to do to demand or expect anything of the world except a chance to work. She has been the conserver, the builder, the tireless toiler, but now the world has awakened to find that she, who has been the very balance wheel of civilization, is behind in the procession; already science has discovered her isolated kitchen and is knocking at the door. Shall she be allowed to invite him to enter or will he simply come in and take possession?

The farm woman has been criticized in various ways for her lack of interest in improving rural conditions, and even a bulletin published by

the Department of Agriculture accuses her of being shiftless and careless as compared to her grandmother.

But what will she do?

NEEDS NEW RESPONSIBILITIES.

We all agree that the old-time responsibilities of knitting, spinning, weaving, dipping tallow candles, etc., have been taken out of her hands forever. They have gone with the ox team and the old-fashioned threshing floor. The farmer has adjusted himself to the change, but the farm woman has been given nothing to compensate her for her loss as an economic necessity.

Responsibility is the only means of bringing out the best there is in humanity and the farm woman is no exception to the rule, so in order to bring back the thrift and contentment that characterized her grandmother's day the farm woman should be given responsibility along other lines.

Invite her through this bureau in the Department of Agriculture to help in the solution of the rural problems of to-day and see how quick her attitude is changed. Invite her cooperation with the agricultural colleges and the extension departments and you have enlisted the "better half" of rural humanity.

There is enough energy going to waste because "nobody cares" to bring sunshine, beauty, and gladness into every rural home in the United States. This latent power, if rightly directed by the Department of Agriculture, would put a stop to the drift from the farms to the already overcrowded cities; for, verily I say unto you, the women are responsible for the exodus.

Answers to thousands of inquiries show that 90 per cent of all the families who leave the farms do so because of the dissatisfaction of the mother. Many reasons, such as better educational advantages, social privileges, intellectual environment, modern conveniences, and to escape isolation and loneliness are all given, but the fact is that the rural home has not kept apace with modern life and this neglect is sapping the very foundation of our civilization.

All these objections can be overcome by modern inventions, aided by organized efforts and a cooperation of all concerned, but leave the farm woman out of the scheme and you have delayed the progress by a generation.

KNOWS PRACTICAL SIDE.

She knows the practical side of farm life and she knows by experience and a keen intuition how theories will work out. She may be conservative, but she is always ready to take hold of the hand of science if it is reached out and not down.

The world may call her careless, but it must respect her high disdain for anything subservient; this splendid characteristic has done more to preserve the American independence than any other influence. If in this matter of rural education she is expected to reach up and accept something which science directs without having had a part in its planning, the chances are she will be slow in accepting the proffered help.

88530—14736

This bureau is necessary as a nucleus or headquarters for all farm women's organizations and would centralize the work that is being done for rural uplift.

Organization and cooperation are the two great factors which will bring about the needed changes in country life.

The farm woman must be responsible for her own organization and through this organization she must study the needs of her own community and then cooperate with the agricultural college in supplying them. She must be considered as authority in the practical art of housekeeping. This is necessary to give her proper respect for her position as the farmer's helpmate. It is also necessary in order to give the boys and girls a proper respect for the mother in the home.

This bureau will be the beginning of a larger community life, higher ideals, and a cooperation of hand and brain. It will mean an awakened interest and a new ambition for the woman on the farm.

Hoping your honorable body will pass this bill for a farm woman's bureau, and thanking you for honoring us by its introduction, I am,

Very cordially,

MRS. BELLE VAN DORN HORBERT.

MRS. BIGELOW'S COMMENTS.

One of Mrs. Harbert's earnest, intelligent lieutenants is Mrs. Mary L. Bigelow, of Minneapolis, Minn., president of the Farm Women's Press Association. Mrs. Bigelow has been good enough to prepare a letter in support of the bill, which I will take the liberty of inserting in the RECORD, as follows:

MINNEAPOLIS, MINN., *February 26, 1915.*

Hon. EDWARD KEATING,
House of Representatives, Washington, D. C.

DEAR SIR: I have been requested to write you in connection with your bill calling for a farm woman's bureau and to give reasons why such a bureau is necessary. The question is asked, "Why a bureau for farm women any more than for any other women?"

The city woman's needs are largely taken care of municipally. Public health is a necessity; hence, sanitation and all that relates to its application is cared for at public expense. Sickness, contagion, and epidemics from various causes are, on account of close segregation in cities, such a menace that the city cares for, directs, and even forces obedience to rules conducive to the greatest good to the greatest number. She is within reach of immense libraries and lectures on every conceivable topic, cultural, and economic. She is within reach of food supplies, prepared and otherwise, and is protected by sanitary regulations.

She has abundant water supply at a nominal cost. Garbage is disposed of. Her home is lighted and easily heated with minimum labor. Cooking is made easy. In fact, all conveniences are placed at her disposal either by municipal activities or by public-utility corporations acting under municipal control.

Time, "the great gift of the gods," is hers to live, to improve her mind, rear her children, compass charities, and allow her soul to grow.

The woman of the country has had to look either to herself alone or at the most to the unaided generosity, farsightedness, and financial ability of one man (her husband) to get any of these blessings which come naturally to the city woman.

If the farmer is the ward of the Nation at large, having no town to stand sponsor for him, so the farm woman is equally entitled to at least all the guidance, advice, help, demonstration, and experimental work that the Government can encompass to enable her to get for herself what the city woman already has without asking.

In many of the States the agricultural colleges are giving this service, in some cases covering nearly all that is needed, in many instances specializing in a few directions in which a record has been made and leaving many crying needs entirely without remedy. In other States, sometimes through lack of appropriation or other causes, little, if anything, has been done for the women on the farms.

It is useless to work for the farmer, to teach him to grow better crops; urge him to educate his children and enable him to accumulate a competency, if as soon as all this is done the woman or women of the farm simply will not stay where they have no chance to really live and prefer to move into town and expand under the benign influence of municipal and corporate protection.

So it would seem to be really "up to" the Federal Government to protect, educate, and develop his female wards and exercise the same intelligent parentalism over the women of the country that he is now doing for the men on the farms and for the children of the whole country.

Yours, very truly,

MRS. MARY L. BIGELOW,
President Farm Women's Press Association.

WILL REINTRODUCE BILL.

I found it impossible, Mr. Speaker, to secure consideration of this bill during the Sixty-third Congress, but I intend to reintroduce it at the opening session of the Sixty-fourth Congress, and at that time I will urge my colleagues in the House to give it serious consideration. I am sure I may count on a proper response. Most of us were born on farms, and we are therefore the sons of farm women. It would be strange, indeed, if we did not gladly embrace an opportunity to better the conditions surrounding the women who have taken the places once occupied by our mothers.

On the Hobson Resolution for Nation-Wide Prohibition.

EXTENSION OF REMARKS

OF

HON. HENRY M. GOLDFOGLE,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 22, 1914.

The House had under consideration the joint resolution (H. J. Res. 168) proposing an amendment to the Constitution of the United States prohibiting the sale, etc., of intoxicating liquors for beverage purposes.

Mr. GOLDFOGLE. Mr. Speaker, I shall vote against the Hobson resolution, regarding it as subversive of the principles of local self-government and destructive of property rights, without making compensation; as destructive, too, of legitimate industries, the control and regulation of which should rest with the States alone; and finally as opposed to the teachings of the Democratic Party.

It has been the policy of our Government, and I think I express what Democracy has always claimed to be its doctrine, that those matters which affect the moral and social relations of the States should be left to the control of the several States. The subject of excise has ever been regarded as a matter peculiarly within the province of States to legislate on, and no good reason has been advanced for the invasion of this State sovereignty. It was Thomas Jefferson who, in one of his famous letters, said:

I have always thought where the line of demarcation between the power of the General Government and the State government was doubtful or indistinctly drawn it would be prudent and praiseworthy in both parties never to approach it but in the most urgent necessity.

I can not reconcile myself to the idea that the prohibition to manufacture and sell beer and spirituous liquors comes within the legitimate field of Federal legislation.

It is now within the province of any State to adopt, if it sees fit, prohibition laws, make them as drastic as it sees fit, and provide for their enforcement. Commit this power generally to the National Government, and it would require swarms of officials and myriads of spies to enforce the law. In States where the sentiment opposed to prohibition prevails it would be next to impossible to secure the enforcement of the law. You can not carry any law, as a rule, into effect unless the opinion of the general public is behind it and lends it its moral support. In certain jurisdictions the sentiment would be so strong against prohibition that jurors could not be found to convict, and the law would be treated with that indifference or meet with such local opposition that it would be treated with the evasion or contempt that it deserves.

Again, it may be urged that to carry out the scheme the resolution contemplates would require an army of marshals and in many places a force of other officials, which would call for so

large an expenditure of public moneys as to be burdensome on the Treasury. Clothed with the power of seizure, search, and arrest, and, in some localities, the necessity of taking alleged violators of the law to distant parts before Federal courts, the power to enforce the law would become tyrannous, and where sentiment for it would be lacking the law would to the community become obnoxious. I can not conceive of a species of legislation worse than that, nor of a condition which, instead of promoting respect for, would rather bring an utter contempt for the law.

Suppose a dozen States, each large in population and powerful in their resources—such, for instance, as New York, Pennsylvania, New Jersey, Ohio, Illinois, Wisconsin, and California—be, as I confidently believe they are, opposed to this prohibition legislation. Yet the advocates of national prohibition would, through constitutional amendment, have 36 other States foist on the entire country a law which these powerful States would justly regard as an invasion of their sovereignties, as destructive of the property rights of their citizens, as an unfair, arbitrary, and unjust deprivation of their revenues, and an unnecessary interference with the tastes and inclinations of their citizens. Against the attempt now made to have these smaller States make this aggression upon these larger States I must enter my emphatic protest.

Mr. Speaker, in so far as my State is concerned this prohibition measure if enacted into law or written into the Constitution would entail a loss annually to its treasury of about $20,000,000. It is a well-governed State. It is opposed to this prohibition measure. The city of New York, which in part I am privileged to represent, is a well-governed city—the metropolis of the country—and stands as a pride to the Nation. It is opposed to this prohibition legislation. My city and State, in the exercise of their right of self-government, in their insistence on the right of local control of matters that have no legitimate place in the domain of Federal legislation, in their determination that the lawful industries and legitimate investment of capital and the legitimate employment of honest labor shall not be ruthlessly destroyed, protest against the adoption of this Hobson resolution.

Again, I would remind the House that while we have been seeking for sources of revenue and have been doing so much talking about taking off the burdens of taxation from the people, this prohibition measure, if enacted, would entail an annual loss of about $230,000,000 to the National Treasury. How do you propose this loss shall be made up? You would throw an immense army of workingmen out of employment; you would shut off this large revenue to the public coffers, and where, I ask, would you look for moneys to make up the loss? You would enter on new fields for taxation and thereby add to the burdens already heavily felt by the general public. Indeed, you who advocate this nation-wide prohibition, many of whom have so loudly talked of your interest in the workingman, would strike down scores of industries which enter into the manufacture and sale of beer and ale and wine and liquor and cast out of employment the immense army of thousands of workingmen now engaged in those legitimate pursuits. Whatever may be thought of the so-called liquor question, let each community for itself decide, but let us not venture into an encroachment on the rights of States and an interference with those privileges which peculiarly belong to local communities to regulate.

You who come from States that are dry enforce your laws if you will. You who come from local option counties or towns enforce your laws if you can. But we seriously object to your efforts to have, so far as this matter of prohibition is concerned, a probable minority spread through two-thirds of the States overrule the judgment and desires of what likely is a majority of people in the remaining one-third of the States of the Union.

In this connection and in the few minutes remaining I desire to read from the words of our illustrious President Wilson in his work on constitutional government. He says:

> It would be fatal to our political vitality really to strip the States of their powers and transfer them to the Federal Government. It can not be too often repeated that it has been the privilege of separate development secured to the several regions of the country by the Constitution, and not the privilege of separate development only, but also that other more fundamental privilege that lies back of it, the privilege of independent local opinion and individual conviction which has given speed, facility, vigor, and certainty to the processes of our economic and political growth. To buy temporary ease and convenience for the performance of a few great tasks of the hour at the expense of that would be to pay too great a price and to cheat all generations for the sake of one.

Applying this sound philosophy, which is in perfect harmony and consonance with Democratic doctrine, I trust the resolution will be voted down. [Applause.]

National Marketing Commission.

EXTENSION OF REMARKS
OF
HON. WILLIAM S. GOODWIN,
OF ARKANSAS,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. GOODWIN of Arkansas. Mr. Speaker, there are no two questions that engage the thought of the agricultural population so much as the subject of rural credits and the creation of a national marketing system that will enable the agricultural people to find a ready market for their produce. By all means this Congress should have enacted both propositions into law. I desire upon this occasion to stress and emphasize the importance of the latter proposition—a national marketing system. The greatest authority on both of these questions in this country, who has had an actual experience of nearly 40 years in this country, augmented by a dozen years of close study and observation in Europe, is that world character, Mr. David Lubin, of California, who conceived the idea of creating and is the father of the International Institute of Agriculture at Rome. By his unceasing labors Mr. Lubin finally brought his conception to a realization, and this institute, supported by 54 adhering Governments, is the world's great clearing house of information on all agricultural questions, and no member of this institute, learned as I think all of them are, stands higher as an authority and as an unselfish advocate of bettering the condition of the farming class of people than does Mr. Lubin.

It was my pleasure, Mr. Speaker, for about seven weeks last fall to be thrown in almost daily touch and contact with Mr. Lubin upon his invitation, and no man who is sincerely desirous that the backbone of our country—the agricultural people—should have their lot and condition in life bettered can fail to have a higher appreciation as well as a broadening of his vision by being associated with a man of Mr. Lubin's intellect and sympathy.

It is largely through the efforts of Mr. Lubin that House joint resolution 311, which was reported by me from the Committee on Foreign Affairs, passed this House as well as the Senate and was approved by the President. This resolution seeks to create an international commerce commission on ocean freights that the same may be regulated and made stable, the Shipping Trust destroyed or compelled under a penalty of international law to carry the world's commerce at reasonable and not exorbitant rates. If such an international agreement existed to-day, we could appreciate its worth and value in throttling the Shipping Trust that is devouring the peoples' substance and with an avarice hitherto unknown.

Of the two questions, important as they both are, rural credits and a national marketing commission, Mr. Lubin thinks that the latter should come first, though I believe both should have been enacted by this Congress. For every borrower of money there must be a lender, and no lender of money will begin to put his money out at interest unless he deems the security inviting and the borrower solvent and liable upon his contract. In other words, Mr. Speaker, if the farmer can dispose of his surplus products at a good advantage, at a profit that is due him, by a system of marketing instead of his products rotting in the fields or in the bins, he is then in a condition to receive accommodation and to discharge his obligation, as the same may fall due from time to time, from year to year, in the way of partial payments on long-time loans as well as to meet the annual interest thereon. Therefore if a system of marketing were established in this country, National, State, county, and township, all correlated, dovetailed, and interlinked, there would be no excuse for a failure of any farmer to market his produce, if not locally, then possibly to be consumed by some producer to be found by the county commission; but failing there to be disposed of, probably by the State commission; and if no demand in the State for these products of a given locality, then to find a market at the instance and through the intervention of a national marketing commission. Reports from day to day should be sent by telephone, by telegraph, and by mail, if necessary, not only as to all products for sale by the producers thereof, but likewise similar communications made to all parts of the country by the National, State, county, and township commissions of a demand for farm products which people need and are compelled to have. Therefore, Mr. Lubin says, first establish your marketing commission, conserve the peoples' products by finding a

market for same, build up and make prosperous the producers of the country, then the lender of money, knowing that the man who seeks to borrow it will meet his obligations as they fall due, will not hesitate to accommodate his needs.

A resolution introduced by me to create a national marketing commission, permit me to say, has received wide publicity in different parts of the country, has been indorsed by representative farmers' organizations, consumers' leagues, and many dozens of other civic bodies and some of the foremost editors of agricultural papers throughout the country, and in the State of California, where Mr. Lubin is so favorably known, has possibly been indorsed by a half million people through divers and sundry organizations. The resolution (H. J. Res. 344) above referred to has since been modified to some degree at the instance of the legislative committee of the National Farmers' Union and others, and I herewith append this modified resolution, which speaks for itself:

Joint resolution providing for the appointment of a national marketing commission.

Whereas it is patent that there are defects in the economic system of the United States which affect adversely the producers and the consumers of agricultural products; and

Whereas these defects have been accentuated by the European war, and to a degree justifying the recent utterances of the President of the United States in the matter of the high cost of living; and

Whereas various attempts have been made from time to time to overcome these defects, mainly through nongovernmental agencies, and recently under governmental agency under the Bureau of Marketing of the Department of Agriculture; and

Whereas experience has, however, proven that the solution of this question is not to be found in nongovernmental agencies, nor is it to be found in a governmental agency. It is to be found in a semiofficial governmental agency, as is here proposed, as witness the success in the European countries of such a system, a system which has swept aside the trusts in food products and which renders the trust an impossibility; and

Whereas the present abnormally high prices for food products not alone offers an opportune time for the establishment of a semiofficial governmental agency as a means for the temporary solution of this problem, but also for the organization of the agricultural forces of the United States on the lines indicated as a means for the permanent solution of this problem: Now, therefore, be it

Resolved, etc., That the President be authorized and requested to appoint a national marketing commission, to be composed of 18 members, 12 of whom shall be engaged in agricultural or horticultural pursuits, and 6 of whom shall be selected with special reference to their knowledge of commerce, finance, transportation, and law, and who shall receive compensation not in excess of $6,000 each per annum.

That said commission shall meet in the city of Washington, at a time designated by the President, to organize by the election of officers and to adopt a plan of action for the effective organization of the States, counties, and localities of the United States.

Said commission shall be empowered and directed to act with organizations and individuals as may become part of the national marketing system, when such organizations and individuals may have been authorized by said commission to cooperate to that end and under such rules and regulations as the national marketing commission may prescribe.

I also will publish with the resolution, Mr. Speaker, a few of the letters received by me indorsing this proposition. Mr. Charles Kurzman, of New York, has written me a great number of letters upon this question, and he likewise has addressed other letters to different officers of the Agricultural Department in Washington, as well as other representative officials, not only indorsing the idea set forth in this resolution, but commenting at considerable length, giving his views in a many-sided way to the question of a national marketing commission. I do not agree with some of Mr. Kurzman's conclusions, but I publish his letters gladly as a contribution to this very important subject, for Mr. Kurzman has been a close student of the economic needs of our farming population as well as the unfortunate consumers in crowded centers and cities, who on account of the unfair, cumbersome, and expensive manner of distributing the products from the farm to the consumers in cities is compelled to pay an exorbitant rate for same, thus forcing the producer to receive but a fraction of what he should receive.

HUNTING CREEK, N. C., *February 20, 1915.*

Hon. W. S. GOODWIN,
Washington, D. C.

MY DEAR SIR: Replying to your favor of a recent date, will say that I most heartily approve the measure and the joint resolution now before the House providing for the appointment of a national marketing committee, and shall be pleased to do what I can to further its passage.

Trusting that all goes well with you, and with kindly regards and best wishes, I am,

Very truly, yours,

C. C. WRIGHT.

—

MOUNT VERNON, ILL., *February 25, 1915.*

Hon. W. S. GOODWIN,
Washington, D. C.

DEAR SIR: Just back from a speaking trip and had yours awaiting me. I have had some correspondence with Hon. D. Lubin over these matters and have indorsed the "Landwirtschaftsrat" fully. See his published letter to Senator FLETCHER on bill S. 4246.

If I might be allowed to suggest, I think the words in your resolution, "to appoint a national marketing commission," are altogether too limiting for Mr. Lubin's idea and the Landwirtschaftsrat of Germany. It is essentially a national advisory agricultural council along all lines of farm and rural life.

Hoping that this may be broadened, and wishing you every success, I am,

Fraternally,

JNO. P. DOYLE.

—

ARKANSAS STATE FARMERS' UNION,
Little Rock, Ark., February 26, 1915.

Hon. W. S. GOODWIN,
Washington, D. C.

DEAR GOODWIN: I am writing you in regard to House joint resolution No. 423, introduced by you in Congress recently as a substitute for House joint resolution No. 344.

I want to say that the idea of this agricultural commission as advanced by Mr. David Lubin and embodied by you in this resolution is one that is in entire accord with the principles and efforts of the Farmers' Union; that is, to provide some actual representative manner in which the views of the small farmer may be properly and accurately presented to the Congress of the United States at all times; and it is one of the most worthy and far-reaching efforts to help the agricultural classes in a practical manner that has been introduced in this or any other Congress, I earnestly believe, and I certainly hope that you will be successful in having it enacted into law.

Anything I can do or that the national organization of Farmers' Union can do to help this matter forward you have but to command me and I will see that the proper agencies are put to work to do it.

Very truly, yours,

H. S. MOBLEY.

—

FARM AND FIRESIDE,
Berkeley Springs, W. Va., March 1, 1915.

Hon. W. S. GOODWIN,
House of Representatives, Washington, D. C.

MY DEAR SIR: When I talked with Mr. Lubin about the Landwirtschaftsrat I was convinced of the correctness of his views, and a rereading of his speech before the Committee on Agriculture reproduces in me the original conviction. A national council of agriculture of that sort would be a good thing, I am sure—a splendid thing—if it could represent accurately the sentiment of actual farmers of the country. By actual farmers I mean not only farm owners who work their own farms, but tenant farmers and farm hands. Surely the lower down in the agricultural scale a man may be the more necessary it is that his needs and his rights be taken into account.

I am afraid, however, that I can not help very much in perfecting your plan for the appointment of a national marketing commission. I have been trying to visualize the sort of gathering we should have if either of your proposed commissions should be appointed. I have never been able to see any constructive agreement as an outcome of their deliberations, and yet I am in favor of the resolution. What we need more than anything else is an active cooperative life in the townships and school districts, so that there will be issues on which representatives can be chosen from the localities to the county gathering, from the county meeting to the State convention, and from the State meeting to the national Landwirtschaftsrat. I am afraid we shall not get this through your resolution. As Mr. Lubin so well said, it ought to come from the bottom up, and I am afraid it will have to.

Yours, sincerely,

HERBERT QUICK.

—

FARMERS' EDUCATIONAL AND COOPERATIVE UNION OF AMERICA,
Gravette, Ark., March 2, 1915.

Hon. W. S. GOODWIN,
Washington, D. C.

DEAR SIR: Your letter of February 17 has just been called to my notice. I have read with great interest Mr. Lubin's address at the hearing on H. J. Res. 344. You are working on the right line; in fact, upon the line we had in mind two years ago, when we introduced the bill to create a marketing bureau. The thing Congress gave us will never do what we had hoped to accomplish. The commission provided for in your resolution will get at the bottom of things.

The farmer's problem of the hour is economic distribution. It must be solved in the interest of the whole people. Governmental assistance is absolutely essential, not to market products, but to point the way.

Will you kindly send me 25 or 30 reports of the hearing last September?

Thanking you in advance, I am,

Very truly, yours,

A. C. DAVIS.

—

WASHINGTON STATE UNION,
FARMERS' EDUCATIONAL AND COOPERATIVE UNION OF AMERICA,
St. Andrews, Wash., March 3, 1915.

Hon. W. S. GOODWIN,
Washington, D. C.

DEAR SIR: Yours of the 17th ultimo to hand, containing copy of H. J. Res. 423; also copy of hearing before the Committee on Agriculture of the House, and I wish to thank you for the same.

The resolution meets my hearty approval. I believe we could expect more efficient service if the commissioners receive an adequate salary for the important work that would be required of them.

I believe the bill in its present form is much better than in the first resolution, 344, and would like to see it passed in this form.

Thanking you for the information given and for your interest in behalf of the farmers, I am,

Very truly, yours,

A. D. CROSS,
State Secretary-Treasurer.

—

Letter from Gov. Capper, who is interested in several farm journals, having a circulation of several millions, indorsing the resolution:

EXECUTIVE OFFICE,
Topeka, March 8, 1915.

Hon. W. S. GOODWIN,
House of Representatives, Washington, D. C.

DEAR MR. GOODWIN: I have read with much interest your joint resolution to create a national market commission to follow out the suggestions in Mr. Lubin's statement. It seems to me you will do well to have on that commission the two men in the Farmers' Union and the Grange who are their highest authorities on practical, actual cooperation. For the rest, I hope you will be able to obtain high-grade men who will go into the matter actively and with enthusiasm. One

of the difficulties will be to find men of that kind who can give this enterprise the attention it should have. You and your colleagues will have my best wishes in this endeavor.

Very respectfully,

ARTHUR CAPPER,
Governor.

PLAN FOR INCREASING PRODUCTION, DECREASING PRICE TO CONSUMER, AND YET ENABLE THE FARMER TO MAKE GREATER PROFITS THAN UNDER PRESENT SYSTEM.

MR. CHARLES J. BRAND,
Chief, Office of Markets, United States Department of Agriculture, Washington, D. C.

DEAR SIR: With further reference to the figures of the United States Department of Agriculture on survey of 273 of the best farms in Iowa, Indiana, and Illinois, showing 18 per cent losing from $200 to $500 yearly, and 15 per cent losing from $1 to $200 yearly, or breaking even, for their labor—over and above 5 per cent interest on the investment—thus apparently 33 per cent, or one-third, of the farmers work for nothing or less than nothing.

These would come under the head of "inefficient.."

It is claimed that about one-third of the animals on the farms are also inefficient—that is, they consume more than they produce—hence instead of having a population of 100,000,000 people to feed we also have to feed or board these one-third of our farm animals that are inefficient.

For example, in 1913 it is said the produce of the farms was valued at close to $10,000,000,000, but almost half of this vast sum remained on the farms—for feed for animals, poultry, etc; for seed, food for the farmer, etc.—therefore one-third of this vast sum that was consumed by the inefficient or boarding animals that produce less than they consume is a drain, first on the farmer himself and in turn, as it leaves less for human consumption, raises prices unduly, and as a result is a drain on the Nation. In addition to our 100,000,000 population of human beings we have to feed those animals and fowls that do not pay their way.

By proper supervision—for example, in dairy cattle and poultry—a supervisor in each district, as outlined April 16, the boarders can be eliminated little by little, and in their place gradually produce better breeds that more than pay their way for feed and care bestowed upon them.

Around Ithaca, N. Y.—north and easterly of the lower end of Lake Cayuga—there are about 275 farmers that are in a sort of cooperative organization, who every morning bring their milk to the nearest of six gathering stations, from whence daily the separated cream is brought to the central station, where it is churned into butter. The managing head of this central station is an able, scientific, as well as practical expert. For some years he has been trying to persuade farmers to get rid of their poor milkers and gradually improve their herds. He has established "cow testing" to see the quantity and richness of milk as well as the food consumed by each cow, costing only $1 per cow per year, yet of 275 patrons only 26 have been persuaded to have their cows "tested."

Although the average for New York State yield per cow is 4,400 pounds of milk per year, yet the average of the yield of the 275 farmers is only 3,800 pounds milk per year per cow.

There are cows that yield 25,000 to 27,000 pounds milk yearly, and by proper selection in breeding, etc., in the course of time—say, 5 to 6 years—herds can be vastly improved. It is said that no cow really pays to keep unless her yield of milk is from 6,000 to 7,000 pounds milk yearly.

When it is figured that of these 275 farmers, some amongst the 26 who have their cows tested, as well as some others, now have really fine milkers, that produce 12,000 or 10,000 pounds of milk, and a lot that produce 3,000 to 6,000 pounds of milk, then imagine how many cows are "boarding," such as produce around 2,000 pounds of milk only—to make the average of 3,800 pounds of milk for these 275 farmers—or take the entire State of New York, a great dairying State, how many "boarding" cows there are in New York that, combined with the good yielders, give but an average of 4,400 pounds of milk.

Prof. Harper, of Cornell, claims that easily one-third of the cows in New York State—or, for that matter, in the United States—do not pay their way for feed and care in yield of milk, and that anyone with influence or authority over the farmers in each district, or in the State, or in the United States, could in the space of six years, more or less, gradually weed out the poor cows and so improve the herds that with two-thirds of the number of cows, and perhaps with 70 per cent or 75 per cent of the feed they all now consume, the same yield of milk would be produced.

This would mean that 30 per cent or 25 per cent of the land now used for producing feed for the cows could be utilized for producing food for human beings or food for raising beef and other meat animals.

The same theory applies to poultry—in producing hens for egg production or for flesh—by improving the breed through the advice of a guide or supervisor amongst cooperating farmers in each district or locality.

Likewise, in improving breed of meat animals—steers, hogs, sheep, etc.

Near the same district—about one-quarter overlapping the 275 cooperative milk association—there is also a sort of cooperative poultry association of about 200 farmers, of whom probably 50 bring their milk daily to the milk station. Is there any reason why these 50 farmers could not daily bring their eggs along with the milk to the stations, and from these milk stations the eggs could daily be brought to the central station along with the separated cream—all on the same conveyance—for the poultry station is but two minutes' walk from the central milk or cream station?

Although these farmers cooperate, they have no conception of systematically economizing. At present a wagon goes daily to the farms, gathering the eggs from these 200 farmers, and it takes one week to make the round; thus each farmer has eggs accumulating for one week before brought to the poultry station, and it costs money to do it; but by the new system, with less cost for gathering, the eggs would be daily gathered fresh laid.

The United States Department of Agriculture stated on April 6 that $50,000,000 worth of eggs spoiled on the farms, and that the total loss on eggs from farms to consumers was in the neighborhood of $200,000,000 yearly.

Although the United States Department of Agriculture, as well as the various States, made extra efforts this year to have eggs reach markets from the farms unaffected by heat, yet reports seem to indicate that practically no improvement has taken place, and that the loss or waste is as great as ever. Is not this due to a great extent to improper gathering, which a system as here outlined would to a great extent correct? There are cooperative creameries in a great many sections of the United States, and the farmers who bring their milk to such creameries should also bring their eggs along daily, fresh gathered, to be from there properly graded and packed and shipped on to consuming markets.

The able and scientific head of this cooperative poultry association is now trying to induce the farmers who bring their milk to the six stations, and also the 225 who sell their eggs to hucksters or country stores, to join the cooperative poultry association and bring their eggs daily, fresh gathered, to the nearest of the six milk stations, from whence daily said eggs would be conveyed along with the cream to the central poultry station.

Now comes the difficulty. Will the conservative farmer be willing to change his life-long method of disposing of his eggs; will he be willing to wait a month for his check, even though the price obtained by the cooperative company is 2 cents per dozen above market; and what obstacles or inducements will the present buyers of the eggs of these 225 farmers, or even of the entire 275 farmers in the cooperative milk company, place in the way of the cooperative poultry association obtaining said eggs via the six milk stations? The present buyers in that district make money or a living in buying from these 225 farmers all their eggs, and will not allow themselves to be easily dislodged. Their extra cost of gathering, their profits, etc., as well as the losses in spoiling due to gathering weekly in warm weather, etc., all has to be paid, part by the farmer and part by the consumer.

DISADVANTAGE TO ALL OWING TO COMPETITVE BUYING OF FARM PRODUCE.

Among the 275 farmers in the cooperative milk association there are some that are careless, and a few have been requested to take better care of the milk, as it had soured and could not be used along with the milk or cream of the others.

Owing to no overabundance of almost any farm produce, ready buyers are easily found; and one concern that has use for milk is anxious to lure away the farmers from the cooperative milk company, notwithstanding they obtain a premium of 2 cents per pound for butter fat. When these farmers were told they must take better care of their milk or it would be refused, at once they opened negotiations with the man who was eager for their milk, good or bad. As a result the cooperative-milk chief is now contemplating making two grades of butter—extras and firsts—for to mix the poor with the good milk or cream would lower the standard or grade of the butter produced. This would entail an extra churning of the second grade, meaning an extra expense, or else disappoint the customers who depend upon being supplied with butter with the usual quantities and grade.

When it is remembered that this is in a cooperative district that has the advice and guidance of one of the best men in the State to help the farmers become efficient and prosperous, the outlook for voluntary cooperation amongst farmers for their mutual benefit, resulting in the end in also benefiting the consumers who depend upon them, is not very encouraging.

The claim is here made that probably one-third of the animals on the farms are "boarders" or inefficient, but "surveys" show that probably one-third of the farmers are also inefficient.

We may be able to eliminate in time the "boarding" animals, but one can not drive off the farms the owners or renters who, through persisting in following careless or antiquated methods, retard the proper yield coming from the land under cultivation which they control. These one-third inefficient farmers work for nothing or at a loss, which is their own loss; but what is worse the Nation suffers in consequence, owing to their inability to increase production, thus retarding increase of yield. Just like a chain is no stronger than its weakest link, or a fleet can go no faster than its slowest ships, so these one-third inefficient farmers retard the increase of production and progress.

Thus instead of the inefficient or careless farmers becoming efficient things go on as before, and the user of the milk in the cooperative has to accommodate himself to the heedlessness or stubbornness of the farmer.

If supervised in each district, with notice given to the farmer that he has but one outlet, except direct to the consuming public and to no dealers, and that his record in that supervisor's office will be the basis on which loans to him will be made, he must of necessity change his methods to those suggested for increase of yield with least cost of food consumption, etc., and the necessary care required for the proper preservation of what has been produced, resulting in larger production, less feeding to undesirable animals or poultry and hence lower cost of production, which finally means increased quantity and better uniformity of quality for consumers, accompanied by lower prices to consumers and at the same time a steady profit on all the farmer produces.

Supervision on marketing also prevents glutting of certain markets that temporarily lowers prices to consumers, to the detriment of the farmer, who next season stops or reduces producing that commodity, resulting in high prices next season to consumers. This plays havoc both ways.

Not only can glutting of some markets be prevented, but, to a certain extent, even the planting or overproduction can be regulated, especially in such commodities that can not be exported. A supervisor in each department or commodity can regulate or advise farmers, receiving word from the central or Federal bureau of that department. No reason to have onions in storage unsalable or cabbages rotting in the fields and, as a result of such blindness, the following season a shortage and then high prices again.

Cooperation in each county among farmers will help, but if the operations of the adjoining county or State, or even of States far distant, spoil the market of the cooperating farmers, most of their work is nullified; but national, or rather nation-wide, supervision in each commodity will tend to prevent this.

The idea is to stabilize prices so that what has been produced will not be sacrificed at prices below cost of production, and in some cases for less than the freight, nor to exact prices from consumers that are unreasonable.

The mere fact that each commodity—or even any commodity—is under supervision in itself stabilizes prices, improves quality to a higher standard of uniformity, and the surplus, if exportable, will be exported by the national supervisor of the cooperating farmers, prorating the loss, if any, over the entire production of that commodity, thus making the loss almost infinitesimal to each producer; and yet prices are not unduly depressed for the entire product, and, on the other hand, in case of a shortage in production, the national supervisor of that commodity of the cooperating farmers imports the same from abroad and distributes where needed, thus preventing the soaring of prices.

At present, owing to the European war, as foreigners can buy upon the same free and unrestricted terms in our home markets foodstuffs for

export to any part of the world, prices in almost all exportable articles of food are rising.

If, however, for example, a sort of forced cooperation were in existence—say, through a law that would prevent dealers in the country points from buying farmers' produce by imposing a heavy or almost prohibitive license tax on such dealers in each farming district—it would not pay them to buy of farmers; hence farmers having at all times the privilege of selling direct to consumers but not to dealers, would be forced to cooperate and establish stations for gathering produce in their districts, they selecting their own chief in each commodity, who, as outlined April 16, would receive instructions where to ship such commodity to, to be sold by the farmers' agent in the cities. The result would be that the surplus, having no destination, would be taken care of by the national supervisor of the cooperating farmers in that particular commodity, and thus only our surplus would be exported, at any price the national supervisor or the board would decide upon. Thus we could have two prices—the usual or normal price to our own consumers and during the war a higher price for export, and the gain over the normal price would be prorated among the producers—cooperating farmers. All this was outlined February 27 and April 16.

Distributors.—Public utilities in the United States are under Government supervision, and even the prices charged are regulated. Railroads (in which the public have invested billions of dollars) are distributors, and their rates for distributing are regulated.

Farmers are producers, and dealers, who take their produce to dispose of to consumers, are not producers but mere distributors. If these distributors of food will in the consuming centers receive same from the supervisors' agents of the cooperating farmers, and are reasonably sure no markets will be glutted, and that shortages will be relieved by the national supervisor in that commodity, hence the price should be stable, not drop unduly nor rise unduly; therefore, with practically stable prices, their cost of distribution and profits will be within reason, too. In other words, the distributors, running practically but little risk regarding violent price fluctuations, would eliminate speculation and arrange selling prices to consumers to conform with the cost of the commodity under supervision plus carrying charges, interest, cost of doing business, and a reasonable profit for their time and labor. This would not only stabilize prices, but also increase prices to producers (farmers) and decrease or lower prices to consumers.

The farmers cooperate in their district, sending their product to the gathering stations in their locality, where, for each commodity thus to be supervised, they have selected their own man to gather, grade, pack, and mark same for shipment to consuming markets, where again there is a selling agent for each commodity, all under a central supervision, with subdivisions for States, counties, etc., divided along railroad zones of distribution.

The man selected by the cooperating farmers in each district is to be an expert in that particular commodity he will have charge of. He is to take a special course of instruction in that branch only at the State agricultural college, making him a sort of specialist in it, and he is to guide the farmers in his district in producing and caring properly for that commodity on scientific as well as practical lines.

Let us assume that, to start with, cooperation will commence in milk, butter, eggs, poultry, and potatoes. Thus, the records of the local agency of the farmers' agent in milk and butter, poultry and eggs, and potatoes would show what farmers are efficient and which of them refuse to heed the advice of their own agent. If a certain farmer persists in careless methods and remains inefficient, such a farmer is a hopeless case, and is undeserving of financial aid or credit, and by reason of being discriminated against by banks or lenders of money (who naturally would inquire of the agents as to the efficiency or earning power of the intending borrower) would in time be eliminated and may probably be succeeded or supplanted by farmers willing to learn to become efficient.

But the bulk of the cooperating farmers, upon learning that records are kept, and that lenders of money will want to have reports of same to guide them in granting credit, and that efficiency will be rewarded, not only by better profits for their toil, but also by the prospects of financial aid (if they show themselves worthy of it), result must of necessity be that it will spur the farmers on to renewed hopes that their individual welfare is being looked after, and that he is bound to prosper and succeed, provided he himself will act as the agents or supervisors in his district will suggest.

It has been found that many farmers (renters) stay but two or three years on a farm, and then rove to some other farm, always hoping the next farm will prove better paying than the last.

As a rule, they leave the farms, as well as themselves, in a poorer condition, and by not changing their methods, and under existing system, they fight against the same odds as before, and have nothing to show for their toil.

It is the disappointing results that discourage the farmers (except the very efficient ones), and cooperation, as outlined on April 16, with but little financial help added, where it can be safely given, when the borrowing farmer shows his eagerness to wake up from his lethargic condition, will go far to galvanize into new life activities on the farms of the United States.

It is a pity to leave five to six and one-half million farmers to work out their own salvation. Deluging with literature and advice won't and so far has not helped. Asking them to form cooperative societies, without the required leadership in each district to make or take the initiative steps, is like having leaderless regiments without a general in chief command.

We have the material—fine lands and intelligent farmers—but we fail to drill our farmers; fail to make them work like an army of well-trained (soldiers) farmers.

The farmers don't want excessive prices for their produce, and the consumers don't expect to obtain their food for less than cost of production, nor even would the wholesalers and retailers in the towns and cities desire to make more than a fair profit or a good living; but unless the vast army of producers are taken hold of and drilled and trained, and not to work at cross purposes, but little headway can be made.

The initiative is not likely to come from amongst the farmers themselves; their mode of life precludes that. Therefore the initiative must come from governmental sources.

The plans outlined do not deprive the farmer of his right to sell his produce to consumers nor to do with his land as he chooses; but taking away the country buyer through a high or prohibitive license tax forces the farmers to cooperate; and if they cooperate in a district or locality why not go a step further and have the cooperation nation wide in scope in such commodities as they will start to cooperate in, and in time it will lead from one commodity to another, for one can easily see that without a nation-wide supervision in a commodity it would simply mean that each community of cooperating farmers fighting each other in prices or overstocking one market or undersupplying another, thus defeating the very ends and aims that cooperation are intended for, viz, larger and better quality of production, economy in marketing, and stable prices, all of which insure a steady progress; and this in the end is bound to lower prices to consumers and at the same time make the farmers more prosperous and efficient.

It is a fallacy to think that by lowering duties on foodstuffs we lower prices to consumers; that in the long run will only reduce our own production and leave us at the mercy of the foreign producers. In the short time that has elapsed we already see a smaller production of sugar, butter, and eggs. The present war teaches that a nation should be as self-sustaining in food production as her soil and climate will permit.

England, by her free-trade policy, has encouraged the newer countries to supply her with food, and thus discouraged her own farmers, with the startling result that since the 1846 laws the acreage under cultivation as well as the production is said to have dwindled about 50 per cent, and this in the face of a large increase since 1845 in her population. And see the vulnerable position England is in to-day, dependent upon foreign lands to feed her.

Look at sugar. At one time this season, after the reduced duties went into effect, price for raw sugar, 96 polariscope test, was 2.99 cents a pound; later it had risen to 3.39 cents a pound. Was not this rise of four-tenths cent per pound due to our decrease in production, which would have to be made up by foreign importations? That is, as the lower duties discouraged our own production we would have to import more and more; result is that the rise of four-tenths of a cent per pound on the 60 per cent more or less we import was about equal to the reduction in duty. In other words, we did not, up to the time of the outbreak of the present European war, lower prices to consumers; but, instead, the amount the consumers would have paid into the United States Treasury as duties on imported sugar, this sum went instead into the pockets of the foreign producers of sugars who sold to United States (advance in price 2.99 cents to 3.39 cents).

Is not this a national loss? The money had to be paid anyhow by the consumers, and it would have been better in our United States Treasury than in the pockets of the foreign sellers of sugars.

On the other hand, high protective duties, like on butter and eggs, do not help either. While it is true that under present conditions lowering duties will reduce the production and ultimately work harm, yet the consumer, too, has a right to be protected from paying for his food far, far above what similar articles can be procured from abroad; therefore even too high protection is wrong, too.

Since, therefore, low or no duties seem to work harm and, on the other hand, high duties do not increase markedly our food production, therefore we are suffering from something that as yet seems to baffle all our statesmen, irrespective of what parties they belong to, for this is a matter where there are no party lines.

Further, by assuming that to counterbalance our imports of cheap food products (instead of trying to produce same at home) we will exchange such with our manufactures of a similar amount in value, even this is a fallacy.

For example, if we export shoes to the value of a million dollars, it will not equal imports of food that we could have produced at home valued at a million dollars, for we have largely to import the hides and skins; or even if it be coal, oil, copper, or steel, we there export articles taken out of our soil that can not be reproduced and are not inexhaustible, while intelligently raising foodstuffs from our soil can go on forever. Just as harnessing water power is the more economical over using mined coal for power, so is the intelligent production and reproduction of food, whether for home consumption, and exporting the surplus, the more beneficial for a nation over exporting manufactures and importing foodstuffs.

But cooperation nation-wide in scope will help increase the yield, giving better profits to farmers and lower prices to home consumers.

The new dean of the State agricultural college, who was for 25 years with the United States Agricultural Department, is reported to have said that 50 per cent of the farmers show increase of production, while 50 per cent show a decrease, and that of the increase 90 per cent of it is made by only 10 per cent of the farmers, inferring that the bulk of the farmers are inefficient or careless in some one of the many things they produce; for example, improper care of eggs, which may be only a side line attended to by the women or children on the farm, yet if only a dozen are spoiled on the farm in a month the total aggregate throughout the United States amounts to enormous sums.

He further claims that 75 per cent of the farmers take more out of the soil than they put back—that is, that three-fourths of our farms are becoming poorer and less productive; and, finally, he is reported as saying that by efficiency, without increasing the area under cultivation, production of our farms could be doubled.

The astounding remarks from an expert who has made a lifelong study of the situation are not to be lightly considered as mere idle words, but thought should be given how to make the farmer and our farms more efficient as producers.

By teaching the farmer, some say. But the president of the Maryland School of Agriculture is reported to have said that last season he notified farmers in a certain district to meet and hear lectures from experts of the college, which would help them, and yet the attendance was so small that he became discouraged.

The plan of April 16, further dilated upon here, embraces all at one time:

1. Cooperation, accelerated and nation-wide.
2. Marketing, economical, eliminating all except wholesalers and retailers in consuming centers.
3. Tuition, or guidance and instruction by the agent or supervisor of a commodity—selected by the farmers themselves in each district—preferably the most active and intelligent from the many in the locality who now buy or handle such product, and who prior to starting as the farmers' agent will have to attend a special course of lectures in that commodity or branch at the State agricultural college, thus making him a sort of practical as well as scientific expert in that product.
4. Loans: Lenders of money will, through the agents of the farmers, be enabled to judge where loans can be with safety made, and to help increase production.

One might ask what will become of the many in the farming districts who now buy or handle the produce. Well, does not the marketing direct from farm to consumer by parcel post or express even cut out the dealers in the towns and cities who sell to the consumers?

It would pay the Nation (if such a thing were necessary) to pension off the country buyers and dealers, for the saving in waste and expenses would be enormous. However, the capital of these unnecessary go-betweens would go into farming, instead of, as now, being em-

ployed as useless links in a chain that circles and curves instead of running straight from the rural districts to consuming centers.

There would hardly be a ripple caused by the change in gathering and distributing. It is doubtful if even 1 per cent or 2 per cent of many a product would have its destination changed from what it is at present; but the destination and marketing would be more direct and less wasteful and less expensive.

Respectfully submitted for your consideration.

CHAS. KURZMAN.

514 WEST ONE HUNDRED AND FOURTEENTH STREET,
New York, August 25, 1914.

Mr. CHARLES J. BRAND,
Chief of the Office of Markets,
Department of Agriculture, Washington, D. C.

DEAR SIR: On October 13, at Wichita, Kans., Mr. T. N. Carner, of the United States Department of Agriculture, is reported to have declared before the National Dry Farming Congress that "Human character should be made as much a basis for rural credits and farm loans as collateral."

But if we leave the farmer to shift for himself, how can we ever expect to develop character and efficiency that will come up to requirements, so that lenders of money will feel warranted in extending credit to farmers as freely as banks to merchants and manufacturers who have demonstrated their efficiency?

There is to be a meeting on October 27 at Congress Hall, in Chicago, which has for its object the mobilization of dairy forces to make war on poor milk and cream. The announcement reads that "poor cream and milk is intrenched behind a wall of competition that must be broken down by cooperation. Some have pointed out the danger of organized effort as an infringement of the Sherman antitrust law. We can not think for a moment that the United States Government would ever attempt to interfere with any united movement whose principal object was to uplift or improve."

Owing to no overabundance in production, the eagerness with which farm products are bought up encourages those who are stubborn or careless amongst producers to continue to improperly care for what has been produced. A sample of this is clearly shown in the previous article on the food problem, dated August 25.

In Europe, under rural-credit systems, such as the Raiffeisen and others, farmers are forced to be not only efficient but even thrifty, for their neighbors, who are jointly liable for each other's debts, so to speak, exercise a moral pressure on any debtor farmer who fails in any way to produce the maximum and to carefully guard from spoiling what has been produced. Let us take the dairy industry. We have in this country cooperative creameries, as also creameries that are owned by individuals and corporations in many parts of the United States, and wholesale dealers in the cities eagerly bid against each other to make contracts to take the output of such creameries at the market price daily. Thus there is a ready market for all that the farmer produces from the milk his cows yield.

But under existing conditions and present system of operation the creameries receive the milk or cream from the farmer, and have no means of forcing the farmer to carefully guard same from deterioration, owing to competitive buying.

If, however, a United States law were enacted heavily taxing all dealers in milk or cream, so heavy a tax that it would force such dealers to quit business, result would be that in each farming district the farmers would form cooperative societies, who would rent the creameries at a fair return on the money invested, and these cooperating farmers would then choose the most efficient in the district to receive their milk and cream to be churned into butter.

In all probability they would choose the very men who operate the creameries at present; thus these, instead of being principals, would become agents or rather employees of the cooperating farmers.

Under the present system they are not interested, nor have they the right or power to dictate or rather to guide and instruct the farmer; but under the suggested plan it would be part of the duty of the agent or employee of the farmers to do so; hence if any milk or cream reaches the creamery that has been improperly cared for, it would be refused—rejected.

The farmer would still have an outlet direct to consumers but to no competitive buyers or creameries, as such were taxed out of existence. Therefore, with only the consumer direct as a possible purchaser of the poorly kept milk or cream, the inefficient farmer would soon learn that even this outlet is shut to him, as the direct consumer (customer) would soon stop buying bad milk or bad cream.

A law such as outlined here would have the same beneficent effect as the Raiffeisen and other rural-credit systems do in Europe to make the farmers efficient, careful, and thrifty. Further, if these agents or employees of the cooperating farmers, prior to starting in their work, would have to attend a special course of lectures at the State agricultural college in dairying only, it would make them semiexperts, scientific as well as practical.

As they would then require "cow testing" for yield of milk, feed consumed, etc., arrangements could be made to use such records for improving the breed of cows, so that in the course of six years, more or less, the breed would be greatly improved in milk productive power. This would decrease cost of dairy products and leave perhaps 25 per cent of the land now used for providing feed for unprofitable or "boarding" cows to be utilized for producing food for human beings.

If in addition there would be appointed in every county an expert in animal husbandry (breeding), such expert, with the records at hand from the chief employees in every creamery, and otherwise, would be able to determine how to improve the herds, and would take the proper steps to do so. Cost and keep (board) of excellent bulls would be proportionately paid for by the cooperating farmers.

Follow the same plan in poultry husbandry and eggs, and market the eggs via the creameries or milk distributors, by enacting a similar law—prohibitive tax—thus forcing farmers to cooperate in each district in poultry and eggs also.

By starting with these two on a nation-wide scope it would inaugurate the long-needed movement of cooperation among farmers, not only for their own welfare but for the benefit of the consumers all over the United States, too.

COUNTY AGENTS.

It seems to be the hope that by having county agents for farmers that great improvements will be brought about. No doubt it would help somewhat; but imagine a big college (like a big county) with but a single instructor or guide to teach the many branches of agriculture that farmers are interested in. Just as a college or university teaches by departments—a tutor or professor for each subject—so should this matter be taken hold of, too, and each class in any subject or department should not be too big—like a county—but, rather, the class should be no larger than a single district or locality where almost daily the tutor or agent of the farmers in any branch or department is able to come into almost personal contact with the farmers for whom he acts as agent or tutor or employee.

The plan suggested divides the United States into gathering stations along railroad zones of transportation (representatives of the transporters, railroads, or steamship lines, to be on the central or Federal board to help improve, if possible, even the transportation problem, for, good as it is, nothing is as yet so perfect but what it can be further improved), and in each such district there is to be a cooperative society of farmers, who select their own agent or employee for each product or related products, each agent having first attended a special course in his particular line or branch at the State agricultural college; thus in each product to be handled or cooperated in the farmers will have practical as well as scientific guides in each district. Each such department in each district to be under the head of a county chief, and these, again, to be under the head of a State chief, and, finally, the various State chiefs to be under a central or Federal supervisor or board for the entire United States for each such department or branch, and the selling end to have an agency by departments established in consuming centers.

Thus in each department or commodity there would be supervision or control, and it would be known by the central or Federal head or board, as well as by the State chiefs in such department or commodity, not only the production, quantity in transit, quantity in each consuming center, but also where there is a shortage or oversupply, and the Federal head or board would look after the importation or exporting of same and thus avoid violent price fluctuations, as under present system. A stable or normal price is thus likely to result, benefiting both producer and consumer.

When a plan such as outlined is once in operation farmers will themselves see how beneficial it is, and they themselves will eagerly clamor for cooperation to be extended from dairy and poultry industries to other farm products, too, and thus in time we would gradually work up, by departments, a great many of the commodities the farmers produce on highest efficient lines of scientific production, economical gathering, grading (standardizing), transporting, and marketing, stoppage of waste, and also bring about prosperity among farmers and lower prices to consumers, and perhaps in time exports of surplus farm products other than the few the United States had a surplus of for export in recent years.

LOANS.

It is claimed that our farmers owe about $6,000,000,000; half of this is due on farm mortgages by about one-third of the farmers, and the other half is due by the farmers on notes, accounts current, etc. It is further claimed that the interest rate paid by farmers is excessive as compared to mortgages on real estate in the large cities, or accommodations granted to merchants, manufacturers, etc.

There is a reason for this.

Create a system that will make our farmers prosperous, and their credit, whether on the farm as collateral or on notes, will be on the same basis as the merchants or manufacturers.

The railroads that show a high earning power have hitherto enjoyed good credit at home, as well as abroad, on long-time mortgages. When the farming industry is so systematized that it will show a steady profit, year by year, the farms will be even better security than railroad mortgages. For with the railroads, many are mortgaged for more than 50 per cent of the valuation, while the agricultural-credit bill limits farm-mortgage loans to 50 per cent with amortization, so that as the years pass the farm loans are gradually reduced, while on railroad mortgages not only are the mortgages not reduced but they keep on growing in amount, thus increasing the fixed charges, which in recent years seem to mount at a more rapid rate than the net earning power. So much is this in evidence that many formerly esteemed good railroad bonds are now in danger of default.

Further, when a railroad gets into financial trouble the receiver issues certificates of indebtedness that come ahead of the existing mortgages, while with farms the mortgages grow smaller yearly (under the proposed bill), and if properly cared for under the suggested plan of cooperation and supervision by departments or commodities the farms would become more valuable and productive as time elapses, thus increasing the security, while at the same time the mortgage grows less and less yearly.

Further, it appears that "somehow" the farmers do, after a fashion, manage to get along with the present indebtedness.

If there be any that assume or think billions are needed to put our farmers into a position to properly produce the maximum, they are losing sight of one important fact, viz, the indebtedness already exists, and when it can be conclusively demonstrated that the farmers under the suggested system of cooperation by departments will be or are prospering, immediately their credit rises. Thus as each loan matures, be it a mortgage or a note, with a higher credit rating, the farmer would be able to refund or renew the debt at a lower rate of interest, and where needed, and the absolute soundness of the loan is shown, the refunding or renewal would be for a larger amount than the old indebtedness.

The debts of the farmers are not held abroad, so that when maturing, if held by Europeans, they would probably want the gold and refuse to renew; the debts are due mainly to our own citizens, and if any refuse to renew (after the farmer shows his steady road to prosperity) the debts would simply be shifted from the old creditor to the agricultural banks or to a new and wiser set of creditors, and ultimately the old creditor, who has been paid off, will seek investments in other fields and perhaps ere long will learn that, after all, the highest and best type of security is that offered by the farmer—provided the farming industry is so systematized that it can prosper, and not allow it to drift aimlessly, without real business supervision, which should come from sources other than from among the farmers themselves.

IRELAND.

In Ireland the farming population had sunk into a most deplorable state. One owner, who had about 235,000 acres of land, leased his land to a few individuals, who in turn split the leases into smaller plots to a new set of lessees, who in turn did likewise, until, when finally the poor Irish tenant got his lease, he was paying as high as £2 rent per acre, while at the same time the original owner received but 12 shillings rent per acre. The difference, equal to about $7 rent per acre, was swallowed up by the many unnecessary go-between lessees, who were nothing more than parasites. Result was the Irish tenant farmer could not eke out of the soil sufficient to meet the heavy drain, nor could he produce the maximum, as he had not the means or the credit to do it with. Only about 30 years ago the land laws were changed and Ireland

to-day is on the road to agricultural prosperity. The law rid them of the unnecessary middlemen lessees, and to this they added cooperation.

In many a commodity produced on our farms we, too, have too many middlemen or go-betweens. By starting in such commodities as dairy and poultry products, by passing laws that tax out of existence the unnecessary middlemen, we would at the same time bring about also cooperation. Of the many buyers or dealers or handlers of such products in each country district, the most active and efficient is selected by the farmers themselves to act as their agent and guide, and in the selling marts a single selling agency in each commodity, to sell to wholesalers, who in turn must sell direct to public or to retailers, who sell to the consumers. Thus even in the cities the unnecessary jobbers are eliminated.

Further, wherever in any of the cities they have municipal markets the selling agency of the farmers in any commodity retains a certain quantity in carload lots, which can be sent to these municipal markets, to be there sold, say, 5 per cent above the wholesale price of the day direct to the public. The 5 per cent is to cover cost of transporting into the municipal markets, wages for the men employed in selling to the public, etc., and any balance left to go to the municipality in lieu of tax to cover maintenance of such market, etc. The per cent may vary according to the commodity, but in any event such a method would be as near as possible to bringing farm products to the city consumers without the wasteful expense of having each farmer bring his own produce to such market to sell there personally.

BASIS FOR CREDIT.

Suppose in time cooperation as outlined will have grown to include, say, five or six farm products. The records or reports of such five or six agents—one for each commodity—in a rural district would be a pretty good criterion on which the lender of funds to farmers could judge as to which farmers are efficient and prosperous, and therefore deserving of credit. If agricultural banks have been established, the agents of the cooperating farmers would form a sort of advisory board to the bank, to whom would be referred the question as to who is and who is not deserving of credit or loans. This would cause farmers to become efficient and would make for an increase in production at a lower net cost, and the inefficient farmers, by reason of being discriminated against in procuring loans, would in time be eliminated and supplanted by others eager for farm life—eager to enjoy a happy and contented life, with prosperity in his grasp on our farm lands.

In many commodities we barely produce enough to supply our 100,000,000 population. The farmers have a sure outlet for their produce in our home markets, with prospects that if the production is increased it will be wanted by our ever-growing population as well as in foreign lands.

FIXED CHARGES.

Public utilities such as our railroads, when in receiver's hands, are operated for the benefit of the public first, even if new money is required, going ahead of existing mortgages. So with the food production; that, too, is vital for the public welfare. We, as a Nation, have billions of our railroad and other securities owned abroad by foreigners, and the interest and dividends on these are like fixed charges, payable either by excess of exports over imports or in gold. Shall we, therefore, add to our fixed charges by failing to keep up our home-produced food supply, get into the habit of importing our shortage from abroad, when we can easily produce ample and to spare at home provided we but so arrange our farming problem that it will pay the farmer to do so? By ridding ourselves of the strangle hold both producer and consumer are in, legislating out of existence the well meaning but nevertheless too expensive country buyer and other unnecessary middlemen, we at one stroke do what neither coaxing, persuasion, or literature has so far been able to accomplish, and that is we leave the farmer no alternative but to form cooperative societies.

Industry in the towns and cities brings business men as well as laborers together for interchange of ideas, improved methods, etc.; but agriculture in itself holds farmers apart in lonely ignorance to be the victims of a system that has brought one-third of them into working for nothing or at a loss and crying for financial aid. Suppose, through Government aid or otherwise, financial aid were granted; would it not be like pouring money into a rat hole to be eaten up or dissipated under existing systems? The farmer is industrious, but needs business methods and guidance, and that must come from a different source than from amongst themselves. In fact, the problem should be divided along natural and practical lines—(1) the farmer to produce only on scientific lines; (2) the gathering, grading, packing, transporting, and selling belongs to a different class altogether, and the cooperating farmers should select their own agent in each district or locality by departments, and a selling agency for each such department in the consuming centers. If to start with cooperative societies were formed in dairy and poultry products only, it would probably take in the bulk of the farmers in the United States, and it would form a medium or channel through which improvements in other farm products could reach the farmer in 24 hours' notice. They would thus be in touch with the business world, and could be communicated with almost daily if necessary.

LITERATURE.

As an example of how little use literature alone is, it is but necessary to read Farmers' Bulletin 445, issued in April, 1911. The suggestion of marketing eggs via the creameries or milk distributors of August 25 was anticipated in that bulletin over three years ago, yet the wise suggestion of the United States Department of Agriculture was practically ignored, costing the farmer and consumer at least $100,000,000 yearly on eggs.

Respectfully submitted for your consideration.

CHAS. KURZMAN.

514 WEST ONE HUNDRED AND FOURTEENTH STREET,
New York, October 15, 1914.

—

514 WEST ONE HUNDRED AND FOURTEENTH STREET,
New York, October 19, 1914.

Hon. W. S. GOODWIN,
Washington, D. C.

HONORED SIR: Your kind letter of October 19 at hand with inclosure. Senator FLETCHER has sent me, besides, the National Marketing Commission, which contains the speech of Mr. D. Lubin, which certainly is enlightening, also some other literature, for which I am very grateful.

This country of ours is a veritable gold mine, only so far we have not properly worked it.

Have you ever noticed in a gymnasium how easy those that know how can get upon a horizontal bar, or climb a rope hand over hand without the aid of their limbs, or how easy it is to climb into a boat or onto a float out of the water without assistance? Yet those with greater physical strength are unable to do so if they do not know how.

So with the United States, having unsurpassed land and industrious farmers, and yet it is about all we can do to raise sufficient food for our population—outside of wheat and a few other articles we still have a surplus of for export. Devise a system such as Germany, for example, has and what wonders can not we perform?

What induced me to look into the agricultural problem was the fact of so many strikes and unrest in England, which, having been dependent upon United States for food supplies, when ours gave out had to look to newer countries to supply her, and when finally our meat supply dwindled, and we last year took off the duty on meats, we raised the price of beef almost 40 per cent in England by bidding against England for supplies in Argentina and elsewhere.

Shall we, too, place ourselves in such a position as England has allowed herself to drift to?

I inclose further articles on the food problem—dated August 25 and October 15.

I understand Congress adjourns October 22, and, as I have some further views with concrete examples which I would like to submit to you for your consideration, I would thank you to send me your home address and I will mail same to you there.

Yours, very respectfully,
CHAS. KURZMAN.

P. S. Kindly also mail me the Florida home address of Senator FLETCHER.

—

NEW YORK, *November 23, 1914.*

Hon. W. S. GOODWIN,
Member of Congress, Washington, D. C.

KIND SIR: I duly received yours of 20th ultimo, and thank you for suggesting seeing Mr. Lubin, whom I found to be just as you described.

Perhaps you are not aware of it, but I hear he spends four or five times more in the performance of his duties for the benefit of mankind than his salary amounts to. He certainly is one of the few characters that give more to the world than he gets in return; and I speak not from a monetary standpoint, for I fully appreciate what Mr. Lubin's aims are and what he is laying the foundations for.

Perhaps some of my ideas you may not like, such as on the tariff, which I believe should neither be too high nor too low—like my ideas on prices—a reasonable price that deals fairly with all—for I believe neither farmer, laborer, merchant, corporation, or anyone should be forced to labor for less than a fair remuneration, and if any of these gets less than is their due, whether through a tariff, ruling of a commission, or in any manner whatsoever, it in the long run upsets the balance or equilibrium of the community, and that means each of us is bound to suffer in some way.

Let us try to be just to others and we will find we are just to ourselves, too.

Regarding the supplying of horses and war materials to the combatants in Europe, I hope the conscience of the Nation will be aroused and that a stop will be put to same. Are we not hypocrites to pray the Almighty to stop the war, and yet we help to enable the murder to go on?

We and England helped some years ago to finance the Japanese in their war against Russia, and one of the results of that war is the intriguing that brought on the present war. And I think no one who will analyze the matter now can fail to admit that we, too, are suffering from the consequences of the war, and will continue to do so for years to come in some way or another. So in the final analysis it resolves itself down to as you sow, so you reap.

Yours, respectfully,
CHAS. KURZMAN.

—

NEW YORK, *November 23, 1914.*

Hon. D. U. FLETCHER, *Washington, D. C.*

HONORABLE SENATOR: Inclosed you will find some more food for thought on the agricultural problem, this time mainly about prices and how we fool ourselves into believing supply and demand only make prices—and in my opinion price is a vital factor in production as well as in consumption.

Two days ago I saw a few lines in the newspapers, and in the course of a week or 10 days I expect to have another communication ready in which I think I can point out reasons for the absolute necessity for creating the national marketing commission.

This country of ours can be made prosperous beyond the wildest dreams of imagination; we can take care of double the population we now have, and welcome such newcomers as the consequences of the war will force away from bankrupt Europe, so ill governed.

If only a stop will be put in this country on playing the searchlight on wrongdoers, and instead of inciting further hatred try to bring out the good qualities inherent in every human breast—by so doing we will, in the language of Franklin, purify but not destroy.

Many thanks for the literature you so kindly sent me, and after what I have so far read all I can say is the country is to be congratulated upon your reelection.

Yours, respectfully,
——— ———

—

514 WEST ONE HUNDRED AND FOURTEENTH STREET,
New York, November 23, 1914.

CHARLES J. BRAND, Esq.,
Chief Office of Markets, Washington, D. C.

DEAR SIR: I herewith send you another installment on the food problem, dealing mainly with prices.

In one of the prior articles I mentioned that large milk distributors, such as we have in this city, make prices or contracts with farmers for months ahead for milk. If, therefore, producer and distributor can get together and have a fixed or stable price for milk, why can't stability of prices on certain food products also be arranged by a competent board, who will look after the interests of those really vitally concerned in the matter—that is, producer and consumer—the distributor being nothing more in reality on certain food products than are the railroads—that is, they act as conveyors—and run but little more risk than do the railroads in transporting, and should receive compensation accordingly, and not at times make large profits, and the larger or more violent the fluctuations the greater are the chances of large profits to these distributors, most of whom would be well pleased with a small and steady profit, but the system forces them, at times against their wishes, to take the heavy toll, either from one end or the other, and this is one of the reasons for high prices and for retarding increase of yield and improved quality and lack of profit to producer and a wail from consumer about high cost of living.

It is the system, not the middlemen nor the farmers nor the consumers that are to blame.

If you will kindly mail me copy of your last reply (which seems to have been mislaid), I will in my next, which will treat the matter from a different phase, include reply to yours.

Yours, respectfully, CHAS. KURZMAN.

—

NEW YORK, *November 8, 1914.*

DEAR SIR: The Decalogue has been in existence for at least 3,000 years. I believe it to be of Divine inspiration, and time has proved it can not be improved upon. But the policies and laws created by man are not always wise. See with what little wisdom the world is governed.

The European war is too horrible to contemplate, and yet daily the slaughter goes on. I sympathize with all and am antiwar.

I sometimes wonder whether England could not have prevented the war, or at least prevented it from spreading. I, too, am against militarism, but why insist upon not stopping the slaughter until the vanquished are so crushed that it is hoped militarism will be stamped out? Many a wrong and injustice is done in the name of law, religion, and morality.

I understand Australia for some years past has had compulsory military training, and that Lord Kitchener supervised the plan. Look at the map. Australia is not surrounded by enemies, and therefore why militarism under England's flag?

The inclosed copy of letter is in reply to a lecture on the war, with free trade as a preventive.

Of England's exports, about one-third are manufactures of cottons. India, China, and Japan have started manufacturing cotton, and the first two also now produce raw cotton. Cheap and efficient as is England's labor in cottons, can they hope to compete with Asiatic labor? It is only a question of time, with such competitors, when England's cotton industry will be materially harmed if free trade is adhered to.

If only Henry Berg (late president of the Society for the Prevention of Cruelty to Animals) were alive, he would protest against the exports of horses to the war zone. Yet we go even further and export foodstuffs to give renewed strength for the combatants and guns and ammunition with which the slaughter of human beings can be continued.

And yet we repair to our respective places of worship, praying to God to end the war.

It should not be our concern as to who can or who can not obtain these; it ought to be our aim to deprive them all of the means with which to keep on the slaughter, and thus effectively and practically protest against it. Never mind who is right or who is wrong—stop it—and we can help to do so. It would even be to our economic benefit to do so, as all our foodstuffs will be wanted, and much more eagerly later on than at present, even.

This is a time for men with big, humane hearts, who are endowed with farseeing wisdom and foresight, to raise their voices for sane ideas to prevail. The Eternal will recompense the wise counselor who pleads for peace.

Yours, respectfully, ——— ———.

—

NEW YORK, *October 25, 1914.*

DEAR SIR: Your lecture left me under the impression that you believed England had arrived at a state or condition where free trade was desirable for her welfare, and that we, the United States, were about to begin an era that was approaching it.

Some months ago, in wondering what was the cause of the rise in cost of food in the United States, and looking into the matter, I learned that the free-trade policy of England had since 1846 so discouraged her farmers that area under cultivation as well as production had dwindled about 50 per cent, making her more and more dependent upon foreign food supplies. When we enacted the new tariff, enabling us to import beef, we raised the price of beef about 40 per cent to the English consumer *by bidding* against him in Argentina, etc.

On the other hand, Germany could dump its surplus manufactures into England itself, compelling the industries thus affected to work with little or no profit, and some were being driven out of business.

This created a state of affairs that brought about for some time past strikes, unrest, discontent, and much pauperism, and would ultimately have led to a condition bordering on anarchy.

Imagine a people who were partly idle or working in industries where, owing to competition with surplus goods from other countries that generally can be sold at or close to cost, it was found impossible to raise wages to meet the rising cost of living.

Further, England, although a free-trade country, buys in the cheapest markets, and gives no preference to products of her colonies; yet in many instances England's products have a preferential duty in such colonies. That is to say, the colonies must lower their prices to the lowest of the world in order to sell to England, but in buying the colonies can not buy in the cheapest markets. How long can such a state of affairs continue without bringing about a disintegration of the British Empire?

In the past 12 months our excess of exports over imports have fallen off about $350,000,000. Part of this was due to curtailment of buying power in various countries of the world, due to preparations for war, drawing in of credits, gold, etc.; but part was due to the too radical reduction in duties.

I am not interested in politics, but surely if we are to maintain our high standard of living, we can not hope to compete with the cheaper labor produced products, whether from factory or farm, of other countries.

We are confronting a serious situation, and unless wisdom is shown by our statesmen and leaders it may result in the beginning of the breaking up of this great and unrivaled Republic.

We are a hundred million people, and our internal trade is vastly greater than our foreign trade; therefore I reason, if we can so arrange our affairs to deal equitably amongst ourselves, reciprocal as it were, it would be only our surplus or shortages that would concern us, plus the amounts due foreigners already matured and maturing, and the securities held abroad on which monthly will mature dividends and interest.

Wealth I consider the product of labor; therefore any idleness enforced or unnecessary is a loss of wealth.

Why do we therefore harp on inability to increase freight rates, assuming the consumer can't stand same, when in reality the consumer is not so much concerned with whether he pays 5 per cent or even 10 per cent more on the cost of transportation of products, but is more vitally concerned with obtaining work; and if his employment is steady and the wages remunerative, he not only is able to pay the extra cost of transportation, but to consume in larger quantities, thus keeping the circle of production and consumption unbroken; and being thus employed remuneratively he will have a little surplus to spare, which surplus in the aggregate makes the savings of the Nation, which goes through our savings banks and life insurance companies, individuals, etc., into securities, which represent the increase of production or wealth, such as additions and improvements to railroads, new buildings, etc.

The theory in recent years seems to be making promises on fallacious premises to the gallery—to decrease cost of everything to them, when in reality our aim should be to decrease idleness. For fear the big fellow or the one with shrewd brains will make a little too much, we so now conduct our affairs as to hurt the little fellow all the more. It is true it is hard to strike an equitable balance or equitable exchange, but why go to extremes—too high or too low protective duties or refuse higher freight compensation when monthly earnings show they are too low—ruinous.

Further, why must we go abroad for new capital—capital to place our men to work to produce rails, cars, buildings, etc., when the raw material and labor are at hand? The surplus earnings of our people should easily be able to take care of that; in short, we have a gold mine under our feet, but have become so accustomed to digging abroad for it, and paying a royalty for so doing, that the suggestion of developing our country with our own raw products, labor, and resources must seem queer.

If we adopt a policy to import less of what we can produce at home and export our surplus—at reduced prices when necessary—we are bound in time to wipe out not only what we now owe abroad, but even to gradually absorb our securities from abroad, and in the interim treat such securities not like income-bearing gold certificates payable on demand (when sold here), but rather temporarily like what they are to our own citizens—partnerships and mortgages in our rails and industries, which can't be turned into gold unless the corporations which issued them liquidate and go out of business. By making the certificates held abroad—respective numbers of such to be stricken off the list on the stock exchange and made "not a good delivery"—we virtually invite the foreigner to hold on to such securities for the time being or else to emigrate to this country and avoid the almost confiscatory taxation that is likely to result abroad from the war. The income we will remit as usual in gold or in excess of exports over imports, but the principal we can not at present or even in the near future. Thus we place a sort of storm shield around ourselves and free ourselves from slavery to what might prove too insistent creditors, who really are not creditors (except in normal times we treat them as such), but partners in our enterprises.

I don't know whether my ideas on the distribution of labor and equitable exchange are correct; it is puzzling, especially how to bring this about, but surely any idleness that can be avoided is a saving of wealth, and too low a tariff or too low freight rates or too low compensation for any service of man or corporation are harmful and destructive, and instead of helping to reduce cost of living, helps only to eat up our substance gathered in previous years.

I never read any books on "economics" and don't know if my theories are in keeping with views of recognized economists.

—

OUR FOOD PROBLEM, WITH SOME RECENT INEXPLICABLE FLUCTUATIONS IN PRICES.

CHARLES J. BRAND, Esq.,
Chief of the Office of Markets,
Department of Agriculture, Washington, D. C.

DEAR SIR: During the past fortnight the attorney general of the State of New York has been investigating the cause of high prices of butter and eggs, alleging, according to reports, that prices were made through a conference of big dealers, who gather daily to test the firmness of the market, and disseminate information or misinformation, as the case may be, with respect to prevailing conditions; also that the cold-storage companies and the packing houses and the mercantile exchange and dealers have been influencing and controlling the price above the normal price that would be fixed by the laws of supply and demand; and that there is an alleged combination that is illegal between the above-named elements in the trade.

Let us look into this matter and see if any intelligent conclusions can be arrived at.

The claim has been made right along that high or remunerative prices stimulate production, while too low prices reduce production.

Eggs in December, 1913, were quoted at 44 to 45 cents per dozen, then dropped to 34 and advanced again to 38; in January, 1914, the price dropped further to 32½, and in February down to 28½, then in March advanced to 34, and finally ended in March at 22½, and opening the new season in April at 19½.

In the meanwhile, owing to the new tariff placing eggs on the duty free list, importations in small quantities—compared to our total consumption of about 80,000,000 cases of 30 dozen each—had started, with the result that country dealers and buyers feared it would be unsafe to buy the heavy spring output of eggs at prices above 15 or 17 cents per dozen, which to many a farmer would be unremunerative, result seems to be that many farmers became discouraged, for the production during the flush season seems to have fallen off.

Receipts in New York, Chicago, and Boston, March 1 to July 31, 1913, 6,645,000 cases of 30 dozen; March 1 to July 31, 1914, 6,438,000 cases of 30 dozen; a falling off of 207,000 cases; and this falling off, if compared to 1912, would be heavier yet, for the 1913 receipts were smaller than in 1912, due to spring floods in the Ohio Valley in 1913.

With regard to butter the situation seems to be as follows: At the beginning of the year, in January, 1914, the price was as high as 37½ cents, then, as importations started—in small quantities as compared to our total consumption—the price suddenly slumped off to 26 cents, a drop of 11½ cents, or, say, about a 30 per cent drop; but before February ended the price advanced from 26 to 32 cents, or about 25 per cent advance; but during March it dropped again from 32 to 24½, or, say, a drop of about 25 per cent.

Here we have within three months: In January, a drop of 11½ cents, or, say, a drop of 30 per cent; in February, a rise of 6 cents, or, say, a rise of 25 per cent; in March, a drop of 7½ cents, or, say, a drop of 25 per cent.

What was the cause of these violent fluctuations? Many.

Amongst them may be enumerated the following:

(1) The fear of heavy importations, which compared to our total production or consumption is an utter impossibility.

(2) The lack of absolute and definite knowledge, even in the trade amongst the large dealers, as to exact stock on hand. Most of the cold-storage houses do report stock on hand, but some do not, and hence some guessing has to be done; then most of the large dealers have their own private cold-storage rooms, and they leave their competitors

guessing as to what they have on hand; then also any dealers who may have bought abroad for import do not inform their competitors either, so the net result seems to be that a grand guessing match exists, and each can have a guess of his own, and each guess backed up by a purchase or sale helps to make these violent fluctuations.

Is this the law of supply and demand governing prices?

It seems that finally at the end of the season, May 1, 1914, it was found that in the United States there was a surplus unconsumed carried over into the new season of about 10,000,000 pounds of butter; that is to say, had it not been for the 5,000,000 pounds imported there would have been only 5,000,000 pounds carried into the new season.

It is claimed that New York City consumes from 45,000 to 50,000 tubs of 60 pounds weekly, or say, in round numbers, about 3,000,000 pounds per week, or 150,000,000 pounds per year; and assuming that the United States consumes only 15 times that quantity, ratio according to population, then, approximately, we consume 2,250,000,000 pounds of butter yearly.

Thus, the carrying over of only 10,000,000 pounds, or less than one-half per cent of our annual requirements, had such a tremendous effect on prices as to cause a drop of 30 per cent, then an advance of 25 per cent, then another drop of 25 per cent, and all within the short space of three months.

In short, the importation of less than $1,500,000 worth, on top of what seemed to be a surplus production of a similar value, had the effect of causing such wide monthly fluctuations on a product valued at $600,000,000 yearly.

If the consumer always received the benefit of the low prices, there would be some justification; but often the retailer does not reduce his price until long after he has replenished his stock at lower prices, and then only when some neighboring competitor has forced him to reluctantly reduce his price to the new market conditions.

But how does this affect the producer? The moment the wholesale price drops, immediately the price of fresh receipts from country points is lowered; and that continues as long as the wholesale market price remains low.

It looks as if the distributor—for that, practically, is about all the middleman is—is like unto a porter with a long pole on which he carries the produce from the producer to the consumer—owing to the awkward system, as he turns from the producer he knocks him down with one end of the pole, then in turning to the consumer he again turns round the other way and knocks him in the head with the other end of the pole; thus repeatedly, first with one end, then with the other, the awkward distributor gets a whack at the producer and consumer. Is it any wonder that the producer claims he gets bad treatment (insufficient remuneration) and that the consumer complains he can't stand the high prices?

Let us go a little further into this matter.

As a result of the low prices prevailing at the beginning of the flush season many farmers seemed to have been discouraged, for the receipts of New York, Chicago, and Boston from May 1 to August 1 seem to be as follows:

	Packages (tubs).
1913	3,212,000
1914	3,040,000
Shortage over 1913	172,000

It is claimed that stock on hand at end of August this year in the United States was 10,000,000 pounds less than a year ago, but as we carried over a surplus of 10,000,000 pounds, hence (assuming consumption to be same as in 1913), then production fell off 20,000,000 pounds in the four months, May to August.

So the result seems to be that if we try to force prices down at the expense of the producer, we so discourage some that the production falls off, which causes later on an advance in prices and also brings about importations.

Why should we import from abroad when we have all the facilities for producing at home what we need, provided we properly regulate our affairs?

The system we have of marketing—distributing from producer to consumer—seems to be wrong, and by remedying that, as outlined on previous occasions, we not only increase production on scientific lines and eliminate all unnecessary middlemen, but we are also enabled to give better returns to producers and lower cost of living to consumers, and we also avoid violent price fluctuations and speculation and will also ere long have surplus for exports, which will add to our annual wealth or trade balance.

SHERMAN LAW—MONOPOLY.

As outlined on previous occasions, of the many buyers or dealers the farmers in each district or locality are to select the most active, intelligent, and efficient, who is to gather, grade, pack, and ship the produce, by departments or commodities, to consuming centers, and he is also to act as their guide or instructor in that particular commodity.

But the selling end is to have but a single head central or Federal board for each commodity, with selling subagents in each consuming center.

This looks like a huge monopoly, but is it?

The Sherman law, as the average layman understands it, is meant to prevent a monopoly controlled by a few men who exploit the masses. It is inconceivable that our farming population, who number probably 30,000,000, will want to exploit the other 70,000,000 (consumers). No one single farmer produces enough to warrant him in standing out for a desire for exorbitant or extortionate prices. There is too much sense of justice and fair play amongst ourselves, whether it be amongst farmers or consumers, for one set of citizens to try and oppress the others.

One might say the new Federal Reserve Board is a monopoly, too, and that either the bank stockholders or the borrowers will be in danger of being oppressed.

Or one might claim that the two great political parties are each conspiring to obtain control of the Government and the party that gains the ascendancy through the voice of the majority at the polls will appress the other side (minority). The party in power does enact laws that affect business and prices, but no one would dream of saying it was a monopoly.

Just as we have a Federal Reserve Board, part with Government officials, so should the central or Federal selling agency of the cooperating farmers be constituted—part with Government officials and part with representatives of the farmers, selected by themselves, and part with men of the highest standing in the United States to represent the consumers or public.

Thus we would have a board of three distinct elements—one representing the Government, one representing the farmers, and one representing the consumers.

Also representatives of the railroads or transporters as an adjunct or advisory committee to help improve and cooperate in the transportation of the produce.

We have average prices of previous years, at different seasons of the year, to help guide the board as to prices, as also the ruling world price for a guide.

It is said that many wholesale dealers would prefer stable price and avoid speculation or violent fluctuations in price and would be perfectly satisfied with a fair or moderate profit, but the system, of which any single wholesaler is but a part or fraction, is such that it is impossible to bring this about, and therefore each wholesaler or dealer is forced to protect his own interest or welfare as best he can, and the result is that each tries to make as much as he can or else run the risk of being annihilated by competitors in the struggle for survival.

The plan suggested enables the Federal board in any particular commodity to know quantity on hand in consuming centers, quantity in transit, quantity likely to be produced, etc.; and in such commodities as dairy and poultry products that cooperation could be started, as the production about equals the consumption, the control by the Federal selling board would stabilize prices.

It is folly to allow guessing by dealers to make or influence the price, for, as shown in butter this year, one-half of 1 per cent overproduced creates such havoc in prices, up and down.

All sense of proportion seems to be lost when one-half of 1 per cent or 1 per cent surplus can affect prices 25 per cent, resulting finally in a shortage of production the following season. On the other hand, a similar small percentage short produced sends prices soaring sky-high for the entire product.

In manufactures when there is an overproduction the manufacturer tries to dispose of the surplus at slightly reduced prices. If there is an export outlet, he unhesitatingly lowers the price, and thus relieves himself of the surplus. He does not take his entire output and lower the price on same, as then he would have to lower the wages of his workmen. Hence, often our exports at prices a little below home prices act like a safety valve.

With the farmer the farm is his factory, and the interest on the value of same is similar to the interest or dividends on the value of the plant and machinery of the manufacturer. The farmer's labor compares to the labor of the man in the factory. Therefore, as the manufacturer disposes of his surplus output at reduced prices, and does not lower the wages of his employees, so should we export the little surplus we may have of certain farm products at slightly reduced prices (when necessary), but not allow that little surplus to so tremendously lower prices (as shown in butter) as to affect the returns or compensation for the labor of the farmer.

This should be done for the benefit of the laboring farmer. And, on the other hand, why allow a small shortage of certain farm products to so unduly raise prices as to grievously hurt the consumer, when by having a central or Federal board, who sell the produce for the cooperating farmers, prices are kept steady, stable, and remunerative to producers, and the board, upon learning that there is likely to be a shortage, arranges to import from abroad, and distributes where needed, and thus keep prices from soaring?

Just as the comptroller at stated periods asks the banks for a statement of their condition, which in future will act as a guide for the Federal Reserve Board, so will we under the suggested plan know through the central or Federal selling board or agency of the cooperating farmers about any commodity which will be under cooperation.

The whole plan is nothing more than applying common-sense business principles to the farming problem for the benefit of the farmers and consumers.

There is no denying that law of supply and demand prevails, and those who attempt to act counter to same, as a rule, come to grief.

But the contention made is that the unorganized condition at the producing as well as at the consuming end leaves both the producer as well as the consumer at the mercy of the middlemen, who simply act as distributors; that is, they exact a heavy toll at both ends.

For example, after the producers have sold the greater part of their produce to the middlemen or dealers, then (unless the overproduction is too great) the middlemen, being the owners of the greater part of the produce, contrive to advance prices. In this way the producer sold at the lower price, while the equally helpless and unorganized consumer has to buy his needs at the higher price. After the middlemen have disposed of the bulk of their purchases, then efforts are made to depress prices again, so that new purchases can be made from producers at low figures.

The law of supply and demand is not violated, but while operating within this universal law the organized dealers with their superior business knowledge and training take advantage of the helpless conditions at producing and consuming ends and exact profits that often are unreasonable.

Let us look at the remarkable showing made in the past three months in sugar.

After the great bulk of raw sugars had been marketed by the producers, the European war breaks out, and England is short of sugar, due to inability to obtain her usual supply from Continental Europe of beet sugar. She bids desperately for raw cane sugar in all producing tropical countries, and also buys heavily in the United States, even of refined sugar, and as a result the price advances 100 per cent—from 3.26 cents to 6.52 cents—say in round figures about 3¼ cents per pound. This advance naturally curtails consumption in the United States, especially for canning and preserving purposes. But the fact remains that the producer had parted with the bulk of his product at low prices before the outbreak of the war and the sales at the high prices were made by the middlemen—be they refiners, speculators, or what not. The advance in price occurred too late to affect materially the growing new crop of cane or beet sugars. It is estimated that our United States production of beet sugar will be about 150,000 tons less than last year, due to discouraging the industry by the fallacious idea that by reducing duties we lower prices to consumers, when in reality all about that this accomplishes is to kill off our own industry and ask foreigners to grow upon their lands what we require, thus increasing our fixed charges, for we must eat to live, and expecting foreign countries to increase their purchases of manufactured goods from us, when, as now seen in times of stress, mostly absolute necessities are being bought by foreigners from us. So that the conditions have not materially changed, certainly not for a larger yield. Why, then, do we now see raw sugars back to within about one-quarter of a cent per pound of the price before the outbreak of the war? It looks as if the same old story is being repeated—that is, after the middlemen have disposed of the bulk of their purchases at high prices, and their stocks are down quite low now, and the new crop will soon come along, by abstaining from making new purchases and other methods they allow or help bring about a decline in price, so that the

unorganized and helpless producers will be forced to sell their produce at low figures. After the bulk of the produce has been again absorbed or accumulated at low prices, then the middlemen being again owners of such produce in quantities use their best business talent to engineer an advance in prices, and the consumer, who must eat to live, pays the advanced price. This little comedy goes on year after year in mostly all food products, but once in a while the middlemen are tripped up, but in the long run they are successful; and when at times they do meet with disastrous results, the following season the effort to recoup the previous year's loss is all the greater.

In view of this, why should not the producers organize; that is, cooperate for their mutual benefit as also for the benefit of the consumers?

The plan as outlined would increase production, improve quality, and give better profits to producers; it would eliminate many unnecessary middlemen and make of some of them mere employees in the producing sections—to gather, grade, pack, and ship the produce to consuming centers and have them also guide and instruct the producers. It would make the middlemen in the consuming centers almost, if not quite, mere distributors, eliminating jobbers and speculations and giving moderate profits to these distributors for their capital invested, cost of doing business, carrying charges, and compensation for their time and labor in distributing, and so forth. And to the consumer it would bring about a lower cost of living; and for the United States it would bring about prosperity by enabling us to produce what we require for food at home, and, if there be a surplus, to market same abroad, thus increasing our trade balance or helping to avoid exports of gold.

By no means would it be advisable to attempt to have a stable price at home and export the surplus, at reduced price when necessary, in such commodities as wheat and cotton, in both of which we have quantities to spare for export, especially of the latter, of which we consume about one-third only and usually export the other two-thirds. But there are quite a number of products where we barely produce enough for our own requirements, such as dairy and poultry products; and by making a start at cooperation in these two we could see by practical results how it works, and if successful it could be extended to other commodities little by little.

We have become so accustomed to wide fluctuations in food products that even the farmer tries his hand at speculation. Last May, the papers reported, some farmers in the potato district of Maine, having hopes of obtaining top prices, held on to their potatoes, which they might have sold near to $2.50, but finally had to sell at around $1. As usual, after they sold the price advanced quite some.

But when farmers realize that by cooperation each and every one of them will receive fair and remunerative prices, differentiating, of course, according to quality and nearness to markets, and that a thoroughly equipped and qualified business organization will look after their and the public's interests at one and the same time, and that their own representatives will be on the board, they will not desire to hold on to produce for a possible advance, knowing that the stabilizing of prices will make wide fluctuations improbable.

Absolute freedom is given to farmers who do not wish to cooperate. They do not lose any of their liberty or independence, and can do with their land and produce as they please. But if they do not cooperate in such commodities as there will be cooperation in, they must find consumers as purchasers, as the plan contemplates eliminating all dealers, except only wholesalers and retailers in consuming centers who can obtain their produce only from the selling agency of the cooperating farmers.

In advocating a single selling agency for a commodity having a central or Federal board the idea is fashioned somewhat like our Federal Reserve Board, with 12 regional divisions, and in each of these 12 regions are located the member banks of each respective region.

The Danes, it seems, have nine selling federations, each of which is in close and immediate touch with its members. But for general watching of prices the nine federations seem to act as a single national committee.

The plan is to have a central or Federal board, which has subdivisions by States or regions, and these subdivided again and again along railroad zones of transportation until each little district is mapped off, and to that district so mapped off the respective farmers within same belong.

The produce will be sold, as is now customary, to the nearest consumers, and only the surplus will be shipped out of the district to the nearest large consuming center. It is not intended to dislocate or disarrange existing system, except to avoid unnecessary crisscrossing of shipments, and instead of farmers selling the produce as at present to form cooperative societies in each district, and the gathering agent of the farmers, who probably was formerly one of the dealers or buyers, is to act as their agent or employee, to ship the produce—probably to the same points of destination as before—but instead of being sold to dealers in the large consuming centers the selling agent is the sole consignee or receiver of such produce, and this selling agent disposes of same to the wholesalers, who can obtain such produce nowhere else. Therefore with only one source from which to obtain such produce the wholesaler must of necessity comply with the spirit in which the plan is organized—that is, to eliminate speculation or not attempt to sell for consumption at too high prices—for as the price paid by the wholesaler is known publicly any attempt to exact huge profits will raise a storm of protests, and if the extortion is flagrant or repeated the selling agent may have the power granted to him to refuse to sell to such wholesaler.

This is not an attempt to force dealers to sell without reasonable compensation, but it will act as a preventive at extortion, and in reality every wholesaler who has a large enough outlet will be assured of a competency.

The selling agency in each consuming center for each product to have no depot or warehouse, but only an office.

The wholesalers apply at the office for their requirements, and the carloads in transit are sold to arrive, and upon arrival the wholesalers are to call for their merchandise.

There will be no danger under this system of goods arriving without having been sold to wholesalers, for with assured stability of prices each wholesaler will be only too anxious to obtain goods, knowing that the market will not be glutted and that consumption goes on daily, and hence the public will want what arrives.

The Interstate Commerce Commission fixes a rate for transportation—a maximum and even a minimum.

TARIFF.

We have direct and indirect taxation. The indirect tariff tax, especially on food products that have a world-wide market and that can be exported or imported, affects and even makes prices on such food products, modified, of course, in turn by the still further effect that speculation or sales and purchases of dealers have on such products.

Therefore to a certain extent our tariff law makes or influences prices of such food products, which really means it makes or influences the compensation for the labor of the farmer. If, therefore, we make or influence the price through our tariff created by law, why not permit it to be done by a competent body or board, partly under Government control, like our Federal Reserve Board, who will do so in such manner as to give just returns to the producer and at the same time deal fairly with the consumer, too.

To allow middle men, who are mainly interested in gathering profits, to fix or make prices has so far proven burdensome, and retards increase of production, which increase could, under the suggested plan, be made on scientific lines. To allow ourselves to be blinded by thinking we would run counter to natural laws of supply and demand in the end so far harms producer and consumer and plays into the hands of the middle men, many of whom would gladly welcome the change suggested.

Any dealer or middle man who, through conscientious motives or principles, would abstain from trying to buy as low as possible, would be driven to the wall by the many competitors who, from the beginning of barter and trade, have been trained in the school of experience to always try to buy cheaper than their competitors, and in selling the same principle applies.

So that even if there be middle men whose aim in life would be to be satisfied with moderate profits, such foolhardy philanthropic spirited middle men would soon be in bankruptcy. Competition compels the middle man to buy as low and sell as high as possible, as a rule, and those failing to follow this law can not long continue in the fight or struggle to survive.

Thus we have a trained army of middle men, who, in trying to maintain their position in the trade of exchange, use their talent and experience to reap advantages in both buying and selling; a trained army, using latest methods against producer first and later turning against consumer, and neither the producers nor the consumers are organized or trained to hold their own against such a fighting machine.

We can start to end this unequal fight by the plan suggested, and as we remove the parasitic process one can imagine how strong and lusty will grow both producer and consumer.

No less an authority than Senator D. U. FLETCHER, of Florida, whose speeches on the agricultural problem show a careful study and thorough and profound grasp of the matter, claims that some six billions of dollars disappear or become absorbed annually between the farm and the consumer's kitchen; and in addition to this, enormous amounts go to waste and bring nothing. If we had a proper system, part of the waste could be avoided and part of the six billions would go to the producer and part would remain in the pockets of the consumer.

The part that would be saved or go to the producer would enable him to increase production. It is an almost invariable rule in manufacturing lines that with the profits made the manufacturer increases his output. So also with the farmer. Place him in the position where part of these six billions will reach him, and you enable him to increase production; and if that increase be on scientific lines with less waste than at present, result is the farmer prospers, and that means the entire country, too, shares in that prosperity; and the consumer's cost of living is also reduced, and finally the Nation, too, grows richer, and we again become exporters of what the world will always need—foodstuffs—and perhaps again our exports will be as varied and as great as in former years.

The middleman is not interested in bringing this much-to-be-desired system about, the farmer is unable to do so, and the consumer has not the power. But it can be done, and there is no problem that is of greater importance for the welfare of all of us.

Cooperation amongst farmers as suggested, by departments, with a competent business head in the form of a central or Federal board—nation wide—to look after the interests of the farmer and consumer will bring this about. A trial on dairy and poultry products will at one stroke create the much-to-be-desired cooperative districts or localities. Once we have such districts the rest follows, as does the day the night. One commodity after another will be taken hold of, on the same or similar lines, perhaps, with some modifications, until in time nearly all products of the farm will receive attention and be under cooperation in producing and marketing.

By starting in dairy and poultry products probably the bulk of the farmers in the United States would come into the cooperating fold. Butter production probably amounts to $600,000,000 yearly. Eggs, assuming production to be 80,000,000 cases of 30 dozen each, have a value of somewhere near to $500,000,000 yearly. To this must be added the value of fowls sold for flesh and also the value of milk sold to consumers, so that in all probability cooperation would start with two farm industries, of daily production and daily marketing, having a cash value of over $1,500,000,000, or of greater value than any single farm product sold to consumers. Furthermore, by starting in these two products, in many sections of the United States where butter is still made on the farm, through cooperation creameries could be built for producing a better grade of butter, giving better returns to farmers and a larger quantity of fine-grade butter for consumers. And by establishing such creamery plants, where daily or every second day the farmer's milk would be gathered to be made into fine butter, along with the gathering of such milk would also be gathered the fresh-laid eggs, to be marketed in businesslike methods, fresh for consumers, which probably would save $100,000,000 yearly in waste to farmer and consumer.

And by doing this many rural sections of our country would start to prosper, and with prosperity would come the building of better country roads leading from the farms to our highways, all of which would help to solve the larger question of agricultural products being more cheaply brought to railroad tracks. The offices of the selling agencies in the consuming centers could also act as the medium for obtaining additional farm labor, like a labor employment agency, for the benefit of both farmers and the unemployed in the towns and cities.

The Clayton bill says, in effect, that nothing in the antitrust laws shall be construed to forbid labor or farmers' organizations, instituted for mutual help and without capital, from lawfully carrying out the legitimate objects thereof, nor shall such organizations or members thereof be held or construed to be illegal combinations or conspiracies in restraint of trade.

As pointed out in earlier communications, in manufactures many middlemen such as jobbers have been eliminated, and many manufacturers now sell direct to establishments that deal direct with the consumers. Why, therefore, should we not apply the same up-to-date business methods, where possible, to farm products?

The question may be raised that in manufactured articles such as hardware, wearing apparel, etc., the retailer who sells to the consumer is not limited in price or profits except through competition. Why, therefore, suggest the idea of limiting the selling price or profit of wholesalers and retailers who sell farm products to consumers?

The reply is that the dealer in manufactured articles such as hardware, wearing apparel, etc., buys in hope of selling to consumers, and at times finds on outlet, especially if the season is unfavorable or times are bad or styles change, and therefore he runs a greater risk and is entitled to a greater profit—or, rather, to such profit as competition will permit. But in food products it is entirely different; neither unseasonable weather, hard times, or change of styles has any appreciable effect upon our daily food requirements, and since the system contemplates regulating the supply—that is, not glutting or short supplying the consuming markets—therefore there is a reasonably sure outlet for such produce; and, with an assured outlet, the dealer in such produce, if he takes proper care of same, should and will be well satisfied with a reasonable profit to cover cost of carrying charges, cost of doing business, and a reasonable return on the investment and for time and labor expended.

SUGAR.

Since writing the above, raw sugars, after dropping back from 6.52 cents, the higher war prices, to about 3.52 cents (a drop of about 3 cents per pound), or, say, within about one-quarter of a cent of the price ruling about the time the war started in Europe, has advanced over half a cent per pound, to 4.07 cents.

So we see an advance of 100 per cent, then a loss of 92 per cent of that advance, and finally about 17 per cent of it regained again.

In yours of January 27, 1914, you state:

"Our work is all carried out with a point of view that things must be done on a community basis. To attempt to organize a territory of any size or to federate newly organized communities which have not yet worked out their own problems satisfactorily would be impossible."

Efforts have been made in previous communications to show why farmers among or by themselves can not accomplish this; and since it is desirable and even necessary to bring this about, it can easily be done by enacting a law that places an almost prohibitive tax on country buyers or country dealers, say, in dairy and poultry products. This brings about cooperation, divides the country into little districts of cooperating farmers who will have a business organization to market the produce, and there can be no cornering of such produce nor undue raising or lowering of prices, and even the tariff, as pointed out on February 27, can be entirely ignored.

It will be unnecessary to place a tax on country buyers of other farm products that cooperation is desirable in, because once the farmers, as well as the consumers, have seen how beneficial the plan is when in operation in dairy and poultry products, the farmers themselves will ask the extension of cooperation and marketing to other farm products.

Respectfully submitted for your consideration.

CHAS. KURZMAN.

514 WEST ONE HUNDRED AND FOURTEENTH STREET,
New York, November 23, 1914.

NEW YORK, *December 6, 1914.*

Honorable Senator FLETCHER,
Washington, D. C.

HONORABLE SIR: Replying to yours of December 1, perhaps I have not made a clear statement. In letter of November 30, in second paragraph, I do say, "No use trying under present conditions to keep on producing an article mainly for export, when we can easily raise foodstuffs and feed cattle, etc., on such cotton-growing lands in the South." I meant this to be taken together with the communications to Mr. C. J. Brand, which suggested that some board or commission should have guided the cotton planters to grow, say, 10 per cent or 15 per cent less and keep up the price (bulk of which is bought for foreign countries from us), and utilize the 10 per cent or 15 per cent for corn, etc. I ignore the war altogether, and assume that gradually the overproduction in other countries, even if of higher or inferior grades, would have brought prices down. By under the present system I mean that on the same area we could probably increase the yield by perhaps 25 per cent or more by scientific methods, such as suggested in increased yield of milk from cows, eggs from fowls, etc. As we grow in efficiency the cost of production is reduced, and that perhaps to a great extent will enable us to compete against cheap labor in other parts of the world. But as long as we have not reached the required efficiency, and food products are so high, why persist in 100 per cent cotton instead of 90 per cent cotton and, say, 10 per cent foodstuffs?

Referring to Senate Document 113, on production and marketing Egyptian cotton, page 6, first paragraph, "it (cotton) is bought in the villages by the agents of the Alexandria merchants, and the evidence we gathered shows that the cotton of the tenants sold by the proprietors of the large estates brings fairer returns than that sold by the small farmers to the village buyers."

This same thing is what I claim on many of our farm products—why have so many village or country buyers? They in turn sell to larger dealers, and their expenses of doing business, interest on unnecessary capital invested (which would probably go into farming or loans to farmers), and their profits can be eliminated. Take the most active and efficient village buyer and educate him scientifically at the State agricultural college in that particular commodity only and then have him act as the agent of the cooperating farmers in his district.

Page 7, last paragraph, under "Cooperation": "The method of selling so large a part of the crop under contract makes for the advantage of the ignorant peasantry, who otherwise would be the victims of commercial greed, which seems to manifest itself everywhere in about the same way under similar opportunities and circumstances."

The above needs no comment—it is only too true—except that, somehow, we have gradually drifted into a habit or system whereby we the consumers, too, try our hand at it, to be followed the next season when production is short, due to too low prices the previous year, when the farmer has his inning—provided the middlemen don't grab a goodly share of the price above the normal.

Page 9, end of first paragraph: "We are confident that such a bureau would operate as a practical insurance against either overproduction or underproduction, and would maintain the price of cotton above cost of production, and yet prevent abnormally high prices to the injury and hardship of the consumers."

Page 9, last paragraph: "The proprietors of large Egyptian estates, representing about 10 per cent of the crop, are in a position to cooperate and render powerful aid in maintaining fair prices for their commodities, and these prices will tend to steady the price of American cotton, if our producers do not commit the folly of producing more than the world will take at profitable values."

The above extracts are called to your attention in hope they will be applied more or less to our farming problem.

In an article of October 15 I tried to show that loans with amortization on farms, and also short-term loans to farmers for crop raising, etc., on notes, etc., are the best kind of security. In Germany the farm-land bonds in many instances sell at higher prices than do Government bonds, and rightfully so. A government may be wiped out or be forced—like at present, owing to the war—to issue enormous amounts of new bonds that depreciate the value of all prior government issues—and the money is wasted—but all that can happen to farms is that buildings and equipment may be destroyed; and if, as contemplated in the Fletcher bill, only 20 per cent is to be allowed for destroyable property and limited to 50 per cent loans, it means only 10 per cent of the loan is the maximum that can be destroyed, and the land remains practically indestructible.

But how can money be made to flow into farm-land bonds if hitherto the producer and consumer have played tag via the various middlemen?

Why not come down to business? We have the grandest country on God's footstool, and it is folly for the consumers to think that, like England, the rest of the world will or can feed us and clothe us and that we will sell manufactured goods in return for food from foreign countries. So, really a tacit understanding exists between our farmers and consumers equal to this: The farmer is hereby engaged for a period of 999 years, with privilege of renewals, to produce foodstuffs, cotton, etc., for us—consumers—and we agree to pay him a living wage for so doing; but he in turn also agrees to buy all his requirements from us—the consumers—which we may produce in our factories and mines, etc., and as we will pay him a living wage, he in turn is to do likewise with us, and we hereby bury the hatchet and make peace, and no more will we wage war. We will not try to obtain his produce for less than cost of production, nor must he try to do so from us. If either he—the farmer—overproduces, or we—the workers in the factories—overproduce, we agree to hold up prices—that is, remuneration for labor and capital invested—and market the surplus abroad as best we can.

But just as the laborers in the factories improve in efficiency, through the guidance of the business brains that constantly seek for more improved methods, so will we—the farmers—too, try to increase the yield and improve the quality, and in this way we farmers will try to give you consumers the benefit of what science, through cooperative methods and business guidance, can do for us farmers.

What earthly good will money do the farmer if we try to keep on taking advantage of him whenever he slightly overproduces or sends his produce to the wrong market?

New capital is hard to obtain for railroads, because the compensation is too low or precarious to warrant capital to enter that field.

The committee representing the collateral bonds, which has as security the stock of an old railway system, in order to obtain about $30,000,000 new capital, after carefully studying the matter, finally to obtain the new money offered a 7 per cent preferred stock plus almost 90 per cent additional of their own old stock as an inducement. The old stock was still earning a small dividend, but the outlook was so discouraging that finally those who at one time were willing to advance the money backed out. Just imagine the terms for every dollar advanced—a 7 per cent preferred stock plus about 90 cents of the old common stock, given up by the collateral bondholders out of their security rather than that they themselves should provide the money. This looks as if railroad investments of new capital was like putting money into some wildcat mining scheme.

But is our farming problem any different from the railroad problem? Don't we try in every way to take advantage of the farmer? If the farmer guessed wrong and overproduced any commodity, prices go smashing down; and as long as we continue to treat the farmer thus, so long will money avoid going into farm loans. We are destructively fighting each other instead of cooperating.

Why should a Dakota farmer, who, so to speak, does not want to carry all his eggs in one basket and who, owing to rust or smut in his district, runs a precarious risk as also the additional risk of very low prices when the world production of wheat is above the normal, why should such a farmer find funds to diversify his crops almost unobtainable at almost any price? Reason seems to be that capital is afraid to enter into farming even as a loan to an upright, honest, industrious, hardworking farmer who is striving to release himself from the extra-hazardous risk that dependence on raising wheat only places him in.

Capitalists think that as long as the farmer is not reasonably sure of obtaining a fair return for capital invested and his labor, so long is it unsafe for capital to flow into helping the farmer. If the farmer is able to diversify his crops with new capital, what assurance has the capitalist that the diversified crops will not be overproduced and result in loss of labor and loss of part of the capital, too?

Like new capital for railroads, so also new capital for farmers is hard to obtain, but the capital will be forthcoming the moment capitalists find the loans or investments in either is reasonably safe; and it is within our power to make both safe.

I understand the State of New York recently enacted a law for amortization farm loans, but it is doubtful if savings banks, trustees of estates, life insurance companies, etc., will invest, and it may be the same with any United States agricultural farm-land bank bonds. We need such banks, but the bonds may not be saleable unless the farming industry is made safe. Therefore the two go hand in hand; that is, show that the farmers will be protected by a new system of marketing that will at the same time bring about an increased yield through scientific methods, and at once those controlling capital will eagerly seek investments therein; nay, the capital already invested as loans on farm lands or to farmers on notes will be refunded into new loans at lower rates of interest, world interest rates permitting, of course.

In one of the earlier articles on the farming problem (December 28) I suggested that each large railroad system should, through its employees in the rural sections, form cooperative districts, and that the railroad could take such farm mortgages and against them issue debenture bonds, which having the total aggregate of the farm mortgages as security, plus the guaranty of the railroad, who would carefully in a businesslike manner look after the appraisal, as well as furnish a board to market without profit such produce as the farmers along the railroad line produce, would not only help stabilize prices and give better returns to farmers, but would also help build up the farmers into a prosperous state on scientific lines, and as the railroad stockholders would be anxious to increase the value of their railroad stocks through the increased prosperity and building up of the territory through which the railroad runs, they naturally would buy such railroad farm-secured debenture bonds. I suggested that the start be made with the Pennsylvania Railroad system, but alas the railroads have troubles enough of their own.

Perhaps it is a mistake to expect the Government to do everything, like valorizing. We want to be self-reliant, and whatever savors of paternalism perhaps may cause us to lose confidence in ourselves. But, on the other hand, I do think the day is fast approaching when the Government should take the initiative and suggest combined or cooperative methods and create commissions or boards composed of producing and consuming ends, with Government officials ex officio on such boards to see that both sides receive fair treatment and fair play. We can be a happy and prosperous family, and a cooperative spirit will do much to arouse the conscience of our citizens which in itself will help to suppress the monopolies that oppress.

Regarding the Fletcher rural-credits bill, I beg to suggest the following for your consideration:

As it is claimed that about 37 per cent of our farms are cultivated by renters, and as this is a serious problem, and in order to help such renters become the actual owners of the farms they are on, and thus insure a deeper interest being taken, as it is but natural that the renter is more interested in profits than in the upkeep of the farm, therefore I beg to suggest:

To help renters purchase the farms they are on, loan 50 per cent on the farm, payable in the bank's farm-land mortgage bonds, and a further 20 or 25 per cent in bonds to be issued by the bank "conditionally," to be held by the seller for a period of five years, after which date interest only having been paid on such "conditional" bonds, the owner or holder of such bonds is to apply to the bank to have such conditional mortgage bond on that particular farm exchanged for a regular mortgage bond or bonds of the bank, which is then salable and transferable. The bank prior to making such an exchange is to reappraise the farm, and if value has not depreciated and the buying renter has shown himself to be worthy of the extra credit, the bank can then issue the exchange in regular bonds.

But in no event is the total aggregate of such conditional mortgage bonds, when exchanged for regular mortgage bonds, to exceed the total amount of amortization during that 5-year period—that is, if $100,000 bonds have been issued on farms valued at $200,000, and, say, $10,000 conditional mortgages issued, at the end of 5 years the amount of amortization paid in will exceed the $10,000 conditional mortgages, and therefore same could be issued as regular bank bonds, without exceeding the 50 per cent loans on the total farms, assuming values to have remained the same as 5 years previous.

This will enable renters who have a small capital to buy the farm, and the owner who sells will have a sort of second mortgage for a 5-year period, and who, to protect same, will be interested enough in the buying renter, as well as in his former farm, to see that all goes well with the former renter and the farm.

Further, it does not depreciate the amount of security that the buyers of the bonds will have, as at no time will same be over 50 per cent loaned.

The seller of the farm will be reasonably sure of having, after 5 years (if all goes well), a security that will be as easily salable as any of the original bonds of such farm-land banks. After 5 years' amortization, when the exchange is made, the loan would be 60 to 65 per cent of the value of such farms.

The bank, it is true, takes a little extra risk, but as the buying renter is located in the district, and his character and operations will be well known to the bank officials, they would not make the exchange for regular bonds of the bank unless they were well satisfied that the buying renter was worthy of the confidence they placed in him.

There is room for fraud, through dummies, etc., but 5 years is a pretty long period for a man to be under observation, and owners of farms, who perhaps otherwise would not sell, under this plan perhaps would be inclined to do so.

If 37 per cent of our farms are now in the hands of renters, this plan would probably enable one-third of these renters to become owners, and, as one 5-year period elapses, the same method could go on and on, and thus perhaps in time we may be able to wipe out the renting system. It may take 15 or 20 years to do this, under the suggested plan, but a start could be made as outlined.

Yours, respectfully, CHAS. KURZMAN.

(Copy to Hon. W. G. Goodwin, Washington, D. C.)

—

514 WEST ONE HUNDRED AND FOURTEENTH STREET,
New York, February 3, 1915.

To His Excellency President WOODROW WILSON,
Washington, D. C.

HONORABLE SIR: On January 20, 1914, I sent a communication to you regarding our farming problem, which you kindly referred to Mr. C. J. Brand, Chief of Office of Markets, Department of Agriculture. Since then I have sent numerous additional manuscripts on the matter to Mr. Brand, and according to the tenor of his replies it appears the idea seems to prevail that by urging farmers to form cooperative associations in the rural districts the matter will be solved.

Without in any way minimizing the value of cooperation, which is one of the essential features necessary for economy, stoppage of waste, and increase in efficiency in producing, gathering, and distributing, it is my firm belief that a vital feature is overlooked, namely, marketing, and the selling price is left to the mercy of our present system, whereby the surplus or shortage determines the price for the greater part of the product, sometimes to the hurt of the consumer and sometimes the price is below cost of production.

In any industry where labor forms a large part in cost of production it has been the policy of both our great political parties to always amply protect labor and not expose it to competition with cheaper labor in other countries, especially on our home consumption.

Our farming industry may be compared to our manufacturing industries. Some farm products require no or but little protection, while others, where labor forms a big item in producing, may require heavy protection.

In a manuscript I am sending to Mr. Brand to-day I draw comparisons between the English unprotected system, which caused decrease of about 50 per cent in production, and the German system, under which farming made phenomenal progress, keeping pace with the growth in population and growth in industries. I also show how, although we had a protective tariff for farming for many years past, yet the protection was only partial, for the moment a surplus was produced Liverpool or the world price determined the compensation to our farmers for almost the entire product, even if the bulk was consumed in the United States of America.

Thus we virtually notified our farmers that in products where cost of production was greater in the United States than abroad they must not produce more than barely enough for home requirements. In other words, we discouraged full development of our farming (as did England), and in consequence forced excess numbers into factories, resulting in a loss of equilibrium, and for some years past we see every year large numbers in industries out of employment and in forced idleness.

To protect agriculture, Germany has its council of agriculture, and I beg to suggest that a similar body be created in the United States, such as the national marketing commission, for example, to work in conjunction with the Department of Agriculture for the upbuilding of our farming industry. My aim is to make farmers prosperous, increase yield and production, and decrease cost of living, by natural process and not arbitrarily, and it in no way reflects upon the ability of the Department of Agriculture to suggest that a body having also experienced business men thereon help solve so important a problem.

I trust you will pardon me in obtruding my views upon you, and hope you will be sufficiently impressed to inquire more fully into some of the points I draw attention to, which I consider ought to be remedied.

Yours, respectfully, CHAS. KURZMAN.

THE SUPPLY AND DEMAND JOKE, OR HOW BY SEEING BUT HALF THE TRUTH WE FORCE GAMBLING IN OUR FOOD SUPPLY TO THE SERIOUS HURT OF BOTH PRODUCER AND CONSUMER—REASONS FOR THE DECLINE OF AGRICULTURE IN ENGLAND AND ITS MARVELOUS GROWTH IN GERMANY—SHOWING HOW A PROTECTIVE TARIFF IN THE UNITED STATES DOES NOT PROTECT OUR FARMING INDUSTRY EVEN ON OUR HOME CONSUMPTION, AND HOW FARM LABOR IS THUS OFTEN FORCED TO WORK BELOW THE UNITED STATES STANDARD OF WAGES—TOO LOW OR UNJUST COMPENSATION FOR FARM LABOR PREVENTS DEVELOPMENT OF EFFICIENCY AND INCREASE IN YIELD AND CAUSES COMPARATIVE NEGLECT OF AGRICULTURE, BRINGS ABOUT UNEMPLOYMENT IN INDUSTRIES BY FORCING TOO MANY INTO FACTORIES WHO WOULD HAVE FOUND EMPLOYMENT ON FARMS—A PROPER ADJUSTMENT OF OUR FARMING PROBLEM THROUGH THE AID OF A NATIONAL MARKETING COMMISSION OR A COUNCIL OF AGRICULTURE, WOULD MAKE FARMING MORE ATTRACTIVE AND REMUNERATIVE AND ALSO DECREASE COST OF LIVING—INDIAN WAR DANCE (IN WHEAT), OR PREPARING TO SCALP THE UNITED STATES CONSUMER, TO BE FOLLOWED SOME DAY BY A RETALIATORY WAR DANCE, WHEN THE PRODUCER WILL BE THE VICTIM TO BE SCALPED.

Mr. CHARLES J. BRAND, Esq.,
Chief Office of Markets, United States Department of Agriculture, Washington, D. C.

DEAR SIR: I am in receipt of yours of January 18, in which you state that many of the ills I called attention to in the various communications sent you during the past year "can be adequately handled by cooperative marketing associations of producers."

You further say that you do not agree to the advisability of establishing a national marketing commission to take direct charge of the actual marketing of farm products which you believe to be economically wrong and actually impractical.

In replying I trust you will not consider what I write as criticism, but simply in the nature of a discussion, in which I shall try to convince you that what I am advocating is not impractical nor economically wrong, and that cooperative associations of producers can not remedy the ills of high cost of living to consumers nor make farmers more prosperous or efficient, except to but a limited degree.

It must be conceded by all who have given the subject any serious thought, that agriculturally (and this takes in everything produced on our farms), our country has not kept pace with the increase of population, nor with the marked increase of the United States industrially. Although we have by no means gone backwards, as has England in the past 70 years, since the adoption of the 1846 laws, under which the farmers were so discouraged, and farming in foreign lands encouraged in turn as to actually decrease the production 50 per cent in England, yet we by no means have made any such phenomenal progress as has Germany, that on an area smaller than Texas is almost able to produce sufficient foodstuffs to sustain its sixty-five to seventy million of population.

Therefore to intelligently study the question one must not only study the manner in which Germany accomplished this, and try to imitate her methods, adopting them as best we can to our method of Government and the temperament of our people, but we must also study the English system and try to find out the cause of the decline of her farming industry and try to avoid the pitfall that brought about such a terrible condition there.

TARIFF.

Primarily it appears that the free importation of foodstuffs, especially from countries like the United States where we had cheap, virgin, and fertile lands, enabled foreign countries to produce foodstuffs cheaper than could be done in England where the value of the land, or rather its renting value for farming purposes, was too high to compete against the newer countries. Result seems to be that labor was driven off English farms and into factories. England imports five-sixths of its foodstuffs, amounting to net $1,200,000,000, and therefore the one-sixth she still produces is valued at $240,000,000, and if this is one-half of what it was formerly, then the free tariff or compensation to farmers was so low and inadequate as to drive $240,000,000 in labor (for practically it is all labor, the land being still there) from farming into factories. But $240,000,000 labor in factories produces double, triple, perhaps quadruple that sum in manufactures. Let us assume wages are but £2 per week, that means one-half million people and those dependent upon them driven off farms and into cities into factories. If such labor produced but double in value in manufactured goods, it means one-half billion dollars produced seeking an export outlet.

In 1905 England exported £330,000,000; in 1911, £434,000,000; thus we see that England did increase its exports about one-half of a billion dollars, but that sum was insufficient to give steady and remunerative employment to its unnaturally stimulated numbers in industries, for England had a standing army of 675,000 paupers, besides countless numbers of unemployed; and as other countries also grew industrially, the competition England had to contend against was too great for England to withstand. It must be remembered that English products have a preferential tariff in some of her colonies, like Canada, Australia, etc.; have also a preference in many countries in supplying corporations that are controlled by English capital; have also some slight or perhaps sentimental preference in other English possessions, where English merchants predominate; and, besides, England has an equal chance for her manufactured products with other competing manufacturing nations in countries like the United States. Yet with all these advantages England was unable to find employment for the excess numbers it had in industries to such an extent that for some years past it was a fight to obtain footholds in many a market that perhaps she would not have been so eager for if she had not driven people from farms into factories, and some seem to think that was one of the underlying causes of the present war. If to this state of affairs is added

the impossibility of raising wages in factories, due to tremendous competition on the one hand, and on the other to the steady rise of price of foodstuffs in the past 15 to 20 years, one can easily see in what a precarious condition England placed itself in by depending too much on manufacturing to give a livelihood to her people, and at the same time by the inordinate amount of foodstuffs she had to buy from abroad. For example, for some four or five years past our exports of beef to England had practically ceased, and England found Argentine beef to replace ours; but as we contemplated and later actually enacted our new tariff, that permitted free importations of beef, our bidding against England for Argentine beef actually raised prices in Argentine which England has to pay in the neighborhood of 40 per cent. Thus, although our beef importations are on a small scale, yet small as it is it raised prices unduly to English consumers, who are more largely supplied from Argentina than is the United States. Thus we see how by depending on other countries to supply a daily absolute necessity—food—a country may endanger its welfare to a most alarming extent; and if wages in industries can not be raised, and the cost of food goes up and up, even those who have work can not make both ends meet.

UNEMPLOYMENT.

I tried to show on November 30 that too low compensation for labor or services, whether in fields or factory, for cotton or railroad transportation rates, so unduly hurts those thus insufficiently compensated that their buying or consuming power is curtailed, and that in turn again reduces production by the amount thus curtailed in consumption. But there is also another side to this. If the cost of food is too high, and some say that from 40 to 50 per cent is expended for food, the result is that too much is expended by the masses for food, and hence too little is left for other expenditures, and it is easily conceivable how if the masses spend too much for food they will have to stint themselves in other directions, such as the buying of clothes, etc.; and this in turn forces a reduction in the production of clothing, etc., and thus we see how little by little one industry after another has to slow down in production and as this is done the numbers out of employment increases.

On February 27, 1914, I wrote you that the claim that had been made in a Washington's Birthday speech that the new tariff had already lowered prices on meat, butter, eggs, etc., and that apparently a remedy had been found for our ills, but that it might prove to be the beginning of our undoing. I pointed out how unhappy England, that had such serious labor troubles, had faced a similar situation years ago, which resulted in decline of its agriculture and overstimulating manufactures. I had nothing to base my remarks on, except one very important fact that must never be lost sight of, and that is not to kill off our farming industry by expecting or trying to force the farmer to work for nothing or at a loss.

As a direct result of those unduly low prices that some felt so happy over, sugar, butter, eggs, etc., decreased in production, as shown you on November 23.

So far I have tried to prove that a tariff that is too low does not protect our farmers sufficiently and causes a decrease in production, which later will force us to import our shortages from abroad and might gradually, though slowly, bring us step by step, in certain commodities, to where England finally landed, via, helpless, unless foreign countries supply sufficient to meet the requirements.

But, on the other hand, why, having had a high protective tariff for farmers for so many years, how comes it that our farming in many commodities did not keep pace with our growth in manufactures, etc.? There are many reasons, of course. For example, as our grazing ranges were put up into farms it naturally would decrease our number of beeves and at the same time increase the price. But just as a tariff would protect our farmers or low or no duties would expose them to competition from abroad—so also our system by which we export our surplus, even if it be small, yet such is the natural law of supply and demand that if left free to work without any artificial interference—the price at which the surplus is sold abroad makes the price for the entire crop, or, rather, for the time being, which generally means after the farmer has sold the bulk of his produce; then generally the operator or middleman who has bought the farmer's produce at the low price sells a goodly portion of the surplus abroad at the low price, and after the market is relieved of that surplus up go prices again. But the damage to the farmer has been done and the consumer only partly benefited.

Thus year after year the game went on, even under high protection, which gave no protection to the producer in any of the commodities slightly overproduced. The operator or middleman had a safety valve in exporting the surplus, but the farmer, except in exceptional cases, had none.

Before the United States Industrial Relations Commission, Mr. Henry Ford recently testified that an increase in wages to his employees had increased the efficiency of his men. Compensation that enables a man to more than exist, or more than merely make a fair living, has the effect of giving renewed life and zest in all one does. Give men sufficient for their labor to properly live and keep their families and to enable them to put something aside in savings for a rainy day and you create a new spirit in such men. The latent power is there, but if one has to live a life of drudgery, often in fear that the next week might bring unemployment and throw them onto the mercy of the world, where each is struggling to exist, the initiative or the best that is in such men is crushed.

Has not the farmer been ill treated? Has not the system under which many farm products are marketed practically exposed him to the most precarious kind of an existence?

According to the figures of the United States Department of Agriculture of March 29, 1914, 18 per cent of our farmers lost from $200 to $500 yearly, and 15 per cent lost from $1 to $200; thus one-third of our farmers worked for nothing or at a loss, while the average for all, according to the survey, seemed to be $408 for their year's labor. If our system of compensating the farmers through our antiquated and unjust marketing brings such results, how can we expect the farmers to wake up to the so-called golden opportunities said to be in store for them if they will become more efficient? Mr. Ford's workmen did not become wide awake and efficient on promises or pamphlets. The actual sight of the good wages did it; and show the farmer profits and he, too, will wake up and become efficient.

But no; our system so binds us that we don't give the farmer a chance. It seems as though we had adopted a plan whereby the farmer and consumer seem to be sworn enemies, and each has a knife behind his back, ready to run it into each other, through the middle man. If the farmer overproduces, the knife is run into the farmer; if the farmer underproduces, the knife is run into the consumer.

What needless bloodletting; what unnecessary strife! Why not get together and seal a compact for 999 years, with privileges for renewal?

COOPERATION.

No doubt forming farmers' cooperative societies in every little district throughout the United States for the gathering, grading, packing, and marketing the surplus that has not been sold locally or nearby will be of immense benefit. But as yet we are far, very far, from having even this. But, even if this becomes general throughout the United States, it still leaves the farmers at the mercy of the same old system. The same old operators or middlemen make the prices, and the same old illusory supply and demand make the prices or compensation for the farmers. That same little extra surplus makes the low prices for compensation for the producer, and that same little shortage makes the exorbitant price for the consumer; and the wider the fluctuations the greater the distress of the producer and the consumer, and the greater the glee or opportunity for profit of the expert operator or middle man.

Let me give an example. In the spring finest grades of butter, owing to the reasons stated on previous occasions, had dropped to 24½ cents, and the best June butter in the flush of the season sold at 26½ cents. In December that same stored butter sold at 33 cents. Carrying charges probably amount to 2 cents a pound, and, according to testimony given before the investigating officer of the attorney general of the State of New Yerk, many wholesale dealers claimed they would be satisfied with one-half cent profit on their entire turnover. Yet apparently the profit seems to be 4 cents greater. Would not the producer have been well pleased with 2 cents extra, and the consumer also be benefited by a reduction in price of the other 2 cents? But our system of marketing prevents any such benefit accruing to either producer or consumer, and even the wholesaler would welcome the change.

I have pointed out some of the defects in the English system which we ought to try to avoid. Let me now come to Germany—Germany that has shown the most marvelous progress in all walks of human endeavor, such marvels as no country in the history of the world gives any similar example of. In industries, as well as in agriculture, a standard has been set by Germany. If we could only adopt some of the best features that produced such results!

If you will kindly look at Senate Document 214, issued in 1913, on Agricultural Cooperation and Rural Credits in Europe, you will find one of the reasons why Germany leads the world in productive capacity of its farmers. On page 399 you will find Dr. Dade, secretary general of the German council of agriculture, making a statement.

If you will carefully read what Dr. Dade says, you probably will change your ideas about a national marketing commission being unnecessary.

There is not the slightest doubt that our United States Department of Agriculture is efficient and doing excellent work; but it is lacking in an essential feature, viz, it has no experienced men of marked ability taken out of the ranks of our leaders and captains of industry, where business methods and system and organization with these directing brains guided the men under them to the efficiency that brought many of our manufacturing and commercial businesses to the success they attained. Such men as are required to lead and guide our farming industry, who ought to be on such a commission, are not to be had, except on the rarest of occasions, at any salary the United States Government usually pays; and although there are able men in the Department of Agriculture and in many other departments of the Government, yet the ability is of a different kind than is necessary for the object in view. The Department of Agriculture can do its scientific work, but when it comes to marketing—and that in the final analysis means the compensation or remuneration for the farmer—such marketing can be better devised by men who have spent the greater part of their lives in various business walks of life. Such men are too high priced to be employed at a salary, but what they would not do for a money consideration, they will gladly do gratis for the good of their country, as is shown by the New York City Mayor's Food Supply Commission and also the unemployment committee. A national marketing commission, composed as it would be under the pending bill of 15 men from farming industry and 14 men of marked business ability, could be created to work in harmony with the United States Department of Agriculture, and they would help solve our farming problem. It is not such a big problem. Germany solved it, why can't we, having before us the data, etc., to go by. We confound the big results possible with a supposedly equally big problem as to how to bring this about. Devise the right system of marketing, which in it would embrace stoppage of waste and eagerness of farmers to gain good wages or compensation, and it will be found that farmers who now are indifferent or unwilling to follow suggestions of the Department of Agriculture, will eagerly follow the suggestions such a marketing commission would recommend. Not law, coercion, coaxing, or literature, but simply proof that good and sure profits or compensation for their labor, and they will work with the same zest and zeal as do the men in the Ford factory.

It is my belief that some of the ablest men in the United States would gladly serve on such a commission gratis, and the only expense would be clerk hire and railroad fares.

I have been suggesting right along that the easiest and quickest way to start cooperation throughout the United States would be to start with dairy products, poultry, and eggs, dividing up the United States into little districts, say, something like the post-office districts are divided up in the rural sections, and to put a prohibitive tax on country buyers or dealers in such dairy and poultry products, thus forcing the farmers to select in each district their own representative in each of these three products, preferably men who formerly bought such produce of them, who have a commercial knowledge already of such produce, prior to starting as the local agent of the farmers in such district, are to attend a special lecture course in that product only at the State agricultural college to gain a scientific knowledge also, so as to be able to guide the producers to increased production on latest scientific lines, and who is also to gather, grade, pack, and ship the surplus not locally sold by him to the nearest large consuming market or such market as he will receive notice from his superiors in the selling agency of that commodity to ship to.

The wholesale dealers in the consuming centers can procure such commodity only from the selling agency in that town or city, at the office of such selling agency. Instead of the wholesaler dictating the price which we delude ourselves into believing is solely governed by the law of supply and demand, the price can be determined by mutual agreement for certain seasons of the year, as is now actually done in advance for months ahead in our milk supply, or it can be made as Australia now suggests for a method of opening up new farming districts, by making a minimum price that surely will cover cost of production and fair remuneration for labor, and also a maximum to protcet consumers, not to rise above certain levels or world prices plus protection for farmer in lieu of tariff duties.

It is claimed by R. P. Trask, of the New York State Agricultural College, the average egg production per hen in the United States is 8 dozen, and at 27 cents average, for farmers that have 500 hens, it is claimed the farmer just about quits even. The average milk production in the United States per cow, it is claimed, is 3,500 pounds, and for New York State it is said to be 4,400 pounds, and for the 275 farmers in the Ithaca cooperative district it is said to be 3,800 pounds per year. Suppose, through scientific breeding, etc., which farmers, if they find we consumers mean business and mean really to treat them right, will eagerly desire to help bring about, we later find 25 per cent or possibly 50 per cent, in time, increase in yield of eggs per hen and milk per cow, part of that increase in yield would go to the farmer in extra profits and part to the consumer in lower prices.

Will you please point out what is economically wrong with the whole plan and what part is impractical?

Perhaps it may be economically wrong not to permit the country buyer and the city middlemen to continue their playing football, first using the farmers as the football and later the consumers as the football.

As to impractical, allow me to point out that we actually do bring our farm products to market now; we know more or less, and in many cases exactly, where the produce comes from and where it goes to. The country dealers, the transport lines, and the city wholesale receivers have such records, and no Pompeiian or Martinique earthquake has destroyed such records or knowledge. Even by the cooperative system, which the United States Department of Agriculture, as well as the State of New York also, is urging farmers to form, only the surplus produce from each district will be shipped to consuming markets. Will such cooperative farmers' associations have any better facilities for knowing where to ship to than if such cooperative associations or districts have a central or Federal board, having a department for each commodity, that would have records of production, what is in transit, what in hands of wholesale dealers in consuming centers, what the usual or ordinary daily requirements or consumption of each market, what, if any, surplus or shortage likely to be, etc.? We are going it blind more or less now, and we would continue to do so even if cooperative associations of farmers were formed; but we would not be, under the plan outlined. The task is not herculean nor impractical, but, perhaps, the idea in itself may be startling and that might possibly cause one at first glance to think it impractical or economically wrong.

The destination of such product would probably not be disturbed or changed by as much as 1 per cent, but it would be more direct and economical. Please remember I never at any time contemplate depriving the farmer of absolute freedom to do with his produce or land as he pleases; he at all times has the privilege of selling such produce as he chooses direct to consumers, but not to dealers.

It is only the country dealer who now obtains the produce from the farmer and who is indifferent as to what the farmer does or what becomes of the produce as long as he makes a living or profit out of his share in the transaction; that such country dealers be deprived of this privilege and in place thereof take him—or if there be many in a district the farmers to select the ablest amongst them—and make him the local agent of the cooperating farmers in that district.

Business men who are at the head of large and successful establishments have broad plans or principles on which they operate, but they have no fixed or rigid rules by which the economy of operation may be interfered with, and they allow certain things to be done which possibly might be counter to the general broad plan they have in view; that is, they adapt themselves to circumstances and conditions. Therefore, for example, if the milk supply would also come under the control of the selling agency, and finding that the various concerns that supply New York City with its milk actually have an efficient gathering force, the common-sense business man, who would not be hampered by a rigid rule, but would be guided by the spirit or aim to procure efficiency and good results, would permit the continuation of the business; but probably they would be required to have cow testing for yield of milk enforced and would require arrangements to be made to use the results of such tests for weeding out unprofitable cows and improving the breed gradually, which at present none of the milk distributors are doing. The aim in view is to improve yield and efficiency, not to destroy or punish; to insure better and surer compensation to producers which will act as the impelling force or inducement for producers to do as suggested.

There probably will be many districts in the United States where it would not be feasible or practical to put the plan into operation and where therefore it would not be enforced, except for statistical purposes and also to simply mark out the district and effect an organization of farmers, who are to select their president and other officers so that upon 24 hours' notice they can be communicated with through its president or secretary; but that is no reason why the attempt should not be made to bring about the aim in view, especially in such sections where the production in such produce is carried on on a large scale.

When farmers and consumers and even the middlemen find the plan works well in dairy products, poultry, and eggs, the cry will go up, even from the farmers, to extend it to other commodities.

WHO MAKES THE PRICE?

Let us take poultry and dairy products. At the end of last season the old stock was practically gone and the new April eggs were coming on the market in quantities, as is customary in the season of highest production. It is claimed from time immemorial that supply and demand governs the price. But here the season opens with a heavy production—too big, fortunately, for the population to consume—hence operators or large dealers buy not only to sell part for immediate consumption but also to store and hold for sale in the fall and winter months. The same applies also to full-grass June butter. Therefore for about two months the production is very much heavier than the consumption, and the operators keep on buying and storing. Now the question arises, Where does that illusive law of supply and demand governing prices come in? Nobody knows what the production will be—there are too many uncertainties that can affect the production—and no one knows what quantities will be imported from abroad, except that by no means can it possibly reach 5 per cent of our consumption, for such a diversion to the United States from foreign countries, if it were possible under existing world production and consumption (assuming there had been no war), would raise prices enormously and would perhaps have created riots and bloodshed in England, where the shortage caused by our taking even 5 per cent of our needs from abroad would have made not famine, but what is as bad, famine prices.

The producer surely does not make the price. He, meeklike, has to take what price they say is the market price. The consumer does not make the price, for he is asked no questions. All he knows is that he requires three meals a day and has got to get them, and the market price he is charged he has very little voice in making. The farmer has to sell, as he can not store on the farm; and the consumer must buy his daily food; but neither producer nor consumer really has a voice in making the price. Each is shown market reports or daily quotations and are told these are the prices—one to the farmer, and another, including waste and a lot of unnecessary expenses also, for the consumer. However, producer and consumer are given the privilege to register protests, which the producer does by reducing production when prices get too low, and the consumer by curtailing consumption when prices get too high; and vice versa.

Then, pray, who does make the price? The demand from the consumer is insufficient during this period to anywhere near approach the supply; the goods keep on piling up and up all over the country, and considerable guessing is daily done by the operators as to quantity stored and likely to still further increase, etc. All the pros and cons are taken into consideration by the operators, and they and they only make the price. That is, they are taking a big chance—gambling—and for that chance or risk they take they are the real price makers; and it is but natural that after they have bought and stored large quantities that until the bulk of what has thus been bought by them has been disposed of they will use their best business talent to hold up or even raise prices, so as to insure them a profit. They are taking a gambling chance, and they certainly are entitled to all the profit they can get out of the gambling system under which we operate in marketing foodstuffs.

We know to a certainty that if the goods have been properly selected and stored it will all be consumed; so but very little chance is taken in that respect; but the vital part—the price, low to producer when he sells the major portion and then high to consumers—that is left entirely to what we call supply and demand, the operators.

Many operators or wholesalers would be only too happy to work on a small profit on their turnover, eliminating excessive profits, provided arrangements were made to stabilize prices at various seasons and thus stop what is virtually guessing or gambling.

RURAL CREDITS.

We certainly do need better credit facilities for farmers. Long-term farm-land loans, as contemplated in the Fletcher bill, would be of material benefit to farmers and to the entire United States in consequence. But when loans are made, even if limited to 50 per cent of the value of the farms, the lender looks not only to the security but also to the earning power of that security. If one-third of the farmers work for nothing or at a loss, the earning power seems to be at low ebb. The ordinary chances and risks of loss in raising crops or animals on farms is precarious enough, but if to this we add the still further risk that often the farmer can not tell whether prices he will obtain will cover cost of production, due to our method or system of marketing, then, indeed, farm loans are not quite as alluring as they could be made to be, and the question arises, Is the farmer, no matter how upright and hard working he may be, really a good risk to lend to, considering the business he is engaged in is such a big gamble, even if his production is a little above the normal yield?

JUSTICE.

When contemplating a revision of the tariff, various manufacturing industries that will be affected by the tariff are accorded a hearing before the framers of the bill, with a view to protect the compensation in that industry—fair compensation for labor and for capital. Has it ever occurred to you that the farmer is never consulted at all about the compensation he is to obtain for his labor and capital invested? He has absolutely no voice in the matter at all. The selling price of his produce, which includes labor and returns on capital invested, is left to what we call chance—supply and demand—or what not. On November 23 I showed how within the space of a few months of smallest production even prices fluctuated 25 to 30 per cent, and when, as was later found to be the case, the supply did not exceed the demand by more than 1 per cent. Examples, of which this is a sample, discourage the producer and disinclines him to inaugurate methods that would lead to increase of yield and efficiency. Many producers are so discouraged that they do not care "whether school keeps or not." To think that we permit the backbone or foundation of our county to be left to the mercy of chance or guesswork amongst operators. Remember, please, I am not blaming the operators or middlemen—you even force them into gambling and speculating and guessing and worrying, too. They do the best they can under the system, and the bulk of them are not intentionally trying to be unjust to producers or consumers.

Barring a few products, such as wheat, cotton, etc., we produce just about enough for our requirements; and if there be some products, such as dairy and poultry products, where upon occasion we at times might slightly over and under produce, is that any reason why the fluctuations should be so violent as to work infinite harm to producers and consumers? Stabilize prices, and it will be found everybody will benefit.

If the large milk distributers can get together with the milk producers and can agree upon a range of prices according to grade and nearness to market, and the consumers are not asked whether it suits them or not, why can not it be done to start with in other dairy products, poultry, and eggs by a competent central or Federal board—which will have on its board representatives of the farmers and dealers and also men of high standing for business ability and fair play—with perhaps one or two Government officials to see that no conspiracy to hurt any interest involved—producer, dealer, or consumer—is attempted. This would at least give producer and consumer a voice in making fair and equitable prices, and be it remembered no price can be fair that does not amply compensate the average producer, otherwise we are likely in time to reach the stage England arrived at.

When you show the producer that he at all times will be protected, and that if the yield or efficiency is increased, he will obtain part of it in profits—and the consumer the other part in lower prices—you cause the producer to look upon farming in an entirely different light than at present. This is the foundation upon which, I think, our farming industry can be built up, and upon which our future welfare will to a great extent be determined. It will be an inducement for those in farming to draw others to the farm instead of driving them into factories, as seems to have been the case in England.

You say many of the points I draw attention to are well taken, but you do not always agree with the conclusions I draw from them.

There is but one conclusion I have arrived at, and I desire to emphasize it very strongly, for I consider it vital and paramount in dealing with our farming problem, and that is make farming profitable; do not allow it to become a gamble more than nature or providence has always made it; make the toil or labor expended in farming a surer source of remuneration than our system of marketing has permitted it to be,

and the whole question will solve itself. Show the farmer that he actually will be compensated for his toil, and you sharpen his wits and create in him a desire to profit more and more by becoming efficient and less wasteful. Urging farmers to form cooperative associations will help, but without a business organization or head to devise means to procure just compensation for the farmers' labor, through the advice or guidance of a national marketing commission, with able men trained and experienced in industry and commerce on such a commission, would be like trying to count the chickens to be hatched from infertile eggs.

Without the business brains to guide and protect the wages the farmer is to receive for his labor such cooperative associations may turn out to be simply heavyweights fighting against each other in production and marketing instead of as now each farmer by himself a lightweight. Cooperative combination to avoid making farming less of a gamble than it at present is will help the farmer through better marketing and cheap loans and will lower prices to consumers by stoppage of waste and increased yield per acre and from live stock, and will also be welcomed even by the much-abused middlemen, who will do less guessing and gambling and become more efficient and economical in distributing.

Please remember that Germany encouraged the formation of the Stahlwerks Verband and the potash syndicate in order to avoid destructive competition, and even Belgium had its Comptoir des Acieres. We recently enacted the Clayton bill that permits and encourages farmers to form cooperative combinations. Why, then, should we hesitate to take full advantage of it for the upbuilding of our farming industry, which is bound to redound to the benefit of the entire country.

SHOWING HOW A PROTECTIVE TARIFF GIVES ONLY PARTIAL PROTECTION TO FARMING; MOMENT THERE IS PRODUCED A SURPLUS FOR EXPORT PROTECTION CEASES AND PRICES DROP TO WORLD LEVEL.

I have tried to show how in farm products a small shortage or surplus materially raises or lowers prices for the bulk of the commodity in question, and often out of all proportion to the slight under or over production, thus causing violent fluctuations that are so harmful to producer and consumer; and on previous occasions I tried to show how in manufacturing industry these violent fluctuations are avoided.

My contention is that by not protecting the English farmer and placing him in free competition with farmers the world over English agriculture declined about 50 per cent in the face of a growing population and resulted in excess numbers in industries for whom later it was found hard and almost impossible to obtain steady and remunerative employment, while at the same time large numbers out of employment in industries could have found employment on English land in farming if the policy of England had protected her home farming and farm labor.

We in the United States did protect our farming industry by a protective tariff, but that protection lasted only as long as our production for home requirements was not excessive; and as no foreign importations could take place, it resulted in prices or remunerations as a rule equal to the world price plus freight and import or protective duty.

Therefore for home consumption foreign importations of foodstuffs were practically barred out, and our farmers could count upon our own people as consumers. But the one great defect with this was that it did not amply protect the farmer or the labor on the farm (as it did in manufacturing industries) when we had a surplus to export. That surplus, be it large or small, made the price for the entire or the great bulk of the commodity, and the price always includes labor. If the world price was low, although at no time while the protective tariff was in existence, could importations be made for home consumption, yet it did not prevent prices from falling to the world level, more or less. So that the protection was only partial and not full and complete, as was the case in protecting manufacturing industries.

In Germany, however, a better protective system seems to have been adopted, and that, perhaps was one of the causes why German agriculture kept on growing, not only in amount produced to meet the needs of the increasing population, but also in yield and efficiency.

Broadly, or in a general sense, Germany was not an exporter of foodstuffs. The question with her was (as it should have been with England) how to increase her production to meet the needs of her growing population. A protective tariff and the further safeguarding of the farming industry by the German council of agriculture that acts as the official advisory board, with right of criticism and initiative in all legislation regarding agriculture, helped to give absolute and ironclad protection to German agriculture. A system was devised which virtually gave protection to farmers and labor on the farm by which any surplus produced could be exported without loss to the exporter and without at any time lowering home prices (or compensation for capital and labor) to world prices.

Perhaps I can give a better idea by quoting from "Germany and the German Emperor," by Herbert Perris, who seems to prefer the English system:

"Exporters of all grain, home or foreign, were now allowed free import certificates to a like value, which being available for any cereals and some other goods, including coffee and petroleum, and being saleable, amount to a bounty on exports. Thus, whenever a bountiful harvest brings down the home price below the amount of the foreign price plus the duty, it pays the German corn grower to export. The value of the import certificate makes up the lower foreign price to the requisite amount, and the market being relieved of the surplus supply, the native price swings back to the old level, and the consumer is again paying the full amount of the duty. A more flagrant arrangement, from the national point of view, than this protectionist flywheel it would be difficult to imagine."

Thus we see that in case of a surplus production in any farm product the price which includes labor was maintained to always give adequate protection.

I maintain that good compensation for labor produces contentment and efficiency and encourages increase of production and tends to increase of yield and to not only holding labor in such adequately compensated industry, but even draws additional labor to it, to keep equal pace with the growth in manufacturing labor so as to make a country more evenly balanced.

We in the United States have a higher standard of living and wages than in almost any other country on the globe. Both of the large political parties believe in protecting labor; and the tariff, which produces not only revenue but also protects labor, has more or less protected industrial labor to such an extent that our industries grew up in a marvelous manner; and, as pointed out on prior occasions, when an overproduction or surplus was produced, the system by which sales are effected enabled manufacturers to protect labor from being lowered in compensation.

But our system of marketing farm produce is entirely different; result is that when a surplus was produced the price of that commodity was lowered to the world price; and hence if our cost of producing was greater than in other countries, not infrequently capital invested as well as labor in producing such farm produce was seriously underpaid.

DRAWBACK DUTIES.

To encourage increased employment of labor we devised the system of allowing drawback duties, so that we could import raw products from abroad, paying duty thereon; but after labor has been expended thereon in the manufactured state we allow 99 per cent of the duty in order to enable export trade to grow as well as give employment to labor in the United States. But in doing this we recognize the principle that for home consumption higher prices should prevail. Even if it be a food product like sugar, where duties are paid on the raw imported sugar, after labor is expended thereon in refining—if the sugar is consumed in the United States, the consumer pays the duty; but if exported to a foreign country, the drawback duty is refunded and the foreign consumer does not pay the duty, but he did give employment to our workmen in the sugar refineries. These workmen did not lower their wages for the benefit of the foreign consumer, nor did the fact of labor having refined more sugar than we consumed at home lower the entire or the bulk of the workmen's wages in the sugar-refining industry in the United States.

Therefore we encourage labor to work for foreign consumers in manufacturing industries without damaging such industry, but we do not encourage farm labor to produce for foreign consumers, for the moment we produce through farm labor more than our tariff-protected farm products can be consumed at home, immediately, after even a slight surplus is produced, the price drops to the world price and the protective home-consumption tariff no longer protects such farm labor.

Therefore we virtually say to our farmers and to labor which would desire to go into farming, "We will protect you if you underproduce; but the instant an overproduction or a surplus is created you will have to work at the same low wage of compensation as is paid in other surplus-producing countries where the standard of living or wages for everything the laborer requires and has to buy and pay for is on a much lower basis."

Thus we create an impossible situation, and this is one of the principal reasons why our farming industry has not kept pace with our phenomenal growth in manufacturing industries.

True, you can point to our big exports of cotton and wheat where for special reasons we could afford to be content with the world price; but look back to, say, 20 years ago or more, and you will find many farm products we then exported we now are beginning to import.

LOANS.

The cry comes from the farmers that they should receive better facilities for obtaining long-time loans on their farms, as also short-time loans for crop raising, etc., at lower rates of interest.

The provisions in the new Federal Reserve Board act were intended to help the farmer, and efforts are now being made to perfect the Fletcher bill providing for long-term farm-land loans.

The farmer certainly does need better facilities for obtaining funds at more reasonable rates of interest.

But I claim that even if the Fletcher bill becomes a law it will not help the farmer much, for our farming is too uncertain in returns or compensation for capital and labor, and earning power of the farmer or his security (the land and implements) is a vital factor and must be made more secure and not overlooked.

EXAMPLES OF DROP IN VALUATION DUE TO FALL OF EARNING POWER.

The real owners of a large western railroad system, rather than run the risk of investing some $30,000,000 needed, through a committee representing the real owners of that railroad, offered a preferred 7 per cent stock, going ahead of its own security, plus a bonus equal to about 90 cents for every $1 invested in the new 7 per cent preferred stock, to be given up out of their own security. Early in July the offer was turned down. This means that compensation as determined by the rates of freight was so low that a 7 per cent preferred stock plus 90 per cent bonus in common stock did not tempt capital to enter. One would think that legitimate railroad investments had deteriorated to the standard of wildcat mining ventures. The railroad was still earning a small income on its capital stock, but the future outlook was so uncertain that its stockholders preferred to make extraordinary sacrifices rather than risk any more money of their own, and those who at first entertained the proposition, after due consideration, backed out.

The United States Steel Corporation had reduced its dividend from 1¾ per cent to one-half of 1 per cent quarterly. All interested knew its business and profits had gone down to a low-water mark, but since the turn of the year its business was improving. Recently the directors decided, rather than attempt to lower wages of its workmen in these hard times when cost of living is so high, that its stockholders shall do without even that one-half of 1 per cent quarterly dividend. Result was that, although the business is improving, the stockholders rushed to sell, and the price depreciated over 25 times the amount of the passed one-half of 1 per cent dividend. In other words, although the plants are still there, undamaged by fire, flood, or earthquake, yet owing to the lack of returns as compensation the market value depreciated almost $75,000,000.

In the great city of New York, in our famous Broadway and neighborhood, around Canal Street, Grand Street, etc., rents for certain reasons had a big drop. Result was the value of property there declined in value 50 per cent, more or less. The land is still there, so are the buildings, and the city of New York has not become depopulated; but the moment the rent or earning power decreased it carried with it inevitably a decrease in value of the property.

By the above three examples, in railroad, steel plants, and Broadway, New York City property, we find the values of such properties materially affected by the earning power. Can we create a different standard by which farm values will be judged by capital that is expected to enter as loans to farmers or on farms?

The past, present, and future earning power of farms and farmers is a most vital factor, and until we make our farming a reasonably safe industry, no matter what banking legislation is created for the benefit of farmers or farms, it will not materially induce capital to enter.

On February 27 last I stated that through national supervision by departments for each commodity, through a license tax (or later prohibitive tax on country dealers who buy from the farmers, or otherwise), we could devise a system that would protect our farming industry so that no matter how high or how low prices for such commodities were abroad it would not affect prices in the United States, and price always includes compensation for labor.

We agree on the urgent necessity of having cooperative farmers' associations in all the rural districts throughout the United States. The office of such rural cooperative society sends the surplus not sold locally to the distant consuming markets, and the net proceeds are paid to each farmer, according to the quantity, grade, etc. That is, the office keeps an account with each farmer. It is impractical or economically wrong for the Federal or central board of the sell-

ing agency of the farmers in a certain commodity, say it be butter or eggs, when it is found desirable to export at a lower price to get rid of any small surplus where perhaps $100,000 or even $500,000 loss is sustained over the normal price the farmers obtained, to distribute such loss through the various States, and in these States it is divided and subdivided again and again until finally the loss sustained in any local rural district is determined, and that local rural office apportions or charges it up against each farmer in that local association, according to the per cent he is chargeable with as against the amount of business he transacted there in that particular commodity? It would probably be an infinitessimal sum compared to the volume of business transacted, but it would have protected the farmer and even the consumer from violent price fluctuations.

As to any profits on importations that would thus be made at lower prices than ruling at home in a certain commodity, that profit could be retained for prizes to farmers and to agents of the farmers in the local rural districts as an inducement to spur them all on to efficiency. But the plan outlined would ere long bring our farming industry to such marked prosperity and increase of production and yield and decrease in cost of production and decrease in cost of living that importations of food products would soon be but a memory and no more an actuality or even a possibility.

We have virtually told the farmer that any commodity that he can not produce as cheaply as other countries, even when he had a protective tariff for home consumption in his favor, he must not and dare not produce more than barely enough for our own home needs. If he dares produce a trifle more, the price of that commodity, or the price for the greater portion, drops to world levels, and that means his labor is wasted and sometimes part of his capital, too. Thus we encourage and almost force farmers not to increase production except for the growing needs of our increasing population; and we further force labor to seek employment in factories already oversupplied rather than encourage a more equal distribution of labor into farming as well as into manufacturing.

We further, through this short-sighted policy, cause farmers to lose interest in what they do, and thus they fail to take heed or advantage of the many ideas suggested for increase of yield and efficiency, which would in time decrease cost of production, decrease cost of living, and yet give farmers better and surer profits or compensation. Nay, further, as some wide-awake and hopeful farmers do adopt the ideas suggested in improved methods, etc., enabling them to withstand unduly low prices that prevail in times of slight overproduction of such commodities, those farmers who have not adopted the improved methods suffer all the more when prices are low or near to cost of production for the efficient farmers but are entirely too low to cover cost of production for the inefficient, indifferent, or discouraged farmer.

The plan I suggest, starting by departments for the three products, will not only give fair remuneration for all the farmers engaged therein but will cause the increase of yield from cows and hens to march throughout the United States in an almost equal or armylike advance and it will not be by coercion either, but through assured good profits or compensation, through the advice or system whereby all who are in the cooperative societies can not but help act on the plan for increase of yield and efficiency; and those who do not care to do so will not only receive a "black eye" from the local agent whose report the lenders of funds will consult in granting loans to farmers, but they will further be deprived of the privilege of using the cooperative association and its selling agency for the sale of their produce; and as there would be no dealers in the United States in such commodity to whom they could sell such produce—as all dealers would obtain their produce only through the selling agency—it necessarily would leave such recalcitrant farmers only one outlet for such produce, namely, to seek consumers to whom they can sell direct; but as even consumers want standard and not inferior produce, even such an outlet would soon be closed to such farmers.

Farmers are human beings, have feelings and instincts like other human beings, and when they see that what is intended is not to have him treated like the "easy mark" some city people think he has been hitherto, but that primarily what is intended is to look first of all after his welfare, and the consumers' welfare will follow as a natural consequence, then the farmer will wake up from his lethargy. It would create a spirit of competition to excel in efficiency of production, yield, and stoppage of waste instead of, as now, a competition to see how often we can make him work for nothing, which in turn causes a desire to retaliate when opportunity offers, to turn the tables on those who thus unjustly forced him on previous occasions to work for nothing, and at times even at a loss of his capital, too.

We have the lands, we have the farmers and their help, and we even have excess numbers in factories who could be drawn to the land to produce foodstuffs that the world will always need. We have 100,000,000 people to feed, and our numbers will keep on growing. We have a high standard of living and wages in the United States, and labor on farms should receive as full protection as it does in manufacturing for what we produce and consume in the United States; and we should encourage overproduction even in some commodities that can be more cheaply produced in other countries, and sell such overproduction only at the world price and distribute the difference between the world and home price on the total produced at home, but not to lower our home price also to the world price. Such a plan would in time, by the good wages paid farmers and farm labor, produce increase of yield and efficiency, and that perhaps would ere long bring cost of our total production to a lower basis and nearer to the world level.

Although our wages for labor in industries are higher in the United States than in other countries, yet through efficiency in many a manufactured product we find that, high as our labor wages are, we can compete, more or less, with manufacturing countries where labor is paid lower wages. Through the protection such industries received in the past, not only did they grow to large proportions but also markedly, too, in efficiency.

Why not, therefore, too, start to properly protect our farming industry? As shown, the protective tariff to farmers gave protection only as long as they produced barely enough for ourselves; and the moment a surplus production occurred, as in former years, where labor and cost of feed, etc., played a big item in cost of production, then the surplus brought down price, and that discouraged overproduction and discouraged marked general increase in yield and efficiency.

But by adequately protecting the farmer, at least on the home consumption, we would encourage overproducing and surplus going abroad at slightly lower prices; and in time the efficiency of the farmers in general throughout the United States will have been brought to such a high standard that even the surplus would bring prices close to cost, enabling them to compete in time, as we now do in some manufactured lines, with the cheaper labor produced farm products of other countries.

It would not only create a large favorable trade balance, but would also in time, as efficiency would develop, bring down cost of living to consumers, and would require a larger percentage of our population on farms than we unfortunately now have, and we would see less unemployed and distress in the towns and cities than we have witnessed in recent years.

In fact, those who are thoroughly familiar with our export trade know that prices are often shaded on manufactured articles below the home selling price in order to obtain a foreign outlet for the surplus manufactured at home. In this way the manufacturer figures that the profits made on the 90 per cent, more or less, sold in the United States should produce sufficient profit to enable him to sell 10 per cent, more or less, or his surplus production, at a reduced price or with little or no profit, and in this manner he gives employment to a larger number or more steady employment than otherwise could have resulted. What I suggest is simply applying the same principle on some of our farm products, where labor, care, cost of feed, etc., are higher in the United States than abroad, and the profits made on the large quantity consumed at home will enable the small relative surplus to be exported at lower prices and thus give employment on our farms to larger numbers, and in time, as yield and efficiency increases through good wages, the cost of production decreases, and as this takes place the entire country and the consumers therein will pay lower prices on the larger quantity consumed within our borders, which prior to this they were asked to pay a little more for under the present destructive method of leveling to world prices when overproduced, and unduly raising or keeping up prices by the enforced restriction of production, which prevents increase of yield and increase of efficiency, and which is one of the main causes for the high cost of living and also for the distress of the farmers in other than war time, when war prices prevail on foodstuffs.

On October 26 you wrote: "We wish to acknowledge receipt of the manuscript you submitted treating on improved methods of marketing farm products. In our investigational work on this subject we are glad to have constructive opinions of those who have made a careful study of the matter."

As far as I am concerned, I have made no careful study at all of this matter, and even if I had it would all be theoretical and valueless. All that I have sent since January last year to President Wilson, who referred the matter to you, was all based on actual experience gained in foreign and domestic commerce.

And if I, who can lay no claim to marked ability, have seen the ills and defects from which our farming, and in consequence we consumers, too, suffer from, you can imagine what a national marketing commission would be able to accomplish who would have on it men renowned throughout the United States and the world for their experience and business ability, to work in conjunction with the United States Department of Agriculture, to solve our farming problem.

What the German council of agriculture helped to bring about in Germany the national marketing commission would do for farming in the United States. It is primarily a business problem, and business men should be brought to give their guidance and advice to the matter. This is by no means a reflection on the farmers or on the Department of Agriculture or on our financiers for not lending financial aid; but through the guidance of experienced and able business men, with the aid of all others combined, it is my humble opinion the matter will be solved, and easily at that.

On August 25 I wrote you that steps ought to be taken to protect our citizens from paying war or famine prices for food, and suggested a temporary expedient, and that we seemed to be frantic to get rid of our wheat and flour, of which we had a great quantity to spare, but added my belief that as the quantity was diminished by home consumption and exports it was not inconceivable that prices might rise to $1.50 or $2 per bushel, as 10 or more countries would be eagerly bidding for it.

Here you have an example of how a world shortage creates such a demand; that, big as our surplus was, prices are run up far above cost of production, and to the hurt of our home consumers on the larger quantity we consume at home ourselves.

So, likewise, if there had been no war or no world shortage, the surplus, even if much smaller, would have been pressed for sale abroad, and prices would have tumbled below cost of production.

Our farmers need fear no foreign competition on wheat, but on many a product cost of production is lower in other countries than in the United States, and if we produce but a little more than our home consumption the price gradually drops to the world price, at which the surplus is pressing for sale, and thus we underpay our farmers for having tried to be industrious. When you underpay you prevent efficiency and increase of yield from being developed, and thus we help to prevent a decrease in cost of production, which helps to keep up cost of living and at same time keeps farmers' compensation too low.

It hurts producer and consumer, and we ought to remedy it, as did Germany.

Respectfully submitted for your consideration by a fellow citizen.

CHAS. KURZMAN.

514 WEST ONE HUNDRED AND FOURTEENTH STREET,
New York, February 3, 1915.

---

514 WEST ONE HUNDRED AND FOURTEENTH STREET,
New York, February 26, 1915.

Hon. W. S. GOODWIN,
Washington, D. C.

HONORABLE SIR: I take the liberty of inclosing another manuscript on our farming problem, in which, as formerly, I again draw attention to some features of German methods, which perhaps might prove of benefit in the United States if same could be adopted or copied to suit our people and temperament.

Reason I pick out German methods is because in that country farming and farm credits are models.

Hoping you will pardon my obtruding my views upon you, I am,

Yours, very respectfully,

CHAS. KURZMAN.

WHAT PROTECTION DOES THE AMERICAN FLAG FURNISH TO CITIZENS, BE THEY FARMERS OR CONSUMERS, WHO LIVE ON AMERICAN SOIL, ON THEIR FOOD SUPPLY PRODUCED ON AMERICAN SOIL?

According to Immanuel Kant, "nature is governed by law, man by his conception of law."

In nature everything is orderly and methodical, but man not being infallible in creating laws, often errs, and these errors, if not corrected, lead to distress and misery.

The Paris Figaro, after the Agadir incident, sent a special correspondent to Germany with a view to learning the feelings and sentiments in Germany that brought about the regrettable affair, which led to the new military laws in Germany of March 27, 1911, to be followed by the law of June 14, 1912, and later by the law of March,

1913, all of which increased the military forces of Germany. Written by a Frenchman, Georges Bourdon, the closing words in the chapter on Agadir, in his book, the German Enigma, also lays blame on the French in these words: "But it is also apparent that lamentable, even criminal, blunders were committed at the quai d'orsay, and that it is the duty of a nation, if it desires to live in security against accident, to exact from the men who represent it capacity in the science of politics, scrupulous clear sightedness, and precision in all their dealings and actions."

In other words, it is the duty of the Government to protect the welfare of its people by clear-sighted action and wise laws.

Does the American flag protect its citizens? Even on American soil the flag does not protect its citizens from harm. True, no foreign naval guns have destroyed life or property here, nor has a foreign army invaded our country, but the citizens of our country are suffering nevertheless. Although we have a great abundance of wheat and a big surplus to spare for foreign consumption, yet our citizens are made to suffer by the high prices they have to pay for their bread. What protection does being on American soil, under the American flag, afford our citizen consumers from paying war prices when there is no war within our borders? On the other hand, in case of an overproduction, where the smaller quantity exported also makes the price for the bulk of the commodity consumed at home, what protection has the American producer on the home-consumed quantity?

Therefore it seems that custom or man-made law in a daily necessity—food—which it should be the duty of the nation to foster and protect the full potential production thereof, we are entirely remiss in and leave it to the mercy of chance, speculation, and what not. Instead of paying those engaged in agriculture a living wage according to United States standard of wages and living, somehow the custom grew up to entirely ignore cost of production and a fair living wage, and instead thereof, compensate farmers according to surplus or shortage, and the skilled operators who play upon this keyboard make the high or low prices, regardless of cost of production or fair compensation to farmers. Sometimes the producer profits; sometimes he is seriously hurt; the same applies to consumers; but at all times the skilled operator or middle man, who should be considered no more than part of the distributing machinery, as are the railroad transporters, are afforded opportunities of exorbitant profits to the hurt of both producer and consumer.

Extracts from Agricultural Cooperation and Rural Credit in Europe, Senate Document 214:

(Page 399.)

"Suppose you had no council of agriculture in Germany, but only voluntary organizations; how would you stand?

"We had that in earlier times.

"The great drawback to this movement was the lack of solidarity between the various unions."

(Page 400.)

"The logic of the situation is such that a council of agriculture for the United States has become an absolute necessity. The capital and brains of the cities are organized. The labor of the cities is organized. The farmer may only remain unorganized at the peril of his existence. This is the situation which makes the council of agriculture an absolute necessity for the United States. I wish to ask if you attribute the success of Germany as an agricultural country to the council of agriculture?

"Yes; the council of agriculture is one of the factors in this success. It has secured success from the legislative and political end. The other factor in securing the success has been the agricultural society, which has watched over and promoted technical development and improvement."

(Pages 425–427.)

"A cattle-breeding law has been enacted. The law provides that only those bulls may be used for breeding purposes which have been approved by a commission."

"If one takes 10 swine or 10 sheep or 10 goats as being equal to 1 head of larger cattle, Saxony has 1.2 head of cattle for each hectare of agriculturally utilized land, or, say, 1 head of cattle for every 2 acres. This makes a stock of cattle probably larger than any to be found in any other land. The great number of cattle in Saxony is responsible for the large production of manure by which the state of cultivation of the fields is extraordinarily raised."

"Our highly respected colleagues from America will therefore not take it ill when we insist upon a certain degree of protective tariff, for without it an intensive agriculture could hardly be maintained in Germany in face of the high cost of production. The interest of the whole German population in a large production of foodstuffs in Germany itself in consequence of our geographical position is so great that to renounce our protective-tariff policy would portend disaster for agriculture and for the whole population."

(Page 443.)

"Hanover (cattle) Marketing Association aim to uphold German market for German agriculture to influence fixing of prices to regulate the supply according to the demand."

(Page 450.)

"Landwirtschaftskammer—council of agriculture—is the mother of all cooperative associations; is the advisory board, and supports agriculture in every possible way."

From these few extracts of that 900-page document of information gathered by our United States investigators many valuable lessons can be deduced for the upbuilding of United States agriculture.

It seems that what we are trying to do in the United States is to form organizations such as Germany 40 years ago found to be insufficient. Will we deliberately defy the experience of Germany (see p. 399) and presume that our farmers, who have less opportunity of meeting and exchanging views and ideas than most farmers in the villages and hamlets of Germany, can overcome a difficulty that Germany found it necessary to remedy by solidifying the cooperative unions through a council of agriculture?

First and foremost, we see that Germany protects its farming industry. The council of agriculture does that even to the extent of having had enacted not only a protective tariff on importations of farm products from abroad but also by having protection extended to native farm produce when overproduced, through the "import certificate," which keeps up the price at home equal to the world price, plus freight and protective duty. Therefore, although prices fluctuate, yet when world prices are below the usual or extremely low, the price on the home consumption is still protected, even when there is a surplus being exported.

It is economically wrong to force farmers to accept prices below cost of production (including fair returns for capital and labor) on the quantity consumed in the United States when at the same time everything the farmer has to buy is paid for at the higher range of prices prevailing in the United States.

It is also economically wrong to ask the United States consumer to pay at the rate of $1.50 to $1.75 per bushel of wheat in these war times when the consumers' wages have not been proportionately raised.

We have not treated the farmer justly hitherto, and that accounts for the comparative failure of farming to grow at the same phenomenal rate that we have advanced industrially and commercially. Not without reason does there seem to be unwillingness, now that the farmer has his inning when war prices are prevailing, for a movement to be started to rectify the injustice done farmers formerly. Possibly from the large consuming centers, like New York City, the effort may be made to bring this important question before the country in its true light, and to try and inaugurate new laws or a new system that will, first of all, deal justly with our farmers and their compensation, and justice, to be even-handed, will in turn make just prices to consumers, too.

BREAD.

Prices for wheat and flour have advanced over 80 per cent, and now the price of a 5-cent loaf of bread has been raised to 6 cents, or 20 per cent.

If, therefore, 6 cents is to-day a fair price for bread, then for years past the consumer has been paying far, far above what he should have. Who made the enormous difference on the big quantity we yearly consume at home? It has been swallowed up by the go-betweens.

We had for years past a standard or fixed price for a daily necessity—bread; the consumer never was asked if he was satisfied; whether the price of wheat was unduly low, moderate, or a little above the usual average made no difference; the consumer was not asked any questions. The price was fixed for him, not by overproduction or supply and demand, but by custom, and so used did the consumer become to this custom that he never stopped to ask if at times the price could not be lowered or the weight or quantity for the 5 cents he paid be increased.

But if we had a fixed price for bread, which the consumer willingly and without complaint or murmer paid, why did not the farmer receive compensation in accordance with that 5-cent price for a loaf of bread on the quantity consumed in the United States? Why did we permit him to be so often underpaid, to such an extent that many of them have become so poverty-stricken that they are unable to procure sufficient funds to diversify their crops, or to expend money for lime, fertilizers, etc., to improve the much-impoverished soil?

Cooperative associations of farmers have not and can not remedy the evil; but we ought to have such cooperative associations throughout the length and breadth of the United States in each and every rural district, being in turn combined by counties and then by States, and from these States a solid agricultural society with a national or central board, to which should be added men of ability from the ranks of our leaders in industrial and commercial enterprises, to give their aid to protect farmers and consumers, with also a few Government officials to see that both publicity and fair play are given and no effort to oppress or exploit be attempted, and to this be added advisory boards having on them able railroad men to help improve the transporting of the produce and besides dealers in various commodities to give advice.

Such a body, whether it be called a council of agriculture or national marketing commission, or what not, created by United States law, but not part of the Government itself, no more than is the American Federation of Labor, would help solve our farming problem.

It would study the various commodities produced on our farms, find the average cost of production, and would suggest ways and means for seeing that our farmers were paid in accordance with such cost, more or less, and not by speculative prices.

In many of the labor organizations compensation as well as hours of labor are fixed and the members are compelled to abide by the rules of the labor organization. So likewise with farmers—they would have to be governed by the rules of the organization, which, having on it also representatives of the consumers, would formulate rules and regulations for the farmers.

For example, in marking eggs the farmers would be compelled to bring or deliver the same wherever possible along with their milk, which in itself would probably save at least $100,000,000 yearly. They would also have to take better care of their milk, and they would have to start cow testing for yield of milk per cow, so as to weed out the unprofitable or boarding cows, and they would have the benefit of improving the breed through cooperative certified breeding bulls that the cooperative societies would have in the district; they would also have to try and increase the production of eggs from fowls reared for that purpose as counter to those reared for flesh; and likewise there could be inaugurated raising steers for their flesh; and by the increased number of animals on the farms the increased manure would help raise the productive capacity of the soil of the farms.

In advocating a selling agency for the farmers' cooperative associations, to start with, say, dairy products, poultry, and eggs, with a department for each, having a central or Federal board, which has regional branches, which in turn have divisions and subdivisions, the aim is to bring about economies in gathering and distributing and to eliminate such middlemen as will be found to have been unnecessary hitherto. Instead of having many country buyers of such produce from the farmers, there will be none at all, and in place only an agent of the farmers, selected by themselves, to gather, grade, standardize, and ship to consuming markets such of that product that has not been locally sold by him for local consumption. In the large consuming markets the selling agency has an office only, by departments, to which wholesale dealers in the commodity in question have to apply for their requirements and purchases. Nowhere else can they obtain such produce, and it is to be hoped in time there will be only wholesale merchants and retailers and all jobbers or other unnecessary middlemen will have been eliminated, too.

These wholesalers (as also farmers and consumers) will have representatives on the central board of the selling agency and will have been consulted as to prices for grades and seasons, etc., and although the prices to be paid by the wholesalers need not necessarily be fixed, yet they can be made stable; and as the supply to be sent to each market will be regulated more or less to the demand or consumption, the wholesaler will know that if he properly takes care of the produce he is sure of its sale at a reasonable profit, no speculation or violent fluctuations being possible, and in turn the retailers will purchase such produce at stable prices, to be distributed to consumers who are never asked any questions if price suits them or not—as has actually been the case for years and years past in milk and bread.

Any shortage or surplus the central board of the selling agency in that commodity looks after, perhaps direct or through merchants now engaged in such business, but always under such rules and regulations as the central board will formulate to prevent exploitation of any of the interests involved—producer, dealer, or consumer.

In this way we at one stroke, by eliminating unnecessary middlemen and expenses, decrease prices to consumers and increase prices to producers.

But what must not be lost sight of is, that by having such a selling agency the products in question will receive better care and preservation, and at the producing end there will be methods introduced for increasing yield and decreasing cost of production; and as the farmers will receive the benefit of such guidance and instruction they, in view of the stability in compensation it will give them, are expected to do their share in helping to bring this about. Therefore, such farmers as are unwilling to do this would be deprived of their membership in the cooperative society. They would still have the use of their land and could sell their produce direct to consumers, but they would be "independents" and would not belong to the organization and could not use the selling agency for the disposal of their produce.

In other words, the organization, although created by a law of the United States, is not one that forces or coerces farmers to join, but if they desire to enjoy the benefits of organized selling to other than consumers direct by themselves they must abide by the rules of the society, same as do members of organized labor.

It is most probable that if farmers are made efficient in the dairy products, poultry, and eggs the chances are that it will also help bring about efficiency in farm crops, etc.

PROTECTING HOME INDUSTRIES.

Farming is a home industry, in which almost 30,000,000 of our people are engaged, and the protection accorded them even under a protective tariff was not real protection; hence our farming did not keep equal pace with the growth of our manufacturing industries.

Germany, through the advice and suggestions of the German Council of Agriculture and through the "import certificate," gave real protection to German agriculture.

Mr. Herbert Perris's "Germany and the German Emperor" was quoted on February 3, in which he derided the German plan of protection through the import certificate, as undoubtedly price of food was maintained at all times at a higher level in Germany than in free-trade England.

But was this a hardship on the German population? Is it not economically just and fair if home labor and home industries are to be protected from cheaper labor in other countries that the protection be extended to all industries that require it? An employee of a railroad who obtains fair compensation for his labor must not expect to buy his food from abroad, where possibly prices may be lower, but in all fairness should patronize the native farmer whose produce he helps to transport, and who, therefore, in reality furnishes him with employment. A workman in a shoe or clothing factory who works at the United States standard of wages should also patronize the United States farmer, even though the price of such farm produce is at times higher than abroad, otherwise the farmer, who in turn buys the shoes and clothing produced by United States labor, will be unable to make such purchases and could with justice complain that he can procure his clothing cheaper abroad.

When we recognize the principle of protecting home industries, as we have for years past, we must see to it that the protection is extended to all home industries that need it alike, otherwise those that receive ample protection would be laying tribute on those that do not, and this would be creating a situation that unbalances a country and has the effect at first of drawing labor to the well-protected industries and away from those not so protected, and in time slowly, gradually, sometimes with slight reactions, the underprotected industry begins to languish, and then begins the cry as it has in recent years of high cost of living from consumers, and on the farmers' side the cry that high as prices are he, too, is suffering, and then a slowing down in business where the excess numbers of labor were drawn, resulting in unemployment.

While admitting that a good deal is wasted in our awkward, wasteful, and antiquated methods of distributing farm products, which causes distress to both producer and consumer, yet seemingly from the efforts made in various directions the idea seems to prevail that by remedying the distributing part a solution will have been found. No stress seems to be laid upon the potential possibilities of lowering cost of production by increase of yield. The United States Department of Agriculture has for years been doing most excellent work in this direction, but unfortunately the proper method of applying the suggestions and information has not been found. The pamphlets are most excellent, and those with high-school or college educations take advantage of the pamphlets. One might as well try to influence human beings to a higher standard of morality through free distribution of the Scriptures.

In order to draw some further comparisons between German and other methods a few extracts will be quoted from—

"GERMANY OF THE GERMANS.

"[By Robert M. Berry.]

"These people are wonderfully methodical. Without knowing it he has hit on the principal reason of Germany's prosperity. Signs of method and discipline are visible on every hand. Well-ordered progress is apparent everywhere—not that frenzied, demonstrative progress observable in newer countries, but an organized forward movement in which every detail seems to have been well considered and nothing left to chance.

"No detail is too small to claim attention, and to this study of detail much of the extraordinary progress which has been attained is to be attributed.

"The men engaged in trade and commerce are most enlightened and full of worldly knowledge. This they apply to business, which they conduct with intense energy, common sense, and practicality.

"Guardianship of the State has effected much in delivering the working classes from the horrible nightmare of an old age of hopeless privation and dependence on others.

"Virility of the people, instead of being dribbled away in constant internal bickerings, has been directed into its proper channel, and power hitherto wasted has been utilized to develop the vast national resources of the country."

Are higher prices at home for food a detriment to the people, provided, of course, industrial labor is paid higher compensation than in countries where food or cost or standard of living is lower?

Let us again refer to Robert M. Berry.

In 1909 the trade-unions in Germany and England each had a membership of about 2,000,000, with an annual income of about £2,350,000 yearly for each.

The figures quoted below speak for themselves:

GERMANY.

Paid out for sick benefits and annuation	£190,000
Paid out for deaths	115,000
Paid out for unemployment	180,000

GREAT BRITAIN.

Paid out for sick benefits and annuation	735,000
Paid out for deaths	10,000
Paid out for unemployment	430,000

Apparently it seems that Germany had less sickness and less unemployment than Great Britain's trade-unions, and Germany gave greater protection to widows and orphans in case of death of the wage earner.

SMALL DEPOSITORS—SAVINGS OF THE WORKING CLASS.

According to Mr. Berry, Germany had 19,000,000 depositors prior to 1909, having deposits of £642,600,000.

But Mr. Georges Bourdon, in his German Enigma, gives the following figures of saving deposits in marks:

England, 4,500 million marks in 1909.

United States, 17,000 million marks in 1909.

Germany, 15,500 million marks in 1909; 16,780 millions marks in 1910; 18,000 million marks in 1911.

According to the above, Germany had more than double per capita savings of the laboring class than Great Britain. Some of our newspapers give the "savings" for Germany in 1914 as amounting to £1,050,000,000, and one paper stated that the United States had about 17,000,000 savings-bank depositors, with deposits of almost $7,000,000,000.

According to Sir Charles Booth, one-third of the families (not individuals) of London had to live on a pound sterling per week or less; this astounding announcement that entire families had to exist on $5 weekly or less was seriously questioned, but another British authority, Rountree, who caused investigations to be made, found a practically similar state of affairs in Yorkshire.

Therefore it is but natural that if a man of family earns but $5 weekly, more or less, the savings to be banked for a rainy day will be practically nil; in fact, the wonder of it is that they managed to keep body and soul together, and the cost of food rising and rising.

But if small savings are a criterion of prosperity of the masses, then the unprotected system of Great Britain is far behind the fully protected system of Germany, where not only industrial but also farm labor was at all times fully protected, and it seems to have been no hardship on the people of Germany, when, according to the 1909 figures, the savings in Germany per capita was greater even than in the United States, where farm labor received but partial and not full protection.

CONFEDERATE STATES.

When the Confederate States on February 4, 1861, were about to adopt their constitution they decided that congress did not have the power to give bounties or lay protective duties, but exports might be taxed by a two-thirds vote of each house.

The South was an agricultural country in those days and it was but natural that their main crop—cotton—which could be procured nowhere else as cheaply, should form the chief source of revenue through an export tax, while at the same time, having to purchase their manufactured products, these they desired to procure in the cheapest markets, free of import duties.

But the United States as constituted to-day is both industrial as well as agricultural. We amply have protected industries, and they grew up most marvelously, but we failed to accord that same measure of protection to our agriculture, as did Germany through its "import certificates," with the result that farming, except in a few commodities like cotton, wheat, etc., has not progressed to the same degree as our manufacturing industries.

Why with so much labor seeking employment year after year of late, and why with land in abundance, on which billions could be raised additional in farm products, should we to-day be importing beef, butter, eggs, etc., when 10 to 20 years ago we were large exporters of these commodities? These small importations, which we recently started, are like a stimulant or drug, which, if allowed to continue, will in time be a necessity for us, and as time passes we will require more and more and will be unable to get along without them.

Germany used every possible means, even in addition to protective duties, to bar out importations of food, thus forcing a larger production at home, and this was not an unimportant factor in creating the increase of yield and increase in efficiency.

Notwithstanding that seemingly it increased the cost of food and cost of living, the savings of the masses kept on growing year by year; was more than double free-trade and cheap-food England, and was also greater per capita than even in the United States, where industrial labor was fully protected, but agricultural labor only protected to produce enough for home requirements; but if a surplus was produced (except in cotton and wheat for special reasons and conditions) the protection ceased, even on the quantity consumed in the United States.

We also see there was less unemployment in fully protected Germany than in free-trade England.

THE PIECEWORK SYSTEM.

Labor organizes to protect the laborer, and those in the union have to live up to the rules and regulations of the union in order to protect their fellow workmen as well as themselves.

In many industries the employers as well as the employees prefer the system of paying by piecework. It is of benefit to the employer, as it enables him to figure the cost of his labor and product more exactly; but the efficient workman also prefers it, as through his efficiency and industriousness he can increase his daily or weekly earnings.

This system puts a premium on efficiency and a discount on laziness. By this system the lazy or inefficient are forced through competition to become more industrious and more efficient, or as time passes and the compensation changes to a basis where the increase of yield or production is divided partly between employer, employee, and ultimate consumer those who remained lazy or inefficient find themselves unable to exist and are driven into some other field more suitable, perhaps, to their qualifications.

In suggesting that produce of the farms be in future compensated not as heretofore, mainly by the law of supply and demand, or by the high or low prices brought about by the skilled operators who, playing on the

keyboard of the surplus or shortage, which often they themselves have no definite knowledge of and which is frequently a matter of guesswork, and in playing on this keyboard—high or low—as circumstances, guessing, or the courage or interests of the operators may dictate, results in such wide fluctuations that have proved so harmful to both producer and consumer—that instead of this we in future also take into consideration the average cost of production for any commodity in question and let that, too, be an important factor in determining prices on our home consumption.

This would place farming on the same basis as the piecework system. The employer or consumer for whom the farmer labors would pay a living wage to farm labor; according to grade or quality and nearness to market the farmer would receive from his employer, the consumer, a more stable and at the same time equitable price—so much per egg, so much per pound for milk or butter, so much per pound of poultry, beef, etc., so much per bushel of potatoes, wheat, etc.

Instead of as heretofore, when a surplus is produced, sell that surplus abroad at the world price and prorate the difference amongst the producers, but without lowering the home price or compensation on the much larger quantity we need and require for home consumption.

The result of such a system would be that each farmer (like the workman at a machine in a factory who was paid by piecework) would strive on his farm (or machine) to produce a higher standard of goods and a greater quantity than he now produces. Now, he knows that if overproduced he will obtain less than if the production is barely sufficient for home consumption, but by the system suggested he will, like the workman in the factory, do all in his power to increase yield from his farm.

Pamphlets and suggestions from the United States Department of Agriculture that now are unread or unheeded would at once be in demand and eagerly followed, for who does not want to profit if a way to do so is paved for him?

As the increase of yield per acre or per animal would decrease cost of production, the employer and the employee (consumers and producers) through their representatives—be it through a council of agriculture, a marketing commission nation wide in scope, or a central or Federal board of a selling agency having on its board representatives of the farmers, dealers, and also able and experienced business men to look after the consumers' welfare in addition to the farmers', and besides a few Government officials, and add to this full publicity of all meetings of such a body—would revise prices, and the result would be that as increase of yield and efficiency would decrease cost of production the price or compensation would be lowered to such an extent that part would go to the farmer in extra compensation and part to the consumer in lower cost of living.

Like in making a new tariff or in many legislative enactments, compromises would be made; but at least it would make it worth while for the farmer to use every effort to outdo his neighbor, for the more efficient he becomes or the greater increase in yield he can obtain from his farm the greater would be his compensation.

This would be true and ideal competition, the same as it is in factories where the piecework system prevails, a competition to excel; and the more each farmer excels the greater his profit, tending little by little to decrease cost of food products to consumers, and yet at the same time fully compensating farmers for their extra exertions, which to-day they are not encouraged to inaugurate, due to our system of unduly depressing prices on the huge quantity consumed at home if he but slightly produces more than our home market can consume. Also, like in the factories, those farmers who have not adopted the improved and scientific methods would ere long be compelled to seek other fields of employment more suitable to their qualifications.

The assured fair compensation or wages to the farmers would enable them to procure and invest capital to improve the productivity of their land and animals, would enable them to purchase such implements as they may require, and would even make farm-land mortgages, as contemplated in the Fletcher bill, one of the safest of legal investments which individuals as well as institutions would eagerly seek, and these would in time rank as high as the best of first-mortgage bonds of our leading railroad systems or as high as any first-class municipal bonds; and perhaps in time these would even sell higher than such securities, like in Germany. Thus the farmer, if the way is paved for him to reach this goal, would obtain loans at as low a rate of interest as railroads or municipalities having the highest credit rating.

And would the consumer in any way have suffered? Apparently not, if the figures quoted herein about Germany as compared to Great Britain, or even the United States, are studied. On the contrary, the consumer as well as the farmer both will have benefited.

Instead of destructive warfare, under which we have been operating the farming industry—warfare in trying to obtain the farmers' produce, often below cost of production, which in turn justifies him, as at present, owing to the European war, in exacting from the consumer the full measure of retaliation in the high price now ruling for wheat, which has raised such a howl and cry of distress from the poor in the cities who now pay 6 cents for bread.

It is our own fault; and by "our" is meant the 70,000,000 consumers who have been unfairly treating the 30,000,000 farmers.

HOW CAN WE CHANGE THE SYSTEM?

Over 65,000 new bills have passed Congress, etc., in four years, "to the delight of the lawyers," as ex-President Taft puts it. It is a well-informed man who knows even 1 per cent of these new laws. However, one bill stands out in bold relief as unquestionably the most constructive piece of legislation enacted, not in four years, but at any time, and that bill had for one of its aims the stabilizing of the price or use of money or credit. The wild fluctuations of interest rates, at times as high as 100 per cent per annum, are now a thing of the past.

So, likewise, with a daily necessity, food, the price of this, too, should be established and not be made a football to play with; but we should recognize that as business—commercial, industrial, or agricultural—could not do without money or credits, and should be made available to all worthy of it at reasonable prices, so, also, food, without which we can not get along, and which no country or countries in the world can supply us with in large quantities, and which, if we treat the industry properly, we can produce ample and to spare at home, and in time even reduce cost of production to the benefit of producer and consumer, that for this industry, too, some legislation is necessary. If we can enact 65,000 new laws why can not one more be enacted that is so vital to our welfare?

Over a year ago, on January 27, 1914, you wrote: "The problem is more complex than your letter indicates. We have the great inertia of an existing system to overcome. To attempt to organize a territory of any size or to federate newly organized communities which have not yet worked out their own problems satisfactorily would be impossible."

That great inertia is inherent to those living by themselves on the farms, as do our farmers in the United States in contradistinction to many parts of Europe, where they live in villages or hamlets and can meet daily to interchange views and ideas, as do workmen in the towns, which led to labor unions being organized.

As to expecting communities to work out their own problems first, how can they do so when the produce of their farms, on which they expended hard toil, is made a football of speculation, and frequently they receive payment that shows no remuneration for their labor and at times puts them further in debt, and they have no voice in saying what the compensation shall be for their work, and being unorganized can not as individuals work out their own problems nor that of their neighbors who are similarly situated, even if organized into small cooperative societies without an organization nation wide in scope.

In yours of February 18, 1915, you say: "In the scope of the letter it is impossible to discuss the various points which you bring up. Inasmuch as the essential feature of your national marketing scheme rests with the taxing power of Congress, it is impossible for any executive power to carry out your suggestions."

The tax is not on farmers nor on consumers, but simply through a law to tax out of existence a parasitic class, and in place thereof take the ablest of these at present parasites and make them useful agents of cooperative farmers, who, without these country parasites, are left not alternative but to shake off the inertia now existing and form cooperative societies.

But this is or can be separate and distinct from the council of agriculture, marketing commission, or whatever you please to call the independent body to be created, who are to study the farming problem from a business point of view for the benefit of farmers, dealers, and consumers.

It is only too true that the executive department of the Government does not enact laws, but a recommendation from the Chief Office of Markets to his superior, the Secretary of Agriculture, as to the desirability of suggesting that a law be enacted to create a body outside of the Government itself, such as exists in Germany, to help the Department of Agriculture in upbuilding our farming industry, such a suggestion, if it meets with the approval of the Secretary of Agriculture and the President, with their recommendations, would go far in helping to bring the matter to the attention of Congress, who, if the matter is explained to them in an abler manner than my efforts seem to have been, would probably enact such a law.

Even assuming that all that I have suggested in the way or manner of marketing is undesirable, impractical, or economically wrong, yet that in no way proves that other ways can not be devised, and since marketing is primarily a business in which experience and not theory must be brought to bear to make it successful, is there a better way than to have an independent body, such as a council of agriculture or marketing commission, on which farmers, dealers, and experienced business men will be, to study the business end of the question, while the Department of Agriculture continues its efforts on the scientific side?

I repeat that I am of the opinion that such a body can be created without any expense to the Government, except a trifle, perhaps, for clerk hire and railroad fares; and the recommendations of such a body would be publicly discussed, and surely would not be enacted as new laws unless public opinion approved.

Nature is governed by law; there is a plan or method in nature, but we in the United States have no plan or business method by which our farming industry can be successfully conducted, as have been our industrial industries, as evidenced by the phenomenal growth, while farming has not kept equal pace with such growth as it did in Germany. Protection need not necessarily be high; it will vary on commodities as it does on manufactures, but a competent independent body should study the matter as it did in Germany.

The Naval Bill.

SPEECH

OF

HON. EDWARD W. SAUNDERS,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 29, 1915.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 20975) making appropriations for the support of the Navy for the fiscal year ending June 30, 1915.

Mr. SAUNDERS. Mr. Chairman, I trust that I will not require the entire time that has been yielded to me by the gentleman from Missouri, to present some thoughts in connection with the pending bill.

The advocates of an excessive, and therefore an extravagant Navy, relate all antagonism to their pet project, to one of two heads—ignorance, or lack of patriotism. Neither count in this indictment is well taken. So far as the charge of ignorance is concerned, the Members of this body who stand for a moderate Navy will not, in respect of their intellectual capacities and equipment, suffer in comparison with their colleagues who bow the knee to militarism and navalism, and without regard to conditions, or expense, insist upon a great Army, and a greater Navy.

I undertake to say that the arguments in behalf of a moderate and sufficient Navy submitted by the men derisively styled pacificists by their opponents, are better exemplified by pertinent illustration, more fully supported by cogent facts, and in more harmonious accord with the lessons of history, than the

arguments of their antagonists. By way of reply to our suggested lack of patriotism, I submit that there is not a pacificist in this body who is for "peace at any price," in the sneering sense in which that phrase of belittlement is applied to the men who favor a moderate Navy. There is not one of us who would be willing to secure peace by the sacrifice of aught that concerns the honor, the traditions, or the welfare of our motherland, "this dear, this native soil." [Applause.] There is not a Member of this House who is a little Navy man in the sense imputed, that is a man who favors a smaller Navy than the needs of our country require. In a real sense we are all great Navy men, since we favor a Navy sufficient for the requirements and necessities of the national defense, rightfully and reasonably apprehended. Surely that is as big a Navy as any country should desire to possess.

The gravest mistake that has been made with respect to our naval policy is that the legislative branch of the Government has failed to do its plain duty. This duty on our part is to disregard the hysterical appeals of the timid, the clamor of the swashbucklers and the jingoes, and the suggestions of the selfish interests, and use toward this particular subject matter that same common sense with which we have discharged our other duties. In the exercise of this common sense we should establish a naval policy for the United States. The establishment of this policy appropriately belongs to civil administration. It is a proper function of the legislative department, and is not a problem to be remitted to the military experts. Moreover, in the words of ex-Secretary Chandler, we ought to strengthen, not weaken the civilian control of the Navy Department. The navalists are too prone to cite with an air of finality the opinions of the admirals, the rear admirals, the captains, and the commodores, on the subject of our naval program. We should be willing to hear these gentlemen gladly, but their judgment should not be the final judgment, or of more than persuasive value in the determination of an appropriate naval policy for this country.

The determination of that policy is fundamental and preliminary to the size of our fleet, and the character of our fighting ships. The statesmen of this body should determine the dangers to be provided against, and the possibilities to be disregarded, that is to say, they should determine both the reasonable risks requiring attention and the chances that may be reasonably taken. The task of providing against all the possibilities that the future holds, is an undertaking that would strain even the vast resources of this country to the breaking point. Nor does the proper defense of the United States require that we should undertake to provide against all contingencies. In our rôle of civil administrators we should endeavor to forecast the likely, and the unlikely dangers, the risks that constitute a real menace, and the risks that are mere possibilities. We should not burden too greatly the present, in the effort to anticipate the future. The dangers reasonably to be apprehended, the likely combinations of nations, if any, that may be formed against us, and the possibilities that may be disregarded, are the factors of the problem to be settled before we call in the experts. There is no reason to believe that they are in a position to advise us in any authoritative fashion which of the great powers would be most likely to attack this country, or to prescribe the appropriate course for this Nation to pursue in its international rôle, but once apprised by this body of the dangers to be provided against, and the possibilities to be excluded from contemplation, in a word once acquainted with the scope and limits of our policy, it should be their appropriate task to afford a scheme of national defense that would safeguard the United States.

We train our military men to the end that they may advise us within the limits fixed by the policy that we formulate to control our military expenditures. This body should constantly keep in mind the duty that it owes to the taxpayers. Within the limits thus prescribed by Congress the experts come into their own, and are qualified to fix the forces both military and naval that will be sufficient to provide against the dangers that this body has concluded are of sufficient likelihood to justify preparation.

It is for us to determine this likelihood of danger, the source from which it may be apprehended, and the possible combinations against which we wish to make provision. With the factors of the problem submitted for their consideration, the experts can work out an appropriate policy of defense, outlining the men, the guns, the ships, the permanent works and other instrumentalities, which in their judgment will safeguard this country against the dangers in contemplation, excluding from their consideration all other possibilities, and combinations, and confining themselves solely to the solution of the problem submitted. In this way, and in this way only, will Congress secure the real benefit of the military experts along the line for which they have been trained and prepared. So long as we are concerned to provide against all contingencies, all possibilities, and all conceivable combinations, so long will we continue to pile up Ossa on Pelion in the way of military and naval expenditures, and provide great armies and even greater navies to afford security against fantastic, unlikely, and chimerical dangers.

Whenever one of the alarmists who entertain the public from time to time with stories of our national defenselessness, advises us that we must be prepared against every possible danger, he should be asked to translate that warning into terms of dollars and cents, and inform us what such a state of preparation would cost this country. Such an attitude would mean that the United States must not only provide against possible war with a selected antagonist, but in addition must provide against possible war with a confederacy of the great nations of the world. A combination of this character directed against this country is not only conceivable, but it is one of the possibilities of the future. But does it follow that the United States in the exercise of a wise precaution should take steps to provide itself with an Army, and a Navy sufficient to make headway against such a combination of enemies? I have often heard the question asked on the floor of the House: What would the United States do, should one of the great military powers of the world land an army of 100,000 men on our shores? Well, if that question implies that we must at once begin to increase our Army, and Navy, the next question that may be asked is what would we do, should some other one of these powers land an army of 200,000 on our coasts, and what additions to our Army and Navy would this possibility require us to make? The Secretary of War has recently recommended an addition of 25,000 men to our present Army. While this would add about $25,000,000 to our annual expenditures, the numerically feeble addition thereby contributed to our present forces is far short of what should be afforded, if there is any real likelihood that armies of one, two, or other hundreds of thousands of men will be landed upon our shores.

If it is likely that the armed nations of the earth will assail us upon our own soil, this country should make adequate preparations to protect our shores. If these dangers are real, we ought to meet the situation as Germany has done, and become a military nation in real and deadly earnest. The chances that we may become involved in war with a combination of nations are fully as great as the likelihood of war with a single nation. Who in this body, or what military expert of high or low degree in the Army or Navy, can undertake to forecast the future, and pronounce against the possibility that within the next decade the whole world may be arrayed in arms against the United States?

But are we to order our policies, and establish our armaments with reference to such fantastic possibilities? No, while we may admit that such an array of foes is a possibility, this country must take its chances of danger in this respect. The burden of preparing against all chances of danger and all combinations of possible opponents is too great to be undertaken. Nor is there any imminent risk in omitting to make these preparations.

If only we would use our common sense at this particular time, it is apparent that no such opportunity has been afforded within 50 years for a holiday in naval construction. "The blindest man can see our absolute safety until long after the present European war ends." Why do we maintain a Navy at all? The answer is, to make our country secure. Granted. But if we are secure with our present force, then the construction of a single additional ship is simply a vicious waste, and a prodigal extravagance. [Applause.] Looking abroad the spectacle is presented of the greatest nations of the world reducing themselves so rapidly to such a condition of physical and financial exhaustion that not even the weaker countries in this hemisphere need fear the menace of their aggression, much less this rich, powerful, and virile Republic. In the past we have been told that by reason of the development of German militarism and navalism, particularly navalism, the security of this Nation was threatened, so that to save ourselves harmless, the burdens of the taxpayers must be increased for naval construction. This was a false and vicious argument, and a most unwarranted conclusion.

How is it to-day? In view of the continuous destruction of Germany's naval forces, and of the crushing burden of debt that will be her portion at the expiration of the war, is there any reason to apprehend danger from that quarter? The war once ended, whether she is a victor or a loser in the awful grapple in which she is now engaged, Germany will be as little likely to provoke, or invite fresh conflicts, as she was at the expiration of the Thirty Years' War. In the judgment of

ex-Secretary of the Navy Hilary A. Herbert, even if Germany should win, even if her success should be a vast menace to America, no one can believe that exhausted as the winner in this great war will be, our country will be in danger of attack from that quarter.

This war is a guaranty of world peace for decades to come. The great nations will come out of this conflict bankrupt and exhausted, and recognizing the vital need of a long peace for their recuperation. If then we are safe against foreign aggression, and we are undoubtedly safe, nay safer than we have been during any period of our history, why not call a halt on our building activities until the conclusion of the war, and with the war well over, and the lessons of that war before us, determine the form and direction that our defensive naval construction shall take. This would seem to be the lesson of wisdom for this country.

Secure on this side of the Atlantic we can watch the progress of the fighting across the water, and without venture or risk on our part, reap the benefit of the experiment which others are making, an experiment which will teach profound lessons, and doubtless bring to pass radical changes in the construction and use of the machinery of war, both on the land and the sea.

The following protest again naval increase by Senator BURTON and many other distinguished advocates of moderation in military preparation states the case for the pacificists in a very cogent fashion:

We desire to record ourselves as unqualifiedly in support of the policy of restriction in regard to naval construction at this time and, in accordance therewith, to emphasize the inadvisability of any present increase in our naval program. It is our conviction that no change of program involving increased construction as a result of current European conditions would serve any present purpose or conduce to future safety. The reasons for urging these considerations are the following:

1. No immediate need of defense commensurate with our present armament can possibly arise within the period to be affected by the forthcoming program. All the naval powers peers of the United States are engaged in warfare except Italy. Their armaments are being reduced by the stress of battle; and they themselves will be concerned strictly with their own affairs during the course of the campaigns, the period of peace negotiations and a necessary additional period for recovery. Even admitting the probability of a war in which the United States should be engaged—an assumption against all reason—that war could not occur within a time sufficiently close to demand preparation for it at the next regular session of Congress. All possible antagonists of a strength nearly equal to the United States will have to recuperate a long time before they are on a par with this country. At present they are all sedulously cultivating American friendship, they are greatly indebted to us, and after their own affairs are rearranged on a peace basis they will necessarily continue to cultivate our friendship until world conditions become approximately normal. We need no new construction to maintain our proportionate strength relative to other powers.

2. The inhibition of naval increase is no less strong in respect to technical construction. Naval armaments are developed in time of peace and become with its long continuance more or less fixed as to type along theoretical lines. Every new experience prescribes fundamental changes in construction. The dreadnought type was the technical lesson of the Russo-Japanese War; and recently so acute a student as Sir Percy Scott published his conclusion that the dreadnought is rendered obsolescent by the submarine and the aeroplane. Besides demonstrating the degree of truth in his conclusion, the present war will prove many other things about the current standards of naval construction. Attempts to forecast the experience which will be in the hands of the naval constructors in due course are useless. It is proper to conclude that any plans thus forecasted would, if realized in steel, simply involve a waste of the public money.

3. Even from the point of view of international politics a new naval program of any sort is, it seems to us, entirely inadvisable. The whole system of militarism is on trial in Europe. The conflict will beyond question establish a new order in Europe; and there seems no reasonable doubt that in its solution provisions will be made by which the burden of armaments will be in some degree removed from the nations of Europe, and therefore of the world. American sympathies are bound up with that hope, and that it will be realized to some extent is one of the surest things that the whole tragic conflict offers as an earnest to the future. If Europe's solution of the problem results only in lowering the level of relative defense, the proportionate needs of the United States will be lessened; and so much is as certain as anything human can be.

If, then, the United States should now plan to increase its naval armament, this could do nothing but permanent harm. Naval programs in Europe, in so far as keels have not been laid down, are at a standstill. Europe is using up its armament, and is building only for current use to meet present exigencies. It may end the war by abolishing armaments largely or altogether. The United States is not in need of current defense, and will not be for a period of years, even on the basis of the old international order. We can halt—and if we do the example will encourage Europe to go much further in the abolition of armament than it otherwise would. If we take advantage of our peaceful condition to rush into construction of any magnitude, we shall certainly be building to a large extent for the scrap heap, and the example would discourage European efforts to lower the level of their own armament, which, by operation of the principle of proportion, has always determined the level of the world's armaments.

If the awful catastrophe in Europe has demonstrated anything, it has demonstrated most signally the groundlessness of the argument that the way to preserve peace is for nations to pile up armaments to such portentous extent as to scare their neighbors from attack. The mad rivalry had already been well characterized before the war as "organized insanity." To-day serious men the world over see clearly that these monstrous armaments were vastly more a menace than a defense and that they were largely responsible for the ruin which has been wrought. That the war shall result in the drastic and universal reduction of armaments is therefore the imperative demand of the best European statesmanship. For the United States, safest of nations, to consider at such a time the increase instead of the decrease of her own armaments would indicate a most untimely readiness to intensify the very evil whose consequences now appall us and tend to check the great movement which all Governments and all earnest men should unite to promote.

The latest results in naval armament, and the latest machinery of naval construction are being put to the supreme test, the arbitrament of actual service under the most severe conditions. But at this point some one suggests that this country, as a matter of precaution should maintain itself in a condition of armed peace. A few days ago Sir James Bryce of England sounded a note of warning against the unhappy policy euphemistically styled armed peace, and the moral that he drew, Mr. Chairman, and the warning that he sounded, we may well afford to take to ourselves at this time. The advocates of armed peace insist that military preparation affords the greatest security against war. Methinks I have heard that argument before. Methinks this phrase that so many advocates of armed peace in this House have rolled as a rich morsel under their tongues, has never been more sonorously sounded, than by Emperor William of Germany. All of his policies were avowedly for peace. All of his arguments were for peace. All of his vast system of military preparation was for peace. And yet somehow, in spite of the emphatic assurance, and reassurance on his part that peace was the ultimate goal of his activities, the whole world seemed to distrust his professions. Still we are told that we ought to imitate this policy on a gigantic scale. Does it never occur to the gentlemen who favor this attitude that when we multiply our implements of destruction, our preparations for war, and our devices to maintain a security that is not menaced, that by that very way will come on the part of the nations of the world first mistrust of our intentions, then apprehension, then combination, and then war.

The war that is now in progress in Europe is an exemplification that armed peace does not avert, but begets war. Coincident with the development of German militarism was the development of counter preparation, and of that combination of nations known as the Triple Entente. To-day we are the one great nation toward which the eyes of the world have turned in the hope that in the ultimate we will be the arbiter of peace. Once we begin to tread the path of militarism, and to cultivate the development of the military attitude on the part of our people, once our actions cause the nations generally, and in particular our sister Republics of this hemisphere, to question the sincerity of our professions, and we will lose our present position, we will lose the moral force that makes us at present so potential in world politics. We will fall from our high estate. Our fervent protestations of peaceful intentions, when there is no peace in our hearts, or evidence of peace in our preparations, will fall upon deaf ears. An inevitable sequel of the international distrust of our attitude will be an offensive and defensive alliance of other nations. This will be their answer to the menace of our military development. "To-day we are the first moral power in the world. Others may be first in armies, still others first in navies. But we have made good our right to be appealed to on questions of national and international morality. That all Europe is seeking our favor is the acknowledgment of this fact by the European nations, and their tribute to it. They do not want to fight us. They want us to approve them. They feel that our judgment will be the judgment of history."

The best way, they tell us, to avert war, is to prepare for war in time of peace. That argument has been often advanced, but in the light of Germany's experience, it is not likely to be repeated in this body with the confidence with which it was formerly presented.

If great armaments are a guaranty of peace, why is it that to-day embattled Europe is arrayed against Germany, and peace has taken the wings of the morning and fled from that country to the uttermost parts of the earth? The militarists tell us that but for Germany's military preparations she would not be able to resist, as she is now resisting, the mighty armies that menace the integrity of the German Empire from every direction. That may be true. On the other hand, but for the arrogance induced by the vast military machine which she erected, the war would not, in all likelihood, have occurred. Is there anyone in this audience who is acquainted with the teachings of history, or who has knowledge of current events, who doubts that if the chancelleries of Europe, and in particular the chancellery of Germany had been presided over by heads holding the same attitude toward war as the present President of the United States, the soul-sickening carnage now in full tide in Europe would have been averted? [Applause.] In spite of the Emperor's asseverations for peace, does anyone believe that

Germany would be at war to-day if peace had been in the heart of hearts of the German nation, if they had believed less in the invincibility of the Kaiser's war machine, less in the mailed fist, and more in the peaceful methods of determining international differences? Does anyone believe that war could not have been avoided, if the heads of the warring nations had believed in peace as we believe in it, as the President of our Republic believes in it? No, Mr. Chairman, this war was the outcome and culmination of the development of that military attitude which some of our shriekers and shouters for militarism are anxious *to transplant* upon the soil of the United States. "The sum of a thousand other follies is not so great as the single folly of war. The Germans and the allies know the importance of peace now, if they did not know it six months ago."

Mr. HELM. Will the gentleman yield?

The CHAIRMAN. Does the gentleman from Virginia yield to the gentleman from Kentucky?

Mr. SAUNDERS. Yes.

Mr. HELM. Which is the greater evil, militarism on land, or militarism on water?

Mr. SAUNDERS. It is hard to say. I should dislike to choose between them.

Mr. HELM. One other question.

Mr. SAUNDERS. Certainly.

Mr. HELM. I believe that three-quarters of the earth's surface is water. Germany is about the size of Texas. England has had three-quarters of the earth's surface under militarism for 50 years. The Emperor of Germany has had Germany on a military basis for perhaps a decade. Which of the two is the greater evil?

Mr. SAUNDERS. Oh, I do not know; but so far as that is concerned, both of them are bad enough. [Laughter.] England's teeming population and the necessity of drawing her food supplies from abroad have compelled that country to maintain a great navy. She could not afford to take any chances, even the most remote. England's situation and England's environment has left her no choice but to maintain a great navy. Her dangers have been very real. No such condition confronts the United States.

I will point out, however, that in England, the country of naval militarism, the principles of civil liberty, as we understand them, have been perfectly preserved. That country is a great exemplar of civil and religious freedom, the fount from which we have derived many precious principles, and sacred precedents. On the other hand in Germany, in spite of its wonderful scientific and commercial development, there is no such sense, or understanding of civil liberty as is found in this country, or in Great Britain. The cultivation of the military attitude has starved and stunted the growth of civil liberty, and the development of popular government. It has been alleged that England was caught napping at the outset of this war, and that the present conflict is emphasizing her need of a mighty standing army.

With open eyes and full knowledge of what it meant, Great Britain has steadfastly pursued her policy of a great navy, and a small army, knowing full well that real liberty, as Anglo-Saxons understand it, is a flower that will not flourish under the shadow of militarism. Better far the maintenance and preservation of that liberty, pure and undefiled, than the security thought to be afforded by a military despotism! This thought was presented with insistence by no less a man than William E. Gladstone. When arms are abroad liberty, like the laws, is silent.

I desire to call your attention to the further fact that if a country really desires peace, it must develop the peaceful attitude, and avoid the development of the machinery of war. As the gentleman from Ohio [Mr. SHERWOOD] recently said, you do not develop peace in the canine world by breeding bulldogs. [Applause.] In the civil world you do not promote peace by developing the military attitude. The essential difference between England and Germany is that the former by choice has deliberately omitted to develop the military attitude on land, though maintaining a mighty navy under the compulsion of necessity. The lesson that Germany teaches us is that you can not develop a great standing army, and a great naval establishment without building up at the same time the military attitude, and the military temper. Once the military attitude is fully developed, you have created the ideal conditions under which force, and force alone, comes to the front as the appropriate solution for international controversies. Ethical considerations and peaceful arbitrament are thrown to the winds.

Our friend from Alabama [Mr. HOBSON] is in private an amiable and gentle spirit, but in his views of public questions, and of the proper national attitude, he is saturated with the military spirit. He dreams of armed controversies, of battling millions, of mighty navies engaged in deadly grapple. This mental attitude on his part is largely due to his military training, and the environment to which he has been subjected. What could be more absurd than his argument this evening to the effect that this country should control both the Pacific and the Atlantic Oceans with its armadas, and impose our ethical concepts upon the nations of the world, by the cannon's mouth, as if the multiplication of our machinery of destruction would so quicken our ethical sense, as to fit us for the rôle of moral arbiter of the nations?

So far as my knowledge of the teachings of history advises me, no nation has ever attained a higher moral level through the development of military establishments, and the cultivation of the military point of view. There are other methods of international settlement, than the arbitrament of war. There are better ways of determining international controversies than by dynamite shells, dreadnaughts, submarines, aeroplanes and the other instruments of devilish destruction with which the belligerents in the European war are "killing off their young laborers, ruining their industrial plants, accumulating a huge burden of taxation, inflicting a cruel blow on their economic development, and devouring their capital." A holocaust of death is in progress abroad, consuming the very flower of young manhood in the countries engaged.

Mr. BRYAN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Virginia yield to the gentleman from Washington?

Mr. SAUNDERS. Yes.

Mr. BRYAN. From what the gentleman said a few moments ago about England, I should judge he would refer to England as one of those nations that established the other kind of ideals, would he not?

Mr. SAUNDERS. Well, I said that the best of our civil institutions have come from England. I do not suppose the gentleman will challenge that statement.

Mr. BRYAN. No; but the gentleman was condemning other nations that did not go as far as England in that direction and was holding them up to condemnation.

Mr. SAUNDERS. Well, I have tried to point out that as between England and Germany, we have derived our greatest blessings of civil liberty, and our highest concepts of free institutions from England, and not from military Germany.

Mr. BRYAN. I agree with the gentleman on that.

Mr. SAUNDERS. Now permit me go a little further on this line. I do not suppose there is a single Member of this body who will claim that the bare possession of an army, or a navy adds one jot, or one tittle to the sum of human happiness. In this respect these instrumentalities are unlike the great industrial plants and commercial enterprises which, in their orderly operation, are continually adding to the sum total of human comfort, and human possessions, hence to the sum total of human progress.

Armies and navies are per se burdens upon a nation, and can be justified only to the extent that they are necessary for the purposes of national defense. As civil administrators we ought to determine, as I said, the limits of our preparation, as well as the dangers to be reasonably apprehended, and for which provision should be made. We do not educate men at the Naval and Military Academies to advise us as to our civil policy, or to determine with finality a scheme of military preparation for this Government. We abdicate our position, we lower ourselves in the estimate of the people, when we disregard our plain duty, and allow others to be called in to solve a problem which is wholly ours, a problem of civil, not military administration.

I have heard another remarkable proposition advanced this evening, and that is that the maintenance of the Monroe doctrine depends upon absolute force. And yet from the date of the enunciation of that doctrine down to the present time, we have supported it without firing a shot. We announced it when as a Nation we were utterly incapable of maintaining it by force, if the new principle had been challenged by the military monarchies of the Old World. [Applause.] From that time forward the doctrine has remained unshaken, such has been the moral strength of our attitude.

Mr. J. R. KNOWLAND. Have we enforced it without battleships?

Mr. SAUNDERS. Yes. When President Monroe promulgated this doctrine in the face of the menace of the Holy Alliance of Europe, he had no battleships with which to make good the declaration of a novel principle that challenged the authority of the most powerful nations of the Old World. Yet it was accepted by those nations without demur. When we took issue

with Great Britain over the Venezuela incident how many battleships did this country own with which to make effective our position, in case of an appeal to force?

Mr. J. R. KNOWLAND. Mr. Chairman, will the gentleman yield there?

Mr. SAUNDERS. In a moment. At that time our battle fleet, as compared with the naval array of Great Britain, was as insignificant as a torpedo boat in comparison with a superdreadnaught. I know what the gentleman from California has in mind by way of answer, and that is that Great Britain did not accept our challenge because in the event of war, we would hold Canada as a hostage. Granted. But that condition will endure for all time. Hence we can eliminate Great Britain from the list of possible adversaries. But if Great Britain is eliminated, pray tell me what nation in the world remains, whose naval might is a menace to the United States, or is sufficient to justify this body in increasing the burdens of the people to maintain an imposing array of fighting ships from the tiniest submarine to the most formidable superdreadnaught? [Applause.]

Mr. FESS. Will the gentleman yield for a question?

Mr. SAUNDERS. Yes.

Mr. FESS. When President Cleveland in 1895 sent the message here to Congress asking permission to send a commission to investigate that disputed boundary line and said he would ask Congress for the authority to enforce their recommendations, why did England withdraw from the contest?

Mr. SAUNDERS. Will the gentleman please answer that query himself? Certainly the force of the United States on the high seas was not sufficient to cause her withdrawal. Why did she withdraw?

Mr. FESS. When the President referred to the matter of the Monroe doctrine being violated Lord Salisbury replied that the Monroe doctrine was not international law and never had been, no matter how brilliant the statesman who announced it, nor powerful the nation that backed it. Then President Cleveland asked Congress for that support.

Mr. SAUNDERS. Very well.

Mr. FESS. And Salisbury withdrew. Now, why did he withdraw?

Mr. SAUNDERS. Why did he withdraw? You have not answered your own question.

Mr. FESS. That is what I am asking you.

Mr. SAUNDERS. I maintain that he did not withdraw by reason of our might on the seas. That is my answer to your question. What is yours?

Mr. FESS. My answer is that he did not want to get into a fight with us.

Mr. SAUNDERS. Why?

Mr. BRYAN. They had had two with us before.

Mr. HENSLEY. If the gentleman will yield to me, I ask his consent to answer the question put by the gentleman from Ohio, in the words of an admiral before our committee:

> I then asked him how he accounted for the fact that Great Britain acceded to our position concerning the Venezuelan dispute. He answered me that the concession of Great Britain to this country was not contingent upon the size of our Navy; that Great Britain took her time, and that when she saw that our position was a just one she acceded to it.

Further, in this connection, permit me to read from an examination before the Naval Affairs Committee that proves beyond question that the position taken by the gentleman from Virginia [Mr. SAUNDERS] is undoubtedly correct:

> Mr. WITHERSPOON. Do nations fight to maintain their rights, without any reference to whether they are as powerful or less powerful?
>
> Admiral VREELAND. I think the aggressor is generally the more powerful nation, because he thinks there is something to gain by warring, and the other party to the contest is forced into it.
>
> Mr. WITHERSPOON. The aggressor, according to your idea, would go into war because he thought that he could win in the war; is that your idea?
>
> Admiral VREELAND. He would not become the aggressor if he were sure of defeat.

Mr. SAUNDERS. My friend from Ohio has offered an explanation which I will accept. England did withdraw because she did not desire to have a war with us, not because she was afraid to match her fleet against ours. Her naval superiority at that time was even more conspicuous than it is to-day.

Mr. GREENE of Vermont. Will the gentleman yield?

Mr. SAUNDERS. Yes.

Mr. GREENE of Vermont. Will the gentleman from Virginia kindly give some thought to this proposition: Is it not true that the Monroe doctrine is supposed to have been suggested by the British ministry at the time of its origin?

Mr. SAUNDERS. Conceding that to be true, what of it?

Mr. GREENE of Vermont. It was suggested as some offset to the expected maneuvers of the Holy Alliance in Europe at that time.

Mr. SAUNDERS. Concede that the original suggestion came from the British ministry, still that concession in no wise weakens my contention that we have maintained the Monroe doctrine without recourse to arms, even in our days of feeble immaturity. Why then suggest that at this period of our maturity, when our strength is as the strength of ten, and our resources without limit, we need to pile up armaments in order to make this doctrine effective? Who is challenging, or is disposed to challenge the Monroe doctrine?

Mr. GREENE of Vermont. The Monroe doctrine was suggested at the time of our weakness by the most powerful nation on earth, and the one that at that time controlled the seas and was prepared to back up her suggestion in company with us.

Mr. SAUNDERS. Do you think that the Monroe doctrine has been maintained by reason of the fact that England was prepared to fight for it in the beginning?

Mr. GREENE of Vermont. Originally that was the beginning of the Monroe doctrine. There was power behind us to enforce it by the nation that suggested it.

Mr. SAUNDERS. But when the Venezuelan controversy arose, the power of the nation that suggested the doctrine was no longer on our side.

Mr. FESS. Will the gentleman yield for another question on that same line?

Mr. SAUNDERS. Yes.

Mr. FESS. When Maximilian went into Mexico we were in the midst of our civil strife and unable to do more than protest.

Mr. SAUNDERS. Yes.

Mr. FESS. We protested officially three times.

Mr. SAUNDERS. Yes.

Mr. FESS. At the close of the war President Johnson sent an army of 50,000 men under Phil Sheridan.

Mr. SAUNDERS. He made ready to send them. They were never sent.

Mr. FESS. He got ready to send them, and Maximilian did not withdraw, but the French authority did.

Mr. SAUNDERS. Yes.

Mr. FESS. Did the Army have anything to do with it?

Mr. SAUNDERS. That very incident established for all time the fact that no foreign Government is prepared to challenge by force our assertion of the Monroe doctrine. Every man who knows the history of this country, knows the history of the Mexican incident. The French Emperor took advantage of our Civil War to send troops to Mexico with the idea that the United States would be divided into two hostile Republics as a result of the war, thus leaving the Monroe doctrine without its original advocate. But the moment that the Civil War ended with a united Government north of the Rio Grande, the French Emperor did not for a moment propose to challenge the supremacy of the Monroe doctrine in the Western Hemisphere, or invite an appeal to arms.

Now I wish to call attention of the committee—and my friend from Missouri [Mr. HENSLEY] will be able to give the appropriate reference—to a speech by one of our admirals that reveals the reason why so many of our military men favor great armaments. This high magnate in the naval service remarked in the course of his speech, that even if great naval armaments were not needed for our security and protection, there was no reason why this country should be weak in a military way, when it could be strong. In that thought is mirrored the attitude of the military potentates which is that the greatness of a country is established by the imposing character of its military and naval armaments. They believe in the pomp of power, and are indifferent to the burdens of taxation which their policies will inevitably impose. Senator LEWIS recently summed up the argument against militarism when he said: "The expense of the Navy on the one hand, and of the Army on the other, will be a constant drain on the citizens, while the despotism and aristocracy of the officers of a large army and navy will be a menace to the theory of equality of citizenship, which is the foundation upon which America rests."

Mr. FESS. Will the gentleman yield?

Mr. SAUNDERS. No, I can not yield, I have only two or three minutes left.

Now, let me bring this argument to a head as it were. The majority party is charged with the administration of this Government, and should fix its naval policy. We ought to agree on a policy in this respect that in our judgment will preserve the security, the dignity, the interest, and the welfare of our beloved country against the reasonable likelihood of danger. Further we ought not to undertake to go. We need a Navy large enough to protect us against invasions, not one of a size sufficient to enable us to assail and invade other countries of our rank and power.

When we have done this, the gentlemen who favor the imposing armaments that are intended to protect us against all possibilities of danger, should submit their policy as a counter proposition, having first translated the same into terms of dollars and cents and to that end giving in detail the number of men required, the vessels of all types to be constructed and maintained, the guns on land and sea, the reserves of men, munitions, and supplies to be provided, in a word all that is needed in their view to make our country secure. The issue thus made up may be taken to the country, so that the people of the United States will pass on it in a great national referendum.

This country is entitled to possess all the military and naval forces that it desires, and for which it is willing to pay. I am anxious for the people to determine how many men we need, and how many ships we require to make our country perfectly secure. It will be a kindness to many timid and hysterical people to have an authoritative answer afforded to these inquiries, and the proper remedy supplied, so that the slumbers of our friend from Massachusetts and many others will be no more disturbed by dreadful dreams of invading armies, of ruined homesteads, of great cities given over to sack and rapine. [Laughter.] I have suggested the issue to be submitted to the people. On the one hand a program of moderation, a program that comprehends and provides against all dangers reasonably to be apprehended. On the other hand a program designed to provide against all contingencies and possibilities, a program that contemplates singly and collectively the great nations of the world as our possible antagonists. Remit this issue to the people and secure a determination that will be authoritative and final, a determination that will fix our policy, leaving to Congress to provide the ways and means to make the same effective.

Mr. Chairman, if our country is in danger, this is no time to talk about economy. The safety of the Republic is the supreme law, and if the peril to that safety is a verity, and not a chimera, if the menace of foreign aggression is established, we must not haggle over the cost of one, or a dozen battleships. The question of national defense takes precedence over all other interests and issues. Whatever else may suffer, whatever may be the condition of the Treasury, whatever the difficulties of raising the necessary revenues, no man, and no party should shrink from doing whatever their conscience and their judgment tells them is necessary for the safety and security of their country. [Applause.]

That is the way I feel about this matter. This is the way all pacificists feel. The same "patriotic tide that streamed through Wallace's undaunted heart," is not lacking in American bosoms. We do not favor economy at the expense of our national security, or favor cutting off a single necessary battleship, submarine, or aeroplane, on the ground of a failing Treasury. That is poor economy. We favor a moderate Navy, because we feel that with such a Navy this country is secure, and a greater Navy would be a wanton extravagance. But the Members of this House are patriots, one and all, and every patriot is prepared to devote his uttermost farthing to protect that sacred thing called liberty, to preserve the institutions of his country, and the ashes of his sires. [Applause.]

Indian Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. CHARLES D. CARTER,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. CARTER. Mr. Speaker, under general leave to print, I submit herewith a statement concerning the failure of the per capita payment of $200 to the Choctaws and $100 to the Chickasaws.

The Indian appropriation bill containing this payment died with the recent session of Congress, through no fault of the House of Representatives, as the record will show, but on account of a filibuster in the United States Senate, which prevented its final passage through Congress before final adjournment on March 4, 1915. The conference report on the Indian appropriation bill, which contained the payment, reached the House just 20 minutes before Congress legally expired on March 4, and was being read by the reading clerk of the House when the hands of the clock pointed to 12 noon, the hour of final adjournment.

The House of Representatives had expressed itself unequivocally in favor of this payment and in opposition to reopening the rolls of the Five Civilized Tribes on four different occasions. Twice during the second session of the Sixty-third Congress were various enrollment amendments rejected and the per capita payment retained in the bill by decisive votes.

Again, during the recent session—third session of the Sixty-third Congress—this bill was taken up by the House, and on January 9 the House by decisive votes refused to strike out or reduce this payment, and defeated all amendments for reopening the rolls. In fact, every amendment to the payment was rejected by overwhelming votes and the item retained in the bill just as it had been reported by the House Committee on Indian Affairs.

The Indian bill, containing the payment without amendment, went to the Senate on January 9, immediately after passing the House. Over the protest of Chairman ASHURST and Senators OWEN and GORE, it was held up by the Senate for almost eight weeks. To be mathematically accurate, the bill did not pass the Senate until about noon of March 3—the day before adjournment—and when it was returned to the House it contained 171 Senate amendments, including one adopted by the Senate on the motion of Senator LA FOLLETTE to reopen the rolls of the Five Civilized Tribes to something more than 10,000 persons.

This La Follette amendment was rejected by the House by a decisive vote and all other amendments immediately sent to conference.

In pursuance of these House instructions, the conferees eliminated the La Follette enrollment amendment and retained the per capita payment item as originally adopted by the House without change. The conferees came to an agreement on the other 170 Senate amendments shortly before the midnight preceding adjournment. Upon return to the Senate the bill met the same dilatory tactics which prevented its passage by that body until about 30 minutes before adjournment, after which the occurrence set forth in the first paragraph of this statement resulted.

Unfortunately for this bill, the rules of the Senate permit unlimited debate and this was a short session of Congress. To these facts alone was due the failure of the per capita payment.

Under House rules debate can be brought to a close; and the House stood ready and eager at all times to reject all enrollment amendments, adopt the payment item without amendment, and pass the bill and conference report at any time within an hour and a half before adjournment, the time necessary for the reading and adoption of such report.

Every Member of the Oklahoma delegation in the House gave his best efforts on behalf of the passage of this payment, and Congressmen FERRIS and MURRAY were especially active. The Choctaw and Chickasaw people are deeply indebted to Congressmen JACOWAY, of Arkansas; CAMPBELL, of Kansas; BURKE, of South Dakota; SAUNDERS, of Virginia; POST, of Ohio; and many others too numerous to mention, for valuable services rendered in behalf of this payment.

Senators OWEN and GORE and their friends at the Senate end of the Capitol worked vigorously for the payment, and on the last vote in the Senate, just before final adjournment, appeared to have a large majority of the Senators with them in favor of discharging the delayed obligation of the Federal Government to its wards. It must be remembered, however, that our Senators were handicapped and failed for the same reason that the President's ship-purchase bill failed, to wit, on account of a filibuster during a short session of Congress.

It should also be borne in mind that claimants for enrollment in the Five Civilized Tribes are scattered over no less than 15 States, each having its full quota of Congressmen and Senators. Many of these, to be sure, look upon this matter with fairness and liberality and stood stanchly to keep the Government's obligation with the Choctaws and Chickasaws, regardless of the importunities of their own constituents. Some others, however, are prone to yield to the wishes of their constituents, disregard the Government's sacred obligation to the Choctaws and Chickasaws, and stand against a final settlement of our affairs in an unreasonable manner.

Moreover, a syndicate has been organized for the purpose of securing the enrollment of spurious applicants for citizenship. The records show that this syndicate, known as the Texas-Oklahoma Co., was organized with a capital stock of $100,000, $25,000 of which has already been paid in and used, and that the syndicate and its satellites have contracts for the enrollment of some 15,000 or 20,000 alleged claimants for citizenship, with fees aggregating about $11,000,000. The effect of this slush fund can not be overestimated. I do not, of course, mean to charge that any Congressman or Senator might be cor-

rupted by it, but a standing array of trained lobbyists is kept on the job at the Capitol during the entire sessions of Congress to lobby against a final settlement of the affairs of the Five Civilized Tribes and for a reopening of the rolls.

The Oklahoma delegation and others have fought this bunch of grafters from Hanover to Halifax and back again. We will continue to fight them until the sacred obligation of the Government to distribute their funds among enrolled Choctaws and Chickasaws is complied with.

IMPORTANT FACTS CONCERNING THE PER CAPITA PAYMENT ITEM IN THE INDIAN APPROPRIATION BILL, AS DISCLOSED BY THE RECORD.

The subcommittee making up the Indian appropriation bill, composed of STEPHENS of Texas, CARTER of Oklahoma, and BURKE of South Dakota, by unanimous vote placed in the Indian bill an item providing for a payment of $200 to the Choctaws and $100 to the Chickasaws, and recommended its adoption by the committee.

The House Committee on Indian Affairs adopted the subcommittee's report, including the amendment, without change and reported the matter favorably to the House on December 17, 1914. (Minute book, House Committee on Indian Affairs.)

The House of Representatives rejected all enrollment and other amendments to the per capita payment item, adopted it without change as a part of the Indian appropriation bill, and passed such bill on January 9, 1915—53 days before adjournment. (CONGRESSIONAL RECORD, p. 1301.)

The Senate referred the Indian appropriation bill as passed by the House to the Senate Committee on Indian Affairs, January 11, 1915—51 days before adjournment. (CONGRESSIONAL RECORD, p. 1325.)

The Senate Committee on Indian Affairs held the Indian appropriation bill before that committee for 42 days, until February 22, 1915, when it was reported to the Senate—ten days before adjournment.

The Senate took up the committee report on the Indian appropriation bill five days thereafter, on February 27, 1915—five days before adjournment. (CONGRESSIONAL RECORD, p. 4818.)

The Vardaman amendment to enroll Mississippi Choctaws was defeated, but the La Follette amendment to the payment item, providing for the reopening of the rolls of the Five Civilized Tribes to something more than 10,000 persons, was adopted by the Senate, and the bill, with 171 amendments, passed about noon of March 3, 1915—24 hours before adjournment. (CONGRESSIONAL RECORD, pp. 5156–5162.)

The La Follette amendment was rejected by the House and all other amendments sent to conference about 2 p. m. on March 3, 1915, within two hours after the Senate had passed the bill, CARTER, of Oklahoma; HAYDEN, of Arizona, and BURKE, of South Dakota, being appointed as managers on the part of the House. (CONGRESSIONAL RECORD, p. 5445.)

The conferees took up the bill with amendments at 2.30 p. m. on March 3, 1914, and came to a complete agreement shortly before 12 midnight of the same day.

The Senate took up the conference report first at about 2 in the morning of March 4 (10 hours before adjournment), the House having to await action of the Senate. (CONGRESSIONAL RECORD, p. 5358.)

The Senate adopted the conference report at about 11.40 a. m the same day (20 minutes before the hour of adjournment). (CONGRESSIONAL RECORD, p. 5497.)

The House took up the conference report at 11.48 (12 minutes before adjournment), and the report was in the process of reading when the hour of adjournment arrived. (CONGRESSIONAL RECORD, p. 5526.)

It would have taken about an hour and 30 minutes for the House to have read the conference report and call the roll.

HOUSE AND SENATE ACTION ON PER CAPITA PAYMENT ITEM OF $200 TO THE CHOCTAWS AND $100 TO THE CHICKASAWS IN THE INDIAN APPROPRIATION BILL AS DISCLOSED BY THE RECORD. (3D SESS. 63D CONG.)

HOUSE.

A subcommittee of the House Committee on Indian Affairs, composed of STEPHENS of Texas, CARTER of Oklahoma, and BURKE of South Dakota, began making up the Indian appropriation bill during the second week of December, 1914.

The subcommittee, by unanimous vote, placed in the Indian appropriation bill an item providing for a per capita payment of $200 to the Choctaws and $100 to the Chickasaws.

The Indian bill, with the payment item, was reported by the subcommittee to the House Committee on Indian Affairs on December 17, 1914. (Minute book House Committee on Indian Affairs.)

The Indian bill, retaining the per capita payment item, reported by the Committee on Indian Affairs to the House of Representatives by unanimous vote on December 18, 1915. (Minute book, House Committee on Indian Affairs.)

The Indian bill taken up for consideration by the House in Committee of the Whole and filibuster begun by advocates of reopening the rolls of the Five Civilized Tribes on December 31, 1914. (CONGRESSIONAL RECORD, p. 834.)

The per capita payment item reached by the House on January 8, 1915, and HARRISON, of Mississippi, made point of order against same, which was overruled by the Chair. (CONGRESSIONAL RECORD, p. 1211.)

HARRISON proposed an amendment reopening the rolls. Point of order against same by CARTER sustained. January 8, 1915. (CONGRESSIONAL RECORD, p. 1212.)

HARRISON proposed an amendment preventing payment to the Choctaws until Mississippi Choctaws are enrolled. Point of order made by STEPHENS overruled. January, 1915. (CONGRESSIONAL RECORD, p. 1214.)

Harrison amendment holding up Choctaw payment rejected on division, January 9, 1915, ayes 50, noes 79. (CONGRESSIONAL RECORD, p. 1301.)

Lenroot amendment to strike out per capita payment item rejected, January 9, 1915, ayes 44, noes 69. (CONGRESSIONAL RECORD, p. 1302.)

Miller amendment to reduce Choctaw payment to $100 defeated, January 9, 1915, ayes 39, noes 54. (CONGRESSIONAL RECORD, p. 1302.)

Lenroot amendment equalizing payment to all who might be hereafter enrolled defeated, January 9, 1915, ayes 23, noes 42. (CONGRESSIONAL RECORD, p. 1303.)

Indian bill, with per capita payment item unamended, reported without dissenting vote by Committee of the Whole House to the House, January 9, 1915. (CONGRESSIONAL RECORD, p. 1319.)

Indian bill containing per capita payment item, without amendment, passed by the House without roll call on January 9, 1915. (CONGRESSIONAL RECORD, p. 1321.)

SENATE.

Indian bill referred by Senate to Senate Committee on Indian Affairs, January 11, 1915. (CONGRESSIONAL RECORD, p. 1325.)

Indian bill delayed and held in Senate Committee on Indian Affairs for 42 days until February 22, 1915, when reported to Senate with no important amendments to per capita payment item.

Senate took up for consideration committee report on Indian bill on February 27, 1915, but filibuster delayed passage until March 3, 1915. (CONGRESSIONAL RECORD, p. 4818.)

Vardaman amendment to enroll Mississippi Choctaws defeated on March 3, 1915; ayes 15, noes 33. (CONGRESSIONAL RECORD, p. 5156.)

La Follette amendment to reopen rolls to something over 10,000 persons adopted March 3, 1915; ayes 33, noes 13. (CONGRESSIONAL RECORD, p. 5162.)

Indian bill, containing La Follette amendment to reopen rolls, passed Senate and conference asked of the House. Senators ASHURST, of Arizona; MYERS, of Montana; and CLAPP, of Minnesota, appointed conferees on part of Senate March 3, 1915. (CONGRESSIONAL RECORD, p. 5165.)

HOUSE.

Request of CARTER, of Oklahoma, that House disagree to Senate amendments and agree to conference asked by Senate objected to by HARRISON, of Mississippi, whereupon CARTER moved to suspend rules, disagree to Senate amendments, and go into conference asked by Senate, March 3, 1915. (CONGRESSIONAL RECORD, p. 5440.)

HARRISON then asked unanimous consent for separate vote on amendment to reopen rolls, which was not objected to by CARTER, and upon separate vote La Follette amendment, reopening rolls, was disagreed to by House on March 3, 1915, by a vote of 44 to 69, thereby instructing the conferees against the Senate enrollment amendment. All other amendments were sent to conference en gross, CARTER of Oklahoma, HAYDEN of Arizona, and BURKE of South Dakota being named as managers on the part of the House. (CONGRESSIONAL RECORD, p. 5445.)

Indian bill with amendments reached conference about 2.30 p. m. on March 3, 1915.

One hundred and seventy-one Senate amendments were considered, worked out, and complete agreement reached by the managers on the part of the House and Senate shortly before 12 o'clock midnight on March 3, 1915.

SENATE.

The Senate took up consideration of the conference report on the Indian bill about 2 a. m. the morning of March 4, 1915. (CONGRESSIONAL RECORD, p. 5358.)

The House could take no further action until matter was disposed of by the Senate.

When reading of the report was concluded Senator GRONNA, of North Dakota, took the floor about 3 o'clock a. m. and talked until 10 a. m. on March 4, 1915. (CONGRESSIONAL RECORD, pp. 5361–5406.)

Senator GRONNA concluded his remarks shortly after 10 o'clock a. m., less than two hours before final adjournment. Passage of the conference report on the Indian bill being despaired of, Senator OVERMAN called up a joint resolution (S. J. Res. 441) continuing the current year's appropriations for the Indian Bureau, and it passed the Senate about 10.30 a. m., March 4, 1915, after which further consideration of the Indian bill by the Senate was dispensed with. (CONGRESSIONAL RECORD, p. 5407.)

Shortly after 11 a. m. the House managers were informed that an agreement had been reached among certain Senators, and the conferees were reassembled. The agreement retained the per capita payment item with an unimportant amendment, eliminated the La Follette enrollment amendment. The conferees immediately consented to this agreement and sent the Indian bill back to the Senate. By the time this agreement on the conference report had passed the Senate and had been brought before the House the hour of 11.40 a. m. had been reached. (CONGRESSIONAL RECORD, p. 5497.)

HOUSE.

The conference report containing the per capita payment item was taken up for consideration by the House at 11.48 a. m. March 4, 1915, only 12 minutes before adjournment, and the Clerk had finished reading about one-sixth of the conference report when the hands of the clock pointed to 12, the hour of final adjournment. (CONGRESSIONAL RECORD, p. 5526.)

Report on H. R. 12586, to reopen the rolls of the Choctaw-Chickasaw Tribe, etc.—the Harrison bill:

JANUARY 2, 1915.

Hon. JOHN H. STEPHENS,
Chairman House Committee on Indian Affairs,
Washington, D. C.

SIR: Your subcommittee appointed to investigate and report on H. R. 12586 begs leave to submit the following observations:

A careful and painstaking investigation of all treaties, laws, and other records bearing on this claim, including hearings lasting from April 1, 1914, until August 27, 1914, was gone into by your committee.

H. R. 12586 directs:

1. The Secretary of the Interior to enroll certain Mississippi Choctaws upon the rolls of the Choctaw Nation in Oklahoma with a full participation in their tribal estate.

2. To reopen the Choctaw rolls for the adjudication of 20,000 or more alleged claimants.

There are some Choctaws still remaining in Mississippi who have persistently refused and successfully resisted all efforts of the Federal Government and the Choctaw Nation to have them move west and affiliate with the tribe.

The testimony before the subcommittee discloses many thousands of persons of doubtful descent, African and other, living in Mississippi and surrounding States, who have attempted to assert claims as Choctaw Indians.

Such Indians of real Choctaw blood as still reside in Mississippi appear to take little interest in the claims asserted by their alleged attorneys. On the other hand, those claiming remote Indian blood and of doubtful descent have manifested much interest in being enrolled and sharing in a division of the Choctaw funds in Oklahoma.

The contention of these latter seems to have been inspired and augmented by certain attorneys who have sent agents among these people advising them that they were Indians and taking contracts for their enrollment for a contingent fee of from 30 to 40 per cent of recovery, and in many instances a small cash retainer in addition.

According to statements and admissions of these attorneys and their agents, two firms alone, those of Cantwell & Crews, of St. Louis, Mo., and Ballinger & Lee, of Washington City, D. C., and Ardmore, Okla., hold contracts with 15,596 individuals, carrying provisions for fees aggregating $10,882,815.

The testimony further shows that a syndicate for the purpose of securing the enrollment of Mississippi Choctaws and a participation in the tribal estate of the western Choctaws has been formed under the name "The Texas-Oklahoma Investment Co.," capitalized at $100,000, $25,000 of which has been paid in and used. The directors of this corporation are S. L. Hurlbut, of El Campo, Tex.; H. Masterson and W. A. Smith, of Houston, Tex.; and T. B. Crews and H. J. Cantwell, of St. Louis, Mo.

This claim of the Mississippi Choctaw attorneys for enrollment of their clients and participation in the Choctaw Nation's estate is by no means a new contention. The claim was, under the direction of law, fully adjudicated by the Commission to the Five Civilized Tribes (H. Doc. 274, 55th Cong., 2d sess.) and afterwards by the Federal court, to which appeal was taken (Jack Amos et al. *v.* The Choctaw Nation, Decisions of United States courts in Indian Territory, 465), both decisions being adverse to the Mississippi Choctaw contention for enrollment.

In rejecting the claim of nonresident Mississippi Choctaws the Commission to the Five Civilized Tribes said in part:

"This historical review of the acquisition of this territory by the Choctaw Nation and its subsequent legal relations to it makes it clear in the opinion of this commission that the Mississippi Choctaws are not under their treaties entitled to all rights of Choctaw citizenship except an interest in the Choctaw annuities and still continue their residence and citizenship in Mississippi." (H. Doc. 274, 55th Cong., 2d sess.)

In affirming the decision the United States District Court for the Central District of Indian Territory closed its decision with the following paragraph:

"To permit men with, perchance, but a strain of Choctaw blood in their veins, who, 65 years ago, broke away from their kindred and their nation, and during that time, or the most of it, have been exercising the rights of citizenship and doing homage to the sovereignty of another nation, and have become strangers to the people, to reach forth their hands from their distant and alien homes and lay hold on a part of the public domain, the common property of the people, and appropriate to their own use, would be unjust and inequitable. It is therefore the opinion of the court that the absent Mississippi Choctaws are not entitled to be enrolled as citizens of the Choctaw Nation. The action of the Dawes Commission is therefore affirmed and a decree will be entered for the Choctaw Nation." (Jack Amos et al. *v.* The Choctaw Nation, Decisions of United States courts in Indian Territory, 465.)

An appeal was taken from these decisions by the attorneys for the Mississippi Choctaws to the Supreme Court of the United States and the Jack Amos case was dismissed upon motion of the attorneys for the Mississippi Choctaws. (190 U. S., 873.)

Several years subsequent to the date of these decisions excluding the Mississippi Choctaws from enrollment this matter was again taken up and readjusted by the legally constituted authorities of the Federal Government and the Choctaw and Chickasaw Nations in Oklahoma, by which agreement the Mississippi Choctaws were given additional time for identification and establishment of bona fide residence in the Choctaw Nation in Indian Territory. (Supplemental agreement, "An act to ratify and affirm the agreement with the Choctaw and Chickasaw Tribes of Indians, etc." approved July 1, 1902.)

The Choctaw Nation in Oklahoma has dealt justly and liberally with the Mississippi Choctaws, always granting them full citizenship in their nation with all emoluments thereto whenever they would agree to affiliate with the tribe, and the Choctaw Nation in Oklahoma is under no legal, equitable, or moral obligation to enroll the Mississippi Choctaws as citizens of the tribe in the West at this time.

By the agreements negotiated between the Federal Government and the Choctaw Nation all native western Choctaws were required to be on the reservation by June 28, 1898, or stand debarred from enrollment and participation in the tribal estate forever thereafter, and this rule has been strictly adhered to.

The time for establishment of residence on the reservation was extended to the Mississippi Choctaw claimants until July 1, 1903, giving the Mississippi Choctaws five years to move on the reservation after the time for establishment of such residence had been closed to the native Choctaws.

After 11 years were consumed by the Commission to the Five Civilized Tribes in making up the rolls of the Choctaw and Chickasaw Nations such rolls were affirmatively closed by action of Congress on March 4, 1907.

The rolls of the Choctaw Nation were held open to the Mississippi Choctaws from 1830 until March 4, 1907, giving the Mississippi Choctaws 77 years in which to complete enrollment with full benefits of citizenship.

The Federal Government as such is neither legally nor equitably obligated to enroll Mississippi Choctaws with the Choctaws west, and is under only such moral obligation to the Mississippi Choctaws as is due to dependent North American Indians who were originally occupants and owners of the soil and who have been deprived of their patrimony by white settlers.

The passage of H. R. 12586 would completely upset and undo 11 years of careful, painstaking work of the Interior Department in settling the affairs of the Five Civilized Tribes, turn the wheels of progress backward for more than 20 years, and, as has been said by President Taft, "open up a Pandora's box of troubles, which the life of the present generation might not see closed."

The passage of H. R. 12586 would doubtless result in stupendous claims of millions of dollars against the Federal Government on the part of the Oklahoma Choctaws because of a division of their funds among persons whom the Federal commissions and Federal courts have decided were not entitled thereto.

Its passage would lend encouragement to grafting attorneys with contracts for enormous attorneys' fees, running into millions of dollars, and hold out inducement for procuring additional contracts from spurious claimants.

Your subcommittee therefore recommends that the Harrison bill (H. R. 12586) be not favorably reported by the House Committee on Indian Affairs.

Respectfully submitted.

C. D. CARTER, *Chairman.*
J. D. POST.
ROBT. P. HILL.
P. P. CAMPBELL.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON INDIAN AFFAIRS,
January 13, 1915.

The committee met at 10.30 pursuant to call of chairman, the chairman presiding.

Present: Messrs. STEPHENS, CARTER, GUDGER, POST, HAYDEN, HILL, CLANCY, EVANS, MURRAY, CHURCH, BURKE, CAMPBELL, MILLER, HAMILTON, and NORTON.

H. R. 12586 (the Harrison bill) was laid before the committee by the chairman, and on motion of Mr. CARTER, seconded by Mr. POST, the bill was unanimously laid on the table, leave, however, being given Mr. MILLER to file a report, which is to be printed, setting forth his views relative to the Mississippi Choctaw matter. * * *

Attest:

PAUL N. HUMPHREY,
Assistant Clerk.

* * * * * * *

I, Paul N. Humphrey, assistant clerk of the Committee on Indian Affairs, House of Representatives, hereby certify that the above and foregoing is a true and correct copy of the minutes of the Committee on Indian Affairs, recorded in the minute book of said committee at page 20, showing the action taken by said committee on H. R. 12586, being a bill "to reopen the rolls of the Choctaw-Chickasaw Tribe and to provide for the awarding of the rights secured to certain persons by the fourteenth article of the treaty of Dancing Rabbit Creek, of date September 27, 1830."

PAUL N. HUMPHREY,
Assistant Clerk, Committee on Indian Affairs.

RESOLUTIONS OF GENERAL CONVENTION OF CHOCTAWS.

Over 100 Choctaw citizens, representing 14 of the 17 counties of the Choctaw Nation, as follows, Skullyville, Sans Bois, Sugar Loaf, Gaines, Tobucksey, Atoka, Jackson, Jackfork, Blue, Kiamitia, Wade, Towson, Nashoba, and Red River Counties, as well as representatives of the Choctaws residing in the Chickasaw Nation, in general convention assembled at McAlester, Okla., October 28, 1914, passed the following resolutions:

We, the Choctaw people in representative convention assembled, respectfully and earnestly protest against the enrollment of the Mississippi Choctaws for the following reasons, to wit:

First. Under and by virtue of the terms of the treaty of 1830, the fourteenth article thereof, the Mississippi Choctaws who elected to remain in Mississippi were given valuable property rights in the State of Mississippi and were not to lose the rights of Choctaw citizens should they ever remove to Indian Territory, except that they should not participate in the annuities of the tribe. This right they had up to the very day and date of the closing of our rolls, March 4, 1907. Many of the Mississippi Choctaws exercised these rights, removed to the Indian Territory, and received allotments of land the same as other members of the tribe. The Mississippi Choctaws were by the Choctaw and Chickasaw tribes given even more rights than were guaranteed them under the treaty of 1830, to wit, the right given by article 14 of the treaty of 1830 to Mississippi Choctaws to remove to the Indian Territory and become citizens of the Choctaw Nation was extended to the descendants of the Mississippi Choctaws by the Atoka and supplementary agreements. We represent that the Mississippi Choctaws have been given not only all the rights of other citizens of the tribe, save and except the right to participate in the annuities, but have been given every opportunity that the law could afford them to establish such rights.

Second. As a further concession to the Mississippi Choctaws, the Choctaw and Chickasaw Tribes waived proof on the part of full-blood Mississippi Choctaws as to their right under article 14 of the treaty of 1830 and admitted all full-blood Mississippi Choctaws to citizenship in our tribes without proof of their right. This concession was made to the Mississippi Choctaws and their representatives in Congress and before Congress at the time the supplementary agreement was before Congress for ratification. We feel that the Mississippi Choctaws are not entitled to any further special favors under the law.

PER CAPITA PAYMENT.

Inasmuch as the Choctaws and Chickasaws under the law jointly own the common property and the common funds of the two tribes, so that each and every member of said tribes is entitled to an equal share thereof, and inasmuch as the Congress of the United States authorized a per capita payment of $100 to the Chickasaws out of said joint funds, but withheld payment from the Choctaws on account of the claim of the Mississippi Choctaws, we feel it incumbent upon us as Choctaw citizens in the proper protection of our rights to protest against such action by Congress as being an unjust and illegal discrimination against the rights and interests of the Choctaws under the law and prejudicial against the Choctaw Nation in the matter of the Mississippi Choctaw claims, which claims are against both tribes, if against either. And we respectfully, earnestly, and urgently request that a per capita payment be made to the Choctaws to include the amount due us when payment was made to the Chickasaws and to include such other and additional amount to the Choctaws and Chickasaws per capita as the amount of the funds now in the hands of the Government belonging to the Choctaw and Chickasaw Tribes jointly would afford.

ABOLISHMENT OF TRIBAL SCHOOLS.

We favor the abolition of all tribal schools and a sale of all school property. Amalgamation and not segregation is our aim. The problem before the Indian people is to become progressive and up-to-date citizens in language and habits, and this can best be done by our children attending the common schools.

SALE OF COAL AND ASPHALT.

It is the opinion of this convention that the coal and asphalt, the common property of the Choctaw and Chickasaw people, should be sold without delay that a speedy settlement of our affairs may be had.

DELEGATES TO WASHINGTON, D. C.

In order that the interests of the Choctaw people may be properly presented to Congress, the committees, and the department in the spirit and sense of this convention, which is representative of the Choctaw people, we favor the selection of two delegates to be elected by this convention to proceed to Washington to assist in the protection of our interests generally and in the Mississippi Choctaw claims specially and to assist in securing a per capita payment to the Choctaws and such other distribution of our tribal property to which the tribes are entitled, and we ask the Oklahoma delegation in Congress to secure an appropriation of an amount sufficient to pay the expenses of said delegates and a reasonable compensation out of the Choctaw tribal funds.

INSTRUCTIONS TO TRIBAL ATTORNEY.

Owing to the value of the tribal estate belonging to the Choctaw Nation, and owing to the fact that many claims are being made against said estate, it is the sense of this meeting that the tribal attorney should devote his entire attention to business affecting legislation and litigation involving the tribal estate. It is the opinion of this meeting that the Secretary of the Interior has authority under existing law to distribute funds in the hands of the Government of the United States to the credit of the Choctaw Nation and the Chickasaw Nation. For the purpose of securing a legal determination as to whether the Secretary of the Interior has such authority, we instruct our national attorney to institute mandamus proceedings to compel the Secretary of the Interior to distribute per capita among the enrolled members of the tribe the tribal funds now in the hands of the Government of the United States to which they are entitled.

Inasmuch as our national attorney is employed by the Choctaw people we feel that we have the right to direct him to institute these proceedings, and we ask that he be not prevented by the Department of the Interior from carrying out these instructions.

H. P. Ward, chairman resolutions committee; H. J. Bond, P. J. Hudson, J. C. Folsom, W. A. Durant, E. N. Wright, N. B. Ainsworth, C. A. Wilson, G. W. Choate, W. H. Harrison, Amos Henry, Sim Colbert, S. H. Mackey, D. C. McCurtain, members of resolutions committee.

W. A. Durant and D. C. McCurtain were elected by the convention as delegates to Washington, D. C., under the foregoing resolutions.

We certify that the foregoing resolutions are a correct copy of the original resolutions adopted by the general convention.

HAMPTON TUCKER, *Chairman.*
WALTER J. TURNBULL, *Secretary.*

We indorse the foregoing resolutions and election of delegates.

Rural Credits.

EXTENSION OF REMARKS

OF

HON. WILLIAM S. GOODWIN,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. GOODWIN of Arkansas. Mr. Speaker, I think the failure of this Congress to enact a rural credit law approaches almost a tragedy in our economic life. I do not believe that the attention of the American farmer has been directed to any one national legislative matter so much as upon the subject of rural credits unless it be that other question which many consider of even greater importance—the distribution and marketing of farm products—which goes as a handmaid to the subject of rural credits. I have not thought for the past few months that Congress would enact this law at this session, and yet in my opinion there has been no legitimate excuse for this failure. We know the unfortunate disagreement existing between the Members who compose the Banking and Currency Committee—their failure to get together and agree upon a given proposition. When a great question like this is demanded by the people Members composing a committee should abandon their pet theories and bills, make common sacrifice, though not too much in principle, and agree upon a sound economic measure that the agricultural people may have what they demand and what has been promised to them.

This Congress has been the most constructive and has put upon the statute books more far-reaching legislation than possibly any Congress that ever assembled in Washington with probably two or three exceptions. The Democratic administration coming into power was pledged to reform certain abuses that had grown up in our national life for the past 50 years, not only unchecked and unhampered, but even fostered and cultivated by the Republican Party, so long in power; and the administration was pledged to first right these wrongs, and the bitterest opponent of the administration will not claim that this Congress in this regard has failed to keep the pledge of its party along these lines.

The passage of the income-tax law, shifting in a large measure the burden of the Government upon the wealth of the country; the modification and strengthening of the Sherman antitrust law; the enactment of a Trades Commission law to supervise and give direction to the acts of corporations; the passage of the law reforming the banking and currency system of the country, decentralizing great aggregations of capital and of power from Wall Street and diffusing it throughout all parts of the country, and this, I submit, Mr. Speaker, is the greatest constructive measure enacted by any party for the past 50 years; divers and sundry laws for the improvement of labor conditions of the country, and many other salutary laws too numerous to mention, constitute but a small part of the constructive work of this Democratic Congress. But, as great and efficacious as these measures in time will prove to be, they have all been overshadowed and put in the background by the most cruel and barbarous war in the history of time, bringing, as this war has done, not only desolation, ruin, and wreck to the countries and the civilization of Europe, but, like a besom blight, its scorching waves have blown across the seas until it has largely destroyed and consumed the prosperity of the American people.

Of course it was expected that the program to which I have just referred should first be carried out, that business might be set free, that the credits of the country should be liberalized and mobilized and made more liquid, that the Money Trust, which controlled the credits of the country, should be destroyed, that the issues that had divided the two dominant parties for so many years should first be settled and settled right.

While all of these, Mr. Speaker, were necessary and were to be expected, yet our platforms are equally committed to legislation permitting the agricultural people to borrow money on long-time loans at a low rate of interest. The merchant borrows money from 60 days to 12 months, and if business is fairly prosperous and no serious losses are entailed he can repay that money as he is turning his money over in the sale of goods from time to time; but not so always with the farmer, who is constantly making improvements in the way of building, ditching, fencing, fertilizing, and otherwise improving his farm, such as the purchase of live stock, farm machinery, and the like, all of which takes a constant stream of money to supply, and upon which investments returns and dividends may be long delayed. This man, I say—the farmer—needs money on long-time loans in order that these improvements may be made and borrowed at a low rate of interest, paying off a part of the loan from year to year until the debt is entirely liquidated.

I know that it is no child's play to draft and make successfully operating any kind of financial legislation, for if there is any one public question that takes every imaginary angle, every conceivable turn of the mind, that has multiplied phases, that may be looked upon from every imaginable viewpoint, that has as its sponsor thousands of people with variegated ideas as to the best possible law, it is the all-perplexing money question when it comes up to be legislated upon. You may go into a group of a dozen men of national reputation, each of whom knows much about the financial question, each of whom stands in a sense as an authority upon money and financial legislation, and from these dozen men will arise as many different ideas and theories. In other words, Mr. Speaker, when the money question is mentioned, every fellow becomes a sort of a law unto himself, many of whom have ideas unrelated, unassimilated and entirely incoherent, some parts of which ideas, I submit, are plausible, but upon the whole not workable, while others, I submit, are as crazy as March hares; thus every Congress is confronted and is baffled when it undertakes to legislate upon any phase of the money question.

The subject of rural credits is entirely a new question in this country. It is a very old question indeed in Europe where it has worked so well for so long a time, but their conditions are quite different from ours. In most countries over there the people cooperate, and this has come about by many years of training and of experience, and from the further fact that those

countries have been settled for many hundreds of years, while ours is a new country, newly peopled, many parts of which are yet sparsely and barely settled at all. The spirit of independence and of individualism has been taught in this country to the exclusion of cooperation that obtains across the waters, so, I say, I can see how the members of the Committee on Banking and Currency may honestly differ and are still groping in the dark, doing their best to see the light; and yet, Mr. Speaker, nearly two years have passed since this question began to be studied one way or another, not only by members of the Banking and Currency Committee, but by most every Member of Congress, and yet, Mr. Speaker, I am constrained to believe that there are some members of that committee who are at least indifferent to rural-credit legislation. I have been very charitable in my expressions until lately in that regard, as I was generous enough to hope at least that there was a natural and well-founded difference of opinion upon a part of the committee. But be that as it may, a Representative in Congress himself might not believe in the wisdom of this or that legislation, but if there is a widespread demand for that legislation and the same can be enacted safely and sanely, and if the political platforms of the country demand specifically that kind of legislation, I submit, sir, that whether a Member of Congress personally believes in the wisdom of that legislation or not, he should bury his individual opinion, divest himself of all pride, and reflect the wishes of all these demands by sacrificing his own convictions and preconceptions.

But, Mr. Speaker, there is another phase of rural-credit legislation aside from the land-mortgage system that is generally thought of when speaking of rural credits, and that is the question of personal credits, which is not backed up by farm mortgages, because the man seeking personal credit may be so unfortunate as not to be a landowner; and these people, Mr. Speaker, are of all our rural population the most unfortunate, the most imposed on; unfortunate that they do not own the roof that covers their heads or a plot of ground upon which they and their family may be buried. Yet these people composing a large part of our citizenship, breadwinners, creators of wealth, because their labor evolves wealth, who bear arms in time of trouble to bring peace and security to our land, embracing many of the young men of the country who, having obtained their majority, go out into the world, either as single or with a small family, and without homes, without collateral, without security, seek to earn a livelihood, but possess nothing except a strong arm and an honest heart and a good name. These virtues, however glorious and important, do not afford collateral at a bank in every instance, and certainly would not if our legislation upon rural credits should be confined entirely to land-mortgage legislation.

We hear little said about this phase of rural credits; the bulk of the talk and of the discussion is confined to a land-mortgage system of rural credits, but the millions of people all over this country without homes to mortgage need credit. These include not only most of the tenants of the country, but many others whom a few moments ago I named by reference.

Now, how are these people to be provided with credit by a law enacted by Congress? We know them by the thousands in our respective districts, men who go to their merchants or their banker from year to year and obtain credit of one kind or another. Some are fortunate enough to own a little live stock, a few cows, a head or two of horses, and maybe a few hogs. If they till the soil they execute a chattel mortgage to the money lender, be he merchant or banker, either for so much money borrowed or for a certain amount of supplies. In addition to that they include in this chattel mortgage a lien on their interests in all the crops of cotton and corn, or what not, that may be grown by them during that year. This mortgage, of course, is accompanied by a promissory note, which is the evidence of the indebtedness. Now, those of us who hail from certain sections of this country where wealth is the exception and not the rule, know to what great disadvantage these unfortunate people are put, as well as the disadvantage that falls upon the man who has land which he mortgages for money or supplies. Both are compelled to pay for money borrowed a high rate of interest. If for goods sold on time in the way of supplies furnished to the borrower, goods at a high profit to the seller. There is no such thing as borrowing money on long-time loans at a low rate of interest the way the system is now arranged. That is entirely out of the question. We are now seeking relief by way of congressional enactment; and what is that relief and what are some of the ideas proposed to grant that relief in the way of personal credit as distinguished from farm-mortgage credit? Let us see:

A commission has been appointed by Congress to investigate the question of rural credits during the recess of Congress. I think this unnecessary and maintain that we should have enacted a rural-credit law, both land mortgage and personal credit. But since that was not done and a commission has been created, this commission then should make the broadest inquiry possible and the most searching investigation of all rural-credit systems extant; moreover, this commission should sit as a court and hear testimony from the best authorities in the land, not bankers only, but farmers and men who would be borrowers of money, men who have credit to sell as well as men who have money to lend; to ascertain what would be right and fair for both borrower and lender as to time, collateral, interest, and amortization, or partial payments from year to year. Some people will want the German system indorsed in this country, others the French, still others the Belgian system, and so on, while others will have ideas original to themselves, strictly American in thought and practice. But how is the money to be had? Of course that would depend upon the system adopted. A considerable school of thought favor the Government of the United States backing whatever system is adopted by lending the Government's credit to this end. Others oppose this, however, claiming that the same is economically unsound and would wreck both the Government as well as the institution created.

In the Eastern States especially there are many hundreds of millions of dollars deposited in savings banks, upon which interest is drawn from 2½ to 3 per cent. These deposits are subject at any time to withdrawal, and this fact alone creates instability in money centers in times of panics or when money becomes timid, in fear of panics or a shake-up in the money market. These depositors, of course, would prefer to lend money out from 4 to 5 per cent rather than to receive from 2½ to 3 per cent, but such loans would not be made unless the Congress would standardize the system in a way that would guarantee stability as to loans. Congress, of course, can not regulate matters pertaining solely to the States only in a national or Federal sense.

I submit, Mr. Speaker, that an undertaking of this importance in order that it may prove a success and give relief to the Agricultural people should begin, at least, with Government aid, as otherwise the system would be of slow growth and possibly fail. The objection might be raised that the Government should abstain and withhold all aid from such enterprises. But the Government is engaged in many national activities, upon not a small but a most prodigious scale. The Government has constructed the Panama Canal at an expense of about $400,000,000; it is building railroads in Alaska, insuring ships and their cargoes since the recent European war came on; and only a day or two ago we had a great fight in this House over the purchase of ships by the Federal Government to carry the commerce of our country to foreign shores to relieve the shippers of exorbitant rates now imposed upon them by the Ship Trust—one of the most gigantic and heartless trusts in all the world—a trust which, taking advantage of our unfortunate situation on account of the war in Europe, is eating up the substance of the people by charging from 100 to 900 per cent more on freight than hitherto had been the custom in times of peace; exacting of the farmer from five to eighteen dollars a bale for his cotton, when the same prior to this had been carried from two and one-half to five dollars a bale across the ocean. Surely if the Government can spend hundreds of millions of dollars in other enterprises, it might at least start off a system of farm mortgage and personal credits by lending Government assistance in that behalf in order that success might be guaranteed at once to the undertaking.

I submit, Mr. Speaker, that there is no legitimate argument against the country coming to the aid of the men who till the soil, who may become home builders, who give strength and security to our Government. Thousands of people in all parts of our country are anxious to become bona fide home builders and permanent citizens—men who can not obtain credit or any considerable backing. We all know many hundreds of people, not only upon the farm, but who are engaged in public works, sawmilling, as well as thousands who reside in manufacturing and other industrial centers, who might own a home for the rent that they pay for a series of years. Nothing, sir, gives such strength and permanence and breeds such good and desirable citizenship as that man who owns his home, who is a fixture in the community in which he resides, who feels an interest in all local, State, and national questions; and nothing will promote home building so much as to be able to borrow money at a low rate of interest and to pay it back through a long series of years in the way of partial payments. All this while the home is being improved, advancing in value, and our failure thus far to do something of this kind has been little short of criminal.

INDEX.

NAMES AND POST-OFFICE ADDRESSES

OF

SENATORS

IN THE

THIRD SESSION OF THE SIXTY-THIRD CONGRESS.

THOMAS R. MARSHALL, Vice President, Indianapolis, Ind.
JAMES P. CLARKE, President pro tempore, Little Rock, Ark.
